FOREWORD

The importance of the Applied Sciences in this University's development has always been recognized, and is especially referred to in our Act of Incorporation.

Undergraduate courses in the fields of Applied Geography, Applied Geology, Chemical Engineering, Chemical Technology, Metallurgy, Mining Engineering, Textile Technology and Wool and Pastoral Sciences are well established. Many of the Faculty's research contributions have achieved international recognition.

It is hoped that students who enter the Faculty will share the enthusiasm and the dedication of those who have taken part in its development. It is of the greatest importance that students should acquire, from the very beginning, the right approach to their studies, and that they should achieve a proper balance between their work and their extra-curricular activities.

In addition to this Handbook, pamphlets and brochures issued in conjunction with the enrolment period and Orientation Week are available. These should be consulted, together with the University Calendar, for further information on problems associated with courses.

It is hoped that this Handbook will be of value to present and prospective students in the Faculty and to employers.

M. CHAIKIN,
Dean,
Faculty of Applied Science.
CALENDAR OF DATES FOR 1972

Session 1: March 6 to May 13
May Recess: May 14 to May 21
May 22 to June 17
Midyear Recess: June 18 to July 23

Session 2: July 24 to August 12
August Recess: August 13 to August 27
August 28 to November 11

JANUARY
Friday 21 .............. Last day for acceptance of applications to enrol by new students and students repeating first year
Monday 31 ........... Australia Day—Public Holiday

FEBRUARY
Tuesday 1 to Saturday 12 ........ Deferred examinations
Monday 21 ............ Enrolment period begins for new students and students repeating first year
Monday 28 ............ Enrolment Week commences for students re-enrolling (second and later years)

MARCH
Monday 6 ............. Session 1 commences
Friday 17 ............. Last day of enrolment for new students (late fee payable)
Thursday 30 ........ Last day for later year enrolments (late fee payable)
Friday 31 to Monday, 3 April ... Easter

APRIL
Tuesday 25 ........... Anzac Day—Public Holiday

MAY
Sunday 14 to Sunday 21 ........ May Recess

JUNE
Monday 12 .......... Queen's Birthday—Public Holiday
Tuesday 13 .......... Midyear examinations begin
Saturday 17 .......... Session 1 ends
Friday 30 .......... Last day for acceptance of applications for re-admission after exclusion under rules governing re-enrolment
JULY
Saturday 1 .......... Midyear examinations end
Monday 24 .......... Session 2 commences
Thursday 27 .......... Foundation Day

AUGUST
Sunday 13 to Sunday 27 .......... August Recess

SEPTEMBER
Friday 15 .......... Last day for acceptance of corrected enrolment details forms

OCTOBER
Monday 2 .......... Eight Hour Day—Public Holiday
Friday 6 .......... Last day for acceptance of corrected enrolment details forms (late fee payable)

NOVEMBER
Saturday 11 .......... Session 2 ends
Tuesday 14 .......... Examinations begin

1973

Session 1: March 5 to May 12
May Recess: May 13 to May 20
May 21 to June 16
Midyear Recess: June 17 to July 22
Session 2: July 23 to August 11
August Recess: August 12 to August 26
August 27 to November 10

JANUARY
Tuesday 30 to Saturday 10 Feb. .... Deferred examinations

FEBRUARY
Monday 19 .......... Enrolment Week commences for new students and students repeating first year
Monday 26 .......... Enrolment Week commences for students re-enrolling (second and later years)

THE ACADEMIC YEAR

The academic year is divided into two sessions, each containing 14 weeks for teaching. There is a recess of five weeks between the two sessions. In addition there are short recesses within the sessions—one week within Session 1 and two weeks within Session 2.

The first session commences on the first Monday of March.
SCHOOL OF APPLIED GEOLOGY

PROFESSOR OF GEOLOGY AND HEAD OF SCHOOL
J. J. Frankel, MSc Rhodes, DSc Cape T., FRSSAf, FGS, MAusIMM
MSAInstMM, MSocSigmaXi, AMIMM

ASSOCIATE PROFESSORS
L. V. Hawkins, MSc Syd., FGS
L. J. Lawrence, DSc DipCom Syd., PhD N.S.W., DIC, MAusIMM
F. C. Loughnan, BSc Syd., PhD N.S.W., AMAusIMM

SENIOR LECTURERS
H. G. Golding, BSc Lond., MSc PhD N.S.W., ARCS, AMAusIMM
J. Roberts, BSc N.E., PhD W. Aust.

LECTURERS
A. D. Albani, DrGeolSc Florence, MSc N.S.W.
A. D. M. Bell, BSc Lond., MSc N.S.W., FGS, MAusIMM
J. C. Cameron, BSc MA Edin., DIC, AMAusIMM
R. P. Freeman, BSc Durh.
M. B. Katz, BS Mich. T.U., MSc McG., PhD Toronto
I. R. Qureshi, MSc Panj., PhD Glas.
P. C. Rickwood, BSc Lond., PhD Cape T., ARIC FGS

SENIOR TUTOR DEMONSTRATORS
Maren Krysko von Tryst, BSc GradDip N.S.W.
R. J. Whiteley, BSc Syd.

TUTOR DEMONSTRATORS
T. M. Bryant, BSc Syr.
R. F. Daniel, BA Macq.
I. Pauncz, BSc N.S.W.
A. S. Ray, MSc Calc.

HONORARY ASSOCIATES
E. J. Swaine, MSc Melb., PhD Aberd., FRACI
G. H. Taylor, DSc Adel., BSc Melb., DrRerNat Bonn

PROFESSIONAL OFFICER
Gisella B. Ikert, BSc Syd.

ADMINISTRATIVE ASSISTANT
G. J. Baldwin, BA A.N.U.
Department of Oceanography

Senior Lecturer
A. N. Carter, BSc PhD Melb., MSc Adel.

SCHOOL OF CHEMICAL ENGINEERING

Professor of Chemical Engineering and Head of School
R. T. Fowler, BSc Wales, PhD Lond., DScEng Syd., CEng, FIEAust, ARIC, MIChemE, MInstF, AIM

Professor of Chemical Engineering
J. S. Ratcliffe, MSc PhD N.S.W., ASTC, CEng, FIREE, MIEAust, AMIChemE

Administrative Assistant
R. F. Starr, ASTC

Department of Biological Process Engineering

Lecturer
R. J. Hall, BSc PhD N.S.W.

Department of Chemical Engineering

Associate Professor
R. G. Robins, MSc PhD N.S.W., CEng, ARACI, AMAusIMM

Senior Lecturers
J. E. Buchanan, ME Syd., PhD N.S.W., CEng, MIEAust
I. D. Doig, BSc(Eng) Lond., PhD N.S.W., CEng, AMIMechE, AMIChemE
C. J. D. Fell, BSc N.S.W., PhD Camb.

Lecturers
R. G. Bowrey, BE PhD N.S.W.
D. C. Dixon, BE MEngSc Syd., PhD N.S.W., MIEAust
F. O. Howard, BE Syd., CEng, MIEAust
C. H. Hunt, MSc N.S.W., ASTC, CEng, MIEAust, ARIC, ARACI
P. Souter, MSc Syd., ARACI

Teaching Fellows
Rhonda G. McIver, BSc N.S.W.
C. E. St. Denis, MSc Qu.

Professional Officer
N. E. Byrne, BSc(Tech) ME N.S.W.
Department of Food Technology

ASSOCIATE PROFESSOR
R. A. Edwards, BSc PhD N.S.W., ASTC

SENIOR LECTURER
P. M. Linklater, BAgSc Adel., MAgrSc N.Z., PhD Wis.

LECTURERS
K. A. Buckle, BSc PhD N.S.W.
T. H. Lee, BSc PhD N.S.W.
M. Wootton, BSc PhD N.S.W.

PROFESSIONAL OFFICER
W. R. Day, MSc N.S.W., ASTC

Department of Fuel Technology

ASSOCIATE PROFESSOR
N. Y. Kirov, MSc Leeds, CEng, FInstF, FIEAust, MICE

SENIOR LECTURER
K. S. Basden, BSc PhD N.S.W., ASTC, CEng, MInstF, MIEAust, ARACI, AMAusIMM

LECTURERS
D. Barrett, MSc Leeds, PhD N.S.W., MInstF
G. D. Sergeant, BSc PhD Wales, MInstF

SENIOR TUTOR
T. P. Maher, BSc Syd., MSc PhD N.S.W., CEng, ARACI, AMInstF

PROFESSIONAL OFFICER
J. P. Smits, BSc(Tech) N.S.W., CEng, AMInstF

SCHOOL OF CHEMICAL TECHNOLOGY

PROFESSOR OF CHEMICAL TECHNOLOGY AND HEAD OF SCHOOL
F. W. Ayscough, BSc Syd., MSc N.S.W., CEng, MIChemE, ARACI

SENIOR ADMINISTRATIVE OFFICER
J. R. Gatenby, ASTC

Department of Ceramic Engineering

ASSOCIATE PROFESSOR
E. R. McCartney, BSc Syd., PhD N.S.W., FICeram, MIEAust, ARACI

LECTURERS
H. Fowler, MSc N.S.W., ASTC, ARACI
S. A. Prokopovich, MSc N.S.W., ASTC

SENIOR INSTRUCTOR
I. J. McMeekin
Department of Industrial Chemistry

ASSOCIATE PROFESSOR
B. J. Welch, MSc PhD N.Z., ANZIC, ARACI

SENIOR LECTURER
B. G. Madden, BSc PhD N.S.W., ASTC FIREEAust

Department of Polymer Science

SENIOR LECTURERS
F. L. Connors, MSc PhD N.S.W., ASTC, MIEAust, APIA
G. W. Hastings, BSc PhD Birm., FRIC, MRSH

LECTURER
J. K. Haken, MSc N.S.W., ASTC, ARACI

PROFESSIONAL OFFICERS (School)
R. G. Anthony, BSc N.S.W., PhD Tas.
R. E. Brand, BSc N.S.W., ASTC, ARACI
W. W. L. Ching, BSc N.S.W.
O. Dworjanyn, MSc N.S.W., ASTC
D. P. S. Kwok, BE N.S.W., DipME H.K.Tech.Coll.
C. L. Samways, BSc Syd., MSc N.S.W.
J. W. Sharp, BSc(Tech) N.S.W.

SCHOOL OF GEOGRAPHY

PROFESSOR OF GEOGRAPHY AND HEAD OF SCHOOL
J. A. Mabbutt, MA Camb.

SENIOR LECTURER
E. A. Fitzpatrick, BA Wash., MA Syd.

LECTURERS
F. C. Bell, BSc Syd., MSc N.S.W., MSocSigmaXi
Juliet P. Burrell, BSc N.Z., MSc Otago, PhD Melb.
Mrs. Janice R. Corbett, BSc PhD Syd.
T. R. Healy, MSc Auck.
A. J. Holsman, MA Camb.
D. Jeffrey, BA(Econ) Sheff., MA PhD Ohio
P. L. Simons, BA PhD Syd.
D. J. Webb, BA DipEd Melb., MPhil Lond.

SENIOR TUTORS
Mrs. Elizabeth F. Burke, BA Camb., MSc Syd.
Yvonne A. Wilson, BA DipEd Syd.

TUTOR/Demonstrators
J. R. Geissman, BA Calif.
N. G. Lonergan, BA DipEd N.E.
Marjorie E. Sullivan, BSc Syd.

TEACHING FELLOW
P. J. Hughes, MSc Cant.
SCHOOL OF METALLURGY

PROFESSOR OF PHYSICAL METALLURGY AND HEAD OF SCHOOL
H. Muir, BMetE Melb., ScD M.I.T., AIM, MAusIMM

RESEARCH PROFESSOR OF PHYSICAL METALLURGY
J. S. Bowles, MSc Melb., FIM

SENIOR ADMINISTRATIVE OFFICER
R. A. Ball, ASTC, MAusIMM, ARACI, AFAIM

Department of Chemical and Process Metallurgy

SENIOR LECTURERS
B. Harris, BSc Syd., MSc N.S.W., AMAusIMM
A. P. Prosser, BSc PhD Lond., DIC, ARCS, ARIC

LECTURERS
S. Blairs, BSc PhD Manc.
D. R. Young, BSc(Eng) PhD Lond., ARSM, AMAusIMM

Department of Materials

SENIOR LECTURERS
A. J. Anderson, MSc N.S.W., ASTC, FIM
L. H. Keys, MSc PhD N.S.W., ASTC, AIM

LECTURER
P. G. McCormick, MS Wash., PhD Corn.

REQUIREMENTS FOR ADMISSION

A person who seeks to become a candidate for any degree of Bachelor of the University must first have qualified for matriculation and have satisfied the requirements for admission to the particular Faculty, course or subject chosen.

In addition to complying with these conditions candidates must be selected before being permitted to enrol in a course. In 1972 it will be necessary for the University to limit the number of students enrolling in all undergraduate courses.

A candidate who has satisfied the conditions for matriculation and for admission to a course of study shall be classed as a "matriculated student" of the University, after enrolment.

A person who has satisfactorily met the conditions for admission may be provided with a statement to that effect on the payment of the prescribed fee.

MATRICULATION REQUIREMENTS

Section A

General Matriculation and Admission Requirements

1. A candidate may qualify for matriculation by attaining in recognized matriculation subjects at one New South Wales Higher School Certificate Examination or at one University of Sydney Matriculation Examination a level of performance determined by the Professorial Board from time to time.
2. The level of performance required to qualify for matriculation shall be

(a) passes in at least five recognized matriculation subjects, one of which shall be English and three of which shall be at Level 2 or higher; and

(b) the attainment of an aggregate of marks, as specified by the Professorial Board, in not more than five recognized matriculation subjects, such marks being co-ordinated in a manner approved by the Board.

3. The following subjects, and such other subjects as may be approved by the Professorial Board from time to time, shall be recognised matriculation subjects:

- English
- Greek
- Chinese
- Mathematics
- Latin
- Japanese
- Science
- French
- Hebrew
- Agriculture
- German
- Dutch
- Modern History
- Italian
- Art
- Ancient History
- Bahasa Indonesia
- Music
- Geography
- Spanish
- Industrial Arts
- Economics
- Russian

4. A candidate who has qualified to matriculate in accordance with the provisions of Clauses 1, 2 and 3 may be admitted to a particular Faculty, Course or Subject provided that:

(a) his qualification includes a pass at the level indicated in the subject or subjects specified in Schedule A as Faculty, Course or Subject Pre-Requisites; or

(b) the requirements regarding these particular Faculty, Course or Subject Pre-Requisites, as specified in Schedule A, have been met at a separate Higher School Certificate or University of Sydney Matriculation Examination.

5. Notwithstanding any of the provisions of Clauses 1 to 4, the Professorial Board may grant matriculation status to any candidate at the Higher School Certificate or University of Sydney Matriculation Examination who has reached an acceptable standard and may admit him to any Faculty, Course or Subject.

NOTE
1. For the purposes of clause 2(a), Mathematics and Science BOTH PASSED at First Level or Second Level Full Course shall together count as three subjects.
2. For the purposes of clause 2(b), Mathematics and Science TAKEN either singly or together at first level or second level full course shall each count as one and one half subjects.

</table>
ADMISSIONS AND ENROLMENT PROCEDURE

ADMISSIONS PROCEDURE

Details of the procedure to be followed by students seeking entry to first year courses at the University may be obtained from the Admissions Office or the Metropolitan Universities Admissions Centre.

Persons seeking entry to first year courses in one or more of the three Universities in the Sydney Metropolitan Area (Macquarie University, The University of New South Wales and the University of Sydney) are required to lodge a single application form with the Metropolitan Universities Admissions Centre, Third Floor, 13-15 Wentworth Avenue, Sydney (near Liverpool Street). Postal address: Box 7049, G.P.O., Sydney, 2001. Telephone: 26 6301. On the application form provision is made for applicants to indicate preferences for courses available in any of the three Universities. Students are notified individually of the result of their applications and provided with information regarding the procedures to be followed in accepting the offer of a place at this University and completing their enrolment at the Enrolment Bureau, Unisearch House, 221 Anzac Parade, Kensington.

ADMISSIONS OFFICE

The Admissions Office which is located in the Chancellery on the upper campus provides intending students (both local and overseas) with information regarding courses, admission requirements, scholarships and enrolment. Office hours are from 9.00 a.m. to 1.00 p.m. and 2.00 p.m. to 5.00 p.m. Monday to Friday. During the enrolment period, an evening service is also provided.

Applications for special admission, admission with advanced standing and from persons relying for admission on overseas qualifications should be lodged with the Admissions Office. The Office also receives applications from students who wish to transfer from one course to another, resume their studies after an absence of twelve months or more, or seek any concession in relation to a
course in which they are enrolled. It is essential that the closing dates for lodgment of applications are adhered to, and, for further details the sections on “Rules Relating to Students” and “Enrolment Procedure for Undergraduate Courses” should be consulted.

**ENROLMENT PROCEDURE**

In 1972 it will be necessary for the University to impose quotas in each Faculty and Board of Studies.

The enrolment procedure for the different classes of undergraduate students is as follows:

**First Enrolments**

(a) New South Wales residents already qualified for admission and persons who are applying for enrolment on the basis of qualifications gained or about to be gained outside New South Wales must lodge an application for enrolment with the Metropolitan Universities Admissions Centre, 13-15 Wentworth Avenue, Sydney (P.O. Box 7049 G.P.O., Sydney) by 29th October, 1971.

(b) New South Wales residents qualifying for admission by the 1971 New South Wales Higher School Certificate Examination or the 1972 Sydney University Matriculation Examination and those who have attended a University in New South Wales in 1971 must apply for enrolment to the Metropolitan Universities Admissions Centre, 13-15 Wentworth Avenue, Sydney (P.O. Box 7049 G.P.O., Sydney) by 21st January, 1972.

Students whose applications for enrolment are accepted will be required to complete their enrolment at a specified appointment time before the beginning of Session 1. Course details must be completed and fees must be paid on the day of the appointment. However, in special circumstances and provided class places are still available, students may be allowed to complete their enrolment after the prescribed week subject to the payment of a late fee.

**Failure in First Year.** First year students who failed more than half their programme at the 1971 Annual Examinations and who were not granted any deferred examinations will NOT follow the above procedure. They are required to ‘show cause’ why they should be allowed to continue in the course, and should await instructions in writing from the Registrar as to the procedure.
Later Year Enrolments. All students enrolling other than for the first time and not included above should enrol through the appropriate School, bringing with them their notification of examination results for the previous year. This enrolment must be effected before or during the week preceding the beginning of Session 1, in accordance with the special arrangements made by the individual schools.

Students who have completed the final examinations but have a thesis still outstanding are required to enrol for the period necessary to complete the thesis and to pay the requisite fees.

Miscellaneous Subject Enrolments. Students may be permitted to enrol for miscellaneous subjects (i.e., as students not proceeding to a degree or diploma) provided the Head of the School offering the subject considers it will be of benefit to the student and there is accommodation available. Only in exceptional cases will subjects taken in this way count towards a degree or diploma. Where a student is under exclusion he may not be enrolled in miscellaneous subjects unless given approval by the Professorial Board.

Final Dates for Completion of Enrolment. No enrolments will be accepted from new students after the end of the second week of Session 1 (17th March, 1972) except with the express approval of the Registrar and the Head of the School concerned; no later year enrolments will be accepted after 31st March without the express approval of the Registrar which will be given in exceptional circumstances only.

University Union Card

All students other than miscellaneous students are issued with a University Union membership card. This card must be carried during attendance at the University and shown on request.

The number appearing on the front of the card above the student’s name is the student registration number used in the University’s records. This number should be quoted in all correspondence.

The card must be presented when borrowing from the University libraries, when applying for travel concessions and when notifying a change of address. It must also be presented when paying fees on re-enrolment each year when it will be made valid for the
year and returned. Failure to present the card could result in some inconvenience in completing re-enrolment.

A student who loses a Union card must notify the University Union as soon as possible.

New students will be issued with University Union cards at the University Union Enquiry Desk as soon as practicable after payment of fees. In the meantime, fees receipt form should be carried during attendance at the University and shown on request. A period of at least three weeks should be allowed to elapse after payment of fees before making application for the card. Cards will not be posted under any circumstances.
UNDERGRADUATE COURSE FEES

Where course fees are assessed on the basis of session hours of attendance the hours of each subject for purposes of fee assessment shall be those prescribed in the Calendar, irrespective of any variation from the prescribed hours which may be necessary in conducting the subject.

Fee determination for courses in the Faculty of Applied Science is on a session basis. Fees quoted in this schedule are current at the time of publication and may be amended by the Council without notice.

A full-time course fee will be charged for any session where more than 15 hours’ per week instruction, etc., is involved.

(i) Full-time Course Fee (more than 15 hours’ attendance per week)—$231 per session.

(ii) Part-time Course Fee—over 6 hours’ and up to 15 hours’ attendance per week—$115.50 per session.

(iii) Part-time Course Fee—6 hours’ or less attendance per week—$57.50 per session.

(iv) Course Continuation Fee—A fee of $33 per annum (no session payment) is payable by:

Category (a) students who have once been enrolled for a thesis and have only that requirement outstanding, or

Category (b) students given special permission to take annual examinations without attendance at the University. (Students in this category are not required to pay the subscriptions to the University Union, the Students’ Union, the Sports Association and the Library Fee.)
Miscellaneous Subjects

Undergraduate subjects taken as "miscellaneous subjects" (i.e., not for a degree or diploma) or to qualify for registration as a candidate for a higher degree are assessed on an hourly basis in accordance with the schedule above.

Students given approval to enrol in a miscellaneous subject or subjects in addition to being enrolled in a course are assessed according to the total hours of attendance as if the additional subject formed part of the course.

OTHER FEES

In addition to the course fees set out above all registered undergraduates will be required to pay—

Matriculation Fee—$9—payable at the beginning of first year.

Library Fee—annual fee—$16.

University Union—$20—entrance fee.

Student Activities Fees

University Union*—$30—annual subscription.

Sports Association*—$4—annual subscription.

Students' Union*—$6—annual subscription.

Miscellaneous—$17—annual fee.

Graduation or Diploma Fee—$9 payable at the completion of the course.

Depending on the course being taken, students may also be required to pay—

Applied Psychology Kit Hiring Charge—$2 per kit. Additional payment for breakages and losses in excess of $1.

Biochemistry Kit Hiring Charge—$4 per kit. Additional charge for breakages and losses in excess of $1 may be required.

Chemistry Kit Hiring Charge—$4 per kit. Additional charge for breakages and losses in excess of $1 may be required.

Excursion Fee—$2 per subject (plant morphology, plant taxonomy, environmental botany).

* Life members of these bodies are exempt from the appropriate fee or fees.
Special Examination Fees
Deferred examination—$7 for each subject.
Examinations conducted under special circumstances—$9 for each subject.
Review of examination result—$9 for each subject.

LATE FEES

First Enrolments
Fees paid at the late enrolment session and before the commencement of Session 1 $8
Fees paid during the first and second weeks of Session 1 $16
Fees paid after the commencement of the third week of Session 1 with the express approval of the Registrar and Head of the School concerned $33

Re-Enrolments
Session 1
Failure to attend enrolment centre during enrolment week $8
Fees paid after the commencement of the third week of Session 1 to 31st March $16
Fees paid after 31st March where accepted with the express approval of the Registrar $33

Session 2—All enrolments
Fees paid in third and fourth weeks of Session 2 $16
Fees paid thereafter $33
Late lodgement of corrected enrolment details forms (late applications will be accepted for three weeks only after the prescribed dates) $7

WITHDRAWAL FROM COURSE
Students withdrawing from a course are required to notify the Registrar in writing. Fees for the course accrue until a written notification is received.
PAYMENT OF FEES

Completion of Enrolment

All students are required to attend the appropriate enrolment centre during the prescribed enrolment period* for authorization of course programme. Failure to do so will incur a late fee of $8.

First year students (including students repeating first year) must complete enrolment (including fee payment) before they are issued with class timetables or permitted to attend classes. A first year student who has been offered a place in a course to which entry is restricted and fails to complete enrolment (including fee payment) at the appointed time may lose the place allocated.

Fees should be paid during the prescribed enrolment period but will be accepted during the first two weeks of Session 1. (For late fees see earlier.) No student is regarded as having completed an enrolment until fees have been paid. Fees will not be accepted (i.e., enrolment cannot be completed) from new students after the end of the second week of Session 1 (i.e., 17th March, 1972), and after 31st March from students who are re-enrolling, except with the express approval of the Registrar, which will be given in exceptional circumstances only.

Payment of Fees by Session

Students who are unable to pay their fees by the year may pay by the session, in which case they are required to pay Session 1 course fees and other fees for the year, within the first two weeks of Session 1. Students paying under this arrangement will receive accounts from the University for Session 2 fees. These fees must be paid within the first two weeks of Session 2.

Assisted Students

Scholarship holders or Sponsored Students who have not received an enrolment voucher or appropriate letter of authority from their sponsor at the time when they are enrolling should complete their enrolment paying their own fees. A refund of fees will be made when the enrolment voucher or letter of authority is subsequently lodged with the Cashier.

* The enrolment periods for Sydney students are prescribed annually in the leaflets "Enrolment Procedure for New Students" and "Enrolment Procedure for Students Re-enrolling".
Extension of Time

Any student who is unable to pay fees by the due date may apply in writing to the Registrar for an extension of time. Such application must state year or stage, whether full-time or part-time, and the course in which the applicant wishes to enrol, describe clearly and fully the reasons why payment cannot be made and the extension sought, and must be lodged before the date on which a late fee becomes payable. Normally the maximum extension of time for the payment of fees is until 31st March for fees due in Session 1 and for one month from the date on which a late fee becomes payable in Session 2.

Where an extension of time is granted to a first year student in Session 1, such student may only attend classes on the written authority of the Registrar, but such authority will not normally be given in relation to any course where enrolments are restricted.

Failure to Pay Fees

Any student who is indebted to the University and who fails to make a satisfactory settlement of his indebtedness upon receipt of due notice ceases to be entitled to membership and privileges of the University. Such a student is not permitted to register for a further session, to attend classes or examinations, or to be granted any official credentials.

No student is eligible to attend the annual examinations in any subject where any portion of his course fees for the year is outstanding after the end of the fourth week of Session 2 (18th August, 1972).

In very special cases the Registrar may grant exemption from the disqualification referred to in the two preceding paragraphs upon receipt of a written statement setting out all relevant circumstances.

Cashier’s Hours

The Cashier’s office is open for the payment of fees from 9.30 a.m. to 1.00 p.m. and from 2.00 p.m. to 4.30 p.m. Monday to Friday. It is open for additional periods during the first three weeks of each session.
GENERAL RULES AND INFORMATION

GENERAL CONDUCT

Acceptance as a member of the University implies an undertaking on the part of the student to observe the regulations, by-laws and other requirements of the University, in accordance with the declaration signed at the time of the enrolment.

In addition, students are expected to conduct themselves at all times in a seemly fashion. Smoking is not permitted during lectures, in examination rooms or in the University Library. Gambling is also forbidden.

ATTENDANCE AT CLASSES

Students are expected to be regular and punctual in attendance at all classes in the course or subject in which they are enrolled. All applications for exemption from attendance at lectures or practical classes must be made in writing to the Registrar.

Where a student has failed a subject at the annual examinations in any year and re-enrolls in the same course in the following year, he must include in his programme of studies for that year the subject in which he has failed. This requirement will not be applicable if the subject is not offered the following year; is not a compulsory component of a particular course; or if there is some other cause, which is acceptable to the Professorial Board, for not immediately repeating the failed subject.

Where a student has attended less than eighty per cent of the possible classes, he may be refused permission to sit for the examination in that subject.

INDEBTEDNESS TO THE UNIVERSITY

Any student who is indebted to the University and who fails to make a satisfactory settlement of his indebtedness upon receipt of due notice ceases to be entitled to membership and privileges of the University. Such a student is not permitted to register for a further session, to attend classes or examinations, or to be granted any official credentials.
In very special cases the Registrar may grant exemption from the disqualification referred to in the preceding paragraph upon receipt of a written statement setting out all relevant circumstances.

COURSE TRANSFERS

Students wishing to transfer from one course to another must apply on an application form obtainable from the Admissions Office, Chancellery, by Friday, 21st January. As quotas will operate on entry to all Faculties and the Board of Vocational Studies in 1972, failure to apply by 21st January 1972 will most likely result in the application for transfer being unsuccessful.

Students whose applications to transfer are successful are required to comply with the enrolment procedures for the year/stage of the new course in which they expect to enrol. Unless otherwise instructed they must present the letter granting approval of the transfer to the enrolling officer.

Students who have not received advice regarding their application to transfer before the date on which they are required to enrol should check with the Admissions Office.

Students should also advise the Enrolling Officer of the School in which they are enrolled of their intention to transfer.

CHANGES IN COURSE PROGRAMMES AND WITHDRAWAL FROM SUBJECTS

Students seeking approval to substitute one subject for another, add one or more subjects to their programme or discontinue part of their programme must make application to the Head of the School responsible for the course on a form available from School offices. Any addition or substitution of subjects after 31st March will be accepted only with the express approval of the Registrar on the recommendation of the appropriate Head of School, and will be given in exceptional circumstances only. In the case of students wishing to terminate their enrolment the application must be lodged at the Examinations and Student Records Section. The Registrar will inform students of the decision. Approval of withdrawal from subjects is not automatic, each application being determined after considering the circumstances advanced as justifying withdrawal.
It is emphasized that withdrawal from:
(1) a subject, tuition in which extends over the academic year, at any time after the May recess;
(2) a subject, tuition in which extends over only one session, at any time after one month from the commencement of the subject; or
(3) failure to sit for the examinations in any subject in which the student has enrolled shall be regarded as failure to satisfy the examiners in the subject, unless written approval to withdraw without failure has been obtained from the Registrar.

RESUMPTION OF COURSES

Students wishing to resume their studies after an absence of twelve months or more are required to apply to the Admissions Office for permission to re-enrol by 21st January, 1972. Students re-enrolling in this way will normally be required to satisfy conditions pertaining to the course at the time of re-enrolment. This condition applies also to students who have been re-admitted to a course after exclusion under the rules restricting students re-enrolling.

ANNUAL EXAMINATIONS

Most annual examinations take place in November-December, although some are held in the mid-year recess. Timetables showing time and place at which individual examinations will be held are posted on the central notice boards, which are in the Bio-Medical Building, Central Lecture Block, Chancellery, Dalton Building, Main Building and Western Grounds area. Misreading of the timetable is not an acceptable excuse for failure to attend an examination. Examination results are posted to the term addresses of students. No results will be given by telephone.

All students will receive an enrolment details form by 30th August. It is not necessary to return this form, unless any information recorded there is incorrect. Amended forms must be returned to the Examinations Branch by 15th September. Amendments notified after the closing date will not be accepted unless exceptional circumstances exist and approval is obtained from the Registrar. Where a late amendment is accepted, a late fee of $7 will be payable. Amended forms returned to the Registrar will be acknowledged in writing within fourteen days.
DEFERRED EXAMINATIONS

Deferred examinations may be granted in the following cases:

(i) When a student through illness or some other acceptable circumstance has been prevented from taking the annual examination or has been placed at a serious disadvantage during the annual examinations.

Applications for deferred examination in this category must be lodged with the Registrar with appropriate evidence of the circumstances (e.g., medical certificate) not later than seven days after the examination concerned.

All such applications shall be reported to the Head of the School responsible for the subject. Before a deferred examination is granted on medical grounds, regard shall be paid to the student’s class and assignment work in the subject, to his general performance in the year, and to the significance of the annual examination in compiling the composite mark.

(ii) To help resolve a doubt as to whether a student has reached the required standard in a subject.

(iii) To allow a student by further study to reach the required standard in a subject. The granting of a deferred examination in such cases will be based on the general quality of the student’s performance.

(iv) Where a student’s standing at the annual examinations is such that his progression or graduation could depend on his failure in one subject only, then his position in that subject shall be again reviewed with a view to determining whether a deferred examination may be granted notwithstanding his failure otherwise to qualify for such concession.

Deferred examinations must be taken at the centre in which the student is enrolled, unless he has been sent on compulsory industrial training to remote country centres or interstate. An application to take an examination away from the centre in which enrolled must be lodged with the Registrar immediately examination results are received. Normally, the student will be directed to the nearest University for the conduct of the deferred examination.
A student eligible to sit for a deferred examination must lodge with the Accountant an application accompanied by the fee of $7 per subject, by the date indicated on the notification of results.

APPLICATION FOR ADMISSION TO DEGREE

Applications for admission to a degree of the University must be made on the appropriate form by 15th January. Applicants should ensure that they have completed all requirements for the degree, including industrial training where necessary.

RESTRICTION UPON STUDENTS RE-ENROLLING

The University Council has adopted the following rules governing re-enrolment with the object of requiring students with a record of failure to show cause why they should be allowed to re-enrol and retain valuable class places. These rules will be applied retrospectively from January, 1971.

1. (i) A student shall show cause why he should be allowed to repeat a subject in which he has failed more than once. (Failure in a deferred examination as well as in the annual examination counts, for the purpose of this regulation, as one failure.) Where such subject is prescribed as a part of the student's course he shall be required to show cause why he should be allowed to continue the course.

   Notwithstanding the provisions of Clause 1(i)

(ii) A student enrolled in the first year or first stage of any course, other than the medical course, who has failed in more than half the programme in which he is enrolled for that year or stage shall be required to show cause why he should be allowed to continue in the course.

(iii) A student enrolled in the first year of the Medical course who has failed in more than one subject of that year shall be required to show cause why he should be allowed to continue in the Medical course.

(iv) The provisions of sections (ii) and (iii) of this rule shall be deemed to apply to any student on transfer from another course or institution whose programme
of studies in the first year of enrolment immediately following transfer is comprised of subjects so chosen that half or more of such subjects are listed in the University Calendar as first year subjects.

2. Notwithstanding the provisions of clause 1, a student shall be required to show cause why he should be allowed to continue a course which he will not be able to complete in the time set down in the following schedule:

<table>
<thead>
<tr>
<th>Number of years in course</th>
<th>Total time allowed from first enrolment to completion (years)</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>5</td>
</tr>
<tr>
<td>4</td>
<td>6</td>
</tr>
<tr>
<td>5</td>
<td>8</td>
</tr>
<tr>
<td>6</td>
<td>9</td>
</tr>
<tr>
<td>7</td>
<td>11</td>
</tr>
<tr>
<td>8</td>
<td>12</td>
</tr>
</tbody>
</table>

3. No full-time student shall, without showing cause, be permitted to continue a course unless all subjects of the first year of his course are completed by the end of his second year of attendance. No student in the Faculty of Arts shall, without showing cause, be permitted to continue a course unless he completes four subjects by the end of his second year of attendance. No full-time student in the Bachelor of Social Work course shall without showing cause be permitted to continue with the course unless he completes the equivalent of four full subjects by the end of his second year of attendance.

No part-time student shall, without showing cause, be permitted to continue a course unless all subjects of the first two stages of his course are completed by the end of his fourth year of attendance and all subjects of the third and fourth stages of his course by the end of his seventh year of attendance.

No student in the Faculty of Medicine shall, without showing cause, be permitted to continue with the medical course unless he completes the second year of the course by the end of his third year of attendance, and the third year of the course by the end of his fourth year of attendance.

4. A student who has a record of failure in a course at another University shall be required to show cause why he should be admitted to this University. A student admitted to a course at this
University following a record of failure at another University shall be required to show cause, notwithstanding any other provisions in these rules, why he should be permitted to continue in that course if he is unsuccessful in the annual examinations in his first year of attendance at this University.

5. Any student excluded under any of the clauses 1-3 may apply for re-admission after two academic years and such application shall be considered in the light of any evidence submitted by him.

6. A student wishing "to show cause" under these provisions shall do so in writing to the Registrar. Any such application shall be considered by a committee, hereinafter referred to as the Re-enrolment Committee, appointed by the Professorial Board, which shall determine whether the cause shown is adequate to justify his being permitted to continue his course or re-enrol as the case may be.

7. The Vice-Chancellor may on the recommendation of the Re-enrolment Committee exclude from attendance in a course or courses any student who has been excluded from attendance in any other course under the rules governing re-enrolment and whose record at the University demonstrates, in the opinion of the Re-enrolment Committee and the Vice-Chancellor, the student's lack of fitness to pursue the course nominated.

8. A student who has failed, under the provisions of Clause 6 of these rules, to show cause acceptable to the Re-enrolment Committee why he should be permitted to continue in his course, and who has subsequently been permitted to re-enrol in that course or to transfer to another course, shall also be required to show cause, notwithstanding any other provisions in these rules, why he should be permitted to continue in that course if he is unsuccessful in the annual examinations immediately following the first year of resumption or transfer of enrolment as the case may be.

9. Any student who is excluded from attendance in any course or subject under the provisions of these rules may appeal to an Appeal Committee constituted by Council for this purpose. The decision of the Appeal Committee shall be final.

10. The notification to any student of a decision by the Re-enrolment Committee to exclude the student from attendance in any course or subject shall indicate that the student may make
application for review of the decision to an Appeal Committee. In lodging such application the student shall ensure that a complete statement is furnished of all grounds on which the application is based and shall indicate whether or not the student wishes to appear in person before the Appeal Committee.

In considering an application for review the Committee of Review, on the basis of the student’s academic record and the stated grounds for review, shall decide:

(i) whether there are grounds which justify the Committee seeing the student in person, or

(ii) whether there is sufficient information available to the Committee to allow decision without seeing the student in person

and so proceed to determine the application accordingly.

RE-ADMISSION AFTER EXCLUSION

Applications for re-admission must be made on the standard form and lodged with the Registrar not later than 30th June of the year prior to that for which re-admission is sought. An application should include evidence of appropriate study in the subjects (or equivalents) on account of which the applicant was excluded. In addition, evidence that the circumstances which were deemed to operate against satisfactory performance at the time of exclusion are no longer operative or are reduced in intensity, should be furnished. An applicant may be required to take the annual examinations in the relevant subjects as qualifying examinations in which case re-admission does not imply exemption from the subject.

Late applications cannot be considered where, in the opinion of the University, insufficient time will be available for the student to prepare himself for any qualifying examinations which may be required.

It should be noted that a person under exclusion may not be enrolled in miscellaneous subjects unless he has received the approval of the Admissions Committee of the Professorial Board.

Persons who intend applying for re-admission to the University at a future date may seek advice as to ways in which they may enhance their prospects of qualifying for re-admission. Enquiries should be made on a form obtainable from the Examinations Branch, and lodged with the Registrar.
OWNERSHIP OF STUDENTS' WORK

The University reserves the right to retain at its own discretion the original or one copy of any drawings, models, designs, plans and specifications, essays, theses or other work executed by students as part of their courses, or submitted for any award or competition conducted by the University.

CHANGE OF ADDRESS

Students are requested to notify the Registrar in writing of any change in their address as soon as possible. Failure to do this could lead to important correspondence or course information not reaching the student. The University cannot accept responsibility if official communications fail to reach a student who has not notified the Registrar of a change of address.

NOTICES

Official University notices are displayed on the notice boards and students are expected to be acquainted with the contents of those announcements which concern them.

LOST PROPERTY

All enquiries concerning lost property should be made to the Superintendent on Extension 2503 or to the Lost Property Office at the Union.

PARKING WITHIN THE UNIVERSITY GROUNDS

Because of the limited amount of parking space available, only the following categories of students may apply for a permit: higher degree students (limited issue, annual fee $7.80); post-graduate, and senior undergraduate students who have completed three years of a full-time or part-time course. Permit will allow access to campus between 5 p.m. and 11 p.m. on weekdays and during library hours on Saturdays, Sundays and public holidays (annual fee $3.90). Applications should be made to the Property Section. It should be noted that increasing demand for parking space may require the imposition of further restrictions.
APPLICATION OF RULES

General

Any student who requires information on the application of these rules or any service which the University offers, may make enquiries from the Admissions Office, the Student Counselling Unit or the Registrar.

Appeals

Section 5(c) of Chapter III of the By-laws provides that "Any person affected by a decision of any member of the Professorial Board (other than the Vice-Chancellor) in respect of breach of discipline or misconduct may appeal to the Vice-Chancellor, and in the case of disciplinary action by the Vice-Chancellor, whether on appeal or otherwise, to the Council".
STUDENT SERVICES

THE LIBRARY

The University Library is on the upper campus and adjacent to the Chancellery and the Arts and Commerce buildings.

The Library's Undergraduate Collection covers the teaching and research interests of the Faculty, and students are expected to read widely and critically from it.

It is recommended that students attend the "Introduction to the Library" which is held at advertised times during Orientation Week and the first week of session 1. The "Introduction" uses audiovisual aids to describe the physical layout of the undergraduate library and the services available to readers. Copies of the booklet Guide to the Library are available on request. Students who are interested in a subject approach to information may attend a course which outlines methods of searching for information in libraries. This course runs for eight hours over a period of one week. Individual assistance for readers with specific library problems is provided by the Reader Assistance Unit which is located in the foyer.

The Bio-Medical Library is in the Biological Sciences building with a branch at Prince Henry Hospital (phone 661-0111).

THE UNIVERSITY UNION

The University Union is a common meeting ground for all students. Restaurant and general recreational facilities are available, as well as stationery and hairdressing shops, a pharmacy, branches of several banks and a branch of David Jones'. Membership is compulsory for all registered students.

STUDENT ACCOMMODATION

Residential Colleges

Accommodation for 450 men and women students is provided within the complex of the Residential Colleges formed by Basser,
Goldstein and Philip Baxter Colleges. Tutors in residence provide tutorial assistance in a wide range of subjects. Board and residence fees amount to $308 per fourteen-week period. Intending students should apply in writing to the Master, Box 24, Post Office, Kensington, N.S.W., 2033.

New College (Church of England) and Warrane College (Catholic) are the first denominational colleges to be established on the campus. Each accommodates approximately 200 men students. Fees are $24.00 and $23.00 per week respectively. Enquiries should be made in each case to the Master.

Accommodation is also available at International House, which has a membership of 120. Approximately half this number is Australian, and the other half is drawn from a multiplicity of nationalities. Board and residence fees are $23.50. In selecting residents preference is given to postgraduate and more senior undergraduate students.

Other Accommodation

Students requiring other than Residential College accommodation may make personal application to the Housing Officer (Extn. 3260) at the Student Amenities Unit. Current lists are kept of accommodation available at recognized boarding houses, private homes, and in serviced and unserviced apartments.

STUDENT AMENITIES UNIT

The Amenities Service, working in close liaison with the Sports Association and the University authorities, assists various recognized clubs by arranging and providing facilities essential to their general development, and by handling on their behalf all inquiries and applications for membership.

Concession Fares

Application forms for travelling concessions may be obtained at the Inquiry Office, the Chancellery, Kensington, or at the Amenities Service Offices, Kensington.

Bus: Concessions are available to:

(a) Students under 18 years of age irrespective of whether they are employed or receive income or remuneration;

(b) full-time students including married women and clergymen, between 18 and 30 years of age who are not in employ-
ment or in receipt of any income or remuneration. In the case of married women students, the term ‘income or remuneration’ shall include the joint income or remuneration of the husband and wife.

NOTE. Income or remuneration includes allowances paid to Colombo Plan students, Public Service trainees, etc., but does not include allowances paid to holders of Commonwealth Scholarships, Teachers’ College Scholarships or Scholarships granted by the State Bursary Endowment Board.

(c) alternatively, a $6.00 concession ticket may be purchased which allows a student to travel at reduced rates at any time from Monday to Friday and up to 6 p.m. on Saturdays between his home and the University. This concession applies only in the academic year and includes the May and August vacations.

Train:
(a) Periodical tickets are available during term time to full-time students not in employment or in receipt of any remuneration.
(b) Vacation travel concessions are available to students qualifying under (a) above.
(c) Country students may travel to and from their homes at weekends at concession rates, provided that both their home and term addresses have been registered with the University.

Ferry: Concession fares are available for travel on ferries controlled by the Port Jackson & Manly Steamship Co. Ltd. and Sydney Harbour Ferries Pty. Ltd. Applicants must be registered full-time students under the age of 21 years, and in the case of Sydney Harbour Ferries, under 20 years.

Aircraft: Concession fares for travel inter-state, intra-state and overseas are available under the conditions ruling for the various operating companies.

(i) Inter-state travel concessions are available only to full-time students under 26 years of age, not in receipt of remuneration. Eligible students must first purchase a 10-cent identity card and affix a passport-size photograph before being entitled to a reduction of 25% of adult fare.
(ii) *Intra-state*—Same conditions for travel concession apply on Airlines of New South Wales. East-West Airlines allows 33\% off normal adult fare to all *full-time* students during vacation periods.

(iii) *Overseas concessions* are available to students enrolling at the University or travelling to or from their homes to University, who are enrolled for at least one full year of studies.

**Location:**

The Student Amenities Unit at Kensington is located in Hut B at the foot of Basser Steps. (Tel. 663-0351, Ext. 2235.)

---

**STUDENT EMPLOYMENT UNIT**

Assistance is offered in finding employment over the long vacations giving course-related experience, or industrial training where this is a course requirement, casual employment and odd jobs, full-time employment for evening students, and permanent employment after graduation. The Service is located in the Chancellery on the ground floor.

---

**CHAPLAINCY CENTRE**

This Service is provided for the benefit of students and staff by five Christian Churches (Anglican, Roman Catholic, Methodist, Seventh Day Adventist, Churches of Christ) and by the Jewish congregation. Chaplains are in attendance at the University at regular times.

---

**STUDENT HEALTH UNIT**

Director: M. A. Napthali, MB, BS (Syd.)

A student health and first aid centre is situated within the University, staffed by two qualified medical practitioners, and a nursing sister.

The centre is located in hut “E” on the northern side of the campus, adjacent to Basser College. The service is available to all students, free of charge, between 9 a.m. and 5 p.m., Mondays to Fridays, and to part-time students, from 6 p.m. to 8 p.m., Tuesdays and Thursdays during University sessions by appointment.
The medical service is, in most instances, therapeutic, but is not intended to replace private or community health services. Thus, where chronic or continuing conditions are revealed or suspected, the student will be advised and referred to his own doctor or to an appropriate hospital for investigation and treatment. The health service is not responsible for fees incurred in these instances. The service is confidential and students are encouraged to attend the centre for advice on matters pertaining to health.

Appointments may be arranged by calling at the centre or by telephoning 663-0351, extension 2679 or 3275.

STUDENT COUNSELLING AND RESEARCH UNIT

The Student Counselling and Research Unit offers a free, confidential counselling service to help students, individually or in groups, to deal with problems, and to make plans and decisions associated with their personal, academic, and vocational progress.

Interviews, and group programmes, are available between 9 a.m. and 8 p.m. each week-day. Appointments may be made at the Unit, which is located at the foot of Basser Steps, or by ringing 663-0351, extensions 2600-2605 between 9 a.m. and 5 p.m.

FINANCIAL ASSISTANCE TO STUDENTS

The Students' Union and the University have co-operated to provide assistance to students who are in financial difficulties which are considered likely to prejudice their progress with their studies.

Three forms of assistance are available. In the first, the University considers, in certain circumstances, deferment of the payment of fees; this scheme is not intended to replace the established procedure for granting deferment for short periods but rather to supplement it by making deferment over longer periods possible. Secondly, students in need may receive a cash loan not exceeding $300 from the Student Loan Fund established from contributions made by the Students' Union and the University. Thirdly, a Students' Union donation has made possible urgent cash loans not exceeding $100 for a period of one month.

In all cases assistance is limited to students with reasonable academic records and whose financial circumstances warrant loans. Students granted assistance of either kind are required
to give an undertaking to repay the loan under the conditions agreed upon.

Applications are made personally to the Deputy Registrar (Student Services).

UNIVERSITY CO-OPERATIVE BOOKSHOP LTD.

Membership is open to all students, on payment of a fee of $5, refundable when membership is terminated. Members receive an annual rebate on purchases of books.
Students undertaking courses in the Faculty of Applied Science are eligible to apply for the following scholarships.

Except where otherwise specified, applications on the form obtainable from the Admissions Office (phone: 663-0351, ext. 2485) must be lodged with the Registrar, the University of New South Wales, P.O. Box 1, Kensington 2033, within seven days of the publication of the award of Commonwealth University Scholarships.

In addition to those scholarships made available by the University and other bodies as set out below, cadetships are offered by the Commonwealth Service, the New South Wales Public Service Board, the Department of Railways and a number of private industrial organizations. Cadets generally have their University fees paid by the employer, and are employed at cadet rates of pay during their course.

Commonwealth University Scholarships

There are three types, and all may be applied to full-time, part-time and external courses, and for pass and honours courses:—

Open Entrance Scholarships, which are granted on the results of the Higher School Certificate Examination to students who are under thirty years of age on 1st January of the year in which they are first awarded the scholarship, and who with their parents are permanent residents of Australia; Second or Later Year Scholarships, which are awarded on the results obtained in approved university courses, are available to students who have completed the equivalent of one year of a full-time course (age and residential qualifications are the same as for Open Entrance); and Mature Age Scholarships, which are available to students who are over thirty on 1st January of the year in which they are first awarded a scholarship. Applicants should be permanent residents of Australia.

Benefits include payment of all tuition fees and other compulsory fees and living allowances (these latter being subject to a means test) up to $700 per annum or $1,100 per annum if living
away from home. The closing date for applications is 30th September in the year immediately preceding that for which the scholarship is desired. Full particulars and application forms may be obtained from the Department of Education and Science, 70 Castlereagh Street, Sydney, 2000, or Box 3987, G.P.O. Sydney, 2001 (Telephone: 2-0323).

University Scholarships

The University annually awards up to fifteen scholarships to students who have matriculated at the Higher School Certificate Examination; ten scholarships to students who have completed certificate courses (Department of Technical Education); ten scholarships to students who have completed Trade Courses (Department of Technical Education) and ten scholarships to part-time students who have taken the Diploma Entrance course of the Department of Technical Education. The scholarships exempt the holder from payment of course fees during the currency of the scholarship. Scholarships will be awarded in order of merit on Higher School Certificate Examination results. They may be held only by persons who do not hold another award and whose parents are permanent residents of Australia. Applications for these scholarships, on forms obtainable from the Registrar, must be lodged with the Registrar within seven days of the publication of the award of Commonwealth University Scholarships.

Bursaries

Numbers of Bursaries tenable at the University are awarded to candidates of merit at the Higher School Certificate Examination whose family income falls within certain limits prescribed by the Bursary Endowment Board. Applications should be made to the Secretary, Bursary Endowment Board, P.O. Box R42 Royal Exchange, N.S.W. 2000.

Sam Cracknell Memorial Scholarship

This scholarship has a value in the range $1,000 to $1,500 and is open to students who are eligible to enrol in the final year of a full-time course leading to an honours degree of Bachelor. Candidates will be evaluated not only on academic merit but on the extent to which they have participated in the sporting programme of the University.
The Fell Scholarship (University Residential Colleges)

The Fell Scholarship is available to any undergraduate who is or will be in residence at one of the Colleges under the administration of Kensington College Ltd. The annual value of the Scholarship is $100. It may be held concurrently with Commonwealth and other scholarships.

In awarding the scholarship the academic merit and financial need of the applicant will be taken into consideration.

Applications must be made on the appropriate form and lodged with the Master, Kensington College Ltd., Box 24, P.O., Kensington, 2033.

Australian Coal Association

The Association offers scholarships for students wishing to undertake degree courses in Mining Engineering or Applied Geology. The scholarships are valued at $600 to $900 p.a., plus $200 living-away-from-home allowance where applicable, fees and a book allowance of $100 p.a. Further details may be obtained from Australian Coal Industry Research Laboratories Ltd., P.O. Box 169, Chatswood, N.S.W.

The Broken Hill Pty. Co. Ltd.

Several scholarships are provided each year for students who wish to undertake degree courses in any branch of Engineering, Metallurgy, or Applied Science. Scholarships are also available to students who have completed at least one year of any of the degree courses mentioned. Preference is given to Commonwealth Scholarship holders. Students receive annually a $400 subsistence allowance, plus $115 book allowance, and a living-away-from-home allowance ($10 to $15 per week) where applicable. Application should be made to: Manager, Personnel and Training, The Broken Hill Pty. Co. Ltd., G.P.O. Box 86A, Melbourne, Vic., 3000.

Consolidated Gold Fields (Australia) Pty. Ltd.

This Company provides one scholarship annually for students wishing to undertake a degree course in Mining Engineering, Metallurgy or Geology. The value of the scholarship is $800 p.a., plus $300 living-away-from-home allowance where applicable and paid vacation work, and is tenable for the duration of the course. Applications should be made to the Company, Gold Fields House, Sydney Cove.
Joint Coal Board Scholarships

The Joint Coal Board offers scholarships in full-time courses in Mining Engineering and Applied Geology. The value of these scholarships ranges from $700 to $1,100 per annum (including allowance for books and instruments). These scholarships will be awarded on the understanding that applicants will normally hold a Commonwealth University Scholarship which covers the cost of University fees. However, applicants without Commonwealth University Scholarships may be given consideration. While scholarship holders are not under bond it is expected that they will obtain employment in Coal Mining or a related industry on graduation. Applications on forms obtainable from headmasters or from the Secretary, Joint Coal Board, Box 3842, G.P.O., Sydney, must be lodged with the Board's Secretary not later than seven days after the publication of the award of Commonwealth University Scholarships.

King Island Scheelite (1947) Limited

This Company provides up to four scholarships annually for students who have completed the first year of the degree course in Mining Engineering, Metallurgy or Geology. The scholarships which are valued at $250-$1,200 p.a., are tenable until the course has been completed. Applications to the Company at 100 Collins Street, Melbourne, 3000.

Mount Lyell Mining and Railway Company

The Company makes available each year a number of scholarships for students entering the full-time degree course in Geology, Metallurgy, and Mining, Electrical or Mechanical Engineering. The scholarships have a value of $700 per annum and are tenable for four years. Applications should be made to the Mount Lyell Mining and Railways Company Ltd., Queenstown, Tasmania, 7467.

N.S.W. Public Service (Department of Mines)

The Department makes scholarships available for students wishing to undertake degree courses in Mining Engineering, Geophysics, Applied Geology or Chemical Engineering. The scholarships are tenable for four years and are valued at $980 p.a. for adults and from $650 to $980 p.a. for juniors, plus University fees and allowances. Applications to The Secretary, Public Service Board, Box 2, G.P.O., Sydney, 2001.
Peko-Wallsend Investments Ltd.

One or two scholarships are provided annually for students who have completed at least one year of the degree course in Mining Engineering, Metallurgy or Geology. The scholarships are valued at $800 p.a., plus tuition fees, and are tenable for the duration of the course. Applications to the Company, 47-53 Macquarie Street, Sydney, 2000.

Rum Jungle Undergraduate Scholarship

One scholarship is made available annually for students wishing to do a degree course in Mining Engineering, Metallurgy or Geology. It is open only to students who matriculated at a Northern Territory school. The scholarship is tenable for the duration of the course and is valued at $800 p.a. with annual increments of $100. Where a Commonwealth Scholarship is not held full University fees will be paid. Applications to The Manager, Territory Enterprises Pty. Ltd., P.O. Box 368, Darwin, N.T., 5794.

The Australasian Vitreous Enamellers' Institute Scholarship in Ceramic Engineering

The Institute provides a scholarship, on the basis of academic merit and personality, for students who are British subjects and who have either met University requirements for admission to Year 1 of the Ceramic Engineering course or have satisfactorily completed Year 1 of the course. The scholarship has a value of $250 p.a., and is normally tenable for four years.

Brick Manufacturers' Scholarship in Ceramic Engineering

The Brick Manufacturers' Association of New South Wales offers a scholarship in Ceramic Engineering, valued at $900 per annum to students who are British subjects and who have satisfied the conditions for admission to the first year of the Ceramic Engineering course, or who have completed satisfactorily the first year of the B.Sc. course in Ceramic Engineering or some other programme of equivalent academic standard. The scholarship is normally tenable for four years and may be held concurrently with a Commonwealth Scholarship.

New South Wales State Brickworks Scholarship in Ceramic Engineering

The State Brickworks of the Department of Public Works of New South Wales has made available an undergraduate scholar-
ship in Ceramic Engineering to the value of $900 per annum for students who are British subjects and who have satisfied the conditions for admission to the first year of the Ceramic Engineering course or who have completed the first year of the BSc course in Ceramic Engineering or some other programme of equivalent academic standard.

The scholarship will normally be tenable for four years. Applicants are expected to apply for a Commonwealth Scholarship to cover course and other University fees.

**University of New South Wales Chemical Engineering Association Scholarships**

The Association offers two scholarships, on the basis of academic merit and personality, for students who are British subjects and who have either met University requirements for admission to Year 1 of the Chemical Engineering course or have satisfactorily completed Year 1 of the course or some programme of equivalent academic standard. The scholarships have a value of $200 p.a. and are normally tenable for four years. Applicants are expected to apply for a Commonwealth Scholarship to cover course and other University fees.

**Western Mining Corporation Ltd.**

The company offers annually a scholarship to the value of $1,000 to students undertaking the degree course in Chemical Engineering, Metallurgy or Mining Engineering.

**Food Technology Scholarships**

A number of scholarships are usually made available by firms in the food processing industries. These scholarships have a value of $800-$1,000 per annum, payable as a living allowance to students enrolled full-time in the Food Technology degree course. These scholarships may be held concurrently with a Commonwealth Scholarship.

**Australian Industries Fuel Scholarships**

Under the auspices of The Institute of Fuel (Australian Membership) a number of awards of $300 each are offered to students who are about to enrol in or have already completed one or more years of an approved course leading to professional qualifications in fuel. The awards are unbonded and holders of Commonwealth Scholarships may apply. Applications giving age, details of previous education, examination record and the names of two referees should reach the Honorary Secretary, The Institute of Fuel (Australian Membership), Box 169, P.O., Chatswood, N.S.W., 2067, by 1st February, 1972.
James Howden Scholarship in Fuel Engineering

James Howden & Co. provide one scholarship in Fuel Engineering with a value of $300 per annum. This is normally tenable for one year but may be extended subject to satisfactory progress in the course and availability of funds.

John Strevens' Fuel Engineering Scholarship

Mr. John Strevens offers a scholarship to the value of $300, on the basis of academic merit and personality, for students who are British subjects and have met University requirements for admission to any year of the full-time BE course in Fuel Engineering (with Fuel Engineering electives). The scholarship is normally tenable for one year, but application for extensions will be considered subject to satisfactory progress in the course and the availability of funds.

Waste Disposal Conference Committee Scholarships in Fuel Engineering

The Waste Disposal Conference Organizing Committee provides each year two scholarships of $300 each for students eligible to enter any year of the full-time BE course in Chemical Engineering with fuel electives. The scholarships are normally tenable for one year but may be extended subject to satisfactory progress in the course and availability of funds.

C.I.G.-E.M.F. Scholarships in Metallurgy

The Commonwealth Industrial Gases Ltd. may provide annually a scholarship tenable at the University of New South Wales for students wishing to enrol in the full-time course for the B.Sc. degree in Metallurgy. If awarded, the scholarship will be tenable for a maximum of four years, and will have a value of $500 per annum payable in fortnightly instalments as a living allowance. Applicants are expected to apply for a Commonwealth Scholarship to cover course and other University fees.

Conzinc Riotinto of Australia Ltd.

The Company offers each year two scholarships for students wishing to qualify for the degree of Bachelor of Science in Metallurgy or Bachelor of Engineering in Mining Engineering. Applicants may be students who have completed one or more years of an approved course. The value of each scholarship is $700 per annum, or $1,000 per annum if the student is living away from home, plus a book allowance of $100. It is expected that applicants will hold Commonwealth Scholarships, which will cover the cost of fees.
Electricity Commission of New South Wales

The Commission offers scholarships to students wishing to undertake degree courses in Metallurgy or Industrial Chemistry. The scholarships are valued at $1,608 in First Year rising to $2,560 in Fourth Year, plus fees and vacation training. Further details may be obtained from the Electricity Commission of N.S.W., 1 Castlereagh Street, Sydney, 2000.

Metal Manufactures Clement Blazey Memorial Scholarship in Metallurgy

Metal Manufactures Ltd. of Port Kembla provide the Clement Blazey Memorial Scholarship for students enrolling in the full-time course in Metallurgy leading to the Degree of Bachelor of Science. The scholarship is available in alternate years (next available in 1972), and has a value of between $200 and $800 per annum payable to students as a living allowance and will normally be tenable for four years. It may be held concurrently with a Commonwealth Scholarship.

School of Metallurgy Scholarship

Staff members of the School of Metallurgy have undertaken to provide a scholarship for students wishing to enrol in Year 1 of the full-time course (Pass or Honours) in Metallurgy. The value of the scholarship is $500 per annum, and is normally tenable for four years.

Mining and Metallurgical Bursaries

The Trustees of the Mining and Metallurgical Bursaries Fund offer bursaries to the value of $100 to full-time students who are British subjects and who intend to enter the mining and metallurgical industries, and who have completed, at least, the first year of bachelor degree courses in Geology, Mining Engineering or Metallurgy. The bursaries are tenable for one year, although the same student may receive an award in successive years of his course. Closing date for applications is 31st March, and they must
be lodged with the Head of the School of Mining Engineering, Metallurgy or Applied Geology.

**Stan Sawyer Memorial Scholarship to Coal Mining Students**

The Colliery Managers' Association of New South Wales provides one scholarship in Mining Engineering for students eligible to enter the third or fourth years of the course. The scholarship has a value of $200 per annum and is tenable for one year.

**Textile Technology Scholarships**

The textile companies listed below have undertaken to provide a number of scholarships for students wishing to enrol in courses leading to the degree of Bachelor of Science (Pass and Honours) in Textile Technology: Bradmill Industries Ltd., Bond's Industries Ltd., F. & T. Industries (Aust.) Ltd., Fibremakers Ltd., Prince-Smith and Stells Ltd., Universal Textiles (Aust.) Ltd. Each scholarship has a value of $1,000 per annum and may be held concurrently with a Commonwealth Scholarship. An applicant for this scholarship will also receive consideration for the Wool Research Trust Fund Scholarships in Textile Technology.

**Wool and Pastoral Sciences Scholarships**

Several firms and banks associated with the wool industry endow scholarships in courses leading to the Bachelor of Science degree in Wool and Pastoral Sciences. The Scholarships now current have been made available by William Cooper & Nephews (Aust.) Pty. Ltd., Merck Sharp & Dohme (Aust.) Pty. Ltd., the Commercial Banking Company of Sydney Ltd. and the National Council of Wool Selling Brokers of Australia, The Australian Estates Co. Ltd., Australian Wool Board, and others. Valued at $1,000 per annum, these scholarships are normally tenable for four years, and may be held concurrently with a Commonwealth Scholarship. An applicant for these scholarships will also receive consideration for the Wool Research Trust Fund Scholarships in Wool and Pastoral Sciences.
Wool Research Trust Fund Scholarships in Wool and Pastoral Sciences and Textile Technology

A number of scholarships for courses in Wool and Pastoral Sciences and Textile Technology may be made available by the Wool Research Trust Fund (Commonwealth Government). The scholarships provide an allowance of $1,000 per annum for living expenses for four years, and successful applicants may hold a Commonwealth Scholarship concurrently.
FACULTY REGULATIONS

RULES OF PROGRESSION

Progression in Full-Time Courses Where Progression is by the Year

1. No full-time student (except those in the Science course, or in Arts, Commerce or Engineering) will be permitted to attend lectures or sit for examination in any subject in any year until he has passed in all subjects of the previous year, unless special permission has been granted by the faculty in which he is enrolled.

2. A student who fails to qualify to progress to the next year of the course where progression is by years may be granted, by the Head of the School conducting the course, exemption from further attendance and examination in any subject in which he has achieved a pass at a satisfactory standard. Such student may repeat those subjects required to complete the year by attendance at either day or evening classes.

3. Any student who elects to transfer to the related part-time course is not eligible to be considered for additional deferred examinations at the time of transfer and may not qualify for progression to the next year of the full-time course merely by completing the part-time equivalents of the subjects in which he has failed.

4. In general, students who fail in full-time courses, and who transfer to part-time courses, shall not be re-admitted with standing to the full-time course until they have graduated from the part-time course.
The Faculty of Applied Science consists of the Schools of Applied Geology, Chemical Engineering, Chemical Technology, Geography, Metallurgy, Mining Engineering, Textile Technology and Wool and Pastoral Sciences. These Schools offer full-time undergraduate courses leading to the degrees of Bachelor of Science and Bachelor of Engineering. The Schools of Chemical Engineering, Chemical Technology, Metallurgy, and Mining Engineering (at Wollongong and Broken Hill), offer part-time courses leading to the degree of Bachelor of Science (Technology) and Bachelor of Science (Engineering).

Full-Time Courses

Full-time courses of four years’ duration leading to the degree of Bachelor of Science are offered in Applied Geography, Applied Geology, Ceramic Engineering, Food Technology, Industrial Chemistry, Metallurgy, Textile Technology and Wool and Pastoral Sciences. Four-year courses leading to the degree of Bachelor of Engineering are offered in Chemical Engineering and Mining Engineering.

Honours: Candidates for honours are required to undertake special reading and other assignments as directed by the Head of the School concerned. In considering the award of Honours special attention is paid to the performance of a candidate in the final research project, for which a thesis describing a theoretical or experimental study is required. Honours are awarded in Class I, Class II division (I), and Class II division (II).

Industrial Training Requirements: In the scientific and technological courses close association with industry is maintained on the practical aspects of the professions. This is achieved in most of the courses of the Faculty by requiring students to complete an approved industrial training programme prior to graduation. This is normally carried out during the Summer Recess. In the case of Wool and Pastoral Sciences, students are required to complete thirty-six weeks’ approved practical work. In Mining Engineering students will undertake a programme of practical training of at least 100 days.
Part-Time Courses

The Schools of Chemical Engineering, Chemical Technology, Metallurgy and Mining Engineering offer six-year part-time courses leading to the degree of Bachelor of Science (Technology) in Chemical Engineering, Food Technology, Industrial Chemistry, Ceramics, Metallurgy, and Mining Engineering (Wollongong). At Broken Hill a part-time course in Mining Engineering leads to the degree of Bachelor of Science (Engineering) and a part-time course in Mineral Processing to the degree of Bachelor of Science (Technology).

Students who qualify for the B.Sc(Tech.) degree in the Faculty of Applied Science and who wish to proceed to a B.Sc. or B.E. degree will normally be required to complete further work which will involve at least one year of full-time attendance.

Holders of the degree of BSc (Tech) or BSc (Eng) will be eligible to proceed to the degree of Master of Science, Master of Engineering or Master of Applied Science, subject to the regulations relating to these degrees.

Transfer is also possible from full-time courses to the part-time BSc (Tech) and BSc (Eng) courses, but one of the conditions for the award of the BSc (Tech) and BSc (Eng) degrees is that at least three years of approved industrial experience be gained before graduation. This requirement will apply to students transferring from full-time courses.

BSc (Tech) and BSc (Eng) Courses With Partial Full-Time Attendance

BSc (Tech) and BSc (Eng) courses may be completed by a combination of full-time and part-time study. The first two stages are to be completed part-time; in the following two years students complete the second and third years of the corresponding full-time course; and in the fifth stage a special programme is prepared. Full details are set out below under the Schools which provide the courses.

General Studies Programme

All undergraduates in Faculties other than Arts and Law are required to complete a General Studies programme. In this way the University hopes to give its students a general understanding of the different aspects of the world in which they live. The Department of General Studies publishes its own handbook which is available free of charge. All details regarding general studies courses and requirements are contained in it, and students are advised to obtain a copy.
SCHOOL OF APPLIED GEOLOGY

The development of natural resources necessitates a type of training for geologists which embraces basic geological instruction and various features of its application in practice. The structure and syllabus of the course in Applied Geology are designed to enable graduates to enter immediately into various aspects of applied geology and to play an effective part in associated engineering and technological practice.

In the early part of the course students receive instruction in the allied fundamental sciences as well as in introductory geology. Later geological instruction is developed and emphasis is placed progressively on engineering applications and on economic aspects of geology.

The applied nature of the course is indicated by the inclusion of such subjects as Geomechanics, Mining, and Mineral Process Engineering. Courses in Surveying, Geophysics, Exploration and Mining Geology, Engineering Geology and Petroleum Geology are added to the basic geology subjects in the later stages of the course. It is also recommended that before graduation students obtain a minimum of eight weeks' professionally oriented, or industrial, experience.

Attendance at the University for students taking the full-time course in Applied Geology is for twenty-eight weeks per year on the basis of two sessions of fourteen weeks each. The second session of the fourth year is devoted to work on a project.

A three-year course (full-time) and a seven-year course (part-time) are available to students in the Faculty of Science. Selected students in the Faculty of Science may also read for an honours degree in Geology.

In order to meet the demands for trained Geophysicists in the Commonwealth a Graduate Diploma course in Applied Geophysics is offered.

A Master of Applied Science course in Hydrogeology has also been instituted to train people to deal with the problems of underground water supply.

* Univ. of Tas. Summer School course, Geology I, is accepted as entrance qualification for Year II of Applied Geology in case of students who have not previously attempted Geology I at this University.

† Attendance is compulsory at field tutorials, to which approximately 14 days will be devoted during the year.

§ Prerequisites: 25.001 Geology I and 2.001 Chemistry I.

† If 10.111 or 10.211 is taken the totals for Lec. and Lab./Tut. vary slightly depending on the parts selected.

† Session 2 is devoted to field and laboratory work on a project.

* Four short visits to civil engineering works and mine workings are included in the course.
The School of Chemical Engineering consists of the Departments of Biological Process Engineering, Chemical Engineering, Food Technology and Fuel Technology. The course in Chemical Engineering contains a number of electives in technical areas, including Biological Process Engineering and Fuel Engineering.

Chemical engineering is the application of the principles of the physical sciences, together with the principles of economics and human relations, to fields in which matter undergoes a change in state, energy content or composition. The chemical engineer is generally responsible for the design, construction and operation of plant and equipment used in the chemical processing industries.

Biological Process Engineering is the extension of chemical engineering principles to systems involving biological materials. Typical areas of interest are: the manufacture of antibiotics; the fermentation industries; bacterial mineral extraction; and the production of industrially useful materials by the growth and utilisation of micro-organisms.

Fuel engineering is primarily concerned with the practical and economic applications of scientific knowledge and engineering experience to the production, processing and utilization of fuels and energy.

Food technologists are concerned with the management of foods from the time of production until they reach the consumer. It is their responsibility to see that foods do not spoil or perish. This covers handling, transportation, storage and packaging of fresh and prepared foods and the techniques for preservation such as cold storage, freezing, canning, dehydration and packaging.

For the award of honours, students need to have distinguished themselves in the formal work, in other assignments as directed by the Head of the School, and in the final year project, for which a thesis is required.
It is recommended that before graduation students in the full-time courses obtain a minimum of eight weeks' professionally oriented, or industrial, experience. Students in the part-time courses must complete three years of industrial training concurrently with their University work.

DEPARTMENT OF CHEMICAL ENGINEERING

Chemical Engineering—Full-Time Course Bachelor of Engineering

This course extends over four years and students study full-time during the day for twenty-eight weeks of each year (excluding examination and recess periods).

Successful completion of the B.E. course is accepted by the Council of Engineering Institutions, U.K., the Institution of Engineers, Australia, and the Royal Australian Chemical Institute as sufficient qualification for corporate membership.

### Chemical Engineering—Part-Time Course

**Bachelor of Science (Technology)**

This course, which extends over six years of part-time study, covers approximately the same subject matter as the first three years of the four-year program. The course is designed to provide a comprehensive education in chemical engineering principles and practice, with special emphasis on applied science. Students are required to complete a minimum of 60 courses, divided into two categories: core courses and electives. The core courses include subjects such as Chemical Engineering Principles III, Process Dynamics and Control, Chemical Engineering Design II, and others, while electives allow students to specialize according to their interests.

#### Hours per week

<td>6</td>
<td>12½</td>
</tr>
</tbody>
</table>

Students must complete a minimum of 60 courses in total. Electives are available to students in their fourth year, and are designed to allow for specialization in areas such as Advanced Chemical Engineering Principles, Chemical Engineering Practice, Oil and Gas Engineering, Food Technology, Fuel Engineering, and others. A project, chosen from a list of options, is also required.

In addition to the core courses, students are required to complete a minimum of 12 courses in General Studies, which may include subjects such as Operations Research, Nuclear Power Technology, and others. By the end of the fourth year, students should have completed a minimum of 186 hours of study.

---

† Students taking Year 2 or Year 3 electives at this point may prejudice their honours degree.
years of the full-time course, and is designed to meet the requirements of students who are employed in the chemical processing industries.†

Students who have completed the requirements of this course qualify for the degree of Bachelor of Science (Technology) and may proceed to the degree of Bachelor of Engineering by attending for one full-time year and completing the subjects listed in the fourth year of the full-time course. Students desiring to proceed to a Bachelor of Engineering degree must apply to the Head of the School not later than December 31 of the year in which the sixth stage is completed.

The B.Sc. (Tech.) degree is recognized by the Institution of Engineers, Australia, and the Royal Australian Chemical Institute, as sufficient qualification, and by the Institution of Chemical Engineers, U.K., as partial qualification, for corporate membership.

Chemical Engineering BSc. (Tech.) in Full-Time—Part-Time Study

Students enrolling in the Chemical Engineering, B.Sc.(Tech.) course may reduce the time required for completion by undertaking the following programme of combined part-time/full-time study:

Stage 1........ Part-time (as for B.Sc.(Tech.) course above)
Stage 2........ Part-time (as for B.Sc.(Tech.) course above)
Stage 3A..... Full-time (as for second year of full-time B.E. course above)
Stage 4A..... Full-time (as for third year of full-time B.E. course above)
Stage 5A..... Part-time (as set out below)

STAGE 5A*

A programme of 6-9 hours per week selected from the following subjects on the advice of the Head of the School of Chemical Engineering:

3.321 Fuel Engineering II
4.011 Metallurgy I
7.311 Mineral Processing I
22.112 Industrial Chemistry II
22.211 Ceramics I
22.311 Polymer Science I
44.111 Microbiology

Any other subject approved by the Professorial Board on the recommendation of the Head of School or Department.

* This course is subject to revision.

DEPARTMENT OF BIOLOGICAL PROCESS ENGINEERING

Biological Process Engineering at the undergraduate level is a course in Chemical Engineering with electives in the areas of microbiology and biological process engineering.

Chemical Engineering with Biological Process Engineering Electives — Full-Time Course Bachelor of Engineering

Year 1 is the same as for the Chemical Engineering course; Years 2, 3 and 4 are also the same as for the corresponding years in Chemical Engineering, but in Year 2 the appropriate elective is 44.111 Microbiology; in Year 3 it is 2.221 Chemistry and Enzymology of Foods; and in Year 4 3.411 Biological Process Engineering.
Successful completion of this course is sufficient qualification for corporate membership of the Institution of Engineers, Australia, The Royal Australian Chemical Institute, and the Institution of Chemical Engineers, U.K.

DEPARTMENT OF FUEL TECHNOLOGY

This Department, the first of its kind in Australia, was established to meet the growing need of Australian industrial and research establishments for graduates trained in the science and technology of fuels and their utilization.

One constant problem of the fuel industries is that of improving and developing methods of processing and using solid, liquid and gaseous fuels to meet the continuously shifting patterns of demand. It is in this field of activity that the university-trained fuel technologist has a most important part to play.

In Australia, there is a growing need for people trained in the technology of fuels, and opportunities for employment and advancement of fuel engineers are therefore particularly good.

Many exciting and revolutionary possibilities are apparent in the fuel and energy conversion industries, and there is a wide and varied field of activity which offers opportunity and challenge in the application of chemistry, physics and engineering to the problems of Fuel Science and Engineering and Environmental Pollution Control. Opportunities for postgraduate studies and research for higher degrees in these areas are particularly good.

The Council of the Institute of Fuel has accepted the degree courses in Chemical Engineering with the fuel electives as providing exemption from the examination required for admission to corporate membership of the Institute. In addition, the fuel subjects in the course, if taken separately, carry exemption from the advanced fuel subjects of the London City and Guilds Institute, conducted on behalf of the Institute of Fuel, and are thus a recognized qualification for admission to corporate membership.

Successful completion of the B.E. course in Chemical Engineering with fuel electives is accepted by the Council of Engineering Institutions, U.K., the Royal Australian Chemical Institute, and the Institution of Engineers, Australia, as sufficient qualification for corporate membership.
Chemical Engineering with Fuel Electives—Full-time Course
Bachelor of Engineering

Fuel Engineering is essentially a course in Chemical Engineering with an orientation to the fuel and energy conversion and utilization industries. This course is available as an elective option in the Chemical Engineering B.E. degree. Year 1 is the same as for the Chemical Engineering course; Years 2, 3 and 4 are also the same as for the corresponding years in Chemical Engineering, but in Year 2 the appropriate elective is 3.311 Fuel Engineering I; and in Year 3 it is 3.321 Fuel Engineering II. In Year 4, 3.331 Fuel Engineering III or 3.332 Fuel Engineering IV or 3.340 the Fuel Engineering Project can be taken.

The final year is devoted entirely to professional subjects which cover refractories and insulating materials, constitution, processing and utilization of fuels, flames and gas reactions, progress and developments in fuel science and fuel and combustion engineering. The latter includes the design, construction and performance evaluation of boilers and furnaces, instrumentation and automatic control.

DEPARTMENT OF FOOD TECHNOLOGY

Food technologists are concerned with the storage, processing, preservation, packaging and distribution of foods. Food technology—a branch of applied science—covers the management of fresh foods of all kinds, the canning, freezing, refrigeration, and dehydration of foods, the development of new foods from conventional and unconventional sources, and the utilization of the by-products of the food industries.

The food scientist acquires new knowledge by laboratory experiments. The food technologist applies such knowledge to practice in manufacture and commerce. He must, therefore, be entirely familiar with food science in its many facets.

Food technology is a profession equally suitable to men and women, and offers much in reward to the adequately trained person prepared to accept responsibility as the guardian of the quality and safety of man’s food supplies.

There is great need for food technologists to help solve the prime problem of our age—to make food supplies increase faster than the world’s population, to let nothing perish that could serve as food for man or beast.
The Department of Food Technology offers a four-year, full-time course leading to the degree of Bachelor of Science and a six-year part-time course leading to the degree of Bachelor of Science (Technology). Graduates of both courses qualify for membership of the Royal Australian Chemical Institute and the Australian Institute of Food Science and Technology.

A Graduate Diploma course in Food Technology of one year full-time or two years' part-time is designed for graduates in science or agriculture wishing to familiarize themselves with the principles of food technology.

**Food Technology—Full-time Course**

**Bachelor of Science**

This course is designed to provide depth and breadth in the relevant physical and biological sciences on which food technology is based. Graduates will be able to pursue more advanced studies in any of these sciences.

Years 2, 3 and 4 of the course have been revised. Full-time students who completed Years 2 or 3 in 1971 will continue with the course programme appearing in the 1971 Calendar and Handbook.

During the third and fourth years of the course excursions will be made to various food industries. Detailed reports of some of these visits are required.

A detailed report of the student’s activities during his period in industry will be required, and will be taken into account in the classification for the Honours list.
Food Technology—Part-time Course
Bachelor of Science (Technology)

This course is designed for students who are employed in the food processing industries. It extends over six part-time years of study, and leads to the degree of Bachelor of Science (Technology). A minimum of three years' concurrent industrial training is required before graduation.

The course covers the same subject matter as the first three years of the full-time course. For the first two years students follow a common course in which general biology is taken, and thereafter specialize in the biological sciences, which are fundamental to the study of food science and technology. The subjects of Stages 5 and 6 may be available only in day-time classes, and substantial day-time release from industry may be required.

Students who have completed the requirements of this course and have qualified for the degree of Bachelor of Science (Technology) may proceed to the degree of Bachelor of Science by attending for one full-time year and completing the subjects listed in fourth year of the full-time course. Students desiring to proceed to a B.Sc. degree must apply to the Head of the School not later than December 31 of the year in which the sixth stage is completed.

Stages 4, 5 and 6 of the course have been revised. Part-time students who completed Stages 4 or 5 in 1971 will continue with the course programme appearing in the 1971 Calendar and Handbook.

### Food Technology B.Sc. (Tech.) in Full-Time/Part-Time Study

Students enrolling in the Food Technology B.Sc. (Tech.) course may reduce the time required for completion by undertaking the following programme of combined part-time/full-time study:

- **Stage 1**... Part-time (as for B.Sc.(Tech.) course above)
- **Stage 2**... Part-time (as for B.Sc.(Tech.) course above)
- **Stage 3A**... Full-time (as for second year of full-time B.Sc. course above)
- **Stage 4A**... Full-time (as for third year of full-time B.Sc. course above)
- **Stage 5A**... Part-time

#### Stage 5A

A programme of 6-9 hours per week selected from undergraduate subjects on the advice of the Head of the School.
SCHOOL OF CHEMICAL TECHNOLOGY

Courses are offered on a four-year, full-time basis in the fields of Industrial Chemistry and Ceramic Engineering leading to the award of the degree of Bachelor of Science. Six-year part-time courses are also available in Industrial Chemistry and Ceramics.

Polymer Science options in the Industrial Chemistry course are provided for students with a particular interest in organic and physical chemistry who wish to make a study of macromolecules — natural and synthetic resins, plastics and elastomers.

It is recommended that before graduation students in the full-time courses obtain a minimum of eight weeks' professionally oriented, or industrial, experience. Students in the part-time courses must complete three years of industrial training concurrently with their University work.

DEPARTMENT OF INDUSTRIAL CHEMISTRY

The courses in Industrial Chemistry are designed to provide scientists trained for industries and organisations concerned with the development, manufacture and use of inorganic and organic industrial chemicals. Graduates from these courses will play an effective role in the research and development, production control, quality control and technical sales and service aspects of the chemical industries.

Arrangements have been made with Wollongong University College for students who have completed a specified programme to be admitted with advanced standing to Year 3 of the Industrial Chemistry course at the University of New South Wales.

DEPARTMENT OF CERAMIC ENGINEERING

The Department of Ceramic Engineering offers courses designed to provide scientists and engineers fitted for service in industries and organisations concerned with the development, manufacture and use of materials in the fields of: whitewares, structural ceramic productions, high-temperature materials,
electrical ceramics, glass, ceramic surface coatings, abrasives, cermets and nuclear ceramics. Graduates from these courses would be able to find employment in the general field of ceramics in the following capacities: ceramist or ceramic engineer on research and development, production control, quality control, product evaluation, technical sales and service.

Arrangements have been made with the University of Newcastle and the Wollongong University College for students who have completed a specified programme at these institutions to be admitted with advanced standing to Year 3 of the Ceramic Engineering course at the University of New South Wales.

DEPARTMENT OF POLYMER SCIENCE

The Department of Polymer Science provides options in the Industrial Chemistry courses and supervises Honours Projects which Industrial Chemistry students may elect to take. The options introduce Industrial Chemistry students to the basic principles of polymer chemistry and polymer physics, giving them a familiarity with the surface coatings, plastics and rubber industries.

Students wishing to receive an intensive training in polymer science are advised, on graduation, to enrol in the Graduate Diploma course in Polymer Technology.

</table>
Geographers study the spatial relationships of the phenomena which make up man's physical and social environment, and aim to establish principles which govern those relationships. The geographer may concentrate on selected variables, as in systematic geography, or may deal with variables operative in a specific area, as in regional geography.

The cultural significance of geography lies in its contribution to an understanding of the total environment, but the geographer's skills also find practical application in the conservation and planned development of resources. Increasing numbers of geomorphologists are finding such professional employment; for instance, geomorphologists and biogeographers are undertaking resource-inventory surveys in northern Australia, and economic geographers are engaged as regional planners and market researchers.

**Applied Geography—Full Time Courses**

**Bachelor of Science**

The School offers three four-year full-time courses leading to the degree of Bachelor of Science. These four-year full-time undergraduate courses aim to train professional geographers for entry into applied fields, with elective specialisation in biogeography, economic geography with emphasis on urban geography, or geomorphology and pedology. The physical basis of geography is studied systematically in the first year, while in the second year there is similar treatment of economic and social geography with additional consideration of geographic methods in general. There is progressive specialisation in the following years, but all courses in physical geography have common training in fundamental observation and data handling. For the award of honours, students will be required to have distinguished themselves in formal work, in additional assignments as directed by the Head of the School, and in the final year project for which a thesis will be required.

It is recommended that all students spend a period of four to six weeks with organisations concerned with the investigation and planned use of resources *et cetera.*

(Honours)

Arts — 27.054 Geography IVA
(Honours)

Science — 27.031 Geography IS
The metallurgical profession is developing rapidly in importance in Australia, in keeping with the recent spectacular growth of our metal and mineral industry. In terms of value of production this industry has become recognized as one of Australia's most important, especially in terms of export earnings. Expansion of the industry has greatly enhanced the need for metallurgists.

Industrial development in metallurgy has been accompanied by, and is based on, the development of metallurgical research. This is being carried on in a number of laboratories run by industry, government, and the universities.

The graduate metallurgist has a wide choice of type of employment and location. He may work in production, technical control or development, either in the ore treatment or metal extraction plants in locations such as Newcastle, Port Kembla, Broken Hill, Mt. Isa, Mt. Morgan, Port Pirie, Whyalla, Kwinana, Gladstone or Pilbara; or in the metal manufacturing plants, including the automobile, aircraft, ship-building and other industries, of the main centres and capital cities. In the metal industry in general the opportunities for a career in management are excellent, since it is a tradition in this industry that management should be in the hands of technical men. If the graduate is inclined towards research and development, he will find considerable scope in various government, University, and industrial research laboratories.

The undergraduate courses in metallurgy have been designed to prepare students for employment in metallurgical industries and research institutions, and involve a general training in basic sciences and engineering. These fundamental principles are then extended to cover studies of the extraction, refining, working, fabrication and use of metals.

The first year of the full-time Metallurgy course consists of physics, chemistry, mathematics, and either engineering or geology. The structure of this first year course is similar to that of many other science, applied science and engineering courses. Consequently, students may delay their final choice of a professional course until the end of first year.
These courses meet the formal educational requirements for admission to the professional metallurgical institutes, such as the Australasian Institute of Mining and Metallurgy and the Institution of Metallurgists (London). Further details about membership of these institutes, the Australian Institute of Metals and the undergraduate Metallurgical Society of the University, all of which students are encouraged to join, may be obtained from the Head of the School.

While the emphasis in the course is on providing a broad fundamental background in all branches of metallurgy, provision is made for a limited amount of specialization of the student’s own choice in the final year.

Metallurgy—Full-Time Course
Bachelor of Science

Students in this course attend the University for twenty-eight weeks over two sessions from March to November (excluding examinations and recesses).

Students are required, before graduation, to have gained at least sixteen weeks of approved industrial experience, and to have submitted satisfactory reports on the work done to comply with this requirement. Industrial experience is normally obtained during the long vacations at the end of second and third years. During the second, third and fourth years of the course, visits are made to various metallurgical works, and students are required to submit reports on some of these.

### Metallurgy—Part-Time Course‡

**Bachelor of Science (Technology)**

The part-time course extends over six years of two sessions each. Students are required to obtain at least three years’ approved experience in a metallurgical industry or research establishment concurrently with studies.

‡ See below for outline of this course involving combined full-time and part-time study.
During the last three years of the course visits are made to various metallurgical works, and students are required to submit reports on some of these.

* This course is subject to revision.
SCHOOL OF MINING ENGINEERING

The School of Mining Engineering offers a full-time course in Mining Engineering leading to the degree of Bachelor of Engineering (pass or honours).

The School also offers two courses at graduate level requiring one year of full-time or two years of part-time study leading to the Graduate Diploma (GradDip) in Mining Engineering or Mineral Technology.

Part-time courses in Mining Engineering and Mineral Processing are conducted at the W. S. & L. B. Robinson University College, Broken Hill. The first two years of a full-time course leading to the degree of Bachelor of Engineering have been available at Wollongong since 1970, the third and fourth years of this course to be completed at Kensington. Students in the part-time Mining Engineering course may also complete the requirements for the Bachelor of Engineering degree at Kensington after obtaining the approval of the Head of the School.

Details of the full-time and part-time courses at Wollongong are given in the Wollongong University College Handbook.

The courses within the School prepare graduates for employment in the mineral industries and in research institutions which are linked with those industries.

Since 1850 the mining industry has been a pioneering force in the development of Australia. Mining engineers who carry on this tradition must realize that the problems of today are complex and require great technical skill. They also must be aware that the future offers an increasing number of opportunities for all mining engineers.

It is obvious that the mining industry will become, because of its spectacular rate of growth, an even greater influence in the development of this and neighbouring countries. Vigorous expansion faces the industry. For example, extensive and successful prospecting is already taking place, particularly in those areas which in the past received little attention, and hidden, sub-surface
deposits are being discovered. After the discovery of a promising deposit there is a period of testing, proving and assessment followed by a period of development and construction. Finally, there is the production period with which is associated some extension of activities which include smelting and the establishment of new industries.

**Mining Engineering—Full-Time Course**

**Bachelor of Engineering**

The first two years of the course are similar to the first and second years of the Civil Engineering course. The third year introduces Mining Engineering and Mineral Processing. The fourth year programme is concerned with the professional Mining Engineering subjects.

The aim of the training is to give students a thorough foundation in mining engineering and so permit them to enter "quarrying", "coal mining", "metalliferous mining" or the "petroleum industry", and to be employed in any of the phases of these industries, ranging from exploration to production in a technical or managerial role.

To cater for the varied needs of the industry and to develop the special talents of individual students, it is possible in the final year of the course to do advanced work in either Mining Engineering or Mineral Processing. In addition, during the final year of the course students are given a project linked with the mineral industry elective for which a thesis must be submitted.

During the undergraduate course, students are advised to seek practical experience in mines during the long recesses. The minimum requirement of 100 days' industrial experience is to be completed before entering fourth year. Mining companies prepare programmes so that the students obtain special experience in mining. This experience is important; it is related to the academic training received within the School, and can contribute to the experience record of candidates for the Mine Manager's Certificate.

After graduation it is normal for mining engineers to obtain the abovementioned statutory certificate of competency from one of the State Government Departments of Mines. Graduates in Mining Engineering are exempt from certain parts of the relevant examination.

Bachelor of Science (Engineering)
(Wollongong University College)

For details of this course potential candidates should refer to the Wollongong University College Handbook.

Mineral Processing—Part-Time Course
Bachelor of Science (Technology)
(W. S and L. B. Robinson University College, Broken Hill)

This course is designed to meet the requirements of students who are employed by the mineral processing industries. It extends over six part-time years of study and leads to the degree of Bachelor of Science Technology. A minimum of three years' concurrent industrial training in approved industries is required before graduation.

† The Project for an award with merit will be more advanced than that required for the award of the pass degree.
The conversion of textile raw materials into their finished products is simply a succession of, and an interaction between, a number of chemical, physical and engineering processes. Graduates with a good background in physics, chemistry or engineering, together with a broad training in the whole range of textile sciences and technologies, as provided in the courses in Textile Technology, will substantially meet the present and future technological requirements of the textile and allied industries. Since present day textile technology is based on engineering and the fundamental sciences, excellent opportunities also await university-trained scientists and technologists in research and development organisations. Such scientists and technologists will play a decisive part in bridging the gap which exists between fundamental research and its industrial application.

Students are given the opportunity of choosing from four courses, viz., Textile Chemistry, Textile Physics, Textile Engineering and Textile Manufacture. The course in Textile Manufacture, which includes subjects in Commerce and Applied Psychology, is especially designed to meet the undoubted need for executives in industry who have been given a comprehensive technological training. Each course extends over four years. All students take a common first year, and they need not choose the option they desire to follow until the end of that year. The aim of all four courses is to produce graduates who have acquired a comprehensive knowledge of all the textile sciences and technologies, the courses themselves differing only in the subjects offered outside the School in the second and third years. Students are required to undertake a minimum of eight weeks’ industrial training during the long recesses between Years 2 and 3, and 3 and 4. The fourth year is common to all four Textile Technology courses.

Motivated by strong competition from cheaply-produced man-made fibres, wool producers, by the implementation of the Wool Use Promotion Act of 1945 and subsequent legislation, have undertaken a programme to improve efficiency through research, increased extension services, and adequate publicity for wool. The full development of this programme will require specialist personnel trained to give service to the pastoral industry.

To meet this need the School of Wool and Pastoral Sciences offers a full-time course in Wool and Pastoral Sciences, leading to the degree of Bachelor of Science (pass or honours).

From 1972 the School will provide the course in Wool and Pastoral Sciences (Education Option), previously offered under the title “Sheep and Wool Technology (Education Option)” within the Board of Vocational Studies. The purpose of the course is to provide training at the tertiary level for teachers of sheep husbandry and wool science in the Department of Technical Education and in the Agricultural High Schools and Colleges. Students who complete the course successfully will be eligible to become certificated teachers. Graduates could proceed to higher degrees in the field of Rural Extension or of certain scientific aspects of the pastoral industry.

At the graduate level the School offers a course requiring one year of full-time or two years of part-time study leading to the Graduate Diploma in Wool and Pastoral Sciences. Research may also be undertaken for the degrees of Master of Science and Doctor of Philosophy.

The Wool and Pastoral Sciences courses aim to provide a pool of graduates in whom has been inculcated a liberal scientific outlook, and the habit of exact and logical thought. These graduates will be familiar with the latest developments in the various fields relating to Wool and Pastoral Sciences and the utilization of the products stemming from the industry. Graduates of the School are keenly sought after for positions as research workers, teachers, extension workers, agricultural journalists, valuers, and managers of estates, and for other professional occupations in the pastoral industry.
The first year of the B.Sc. course consists of a basic training in general science; vocational subjects essential to all branches of the wool industry are given in the second, third and fourth years. The fourth year work includes a project which will give each student an opportunity to express initiative and originality. By association with lecturers, and teachers who are all engaged in research, we aim to provoke both curiosity and interest in students who will themselves endeavour to contribute to the advance of efficiency.

In Years 3 and 4 provision is made for students who wish to specialize in Plant Sciences, Animal Production, Wool Technology, Farm Management and Economics or in the appropriate scientific areas of Genetics and Biostatistics, Physiology, Nutrition and Biochemistry, Rural Extension, Agricultural Chemistry or Parasitology.

From time to time obligatory excursions, farm tours and consolidated courses on University field stations are arranged for senior students.

Requirements for Industrial Training

Each student is required to complete satisfactorily twenty-four weeks' practical work on approved sheep properties, sixteen weeks of which work should be concurrent with the course. If a student has done practical work before entering the course, this may be taken into consideration in determining any further work required. Students in the Education Option are also required to obtain in Years 3 and 4 the equivalent of three hours per week classroom experience in Agricultural High Schools and/or the Department of Technical Education.

In order to obtain recognition of practical work carried out students shall:

1. Make application for the approval of the properties where they intend to carry out the practical work. Students should endeavour to obtain experience in the pastoral, sheep-wheat, and high rainfall zones.

2. At the conclusion of each period of work, produce certificates from employers stating periods of employment and reporting on the quality of the student's work.
3. Supply reports as hereunder:

(i) On work carried out in the long vacation—
   (a) Monthly interim reports setting out briefly the nature of the work engaged in, with any notes of topical interest.
   (b) A final report on both the district and property, to be submitted within one month of resumption of lectures.

(ii) On work carried out in short vacations—A brief report to be submitted within one week of the resumption of the session.

(iii) By students who carry out work for twenty-four weeks on a property or properties—
   (a) Interim reports to be submitted every two months.
   (b) Final reports to be submitted by March 31 in the year of resumption of studies. The nature of the interim and final reports shall be as required for work carried out in the long vacation.

**NOTE**
1. Students may take either Geography I or Physics I.
2. Subjects in italics are compulsory.
3. Course requires yearly progression and apart from compulsory subjects, there are no co- or pre-requisites.
Bachelor of Science

Years 1 and 2 of this course are the same as for the existing B.Sc. degree course in Wool and Pastoral Sciences. As a transition measure students doing Year 2 of the Education Option in 1972 will take a mathematics subject, and 10.331 Statistics will be deferred until Year 3. They will be exempt from the General Studies electives in Year 2 and part of Year 3 by reason of having taken 12.001 Psychology I in Year 1.

POSTGRADUATE STUDY

The Faculty provides facilities for students to proceed to the higher degrees of Doctor of Philosophy, Master of Engineering, Master of Science and Master of Applied Science. Courses leading to the award of a Graduate Diploma are also offered. The degree of Doctor of Science is awarded for a contribution of distinguished merit in the fields of science, engineering or applied science.

The degrees of Doctor of Philosophy, Master of Engineering and Master of Science are all awarded for research and require the preparation and submission of a thesis embodying the results of an original investigation or design. Candidates for the Doctorate of Philosophy may read for the degree in this Faculty and are normally involved in three years' work. The work for the Master's degree may be completed in a minimum of one year, but normally requires two years of study.

The Faculty offers courses leading to the award of the degree of Master of Applied Science. The institution of this degree springs from the recognition of the considerable advance of knowledge in the fields of applied science and engineering which has marked recent years and the consequent increased scope for advanced formal instruction in these fields. Students are usually in attendance at the University for one year on a full-time basis, or for two years part-time.

Numbers of courses are also offered at the postgraduate level leading to the award of a Graduate Diploma. Students are required to attend courses of study for one year full-time or two years part-time. The courses available for the Graduate Diploma are Applied Geophysics, Corrosion Technology, Food Technology, Fuel Technology, Polymer Technology, Mineral Technology, Mining Engineering and Wool Technology.

Courses leading to the degree of Master of Applied Science and to Graduate Diplomas are available in Sydney only. Candidates may register for all the research degrees at Sydney. At Wollongong University College and the W. S. and L. B. Robinson University College, Broken Hill, they may register for the degrees of Master
of Science and Master of Engineering, subject to adequate research facilities and satisfactory supervision being available in the candidate's particular field of study. Where these special conditions can be met the Professorial Board may grant permission to a candidate to register for the degree of Doctor of Philosophy in these centres.

The conditions governing the award of the various higher degrees and graduate diplomas are set out in the Calendar.

Short, intensive graduate and special courses are provided throughout each year designed to keep practising scientists and technologists in touch with the latest developments in their various fields.

**POSTGRADUATE ENROLMENT PROCEDURE**

**Courses Requiring Attendance at Formal Lectures**

Students wishing to enrol in Master of Applied Science or Graduate Diploma courses must make application on the appropriate form to the Registrar at least two months in the case of graduate diplomas and six weeks in the case of Master's degrees, before the commencement of the course. Applicants will be advised whether they are eligible to enrol in the course concerned and of the subsequent procedure to be followed.

Later year enrolments must be made during Enrolment Week in accordance with the special arrangements made by the individual Schools.

No enrolments will be accepted after March 31 without the express approval of the Registrar which will be given in exceptional circumstances only.

Students who have completed the final examinations but have a thesis or project still outstanding are required to enrol for the period necessary to complete the thesis and to pay the requisite fees.

**Research Degrees**

Details of the procedure to be followed in order to enrol for a research degree are given in the statement of the conditions of award of the various higher degrees as set out in the Calendar.
POSTGRADUATE COURSE FEES*

MASTER OF APPLIED SCIENCE AND GRADUATE
DIPLOMA COURSES

Completion of Enrolment

Students enrolling in postgraduate courses which include formal instruction are required to attend the appropriate enrolment centre during the prescribed enrolment period† for authorization of course programme.

Fees should be paid during the prescribed enrolment period but will be accepted without incurring a late fee during the first two weeks of Session 1. (For late fees see below.) No student is regarded as having completed an enrolment until fees have been paid. Fees will not be accepted (i.e. enrolment cannot be completed) after March 31 except with the express approval of the Registrar, which will be given in exceptional circumstances only.

Payment of Fees by Session

Students who are unable to pay their fees by the year may pay by the session in which case they are required to pay Session 1 course fees and other fees for the year within the first two weeks of Session 1. Students paying under this arrangement will receive accounts from the University for Session 2 fees. These fees must be paid within the first two weeks of Session 2.

Assisted Students

Scholarship holders or sponsored students who have not received an enrolment voucher or appropriate letter of authority from their sponsor at the time when they are enrolling should complete their enrolment paying their own fees. A refund of fees paid will be made when the enrolment voucher or letter of authority is subsequently lodged with the Cashier.

* Fees quoted in the schedule are current at time of publication and may be amended by the Council without notice.
† The enrolment periods for Sydney are prescribed annually in the leaflet "Enrolment Procedure for Students Re-enrolling".
Extension of Time

Any student who is unable to pay fees by the due date may apply in writing to the Registrar for an extension of time. Such application must give year of study, state whether full-time or part-time, course in which the applicant wishes to enrol, the reasons why payment cannot be made and the extension sought, and must be lodged before the date on which a late fee becomes payable. Normally the maximum extension of time for payment of fees is until March 31 for fees due in Session 1 and for one month from the date on which a late fee becomes payable in Session 2.

Failure to Pay Fees

Any student who is indebted to the University and who fails to make a satisfactory settlement of his indebtedness upon receipt of due notice ceases to be entitled to membership and privileges of the University. Such a student is not permitted to register for a further session, to attend classes or examinations, or to be granted any official credentials.

No student is eligible to attend the annual examinations in any subject where any portion of his course fees for the year is outstanding after the end of the fourth week of Session 2 (18th August, 1972).

In very special cases the Registrar may grant exemption from the disqualification referred to in the two preceding paragraphs upon receipt of a written statement setting out all relevant circumstances.

Basis of Fee Assessment

Where course fees are assessed on the basis of session hours of attendance, the hours for each subject for purposes of fee assessment shall be those prescribed in the calendar. The granting of an exemption from portion of the requirements of a subject in which a student is enrolled does not carry with it any exemption from the payment of fees.

(a) Master of Applied Science Courses

(i) Registration Fee .. .. .. .. .. .. .. .. .. .. .. .. .. $7
(ii) Graduation Fee .. .. .. .. .. .. .. .. .. .. .. .. .. $9
(iii) Course Fee — calculated on the basis of a session's attendance at the rate of $12.50 per hour per week.
Thus the fee for a programme requiring an attendance of 24 hours per week for the session is 24 x $12.50 = $300 per session.

(iv) Thesis or Project Fee—$49 (an additional fee of $33 is payable by students who have completed their final examinations for the degree but have not completed the thesis or project for which they have been previously enrolled).

(v) Thesis or Project Resubmission Fee† $33

(b) Graduate Diploma Courses

(i) Registration Fee $7
(ii) Award of Diploma Fee $9
(iii) Course Fee — calculated on the basis of a session’s attendance at the rate of $12.50 per hour per week. Thus the fee for a programme requiring an attendance of 24 hours per week for the session is 24 x $12.50 = $300 per session.
(iv) Thesis or Project Fee—$49 (an additional fee of $33 is payable by students who have completed final examinations for the diploma but have not completed the thesis or project for which they have been previously enrolled).
(v) Thesis or Project Resubmission Fee† $33

(c) Miscellaneous Subjects

Postgraduate subjects taken as “Miscellaneous Subjects” (i.e. not for a degree or diploma) or to qualify for registration as a candidate for a higher degree are assessed on the basis of a session’s attendance at the rate of $12.50 per hour per week. Thus the fee for a subject requiring an attendance of 2 hours per week for the sessions is 2 x $12.50 = $25.00 per session.

Other Fees

In addition to the course fees set out above, students in categories (a) and (b) are required to pay:

Library Fee—
Annual Fee, $16.
University Union—entrance fee—$20.

* Students paying this fee who are not in attendance at the University are not required to pay the Student Activities Fees or the Library Fee.
† Candidates paying this fee are not required to pay the Student Activities Fees or the Library Fee.
Student Activities Fees—
University Union†—$30—annual subscription.
Sports Association†—$4—annual subscription.
Students' Union†—$6—annual subscription.
Miscellaneous—$17—annual fee.

Examinations conducted under special circumstances—$9 for each subject.

Review of examination result—$9 for each subject.

Late Fees

First Session
Fees paid from commencement of third week of the session to March 31 .... .... .... .... .... $16
Fees paid after March 31 where accepted with the express approval of the Registrar (see above) $33

Second Session
Fees paid in third and fourth weeks of the session .... $16
Fees paid thereafter .... .... .... .... .... .... $33
Late lodgement of corrected enrolment details form (Late applications will be accepted for three weeks only after the prescribed dates.) .... .... .... $7

Withdrawal
Students withdrawing from a course are required to notify the Registrar in writing. Fees for the course accrue until a written notification is received.

Where notice of withdrawal from a course is received by the Registrar before the first day of Session 1 a refund of all fees paid other than Registration Fee will be made.

Where a student terminates for acceptable reasons a course of study before half a session has elapsed, one half of the session’s course fees may be refunded. Where a student terminates a course of study after half a session has elapsed, no refund may be made in respect of that session’s fees.

The Library Fee is an annual fee and is not refundable where notice of withdrawal is given after the commencement of Session 1. On notice of withdrawal a partial refund of the University fee is given ...

† Life members of these bodies are exempt from the appropriate fee or fees.
Union Entrance Fee is made on the following basis: any person who has paid the entrance fee in any year and who withdraws from membership of the University Union after the commencement of Session 1 in the same year, or who does not renew his membership in the immediately succeeding year may on written application to the Warden receive a refund of half the entrance fee paid.

On notice of withdrawal a partial refund of the Student Activities Fees is made on the following basis:

University Union—$7.50 in respect of each half session.

University of New South Wales Students' Union—where notice is given prior to the end of the fifth week of Session 1 $3, thereafter no refund.

University of New South Wales Sports Association—where notice is given prior to 30th April a full refund is made, thereafter no refund.

Miscellaneous—where notice is given prior to 30th April $8.50, thereafter no refund.

RESEARCH DEGREES — FEES

(a) Master of Science* and Master of Engineering*

Fees are payable from the commencement date of a candidate’s registration and remain payable until the candidate's thesis is presented to the Examinations Branch.

   (i) Qualifying Examination ... ... ... ... ... $16
   (ii) Registration Fee ... ... ... ... ... ... $7
   (iii) Internal full-time student annual fee ... ... ... $98
         Internal full-time student session fee ... ... ... $49
   (iv) Internal part-time student annual fee ... ... ... $49
         Internal part-time student session fee ... ... ... $24.50
   (v) External student annual fee† ... ... ... ... ... $33
   (vi) Final Examination ... ... ... ... ... ... $49
   (vii) Thesis Resubmission Fee† ... ... ... ... ... $49

* Candidates registered under the conditions governing the award of this degree without supervision will pay the following fees: Registration fee $7; Examination of thesis $98. They are not required to pay the Student Activities Fees or the Library Fee.

† Students in this category are not required to pay the Student Activities Fees or the Library fee.
(b) Doctor of Philosophy

(i) Qualifying Examination: $16
(ii) Registration Fee: $7
(iii) Annual Fee: $98
(iv) Final Examination: $66.50
(v) Thesis Resubmission Fee: $66.50

(c) Doctor of Science

(i) Registration Fee: $103

(d) Research Degree

Continuation Fee*: $33

A candidate who at the end of a year has completed all work for the degree other than the writing up of the thesis and who anticipates submitting the thesis to the Registrar for examination before the end of the next session, may pay, in lieu of the normal fees, a Continuation Fee of $33. The payment must be accompanied by a statement from the candidate's Head of School certifying that his work for the degree has reached this stage. If the thesis has not been submitted by the end of the session for which the concession was given, registration will revert to part-time candidature from the beginning of the year with consequential adjustment of fees.

(e) Miscellaneous Subjects

Postgraduate subjects taken as "Miscellaneous Subjects" (i.e. not for a degree or diploma) or to qualify for registration as a candidate for a higher degree are assessed on the basis of a session's attendance at the rate of $12.50 per hour per week. Thus the fee for a subject requiring an attendance of 2 hours per week for the session is $25 per session.

Research

One day per week—$33 per annum.
Two or three days per week—$64 per annum.
Four or five days per week—$98 per annum.

* Students paying this fee who are not in attendance at the University are not required to pay the Student Activities Fees or the Library Fee.
† Candidates paying this fee are not required to pay the Student Activities Fees or the Library Fee.
OTHER FEES

In addition to the fees set out above, all students in the categories (a) and (b) are required to pay:

*Library Fee*—Annual fee, $16.

*University Union*—$20—entrance fee.

*Student Activities Fees*—
  - University Union†—$30—annual subscription.
  - Sports Association†—$4—annual subscription.
  - Students’ Union†—$6—annual subscription.
  - Miscellaneous—$17—annual fee.

LATE FEES

**Initial Registration**

Fees paid from commencement of sixth week after date of offer of registration to end of eighth week .... .... $16

**Renewal at Commencement of each Academic Year**

Fees paid from commencement of third week of Session 1.
  - to March 31 .... .... .... .... .... .... $16
  - Fees paid after March 31 where accepted with the express approval of the Registrar .... .... .... .... $33

† Life members of these bodies are exempt from the appropriate fee or fees.
POSTGRADUATE SCHOLARSHIPS TENABLE AT
THE UNIVERSITY OF NEW SOUTH WALES

Brief particulars of scholarships tenable at this University are listed below. Additional scholarships in a variety of fields become available from time to time, and the Dean of the Faculty of Applied Science and the Heads of the Schools in the Faculty will be pleased to receive inquiries concerning the availability of such scholarships.

Students completing the final year of a course may apply but, in general, applicants should hold degrees with honours or equivalent qualifications.

Applications should be lodged by 31st October with the Registrar, P.O. Box 1, Kensington, New South Wales, 2033, on forms available from the University's Postgraduate Scholarships Unit. Each applicant from outside this University must arrange for a transcript (in triplicate) of his academic record to be forwarded by his University to reach the Registrar at about the same time as his application. He must also arrange for reports (in triplicate) by three referees, to be forwarded direct to the Registrar. If possible, one of the reports should be from a professor, and all three should be from people familiar with the applicant's academic and professional performance.

Unless otherwise stated, the annual stipend for all scholarships is $2,600 per annum and a dependants' allowance at the rate of $450 per annum for a dependent wife and child (or children).

University Postgraduate Scholarships

The University of New South Wales provides each year a number of scholarships for postgraduate study and research in any field approved by the University.

These awards are normally for graduates of Australian Universities who are domiciled in Australia. They are tenable for up to a maximum of four years, subject to annual renewal.
Commonwealth Postgraduate Course Awards

The Commonwealth Government provides a number of awards for full-time postgraduate study in courses leading to the degree of Master by formal course work. Persons permanently domiciled in Australia who are under 45 years of age on 1st January of the year in which the award is to be taken up and who are University graduates or will graduate in the current academic year, are eligible for the awards. They receive a stipend of $2,600 paid over the academic year. Other allowances are identical with those contained in the General Conditions, page 121.

Applications for awards tenable at this University must be lodged with the Registrar by 30th September each year.

Commonwealth Postgraduate Research Awards

The Commonwealth Government is providing each year a number of awards for postgraduate study and research. The awards will be tenable for one year but may be extended for a period of up to four years.

Persons permanently domiciled in Australia and who are University graduates or who will graduate in the current academic year, are eligible.

The General Motors-Holden's Postgraduate Research Fellowships

General Motors-Holden's Limited has agreed to provide annually eight post-graduate research fellowships throughout Australia, three to be tenable in universities in New South Wales and the Australian Capital Territory. Graduates in any Faculty may apply, but preference will be given to graduates in Engineering, Science, Commerce or Economics. Stipend ranges in value from $3,000 to $3,400 p.a.

Atmospheric Pollution Research Fellowships

Fellowships for research on atmospheric pollution, having an annual value of $2,600-$4,000* each, are available to graduates in Science or Chemical Engineering. The fellowships are tenable for one year but may be re-awarded for a second or third year.

The Clean Air Society of Australia and New Zealand Scholarship in Environmental Pollution Control

The Clean Air Society provides a scholarship to enable students to proceed to a Master of Applied Science degree in Environmental Pollution Control. The scholarship has a value of $500 and is
normally tenable for one year, although it may be awarded to a student doing the course in two years of part-time study, in which case the value would be $250 in each year. Applications must be lodged by 31st December each year.

**Environmental Pollution Control Scholarships**

Envirotech Australia Pty. Ltd. and George Kent (A.N.Z.) Pty. Ltd. each provide a scholarship for students proceeding to the degree of Master of Applied Science in Environmental Pollution Control. The scholarships have a value of $850 and are normally tenable for one year of full-time study. However, the awards may also be granted to students doing the course in two years of part-time study, in which case the value is $425 per annum. Applications must be lodged by 31st December each year.

**Lever & Kitchen Pty. Ltd. Scholarship in Environmental Pollution Control**

Lever & Kitchen Pty. Ltd. provide a scholarship to allow students to proceed to the degree of Master of Applied Science in Environmental Pollution Control. The scholarship has a value of $1,000 per annum and is normally tenable for one year. Applications must be lodged by 31st December each year.

**The Broken Hill Pty. Co. Ltd. Postgraduate Scholarships in Metallurgy**

These scholarships are designed to promote study and research for a higher degree at Kensington and Wollongong University College in some branch of Metallurgy which has a direct relation to the activities of the donor company. Graduates in Science or Engineering are eligible to apply. The award carries an annual stipend of $2,700 and a dependant's allowance of $500, and is tenable for one to four years.

**Foundry Research Fellowships in Metallurgy**

Fellowships for research on foundry metallurgy, having an annual value up to $3,000 each, are available to graduates in metallurgy and related disciplines. The fellowships are financed from the Foundry Research Trust Fund, set up by the Foundry Research Association. Holders of the awards are required to work for a higher degree. The Fellowships are tenable for a maximum of three years, subject to annual renewal.
Australian Wool Board Research Scholarships in Textile Technology

Several scholarships are provided by the Australian Wool Board for graduates in Textile Physics, Chemistry or Engineering for research in the fields of wool textile physics, wool textile chemistry or wool textile engineering. The scholarships have a value up to $2,800 per annum, plus fees and certain allowances and are tenable for a maximum of four years, subject to annual renewal.

Australian Wool Board Research Scholarships in Wool and Pastoral Sciences

Scholarships provided by the Australian Wool Board are available for graduates in Applied Science, Science, Agricultural Science, or Veterinary Science, wishing to work in the fields of Wool and Pastoral Sciences such as Agronomy, Animal Husbandry and Parasitology.

The scholarships have a value up to $2,800 per annum plus fees and certain allowances, and are tenable for a maximum of four years, subject to annual renewal.

OTHER POSTGRADUATE AWARDS

Particulars of the conditions applying to the undermentioned awards should be obtained from the persons with whom applications are to be lodged.

Commonwealth Service Awards

The field of study is unrestricted. The awards are available only to officers of the Commonwealth Service. Enquiries should be directed to the Commonwealth Public Service Board, Canberra.

C.S.I.R.O. Studentships

Studentships have a value of $2,800 per annum, plus compulsory university fees, and allowances for dependants and for maintenance and travel expenses. Duration of awards up to three years. Applications to be lodged with the Secretary, Studentship Selection Committee, C.S.I.R.O., P.O. Box 225, Dickson, A.C.T., 2602, by 12th November.
Rothmans Fellowships Award

The field of study is unrestricted. The range of value of the awards is: Junior, Grade 1—$2,200 to $3,500* p.a.; Junior, Grade 2—Not more than $6,750* p.a.; and Senior—Not more than $12,000* p.a. The duration of the awards is not specified. Applications should be lodged with the Secretary, Rothmans University Endowment Fund, Sydney University, by early September.

Department of Supply Postgraduate Studentships

Studentships are available at any Australian university for full-time study and research for the degree of Doctor of Philosophy in specified fields which vary from year to year. Normally they are awarded for a period of three years. Applicants must possess or expect to possess by the beginning of the 1972 academic year a 1st or 2nd Class Honours Degree or a Master's Degree in Science, Engineering or Mathematics. Commencing salary—1st or 2nd Class Honours Degree, $5,171; Master's Degree, $6,090. Maximum salary $6,625. Compulsory fees are paid by the Department. A bond of service is required. Studentships will be advertised in the daily press late in October. Applications should be lodged with Secretary, Department of Supply, Canberra, A.C.T., 2600.

Royal Australian Chemical Institute Masson Scholarship

One scholarship is provided annually for students proceeding to a higher degree in specified fields, including Chemical Engineering, Industrial Chemistry and Metallurgy. The scholarships are tenable for one year and have a value of $1,200. Applications to the Executive Secretary, R.A.C.I., 55 Exhibition Street, Melbourne.

Australian Institute of Nuclear Science and Engineering

The Institute provides awards for students holding an Honours degree to proceed to higher degrees in specified fields, including Metallurgy. At least one-quarter of the student's period of tenure must be spent attached to the Institute at Lucas Heights, N.S.W. The awards are tenable for one to three years, and have a value ranging from $2,350 to $2,650, plus University fees. The Institute also provides awards for post-doctoral research for one year renewable. The value of these awards is $4,500 to $6,000 p.a.

* Exempt University tuition fees.
**Conzinc Riotinto of Australia Limited**

The award is given for postgraduate study and research in the fields of Mining, Chemical Engineering, Geology or Metallurgy. The value of the award is $2,600 p.a. plus university fees for one to three years. Where applicable, allowances may also be payable for dependants, travel, thesis and materials. Applications should be lodged with Conzinc Riotinto of Aust. Ltd., Box 384D, Melbourne, Victoria, 3001, by 31st December.

**Australian Meat Research Committee**

The range of value of the awards is $2,500 to $2,800 p.a., plus fees and certain allowances. They are tenable for two years, with possible extension for a further two years for study leading to the degree of Doctor of Philosophy. Applications to the Secretary, C.S.I.R.O., 314 Albert Street, East Melbourne, Vic., 3002, by 31st July.
OUTLINES OF POST-GRADUATE COURSES

Facilities are provided for students to carry out research for the degrees of Doctor of Philosophy, Master of Engineering or Master of Science. Master of Applied Science courses (M.App.Sc.) and Graduate Diploma courses (Grad. Dip.) which contain a substantial component of formal study are available from a number of Schools in the Faculty. The School of Applied Geology offers a Master of Applied Science course in Hydrogeology, and the School of Chemical Engineering offers Master of Applied Science courses in Chemical Engineering, Biological Process Engineering and Environmental Pollution Control. Graduate Diploma courses are offered: in Applied Geophysics by the School of Applied Geology; in Corrosion Technology, Food Technology and Fuel Technology by the School of Chemical Engineering; in Polymer Technology by the School of Chemical Technology; in Mining Engineering and in Mineral Technology by the School of Mining Engineering; and in Wool Technology by the School of Wool and Pastoral Sciences.

GRADUATE DIPLOMA IN INDUSTRIAL ENGINEERING

Students who have graduated from schools of the Faculty of Applied Science and who wish to continue their studies in the field of scientific management, may enrol in the Graduate Diploma in Industrial Engineering offered by the School of Mechanical and Industrial Engineering.

This course provides instruction in accountancy, economics, industrial law, economic analysis, the use of human and physical resources, organization and administration, operations research and production control. Students take part in a case-study programme and staff from the Schools of the Faculty of Applied Science participate so that effective application of the principles of the course can be made to a student’s own special industry.
SCHOOL OF APPLIED GEOLOGY

Hydrogeology Graduate Course (Master of Applied Science)

The purpose of this course, which leads to the degree of Master of Applied Science, is to train graduates who have a suitable background, as specialist hydrogeologists. It is designed to provide a bridge between water engineering and geology for graduates who wish to study and work in the field of water resources.

The normal requirement for admission to the course is a degree of Bachelor with Honours with geology as a major subject. Other graduates with suitable academic and professional attainments may be permitted to register for the course.

The following programme may be completed in either one year on a full-time basis or two years on a part-time basis.

Applied Geophysics Graduate Course (Graduate Diploma)

The aim of this course is to train suitable graduates in Applied Science, Science and Engineering who wish to become applied or exploration geophysicists. The pre-requisites for the course are Physics and a Mathematics to second-year level, and Geology to first year level, in a first degree in Applied Science, Science or Engineering.

The Graduate Diploma in Applied Geophysics (Grad. Dip.) will be awarded on the successful completion of one year of full-time study.
SCHOOL OF CHEMICAL ENGINEERING

Formal courses in Chemical Engineering lead to the Master of Applied Science or to the Graduate Diploma.

The MAppSc courses involve a project, 3.900G, which must integrate and apply the principles treated in the course. It may take the form of a design feasibility study or an experimental investigation. Evidence of initiative and of a high level of ability and understanding is required in the student’s approach, and the results must be embodied in a report and submitted in accordance with the University’s requirements.

Chemical Engineering Graduate Courses
(Master of Applied Science)

The MAppSc courses provide for a comprehensive study of theoretical and practical aspects of many advanced topics in Chemical Engineering. They are designed to allow the maximum content flexibility consistent with the standing of the award. Intending candidates are invited to submit proposed study programmes to the Head of the School for advice and recommendation.

An acceptable course is a programme of formal study aggregating approximately twenty hours weekly for two sessions full-time or ten hours weekly for four sessions part-time, comprising:

1. a major strand of course material making up 75% of the total programme. This includes a project constituting not less than 15% and not more than 30% of the programme;

2. a minor strand of broader-based supporting material making up to 25% of the total programme; and
3. undergraduate material (generally designated as subjects without a suffixed G number in the Calendar), which may be included in one or both strands but may not exceed 25% of the total programme.

Approximately 60% of the programme (including the project) must be undertaken in the School of Chemical Engineering. The remainder, subject to approval and availability, may be undertaken in other Schools within the University. Full details of all subjects are given in Section D of the University Calendar.

These principles are embodied in the following examples:

1. A graduate course for chemical engineers wishing to practise in the food industries

Biological Process Engineering Graduate Course
(Master of Applied Science)

The graduate course in Biological Process Engineering leads to the degree of Master of Applied Science. It extends over one full-time year or two part-time years. This course is primarily intended for candidates who have completed a four year degree programme in Chemical Engineering, but candidates from other disciplines in science or engineering may be admitted if the appropriate pre-requisites are taken.
The course provides appropriate biological, microbiological and biochemical training for those involved in the application of advanced engineering principles to problems peculiar to large scale industrial biological processes. The engineering principles provided in the course cover process dynamics and design, thermodynamics, heat, mass and momentum transport with particular emphasis on and application to continuous biological processes.

Environmental Pollution Control Graduate Course
(Master of Applied Science)

The graduate course in Environmental Pollution Control leads to the degree of Master of Applied Science. It extends over one full-time year or two part-time years. The course is primarily intended for candidates in chemical engineering and industrial chemistry who have completed a four year degree programme, but candidates from other disciplines in science or engineering may be admitted.

The advent of new laws governing the disposal of effluents into the environment will make the problems of industry more acute as industrial processes are developed and expanded. This course is intended to cover the problems in environmental engineering which may be encountered by industrial plants.

3.242G Treatment of Biological Effluents ................. 2
3.391G Atmospheric Pollution and Control ................. 2
3.396G Unit Operations in Waste Management .......... 1
Optional Elective(s) and Theoretical Project or .......... 3
3.900G Project*

14/17

3.170G Process Principles is a bridging course for all candidates other than Chemical Engineering and Industrial Chemistry graduates. Candidates who have passed the equivalent of first year Chemistry take 3.170G Process Principles, and those who have passed the equivalent of second year Chemistry may take specified parts of 3.170G Process Principles and an approved graduate elective each for one hour per week. Graduates in Chemical Engineering or Industrial Chemistry take an approved elective.

All electives must be approved by the Head of the School, but applications will be considered regarding any subject available in the University which has a relevance to Pollution Control.

Students intending to undertake the course over two part-time years may do so by attending on one afternoon and two evenings per week. Every effort should be made to include in the first part-time year the subjects listed in (a) and (b) above.

The work involved in the Theoretical Project must be embodied in a report and submitted in accordance with the requirements of the School.

* See para. 3, p. 129.
Corrosion Technology Graduate Course (Graduate Diploma)

The Graduate Diploma course in Corrosion Technology is open to graduates in Engineering, Applied Science or Science. At present it may only be taken as a two-year part-time course.

The course is designed for those professionals in industry who are faced with the problem of combating corrosion. Its aim is to develop an appreciation of the fundamentals, principles of corrosion and of the available methods of overcoming it. It is anticipated that in training personnel to reduce corrosion losses the University will make a substantial contribution to Australian industrial economics.

For graduates from Engineering (non-chemical) or Science (in a particular major) a bridging course is a necessary introduction to the graduate level of certain subjects. For this purpose the subject, 3.170G Process Principles, is specified.

The first year of the course introduces elementary aspects of corrosion technology and suitably orientates students depending on their initial qualifications. The second year of the course contains more detailed instruction at a graduate level in Corrosion Theory and Prevention, together with suitable laboratory assignments.

Hours per week for 2 Sessions
Lec./Lab.

YEAR 1

3.170G Process Principles or
3.172G Corrosion Laboratory
3.171G Corrosion Technology I

5

Chemical Engineering graduates will undertake:
3.172G Corrosion Laboratory

Science graduates who have passed the equivalent of second year Chemistry will undertake parts of:
3.170G Process Principles—1 hr./wk.
3.172G Corrosion Laboratory—1 hr./wk.

Graduates who have passed only the equivalent of first year Chemistry will undertake 3.170G Process Principles.

YEAR 2

3.173G Corrosion Materials
3.174G Corrosion Technology II
3.175G Seminar
3.176G Corrosion Literature Review
3.177G Testing Laboratory (by roster)

10

† This is the weekly equivalent of total hours for the subject. These hours may, however, be concentrated in one period.
Food Technology Graduate Course (Graduate Diploma)

The graduate diploma course in Food Technology is designed to provide professional training at an advanced level in food technology for graduates in science, applied science or engineering who have not had previous training in this field.

In addition to a first degree, candidates may also be required to undertake assignments or complete successful examinations as directed by the Head of the School.

The course is a blend of formal lectures and laboratory work at the undergraduate and post-graduate levels. The Diploma in Food Technology (Grad. Dip.) is awarded on the successful completion of one year full-time study (18 hours a week), or two years of part-time study (9 hours a week). It involves the following programme:

Fuel Technology Graduate Course (Graduate Diploma)

The Graduate Diploma Course in Fuel Technology has been designed to provide professional training and specialization in fuel science and engineering for graduates in Science, Applied Science or Engineering who have not had previous training in this field.

Applicants holding an appropriate degree or equivalent qualification in Science, Applied Science or Engineering are eligible for admission to the course. They may also be required to undertake assignments or complete successfully examinations as directed by the Head of the School.
The Graduate Diploma in Fuel Technology is awarded on the successful completion of one year of full-time study (18 hours per week) or two years of part-time study (9 hours per week). The course is a blend of formal lectures and laboratory work at undergraduate and post-graduate levels.

* Subjects to be selected from the following according to availability and specialisation required:—

| 3.391G Atmospheric Pollution and Control      | 2 |
| 3.392G Fuel Science                           | 3 |
| 3.393G Fuel Engineering Plant Design         | 3 |
| 3.394G Thermal Engineering and Fuel Processing| 3 |
| 3.395G Research Techniques and Extension Methods | 2 |

When appropriate, up to three hours per week may be selected from approved courses offered by other Schools within the University, e.g., Coal Preparation, Instrumentation and Automatic Control, Ceramics, Nuclear Engineering, etc.

### SCHOOL OF CHEMICAL TECHNOLOGY

**Polymer Technology Graduate Course**

**(Graduate Diploma)**

The Graduate Diploma course in Polymer Technology is designed for persons holding a degree, or equivalent qualifications, in Science or Engineering who wish to specialize in Polymer Technology and extend their theoretical knowledge and practical experience in fields such as plastics, rubbers, synthetic resins, adhesives and surface coatings.
Two years of study on a part-time basis are required for completion of this course, which leads to the Graduate Diploma in Polymer Technology (GradDip). However, candidates may be required, depending upon their formal training in Organic Chemistry, Physical Chemistry, Statistics and Mathematics, to spend a preliminary period of study before actually embarking upon the formal programme of the diploma.

SCHOOL OF METALLURGY

The School of Metallurgy conducts courses which may lead to the award of Master of Applied Science, and also, from time to time, short courses on topics in Chemical and Extractive Metallurgy and Physical Metallurgy.

In addition to these opportunities for formal postgraduate studies, the School welcomes enquiries from graduates in Science, Engineering and Metallurgy who are interested in doing research in metallurgy for the degrees of Master of Science, Master of Engineering and Doctor of Philosophy.

The Head of the School will be pleased to give information about research scholarships, fellowships and grants-in-aid. Graduates are advised to consult him before making a formal application for registration.
SCHOOL OF MINING ENGINEERING

The School offers two postgraduate courses, one in Mineral Technology and the other in Mining Engineering, both leading to the award of a Graduate Diploma (GradDip).

Mineral Technology Graduate Course (Graduate Diploma)

The Graduate Diploma Course in Mineral Technology is designed to provide professional training for graduates in Science, Applied Science or Engineering who wish to specialize in the fields of mineral processing, including coal preparation. The course is concerned primarily with instruction in the scientific and engineering principles associated with the beneficiation of minerals and coal to convert them to marketable commodities.

The Graduate Diploma in Mineral Technology (Grad. Dip.) will be awarded on the successful completion of one year of full-time or two years of part-time study. The course is a blend of lecture and laboratory work and allows the choice of elective specialization in either the beneficiation of minerals or the preparation of coal.

When appropriate, up to 3 hours per week may be selected from approved courses offered by other Schools within the University.
Mining Engineering Graduate Course (Graduate Diploma)

The postgraduate course leading to a Graduate Diploma in Mining Engineering (Grad. Dip.) has been established to provide graduate students in the fields of engineering, surveying, and some areas of applied science with advanced training in the following aspects of mining engineering:

- Tunnelling and quarrying.
- Metalliferous and coal mining.
- Petroleum engineering and other non-entry methods.

It should be noted that some degree of specialization will be possible in the mining engineering laboratory investigations.

The following programme may be completed in one year of full-time study or over two years on a part-time basis.

SCHOOL OF WOOL AND PASTORAL SCIENCES

Wool Technology Graduate Course (Graduate Diploma)

The Graduate Diploma Course in Wool Technology is specially designed for graduate students preparing themselves for careers in the pastoral industry. One of the principal functions of the course is to provide a bridge from other disciplines such as Agriculture, Veterinary Science and Pure Science, for graduates
who wish to study and work in the field of Wool and Pastoral Sciences.

Recently the course was made more flexible to permit prospective students to specialize in particular graduate aspects of Wool and Pastoral Sciences, and at the same time, to do supporting work in related undergraduate fields which they may not have covered in their undergraduate training, or which, having covered, they wish to revise.

The normal requirement for admission to the course is a degree in Agriculture, Veterinary Science or Science, in an appropriate field. In addition, students may be required to take a qualifying examination in the basic disciplines of the Wool and Pastoral Sciences B.Sc. degree course, viz. General and Human Biology, Agronomy and/or Livestock Production. Such qualifying examination will be of a standard which will ensure that the student has sufficient knowledge of the subject and the principles involved to profit by the course.

The following programme may be completed either in one year on a full-time basis or over two years on a part-time basis:

<table>

Approved undergraduate subjects

The undergraduate subjects may be chosen to suit the requirements of the student, subject to their availability. The Graduate Diploma students are expected to work at the level of honours students in the undergraduate course and to carry out prescribed study of current research material in the field.

Successful completion of the course leads to the award of a Graduate Diploma (GradDip).
DETAILS OF SUBJECTS

The following pages contain a list of most of the subjects offered for courses in the Faculty of Applied Science. In general, the list is arranged according to subject numbers and the School responsible for the subject.

Details of subjects available in Faculty of Applied Science courses but not included in this list may be obtained from the School responsible for the subject. Details of subjects in the Faculty of Arts which may be taken as Humanities subjects may be found in the current Arts Faculty Handbook.

Students are required to have their own copy of the prescribed Textbooks. Lists of Reference Books for additional reading, and of Textbooks, where not given here, will be issued by the Schools.

DEPARTMENT OF GENERAL STUDIES
(HUMANITIES SUBJECTS)

Undergraduate students in all faculties other than Arts are required to study a number of General Studies subjects. Text and Reference Books for all General Studies subjects and outlines of the subjects appear in the Department of General Studies Handbook, which is available free of cost to all students.

2.611 Organic Chemistry I
TEXTBOOKS
One of the following:
GENERAL

In addition to drawing instruments, set squares, protractor and scale-rules, which will be obtained as specified for subject 5.001 Engineering I, each student should possess a Slide Rule of a type which incorporates at least three cycles of each of the exponential scales and reciprocal exponential scales. (These usually are designated on the rules as LL1, LL2, LL3 and LL01, LL02, LL03 respectively). Suitable slide rules are: Aristo 0968, Aristo 0969, Aristo 0970, Castell 2/82, Castell 2/83, Hemmi 259D. Undoubtedly there are others equally satisfactory, but these are suggested as a guide.

3.111 Chemical Engineering Principles I

(b) Fluid Pumping—Piping, fittings and valves. Blow cases, air lift pumps, reciprocating pumps, centrifugal pumps and gear pumps. Gas blowers.

(d) Elementary Boundary Layer Theory—Boundary layer concepts, velocity profiles and boundary layer thickness in laminar and turbulent flow on plates and in pipes. Shear stresses in boundary layers. Heat and momentum analogies—Reynolds, Prandtl-Taylor, Chilton and Colburn.

(e) Dimensional Analysis Scale-up and Theory of Models—Dimensions—dimensionless numbers—dimensional analysis—static and dynamical similarity—Regime concepts—Use of models for scale-up. Pilot plants.

TEXTBOOKS

REFERENCE BOOKS
3.112 Chemical Engineering, Material Balances and Thermodynamics

Material balances. Basic thermodynamic principles leading to Phase Rule. P-v-T relationships. Energy balances. Further thermodynamic principles leading to phase and reaction equilibrium.

TEXTBOOK

REFERENCE BOOKS

3.121 Chemical Engineering, Principles II

Heat Transfer—Heat transfer to boiling liquids and condensing vapours. Evaporation and crystallization processes. Unsteady state heat transfer to solids and fluids.

Digital and Analogue Computations—A short introduction to digital and analogue computers and their uses.
TEXTBOOKS

REFERENCE BOOKS

3.122 Chemical Engineering, Thermodynamics and Reaction Engineering

Thermodynamics—The application of basic material from 3.112 to selected processes and operations. Sources of data, methods of estimating, determining consistency of, and methods of presenting data. Applications of thermodynamics to specific systems, i.e. vapour-liquid, non-electrolyte solutions, aqueous electrolyte solutions and gas-solid systems. Thermodynamic analysis of processes. Irreversible thermodynamics, statistical thermodynamics and thermodynamics of adsorption and desorption.

Reaction Engineering—Homogeneous reactions: (a) interpretation of batch reactor data and testing of mechanisms; (b) isothermal ideal reactor design (i) single reactions (ii) multiple reactions: (c) adiabatic ideal reactor design—single and multiple reactions—optimization. Heterogeneous reactions including (a) flow models—dispersion—mixing residence time distribution (b) reactor design in non-catalytic fluid/solid reactions, catalytic fluid/solid reactions and fluid/fluid reactions. A selection of topics from (a) mass transfer with chemical reaction (b) reactor stability (c) optimal reactor design (d) analysis of reactor/reactions.

TEXTBOOKS

REFERENCE BOOKS
3.123 Chemical Engineering Design IA and IB

**Process Vessels**—Mechanical design and fabrication of pressure vessels. Code and legal requirements. Design of supports for vertical and horizontal vessels.

**Heat Exchangers**—Types of heat exchangers. Service fluids for heating and cooling at various temperature levels. Development and use of film resistance models. Construction and design of shell and tube exchangers for liquids, gases, condensing vapours and boiling liquids. Design of pipe and plate type exchangers.

**Mass Transfer Equipment**—Construction and design of sieve and other type trays for plate towers. Design and construction of packed towers; selection of packing; performance characteristics of packed and plate towers.

**Process Engineering**—Block diagrams, process flowsheets, presentation of material properties, mass and energy flows at various points. Engineering flowsheets. Process engineering (or performance) specifications for equipment items. Storage and safety considerations. The design report.

**Chemical Engineering Economics**—Estimation of capital and operating costs. Components of fixed and variable costs. Break-even charts. Methods of comparing alternatives: rate of return, minimum payback time, incremental return rate, capitalised cost, optimisation. Depreciation and taxation and their effect on economic analyses. Economic design.

**Industrial Measuring Instruments**—The principles of operation and use of the basic industrial measuring instruments. Fundamentals of feedback control, leading to the analysis and synthesis of single-loop linear systems.

**Corrosion and Materials**—A short course covering the theory of corrosion and materials of construction.

**Industrial Process Report.** The Industrial Process Report is an exercise in which the student collects up-to-date information regarding a process which is in current use in Australia. He must report on its history, present state and future with particular respect to the scale, raw materials, alternative and competing end products, and processes. The final report is a compilation of material copied directly from the literature.

**TEXTBOOKS**

3.124 Chemical Engineering Design and Practice

The basis of this subject is a design report which will be a test of knowledge of principles and design as applied to a possible industrial situation. The report should take the form of a set of iterative calculations and specifications for the components of a simple processing battery and is usually limited in size to a battery consisting of two principal unit operations in series (e.g. extractor and fractionator, reactor and separator, etc.). Particular attention is paid to operating instructions, hazards and safety, economic evaluation, use of standards and general presentation.

3.131 Chemical Engineering Principles III

Optimization methods. Computer programming and operating systems and mathematical modelling. An advanced treatment of combined heat, mass and momentum transfer and the equations of conservation from the transport phenomena viewpoint.

TEXTBOOKS

REFERENCE BOOKS

3.132 Chemical Engineering Process Dynamics and Control

TEXTBOOK
3.133 Chemical Engineering Design II

TEXTBOOKS

REFERENCE BOOKS

3.134 Advanced Chemical Engineering Principles

An advanced treatment of the principles of chemical engineering including stagewise operations, fluid and particle mechanics, diffusion and separation and heat transfer.

TEXTBOOKS

REFERENCE BOOKS
3.135 Chemical Engineering Practice
Specialized measurement techniques, experimental techniques, planning of experiments and analysis of engineering data. The use of the literature; information retrieval. The ethical, legal and social obligations of the engineer. Safety; pollution control. Integration of multi-unit complexes; seminar assignment, involving the presenting and discussion of recent chemical engineering papers. Analytical optimization of processes. Associated experimental laboratory studies.

TEXTBOOKS
As for 3.134 Advanced Chemical Engineering Principles.

3.140 Chemical Engineering Design Project
The design of plant for the production of chemicals and the estimation of product costs.

3.150 Chemical Engineering Experimental Project
An experimental investigation of some aspects of chemical engineering.

CHEMICAL ENGINEERING GRADUATE SUBJECTS

3.162G Urban Planning
Priorities in urban planning: topography, community services, industry; selective zoning and decentralization; relationships to regional planning. Cost of pollution and control measures: legal aspects; planned development; architectural aspects; density distribution. Case histories.

3.163G Industrial Use and Re-Use of Water

3.164G Medical and Legislative Aspects
3.165G Process Optimization
Statistical evaluation of process parameters including significance and effect on objective. Experimental optimization techniques for dealing with stochastic processes. The application of selected programming techniques for determination of optimum process conditions for deterministic processes.

3.170G Process Principles

3.171G Corrosion Technology I

3.172G Corrosion Laboratory

A number of laboratory assignments to illustrate and measure the mechanism of corrosion. Electroplating/anodising experiments.

3.173G Corrosion Materials

*Metallic*—types available, properties and applications for each of the following: cast irons, alloy cast irons, carbon steels, low alloy steels, stainless steel, special alloys. The following metals and their alloys: aluminium, copper, nickel, titanium, lead, zinc, magnesium, tin, cadmium, chromium, cobalt. Refractory metals—molybdenum, tantalum, tungsten, zirconium. Noble metals—gold, platinum, silver.

3.174G Corrosion Technology II

3.175G Corrosion Seminar

Joint University/industry colloquia on theory and practice of corrosion technology.

Students will present material arising from literature and/or laboratory assignments and industrialists will be invited to contribute papers and/or participate in the colloquia.

3.176G Corrosion Literature Review

Students will be expected to consult and read the wide literature on corrosion and to produce a comprehensive and detailed report on a selected topic, e.g. aspects of corrosion in the acid industry; marine corrosion; corrosion problems in the food industry; underground corrosion of pipelines.

3.177G Testing Laboratory

Candidates will undertake a project involving the design/evaluation of corrosion testing equipment/techniques. A comprehensive report will be submitted.

3.181G Advanced Process Dynamics

*Distributed-Parameter Linear Systems*: Selected distributed-parameter and mathematically similar systems. Methods of analysis and features of their response. Feedback systems containing deadtime. Heat exchangers. Distilla-

3.182G Process Optimization

Evaluation of significant parameters. Experimental optimization techniques—multidimensional. Consideration of experimental error. Analytical optimization: (a) Consideration of modelling and simulation—mathematics only. (b) Linear programming—including: (i) applications to complete plants. (ii) partial optimization for non-linear processes. (c) Dynamic programming. (d) Discrete and continuous Maximum Principle.

3.183G Thermodynamics, Kinetics and Mechanism

Thermodynamics, kinetics and mechanism of proton transfer and electron transfer reactions, particularly with reference to selected industrial processes.

Chemical kinetic theories and empirical analysis of reaction rates. Particular emphasis is given to mechanistic analysis in terms of kinetics and the equilibrium state and steady-state approximation methods. Experimental techniques and treatment of data.

3.184G System Simulation and Control

Topics to be dealt with will be selected from the following areas: Numerical methods for digital simulation and computation; Programming languages for system modelling; Unsteady-state distributed parameter systems; Advanced analogue computer methods; Digital computers in data-logging and control; Digital logic and instrumentation; Advanced control systems: e.g. system identification, multiloop systems, non-linear systems, sampled-data systems.

3.185G Interphase Mass Transfer

A broad treatment of advanced theories of mass transfer including such topics as: interface instability, empirical and hydrodynamic models for the liquid phase; limitations of and extensions to the two resistance model used to predict contacting unit efficiency; gas absorption with chemical reaction; mass transfer in froths and foams.

3.186G Transport Phenomena

Basic concepts regarding the motion of heat and mass transfer from rigid and deformable particles in an infinite laminar fluid. The effects of acceleration, turbulence and shear flow fields on their motion. The study of single particles and bubbles will be extended to multiparticulate systems of both uniformly and heterogeneously sized particles, and the interaction between particles and bubbles.
3.187G Design

Theoretical treatments concerning stress analyses with time and temperature as variables, stresses at discontinuities and transitions in vessel geometry. Theories and modes of material behaviour, gas solubility effect, design of insulation, reinforcement, etc. Analyses of stresses and reactions in piping subject to large temperature changes. Code requirements. Practical aspects will include a treatment of high pressure components, e.g. valves, fittings, pumps, safety devices. Economic aspects.

3.188G Advanced Chemical Engineering Economics

3.190G Specialist Lectures

DEPARTMENT OF FOOD TECHNOLOGY

3.201 Food Technology I

Introduction to food technology. Morphology, physiology and biochemistry of plants. Horticultural factors, maturity assessment, harvesting, precooling, packaging, transportation. Cold and CA storage, physiological disorders and their control.

TEXTBOOKS

REFERENCE BOOKS

3.211 Food Technology II

TEXTBOOKS
3.212 Food Technology III

The science and technology of meat, fish, eggs, milk, fats and oils, cereals, sugars; their derived products, with particular reference to sources, structure and composition, microbiological and biochemical aspects, their reactions and modifications during processing and storage. Food additives, food package requirements. Food spoilage, its diagnosis and control.

TEXTBOOKS

REFERENCE BOOKS
Please consult Department.

3.221 Food Technology IV

REFERENCE BOOKS (only)
Hobbs, B. C. Food Poisoning and Food Hygiene. 2nd ed. Arnold, 1968.

3.231 Food Engineering I

Fluid flow and heat transfer — common with sections of the subject 3.111 Chemical Engineering I. A study of other unit operations relevant to food processing from the viewpoint of theory, equipment characteristics and materials of construction.

TEXTBOOKS
3.232 Food Engineering II
Fundamental and applied aspects of engineering in selected food processing operations.

3.233 Food Technology (Chemical Engineering)

3.240 Food Technology Project (Chemical Engineering)
Project in Food Technology for students in Chemical Engineering.

3.250 Food Technology Report
The student will undertake an individual project involving a literature survey, an experimental investigation, and the final preparation of a detailed report on a selected topic in food science or technology.

FOOD TECHNOLOGY GRADUATE SUBJECTS

3.241G Food Technology

3.242G Treatment and Utilization of Biological Effluents
Origin, composition and disposal of wastes from biological, food and allied industries. Ecology of biological waste disposal in sewers, streams, ponds, beaches, absorption systems. Legal and economic aspects.

DEPARTMENT OF FUEL TECHNOLOGY

3.311 Fuel Engineering I
1. *Fuels and Energy—Sources and Properties*—Fossil fuels: coal, oil, gas—origin, geology, occurrence in Australia; storage, sampling and analysis; properties and their significance; classification.

2. *Energy Conversion*—An introduction to the combustion of gaseous, liquid and solid fuels; design principles and types of steam-raising plant.

4. **Steam, Power and Work Cycles**—Heat engines, thermodynamic properties of working fluids.

**TEXTBOOKS**

**REFERENCE BOOKS**

### 3.321 Fuel Engineering II

1. **Combustion of Gaseous Fuels**—Basic principles, kinetics, chemical, physical and aerodynamic considerations; an introduction to flames.

2. **Combustion of Liquid and Solid Fuels**—Heterogeneous combustion reactions; combustion in fuel beds, particles in suspension and of 'atomized' fuels. Mineral impurities; deposits and corrosion.

3. **Principles of Gasification**—Thermodynamics of basic reactions and calculations of equilibrium compositions. The production of fuel and synthesis gases, controlled furnace atmospheres; gas purification.

4. **Fuel Plant Technology**—Introduction to furnaces, ovens, kilns and steam generators. Thermodynamics of heating processes; recoverable and returnable heat in fuel systems. Industrial water.

**TEXTBOOKS**

**REFERENCE BOOKS**
Gumz, W. *Gas Producers and Blast Furnaces*. Wiley.

### 3.331 Fuel Engineering III

TEXTBOOKS

REFERENCE BOOKS

3.332 Fuel Engineering IV

TEXTBOOKS

REFERENCE BOOKS
Lowry, H. H. *Chemistry of Coal Utilization—Supplementary Vol*. Wiley.

3.340 Fuel Engineering Project

Projects will be selected involving the design of fuel plant or aspects of fuel science and/or fuel processing and utilization. This will usually involve some experimental work.

No books are recommended. Students are supplied with reading lists appropriate to individual requirements.

FUEL TECHNOLOGY GRADUATE SUBJECTS

3.381 Principles of Fuel Engineering

An expanded version of the course 3.311 Fuel Engineering I, including appropriate laboratory work.

Textbooks are as for 3.311 Fuel Engineering I.
3.382 Combustion Engineering
Similar to 3.321 Fuel Engineering II offered in the post-graduate diploma. Textbooks as for 3.321 Fuel Engineering II.

3.383 Fuel Plant: Evaluation and Assignments
Designed to meet the needs of individual students in the graduate diploma course, with an emphasis on the practical aspects of combustion engineering and the efficiency of operation of fuel plant. Also included is a bridge course of lectures in heat transfer, fluid mechanics, and chemical and engineering thermodynamics, which is designed to bring students from the varied backgrounds of their first degrees to a common level to facilitate further study of these subjects in the graduate diploma course.

Students are supplied with reading lists appropriate to individual requirements.

3.390G Postgraduate Fuel Seminar
This is intended to assist students in assessing technical problems, in the collection of information and presentation of data, including technical report writing and critical evaluation of available information.

3.391G Atmospheric Pollution and Control
Causes, measurement and control of atmospheric pollutants with special reference to fuel-using plant. Clean air legislation.

TEXTBOOK

3.392G Fuel Science
The nature of solid and liquid fuels, their physical and chemical properties and fundamental structure. The constitution of the coal matrix and coal petrography. The influence of the physical and chemical constitution of fuels and petrographic composition of coal and technological utilization.

TEXTBOOKS
As for 3.332.

3.393G Fuel Engineering Plant Design
Extends some of the subject-matter of 3.331.

TEXTBOOKS
As for 3.331.

3.394G Thermal Engineering and Fuel Processing
Advanced heat transfer with applications to flames and fuel utilization. The aerodynamics of fuel and combustion plant; dimensional analysis and models; flame temperature.
Coal carbonization and by-product recovery. Petroleum processing and properties of liquid fuel products; thermodynamics of gasification reactions; controlled atmospheres.
TEXTBOOKS

3.395G Research Techniques and Extension Methods

Designed to provide a critical approach to research activities. The topics are selected from the following:

(a) Advanced analytical techniques (e.g. spectroscopy, X-ray diffraction, chromatography, mass spectroscopy, N.M.R., other optical and instrumental methods. (b) Mathematical methods in the design and interpretation of experiments, e.g., formulation and solution of equations; statistical evaluation of results; empirical equations and nomographs; analogue simulation; an introduction to programming and use of digital computers.

Students to be supplied with reading lists appropriate to individual requirements.

3.396G Unit Operations in Waste Management

The unit operations and processes associated with modern waste management practices, i.e. the origin, nature, characterization, handling, transportation, size reduction and storage of various waste materials; reduction at source and disposal by composting, landfill, incineration and chemical processing; recovery and re-use of marketable products. Legal aspects; case histories.

TEXTBOOK
1971 Waste Disposal Conference. Dept. of Fuel Technology, Univ. of N.S.W.

REFERENCE BOOKS
First Aust. Refuse Disposal Conference Proceedings. Dept. of Fuel, Univ. of N.S.W.

DEPARTMENT OF BIOLOGICAL PROCESS ENGINEERING

3.411 Biological Process Engineering

This subject will be presented as an elective in 1972.

3.440 Biological Process Engineering Project

Project in Biological Process Engineering for students in Chemical Engineering.
3.461G Physical Transport Processes

3.462G Thermodynamics and Theory of Rate Processes

3.463G Bioprocess Dynamics and Plant Design

Linear systems, dynamics and control theory. Mathematical techniques. Computer applications. Introduction to non-linear systems. Problems of stability and applications to organic processes. Biochemical unit operations—process applications and engineering design. Special problems of design, materials and control introduced by aseptic requirements.

3.464G Continuous Culture Processes

Basic theory of the continuous cultivation of micro-organisms. Dynamics of continuous culture and its unsteady state characteristics. Models of cell growth, e.g., Monod model, variable yield model, unstructured and structured models, feedback control models. Multistage continuous culture. Use of batch data in design of multistage systems. Applications of continuous culture: (i) research tool; (ii) industrial fermentations; (iii) effluent treatment; (iv) microbiological oxidation of minerals. Engineering problems associated with continuous biological processes.

3.481G Heat, Mass and Momentum Transfer

Revision of fluid dynamics, heat and mass transfer, boundary layer theory; applications to stagewise processes and two-phase flow, lift and drag co-efficients, non-Newtonian flow. Unsteady state heat transfer by conduction, convection and radiation.

3.482G Thermodynamics of Biological Systems

Review of fundamental principles. First and Second Laws. Applications to biological systems, energy in important processes. Rates of reaction, activation, energy, free energy, and metabolism, activated complexes, redox potential and irreversible electrode potentials.
3.483G Chemical Plant, Design and Operation

Engineering design and operating characteristics of plant and processes normally used, e.g., sterilization and air purification; dehydration; drying at reduced pressure; reduced temperature preservation; radiation; product isolation; sedimentation, filtration, centrifugation; extraction; absorption, chromatography and ion exchange; absorption with reaction; electrophoresis and dialysis; aseptic design; materials of construction; effluent disposal.

3.900G Master of Applied Science Projects

SCHOOL OF METALLURGY

4.011 Metallurgy I

(a) General Introduction to Metallurgy.

(c) Chemical and Extraction Metallurgy—Principles underlying the unit processes by which metals are extracted from ores and raw materials. The extraction metallurgy of iron and steel, copper, aluminium, lead, and zinc, together with the less common metals. An introduction to the principles of fluid flow, metallurgical stoichiometry, energy and mass balances, heat transfer.

TEXTBOOKS

REFERENCE BOOKS
Boas, W. Introduction to the Physics of Metals and Alloys. M.U.P.
Gensamer, M. Strength of Materials under Combined Stress. A.S.M.
Gilchrist, J. D. Fuels and Refractories. Pergamon.

4.012 Metallurgy II

(a) *Metallurgical Thermodynamics*—An introduction to the thermodynamics of metallurgical systems including a study of equilibria involving liquid metals, slags, gases and the solid state.

(b) *Chemical and Extraction Metallurgy*—The application of physico-chemical principles to the study of metallurgical processes. Electrochemistry and the related topics of corrosion and hydrometallurgy. The engineering basis of extraction metallurgy; heat and mass transfer, high temperature technology.

(c) *Physical Metallurgy*—Theories of diffusion, phase equilibrium and transformation, and their application to alloying, heat treatment, and other metallurgical processes.

(e) *Mineral Processing*—The principles and practice associated with liberation, beneficiation, froth flotation, hydrometallurgy, materials handling and process engineering.

(f) *Theory of Plastic Deformation*—Geometry of slip in metal crystals. Polycrystalline materials; preferred orientation. Introduction to dislocation theory; application of this theory to yielding, strain ageing, work- and solution-hardening.

(g) *X-ray Diffraction and Theory of the Metallic State*—X-ray diffraction and its application to metallurgy. Development of the modern theory of solids based on the zone theory.

(h) *Special Topics*—Further development of topics from the above sections.

**TEXTBOOKS**

For the Mineral Processing section see under 7.311 Mineral Processing (School of Mining Engineering).

Hull, D. *Introduction to Dislocations*. Pergamon.

4.012/1 Metallurgy IIA

Comprises sections (a), (b) (part only), (c) and (e) of 4.012 Metallurgy II, together with appropriate laboratory work.
4.012/2 Metallurgy IIB

Comprises section (b) (part only), (d), (f) and (g) of 4.012 Metallurgy II, together with:

(i) Industrial Metallurgy—A course of lectures on the application of metallurgical principles to industrial practice.

(j) Metallurgy Seminar—As specified in 4.013 Metallurgy III.

The section on “Mineral Processing” in 4.012 and 4.012/1 is given by the School of Mining Engineering in 7.551 and 7.551/1. For Textbooks see p. 172.

TEXTBOOKS for 4.012/1 and 4.012/2
Hull, D. Introduction to Dislocations. Pergamon.

REFERENCE BOOKS
As for 4.011 Metallurgy I, together with—
Cullity, B. D. Elements of X-ray Diffraction. Addison-Wesley.
Grossman, M. A. Elements of Hardenability. A.S.M.
Seferian, O. The Metallurgy of Welding. Wiley.
Wagner, C. Thermodynamics of Alloys. Addison-Wesley.
Zener, C. ed. Thermodynamics of Physical Metallurgy. A.S.M.

4.012/3 Metallurgy IIC

Principally industrial metallurgy, and substantially as for section (i) in 4.012/2.
4.012/4 Metallurgy Report

A literature survey of approximately 10,000 words on a topic of relevance to the student's employment. The proposed topic must be submitted to the Head of School for approval before the end of the third week of Session 1 and the report submitted not later than the end of the seventh week of Session 2.

The section on "Mineral Processing" in 4.012 and 4.012/1 is given by the School of Mining Engineering in 7.551 and 7.551/1. For Textbooks see p. 172.

4.013 Metallurgy III

(a) Development and application of metallurgical principles relating to the thermodynamics and kinetics of metallurgical processes; structural chemistry; the extraction and refining of the rarer metals; crystal imperfections, with reference to deformation, work hardening, annealing and radiation damage; X-ray and neutron diffraction; phase transformations; fracture mechanisms; and the design of engineering materials.

(b) The application of metallurgical principles to industrial practice, with particular reference to welding, foundry practice, metal shaping, metal finishing, materials selection and non-destructive testing.

(c) Seminar.

TEXTBOOKS
As for 4.011 Metallurgy I and 4.012 Metallurgy II.

REFERENCE BOOKS

4.013/1 Metallurgy Seminar
As specified in 4.013 Metallurgy III.

4.031 Physics of Metals

(a) Statistical Mechanics: Specification of systems and ensemble; quantised system. Distribution law for localised elements; microscopic states; Stirling's approximation; partition function; Bose-Einstein distribution; Fermi-Dirac distribution; Maxwell-Boltzmann distribution. Interpretation of classical thermodynamic variables; Monte Carlo methods.

(c) Interaction of Radiation with Matter: Properties of electrons; photons, neutrons. Mass; charge; spin; energy. Energy transfers in collisions with free and bound particles. Absorption; true absorption; scattering. Importance of absorption mechanisms at different energies. Coherently scattered radiation; interference; Bragg's law; reference to dynamical theory and effects; determination of lattice parameters.
4.041 Mathematical Methods

4.121 Principles of Metal Extraction

The fundamental principles of metal extraction. Oxidation and reduction, roasting, slag reactions, distillation, leaching precipitation and electrolysis.

4.901 Materials

An introductory course on the production, structure and properties of the main types of engineering materials, with a brief introduction to the process used in shaping and fabricating them. This course forms part of the subjects 5.001 Engineering I and 5.011 Engineering IA.

4.911 Materials Science

The atomic structure of metals. The grain structure of metals; origin; modification. Structure of alloys—theory. Structure, properties and heat treatment of commercially important alloys based on aluminium, copper and iron in particular. Corrosion. Control of structure and properties, commercial alloys, materials selection.

**TEXTBOOK**

**REFERENCE BOOK**

4.913 Materials Science

Polymer materials. The structure and properties of polymers. Mechanisms for the modification of properties.

Ceramic materials. The structure and properties of ceramics. Similarities and differences with other crystalline solids. Ceramic-metal composites.

4.921 Materials Science

(For students in Electrical Engineering). This subject forms part of 8.111 Civil Engineering.

The atomic structure of metals. The crystalline nature of metals and its significance. The solidification of metals. Plastic deformation of crystalline...

TEXTBOOKS
As for 4.911 Materials Science, together with—

REFERENCE BOOKS
Pfann, W. G. Zone Melting. Wiley.

4.941 Metallurgy for Engineers
The structure and properties of solids, with special reference to metals and metallic alloys which are of use to the engineer.

TEXTBOOK

4.951 Materials Technology

The structure, properties and technology of wood.

SCHOOL OF MECHANICAL AND INDUSTRIAL ENGINEERING

5.001 Engineering I
TEXTBOOKS
A. Introduction to Engineering
Harrisberger, L. Engineersmanship. Wadsworth.

SCHOOL OF MINING ENGINEERING

PRELIMINARY BACKGROUND READING
(Selected reading from this book list for First and Second Year Students.)
Farwell, G. M. *Down Ardent Street*. Johnson.

7.110 and 7.110/1 Mineral Resources

TEXTBOOKS

7.111 and 7.111/1 Mining Engineering I

TEXTBOOKS
Pfleider, E. P. & Eugen, D. *Surface Mining.* A.I.M.E.

7.112 Mining Engineering II

7.112/1 Mining Engineering II

For students in the B.Sc. (Eng.) course. Based on topics selected from the syllabuses of 7.112, 7.132 and 7.133.
7.113 Mineral Industry Elective Project
Elective may include mineral process engineering; statistics; sampling and valuation; rock mechanics, mine and treatment plant design, minerals and petroleum production engineering; selected courses from other schools. Students may be grouped in syndicates.

7.113/1 Mineral Industry Elective Project
For students in the B.Sc. (Tech.) and B.Sc. (Eng.) courses. Based on the syllabus of 7.113.

TEXTBOOKS
Barenburg, A. W. Psychometry and Psychometric Charts. S.Af.I.M.M.

7.115 Mining Engineering III
Explosives engineering, nuclear blasting. Petroleum engineering, offshore mining. Computer applications to mining methods and transport.

TEXTBOOK

7.116 Mining Engineering IV

TEXTBOOKS
Mero, M. Mineral Resources of the Sea. Pergamon.

7.121 Mine Surveying and Control Engineering
Surveying techniques in the development and exploitation of mineral resources and the assessment of mineral properties. Tunnel surveys, transfer of azimuth; bore hole surveying stope and ore reserve surveys, special mine surveys, mine survey office organization. Stereographic projection. Organization, programming and analysis of mining methods or techniques. Method of production control and grade control. Mathematical models of mining methods.

TEXTBOOK
7.121/1 Mine Surveying

For students in the B.Sc. (Eng.) course; based on the syllabus of 7.121.

TEXTBOOKS
Students should provide themselves with seven-figure logarithmic tables, such as Chambers' Mathematical Tables.

7.132 Mine Valuation

Sampling and valuation of mineral properties, administration. Resource allocation, finance, infrastructure, labour requirements.

TEXTBOOK

7.133 Mineral Economics

TEXTBOOK

7.311 Mineral Processing I

7.311/1 Mineral Processing I

For students in the B.Sc. (Tech.) and B.Sc. (Eng.) courses. Based on the syllabus of 7.311.

TEXTBOOK

7.312 Mineral Processing IB

TEXTBOOKS
Cameron, E. N. Ore Microscopy. Wiley.
7.315 Mineral Processing II
Surface chemistry, adsorption, electrical double layers, stabilization and dispersion of mineral particles. Flocculation and froth flotation.

TEXTBOOKS
Cameron, E. N. Ore Microscopy. Wiley.  

7.316 Mineral Processing III
Integration of mineral processing techniques with metallurgical operations. Process engineering. Laboratory and pilot plant testing, project evaluation. Preparation of flowsheets, equipment selection and plant design.

TEXTBOOKS
Fuerstenau, D. W. ed. 50th Anniversary of Froth Flotation. A.I.M.E.  
Leonard, J. W. & Mitchell, D. R. Coal Preparation. A.I.M.E.

7.411 Fluid Mechanics

7.412 Mineral Industry Processes
Principles underlying extraction of some common metals, pyrometallurgy, hydrometallurgy, electro-metallurgy, chemical extraction, agglomeration, sintering, mineral processing as a bridge between mining and metallurgical industries.

7.551 and 7.551/1 Mining and Mineral Process Engineering

TEXTBOOKS
Lewis, R. S. & Clark, G. B. Elements of Mining. Wiley.

MINING ENGINEERING GRADUATE SUBJECTS
7.191G Mining Engineering
I. Rock mechanics, behaviour and control of extraction openings in metalliferous, coal and non-entry mining. Techniques in deep mining.

II. Non-entry methods of mineral production, sub-surface horizons, conditioning of extraction horizon, fluid thermal and chemical factors.
TEXTBOOKS
Lewis, R. S. and Clark, G. B. *Elements of Mining*. Wiley.

7.192G Mining Engineering Technology

II. Materials handling: solids and liquids, analyses of control, application of programming techniques, power supply and distribution, legal and statutory requirements, protection of personnel and installations.

III. Economics: mineral-metal type complex, inter-industry economics of mineral production, resources allocation in mineral development programmes. Practical use of programming methods.

IV. Mine Design: separation of functions for maximum efficiency; application of analogue and digital computers. Explosives engineering (chemical and nuclear) applied to the mining industry.

TEXTBOOKS
As for 7.191G Mining Engineering.

7.193G Mining Engineering Laboratory

May include advanced work in: sampling and mine valuation; mine support (temporary or long terms); ventilation; mine design and plant (extraction areas and servicing functions); rock properties; programming of mining methods and transport; non-entry mining; petroleum engineering; gasification; solvent processes.

TEXTBOOKS
As for 7.191G. Mining Engineering.

MINERAL TECHNOLOGY GRADUATE SUBJECTS

7.391G Mineral Processing

TEXTBOOKS
Cameron, E. N. *Ore Microscopy*. Wiley.
Rose, H. E. and Sullivan, R. M. *Ball Tube and Rod Mills*. Constable.
7.392G Mineral Processing Technology, Parts 1 and 2

**TEXTBOOKS**

or

7.393G Mineral Engineering Laboratory
Laboratory investigations may be selected from the following classifications according to availability and specialization: metalliferous ore concentration; coal preparation; beneficiation of non-metallics; processing of mineral bearing fluids.

**TEXTBOOK**

**SCHOOL OF CIVIL ENGINEERING**

8.151 Mechanics of Solids
**TEXTBOOK**

8.241 Geomechanics

8.243 Soil Mechanics
**TEXTBOOK**

8.250 Properties of Materials
**TEXTBOOK**

8.510 Hydraulics
**TEXTBOOKS**

8.557G Hydrologic Investigations
**TEXTBOOK**
8.558G Groundwater Hydrology

TEXTBOOKS

SCHOOL OF WOOL AND PASTORAL SCIENCES

9.101 Livestock Production I

The sheep and beef cattle industries and their place in the economic life of Australia; levels of production and trends. The interrelationships of each of these classes of livestock and the natural, artificial and economic conditions determining the stratification of types. Sheep producing zones. Beef cattle in the sheep enterprise. Sheep breeds, their uses and economic relationships. Aids to judging. Crossbreeding for wool and/or meat production, prime lamb production.

Sheep management and calendar of operations; principal sources of wastage. Handling skins and hides.

9.122/1 Livestock Production IIA

Uses of cattle in the tropics and sub tropics. Adaptation of Bos indicus and B. taurus. Breeds of beef cattle and cross breeding, heterosis.

Types of beef cattle, enterprise, size of units and capital costs; herd composition. Starting the beef cattle enterprise, selection of breeding stock, and performance recording. Production of beef and veal, quality concepts.

Calendar of operations for beef breeding herds, and year round management, sale of stock.

9.122/2 Livestock Production IIB

The dairying and pig industries of Australia; patterns and trends. Principal breeds and their uses. Performance recording. Production of milk and milk by-products, and of pigmeats. Quality concepts of the various products.

Calendar of operations and the day to day management of the dairy cow; selection and management of the dairy sire.

Selection of breeding pigs; importance of type. Pig housing, management and feeding. Wastage and disease.

9.123 Livestock Production III

Principles of livestock production and their application in optimizing animal production; reproduction and fertility; applied milk secretion; growth and development. The meat industry; slaughter, meat inspection and preservation; utilization of by-products.

Carcass conformation and composition and measurement techniques for predicting same. Meat quality.

9.132 Animal Health and Preventive Medicine II—Animal Disease

9.221 Agronomy

TEXTBOOKS for 9.221 and 9.231
Barnard, C. Grasses and Grassland. Macmillan.
Burbidge, N. T. Australian Grasses. Vols. I and II. A. & R.
CSIRO. The Australian Environment. M.U.P.
Donahue, R. L. Soils. Prentice-Hall.
Leeper, C. W. Introduction to Soil Science. M.U.P.
Spedding, C. R. Grassland Ecology. O.U.P.
Whittet, J. N. Weeds. N.S.W. Dept. of Agriculture.
Wilson, B. Pasture Improvement in Australia. Murray.

9.232 Crop Agronomy

9.311 Agricultural Economics I

The nature and development of agricultural economics and farm management. Theory and practical applications of production economics principles and the analysis of production functions.
Theory, construction and analysis of cost curves. Economies of size and the problem of optimum farm size.

Introduction to price theory. The nature and derivation of supply and demand relationships, and of factors which affect these relationships. Illustration of the role of price theory in the analysis of agricultural policies. Problems in the empirical estimation of supply and demand.

**TEXTBOOKS**

9.312 Agricultural Economics II

The structure and functions of agricultural marketing systems and institutions. Use of price theory in the examination of problems and policies affecting marketing systems. Effects on agricultural markets of subsidies, taxation, population growth and economic development.

Introduction to the theory of international trade and international monetary mechanisms. Interrelationships between trade policies and agricultural policies.

Review of current issues in agricultural policy: the small farm problem and declining industries; rural credit policies.

**TEXTBOOKS** as for 9.311, plus:

9.313 Farm Management I

Farm management planning methods: gross margins analysis; simplified programming; partial budgeting; parametric budgeting; whole-farm budgeting; development budgeting and cash flow budgeting. Discounting methods, taxation provisions and rural credit facilities affecting evaluation of rural investments.

Principles and practice of methods of valuation of rural assets. Land tenure and systems of title.

Financial and production records and accounts. Co-ordination of managerial accounts with taxation requirements. Current developments in managerial accounting for rural industries. Use of farm records as indicators of economic efficiency and as sources of information for normal farm planning methods.

**TEXTBOOKS**

9.314 Farm Management IIA
Mathematical programming applications in agricultural industries: linear programming in static and development situations; parametric linear programming; Monte Carlo programming approaches; dynamic programming. Game theory, inventory analysis and other approaches to planning in uncertain or risky situations.

TEXTBOOKS

9.315 Farm Management IIB
Economic aspects of technical agricultural research, with emphasis on the evaluation and interpretation of research results at the farm level. Design and analysis of research projects for estimation of response relationships between rural resources and products. Problems in interpretation and application of these estimates.

Simulation of farm management systems and data requirements for simulation.

TEXTBOOKS

9.316 Analysis of Rural Development Projects
(To be offered from Session 1, 1972.)
Justifications for public investment in rural development. Australian developments in Federal-State financial relationships affecting the planning and evaluation of public development projects.

Evolution of cost-benefit analysis techniques. Theory of cost benefit analysis, and problems in its application, illustrated by case studies.

Input-output models and measurement of the impact of development projects on regional and national economies.

TEXTBOOKS
9.411 Agricultural Chemistry I

An integrated course in various aspects of chemistry directed to the special interests of pastoral science. Experimental techniques, preparative and analytical, built around biological interest. Correlations of theoretical chemistry with biological processes.

9.412 Agricultural Chemistry II

Animal milks, analysis and heat treatment changes and detection. Roles of trace metals in biological processes, metal complexes with proteins and metal catalysis.

9.421 Animal Nutrition

While particular emphasis will be given to nutritional requirements of sheep, those of other farm livestock will be dealt with in this section.

TEXTBOOKS

9.531 Wool Technology I

Wool Textile Manufacture: Lectures and laboratory demonstrations cover the principles and practices involved in the conversion of raw materials to yarn. Weaving and finishing of fabrics.

9.532/1 Wool Technology IIA
   Wool Study: Practical wool sorting, wool classing and appraisal. Participation in the preparation of University Field Station and commercial wool clips. Wool valuing. The physical handling and the quality composition of the Australian clip.

9.532/2 Wool Technology IIB
   Wool Metrology: Theories of sampling and measurement of wool characteristics. Laboratory procedures. Chemical and physical testing of raw wool. Estimation of wool damage.

9.532/3 Wool Technology IIC
   Raw Materials: Fibres other than wool; their properties, uses and identification.

9.533 Wool Technology III
   Wool Study: Relationships between subjective appraisal and objective measurement. Sampling and testing of baled bulks from Field Stations and commercial clips. Developments in wool marketing.

9.534 Wool Technology IV
   Wool Science: Fine structure of the fibre, chemical composition, wool fibre physics, chemical reactivity, mechanical properties and developments in wool technology.

TEXTBOOKS

9.601 Animal Physiology I
   Physiological systems of mammalia are treated with special attention to homeostasis. Cell membranes; blood and body fluids; the immune reaction. Cardiac control, functions and haemodynamics. Respiration. The endocrine system with particular emphasis upon growth, reproduction, lactation and stress. The nerve impulse, its excitation and transmission. Physiology of digestion, the gastro-intestinal tract and of the kidney. Heat tolerance and climatic adaptation.

9.602 Animal Physiology II
   Major aspects of mammalian physiology relevant to animal production, behavioural physiology, reproduction in the female and lactation, semen physiology. Introductory courses on environmental physiology, lower gut physiology, respiratory gas transport, renal function, the physiology of gene action, ageing and the problem of chemical residues will be given.
9.603 Animal Physiology III

Mammalian physiology directed towards domestic livestock production and homeostatic mechanics. Emphasis will be placed upon techniques. Active transport and allied membrane phenomena. Co-ordinator systems (neural, humoral), reproduction and lactation. Development physiology. General metabolism and its regulation: the physiology and metabolism of specific organs—heart, muscle, liver, kidney. The physiology of the mammalian digestive tract. Environmental physiology; adaptive mechanisms, especially in the newborn, and in heat tolerance, the immune reaction. Electrolyte physiology; acid-base equilibrium of the organism; use of clearance values in measuring renal and liver activity; respiration; techniques of gas analysis and respirometry. Circulation, cardiac output and distribution (experimental techniques), special vascular circuits (pulmonary, cerebral, hepatic, splenic, renal, testicular). Physiology of the skin.

9.801 Genetics I

9.802 Genetics II

TEXTBOOKS for 9.801 and 9.802.

9.811 Biostatistics

TEXTBOOK
9.821 Genetics

9.901 Rural Extension

TEXTBOOK

WOOL TECHNOLOGY GRADUATE SUBJECTS

9.105G Advanced Livestock Production
Advanced aspects of the principles of animal production with particular emphasis on physiology and endocrinology. Biostatistics and population genetics. Parasites. Management to maximize economic return.

9.503G Wool Study

9.711G Advanced Wool Technology

9.902G Techniques of Laboratory and Field Investigation

DEPARTMENT OF INDUSTRIAL ENGINEERING

18.121 Production Management

*Engineering Economics*—The structure of the Australian economy. The theory of the firm, pricing, fluctuations in demand. The economics of selection and replacement of processes and equipment. *The Use of Human
and Physical Resources—Methods engineering, ergonomics, motion and time study, financial incentives, applications to machine controlled processes, work sampling and data collection. Plant location, factory layout. Production and Quality Control—Control of jobbing, repetitive batch and continuous production. Manufacturing organizations, functions, inter-relationships and information flow. Sampling techniques in quality control, control charts. Introduction to Operational Research—The formation and optimization of mathematical models of industrial processes. The development of decision rules. Some techniques of operational research and applications, e.g. mathematical programming, queueing theory, inventory models, simulation.

TEXTBOOKS

18.551 Operations Research
TEXTBOOK

SCHOOL OF CHEMICAL TECHNOLOGY

22.111 Industrial Chemistry I
(a) Review of services in the chemical industry.

(b) Chemical Process Equipment—The principles of operation, construction and fields of application of equipment used in carrying out various processes and operations in the chemical industry.

(c) Instrumental Analysis—Basic principles of volumetric and gravimetric analysis and the application of spectrometric equipment to the analysis of process streams.

22.112 Industrial Chemistry II
(a) Processes—A study of the production of inorganic industrial chemicals from the standpoint of the application of the basic principles of inorganic and physical chemistry (acid industries, alkali industries, industrial gases, electric furnace products, superphosphates, aluminium and glass); a study of some sections of the organic industrial chemical industry—fermentation, cellulose, acetylene, polymers, methanol and formaldehyde, sugar. (b) Management Science—Application of the principles of the feedback control loop to management in the chemical industry and dealing with production, quality control, work study, production planning, economics and project development. (c) Operations Research—A study of the use of operations research in the chemical industry including linear programming, the transportation problem, inventory control techniques, applications of the queueing theory, use of the digital computer, brief discussion of network flow problems and dynamic programming. (d) Chemical Thermodynamics and Kinetics—(i) Thermodynamics—Statistical thermodynamics; thermodynamic functions; first and second laws of thermo-
dynamics; thermodynamics of fluids; power cycles; heterogeneous equilibrium; chemical reaction equilibrium; third law of thermodynamics; irreversible processes. (ii) **Kinetics**—Order of reaction and rate equations; theory of rate processes; diffusion; types of reactors; catalysis; mechanical arrangement of reactors for agitation and heat and mass transfer. (e) **Data Processing**—Application of the principles of statistics to chemical problems (Z test, t test, F test and \( x^2 \) test), analysis of variance, design of experiments, correlation and regression, quality control; use of graphical methods; fitting of empirical equations to experimental data; preparation of nomograms using constructional determinants. (f) **Laboratory**—Students will be required to attend lectures on Report Writing, carry out laboratory assignments and attend factory inspections at local and country centres as required.

22.112/1 and 22.112/2 Industrial Chemistry II—Parts 1 and 2

Part I is covered by sections (a) and (f) of 22.112 Industrial Chemistry II. Part II is covered by sections (b) to (e) inclusive of 22.112 Industrial Chemistry II.

22.112/1 Processes

**TEXTBOOKS**

Kent, J. A. *Riegel's Industrial Chemistry*. Reinhold. or

22.112/2

**TEXTBOOKS**

*Chemical Thermodynamics and Kinetics*

*Data Processing*

22.113 Industrial Chemistry III

(a) **Processes**. Topics selected from the following will be studied in depth: refractories, high-temperature processes, high-pressure processes (especially ammonia synthesis—thermodynamics and equipment), high-vacuum processes, nuclear metals, industrial polymers, aromatic intermediates, fermentation industries. (b) **Instrumentation and Process Control**. Instrumentation (primary sensitive elements and final control elements concerned with the parameters normally encountered in the chemical industry), elementary principles of digital computation, process dynamics, open-loop process system analysis, principles of analogue computation and simulation, automatic process control systems. (c) **Advanced Kinetics**. Theoretical kinetics (rate processes, statistical mechanics, diffusion), catalysis, solid-state reactions, polymerization kinetics scale-up reactor design, applications of computers to kinetics and reactor design, nuclear reactions. (d) **Process Simulation**. The application of the hybrid computer to the study of the dynamics of processes encountered in the chemical industry.

**TEXTBOOK**

22.121 Industrial Chemistry Seminars

Students will be required to deliver two lecturettes on selected topics, one related to some aspect of chemical technology, and the other to their research project. The intention is to develop skill in oral expression, critical evaluation, and logical presentation of information. Opportunity will be taken, where appropriate, to arrange for guest lecturers.

22.131 Industrial Chemistry (Processes)

For the description of this subject see section (a) Processes, of 22.112 Industrial Chemistry II. Students are also required to take part in a series of factory visits and prepare reports on them.

22.211 Ceramics I

*Ceramics Ia*—Introduction; basic principles of firing procedures (thermo-dynamics, phase equilibria, reaction rates, nucleation and growth of phases), fired properties and the quality control of finished products; stoichiometry; calculation of the physical properties of ceramic materials. *Ceramics Ib*—Chemical Ceramics—Structural principles; crystal chemistry; kinetics of solid-state reactions; chemistry of ceramics in relation to the periodic table. A systematic treatment of a range of ceramic products in the light of the above principles. *Ceramic Equipment*—The principles of operation, construction and fields of application of equipment used in the mining, preparation, and fabrication of raw materials, and the drying and firing of ceramic products.

**TEXTBOOKS**

22.211/1 and 22.211/2 Ceramics I—Parts 1 and 2

22.211 Ceramics I for part-time students in two parts over two years.

22.212 Ceramics II

*Physical Ceramics*—Application of the principles of physical chemistry and solid-state physics to a study of the preparation and properties of ceramic materials. *Clay Mineralogy*—Structures and properties of the various clay minerals; techniques employed in the identification of clay minerals; composition and properties of the ceramic clays of New South Wales. *Fuel Technology*—The nature of solid, liquid and gaseous fuels; principles of combustion. *Laboratory*.

**TEXTBOOK**
Kingery, W. D. *Introduction to Ceramics*. Wiley.

22.221 Chemical Thermodynamics and Kinetics

For the description of this subject, see section (d), Chemical Thermodynamics and Kinetics, of 22.112 Industrial Chemistry II.
22.231 Ceramic Engineering

A detailed study of the mechanical properties of ceramic materials and a comparison of these with those of metals and plastics. A detailed fundamental treatment of the unit operations concerned with the handling of ceramic materials; production of high temperatures; unsteady-state heat transfer and firing. Ceramic engineering design.

22.241 Instrumentation and Process Control

For the description of this subject, see section (b), Instrumentation and Process Control, of 22.113 Industrial Chemistry III.

22.251 Operations Research and Seminars

For the description of this subject, see section (c), Operations Research, of 22.112 Industrial Chemistry II.

22.311 Polymer Science I

(a) Organic Process Chemistry of Polymers. Session 1.

Industrial methods of polymerization—bulk, suspension, emulsion, solution, high pressure. Polymerization processes—stepwise and chain growth, free radical and ionic, Ziegler-Natta catalyst systems. Selected examples taken from polyesters, vinyl and acrylic polymers, phenolic resins, synthetic elastomers.

Introduction to qualitative and quantitative analysis by chemical and instrumental methods.

(b) Polymer Characterization. Session 2.

(c) Polymer Physics. Session 1.

Stress-strain behaviour of polymeric materials at ordinary and elevated temperatures. Rheological considerations of polymer processing operations. Physical testing of polymers. Design of high polymer formulations.

(d) Laboratory 4 hrs./week for the whole year.

Selected experiments illustrating principles developed in the lecture courses in polymer physics and polymer chemistry.

TEXTBOOKS

Margerison, D., and East, G. C. Introduction to Polymer Chemistry. Pergamon.
22.312 Polymer Science II

This subject is divided into two parts, Part A dealing with polymer chemistry and Part B with polymer physics. Parts A and B are scheduled as 2 hour/week lecture courses in Sessions 1 and 2 respectively. Students may elect to study either or both parts.

Part A: A detailed study of topics selected from the following:—Structure/property relationships, inorganic polymers, polymers for high temperature service, acrylate esters, gas chromatography in polymer science, medical use of polymers, permeability of films, surface coatings.

Part B: A detailed study of topics selected from the following:—Rubber elasticity, extrusion plastometry, rheological aspects of polymer processing operations.

TEXTBOOK

POLYMER TECHNOLOGY GRADUATE SUBJECTS

22.321G Polymer Engineering I

(a) Polymer Compound Design—Safety Precautions—Formulation principles of: Elastomers, thermosets, thermoplastics, adhesives and bonding, cellular polymers (open and closed cell, rigid and flexible), surface coatings, films, sheeting and pipes. Formulation cost data. Milling, mixing and curing of polymer formulations.

(b) Polymer Processing—Mixing and dispersion: extrusion fundamentals (screw type)—isothermal operation, adiabatic operation, die design; ram extrusion fundamentals; screwless extrusion fundamentals; injection moulding (plastic and elastomers); press and transfer moulding; calendering; sheet forming; hollow articles; sealing and welding.

(c) Laboratory—Selected experiments illustrating principles developed in lectures.

Natural rubber gum stock; carbon black reinforced tyre tread stock; neoprene compound design; acrylonitrile compound design; flexible PVC compound design; plasticizer ratios in PVC; polyester castings; glass reinforced—polyester laminates; polyurethane foams; epoxy chemical resistant coatings; surface coating formulation and testing.

Mixing processes (2 and 3-roll mills and Banbury mixer) dispersion processes (Sigma arm mixer); press moulding of thermosets; injection moulding of polyethylene and nylon; screw extrusion of thermoplastics (1½” extruder); screw extrusion of elastomers (1½” extruder); screwless extrusion of thermoplastics; vacuum forming from sheet material; hot gas welding of thermoplastics; hot sealing of plastic films.

TEXTBOOKS

22.322G Polymer Engineering II

(a) Polymer Physical Properties and Engineering Applications of Polymers—Theory of rubber elasticity; molecular chain tension; force-extension fundamentals; large strain region in elastomers; rheological phenomena (flow); extrusion plastometry; reinforcement of polymer physical properties.
Engineering Applications of Polymers—Thermosets; thermoplastics; elastomers; cellular polymers; adhesives and bonding; surface coatings; thermal and acoustic insulation; vibration isolation; chemical resistance; accelerated ageing.

(b) Physical Testing—Density of solid and cellular polymers; hardness; stress-strain fundamentals (ultimate tensile strength, modulus) for thermosets, thermoplastics and elastomers; elastic modulus; work of deformation; compressive strength and modulus; shear; torsion; flexural strength and modulus; impact, resilience; flex cracking; tear.

Creep; relaxation; first and second order transition; thermal conductivity through polymers; refractive index extrusion plastometry; cone and plate viscometry (solid polymers).

Stress-strain; creep; relaxation; second order transition; thermal conductivity (K factor); cell size and per cent closed cells (cellular polymers); refractive index; extrusion plastometer; cone and plate viscometer; Mooney viscometer.

22.331G Polymer Chemistry I

(a) Organic Process Chemistry: Natural Polymers—Classification of polymers; methods of polymerization—bulk, suspension, emulsion, high pressure; processes: stepgrowth, chain growth; the chemistry and applications of polymer systems including—polyesters, vinyl polymers, phenolic condensation resins, synthetic rubbers and elastomers, fluorinated polymers. Natural polymers.

(b) Mechanisms and Kinetics: stepgrowth polymerization kinetics, structure effects, chain growth polymerization. (i) Free radical polymerization—chemistry and properties of free radicals and initiators; kinetics, transfer reactions; copolymerization; monomer radical structure and reactivity, (ii) ionic polymerization including stereo-regular polymers.

(c) Polymer Characterization: molecular weight, average distributions, thermodynamics of polymer solutions, theta temperature, measurement of number average and weight average molecular weights, ultra centrifuge, optical properties, monomolecular films, thermal methods, fractionation methods and their limitations, dual dispersity, control of molecular weight.

(d) Laboratory—Selected experiments illustrating principles developed in lectures.

TEXTBOOKS
Flory, P. J. Principles of Polymer Chemistry. Cornell U.P.
Margerison, D., and East, G. C. Introduction to Polymer Chemistry. Pergamon.

22.332G Polymer Chemistry II

(a) Polymer Structure and Properties: (i) configurational effects; conformational effects; elastomers, fibres, plastics; temperature resistant polymers, rigidity; crystallinity, morphology, kinetics, nucleation, melting effect on properties; polar interactions; chemical reactivity, chemistry of adhesion, stereoregular polymers; tacticity; biological systems; medical applications of plastics; choice and design of materials for specific applications; (ii) Degradation—thermal, photolytic, mechanical, ultrasonic, radiation damage, oxidative, model compounds; biological degradation; protection of materials against degradation.
(b) **Inorganic Polymers:** polymers containing backbones other than carbon: phosphorus, arsenic, sulphur; polysilicanes.

(c) **Analysis:** instrumental methods, U.V. and I.R. spectroscopy, endgroup analysis, vapour phase chromatography; degradation; X-rays, radioisotopes; stereoisomers, chemical methods.

(d) **Laboratory**—Selected experiments illustrating principles developed in lectures.

**TEXTBOOK**
Sharples, A. *Introduction to Polymer Crystallization.* Arnold.

**SCHOOL OF APPLIED GEOLOGY**

**25.001 Geology I**

*Petrology*—Field occurrence, lithological characteristics and structural relationships of igneous, sedimentary and metamorphic rocks. Introduction to coal, oil and ore deposits.

*Stratigraphy and Palaeontology*—Basic principles of stratigraphy; introductory palaeontology. The geological time scale. The geological history of the Australian continent and more specifically that of New South Wales in introductory outline.

*Practical Work*—Preparation and interpretation of geological maps and sections. Map reading and use of simple geological instruments. Study of simple crystal forms and symmetry. Identification and description of common minerals and rocks in hand specimen. Recognition and description of examples of important fossil groups. Supplemented by three field tutorials, attendance at which is compulsory.

**TEXTBOOKS**

**25.002 Geology II**

*Mineralogy*: Principles of optical crystallography; the construction and use of a polarizing microscope. Polymorphism; the crystal chemistry, crystallography and geological occurrence of the main groups of rock forming minerals. Description and recognition of common ore and rock forming minerals in both hand specimen and thin section.

Palaeontology: Morphology and systematics of major fossil Invertebrate phyla (Part 1) and their stratigraphic distribution. Practical: examination of representative fossils from each phylum.

Field Work: Approximately fourteen days will be spent on field tutorial throughout the year. Attendance is compulsory.

TEXTBOOKS
Mineralogy

Petrology I
Williams, H., Turner, F. J. & Gilbert, C. M. Petrography. Freeman, 1954.

Palaeontology I

Stratigraphy I

Structural Geology
Part I

Stratigraphy and Sedimentation—Advanced stratigraphic principals and techniques. Evolution of geosynclines and intracratonic basins. Regional stratigraphy and basin analysis. The sedimentational and tectonic history of selected geological provinces in Australia. The theory of continental drift and its stratigraphic implications.

Part II

Geophysics—Physics, shape, structure and constitution of the earth; geotectonics, seismology, gravity, geodesy, geothermy, geomagnetism, palaeomagnetism, geo-electricity, aeronomy and geochronology. Practical work includes a one day field tutorial.

Palaeontology—Applications of palaeontology to stratigraphy (geochronology and palaeoecology). Vertebrate palaeontology.

Structural Geology—Diastrophic and non-diastrophic deformations and dislocations; structures associated with igneous rocks; alpine style tectonics. Geotectonics. An introduction to structural analysis. Practical: Advanced structural mapping; structural problems, including use of the stereographic net.

Field work—will be held during the year. This includes a geological survey camp which will be held before the first term, and ten days of field instruction. Attendance is compulsory.
TEXTBOOKS

Stratigraphy II

Stratigraphical Palaeontology

Structural Geology
Hills, E. S. *Elements of Structural Geology*. Methuen, 1963.

Geophysics

Petrology II

Minerology
As for 25.002 Mineralogy plus
Azaroff, L. V., and Donahue, R. J. *Laboratory Experiments in X-ray Crystallography*.

Economic Geology

25.004/1, 25.004/2, 25.004/3, 25.004/4 and 25.004/5

Geology IV, Parts I, II, III, IV and V

Part I

Part II

Exploration Geophysics—The theory, interpretation and practice of geophysical methods in exploration, including and extending beyond 25.013 Geology III (Supplementary) *Exploration Geophysics*. 
Part III

Exploration and Mining Geology—Selection of prospecting areas, methods of mineral search, assessment of new discoveries and subsequent development as underground or open cut mines, re-evaluation of old mines. The work of a geologist in operating mines, ore prediction, exploratory drilling. Evaluation of coalfields. Mine geology of leading Australian mines. Laboratory: Solution of mining geology problems involving drill core assays and developmental procedures. Exercises in geochemical prospecting.

Part IV

Engineering Surveying—Ordinary levelling, angle measurements, linear measurements (tapes), theodolite traversing, tacheometry, areas and volumes, contour and detail surveys.

Part V

Project.

TEXTBOOKS

Mining and Petroleum Geology

Geophysics

25.013 Geology III (Supplementary)

Consists of section (a) and two components of section (b) approved by Head of School.

Section (a)

Photogeology—The principles of photogeology and photo-interpretation of laboratory work to illustrate the lecture course.

Geophysics—The theory, interpretation and practice of geophysical methods in exploration. Seismic, electrical, electromagnetic, gravity, magnetic, radioactive and well logging. Applications in hydrology, engineering, petroleum and mining geophysics. Laboratory requirements, include conducting model experiments illustrating the different field methods.
Coal—Origin and distribution of coals. Coal type and coal rank. Petrology of coal and coal analyses.

Oil—Occurrence of oil. Recovery techniques and reservoir assessment.

Section (b)

Palaeontology—Micropalaeontology—the morphology, taxonomy and stratigraphical distribution of the principal groups of microfossils. Practical work—Study and description of foraminifera, ostracoda, conodonts and plant microfossils, also certain examples of megafossils from the invertebrate phyla. Micropalaeontological techniques.

Structural Analysis—The geometric analysis, on all scales, of the fabric of metamorphic tectonites; the kinematic and dynamic inferences that may be made. Strain markers and the problems associated with strain analysis. Genesis of selected fabric elements (including preferred crystal lattice orientations) based on experimental work. Practical work—Geometric analysis of hand specimens; elucidation of the geometric properties of superposed fabric elements; interpretation and presentation of structural data, leading to the construction of orthographic block diagrams. The universal stage as a tool in microscopic analysis. Field work—Approximately ten days will be spent on field tutorials.

Micropalaeontology

Structural Analysis

**25.101 Geology for Engineers**
An introduction to geology with emphasis on the mechanical properties of rock and soil. Rock-forming minerals, clay minerals and the classification of rocks. The properties of rock. An introduction to the processes of orogenesis, epeirogenesis, denudation and weathering of rocks, vulcanicity, intrusion of plutonic rocks, sedimentation and metamorphism. Groundwater, the formation of soils, landforms and the stability of slopes. Review of the application of geology and geophysics in engineering practice. Laboratory work consists of the examination and the identification of common rock-forming minerals and rock types, and the preparation and interpretation of simple geological maps and sections. Two geological field tutorials of one day duration are a compulsory part of the course, and satisfactory field tutorial reports are to be submitted.

**TEXTBOOK**
25.102 Geology for Mining Engineers

Mineralogy and Petrology—Crystalline state, crystal symmetry, crystal systems, physical and chemical properties of minerals, crystal optics, micro-petrology. Occurrence and structures of igneous rocks, consolidation of magmas, igneous rock classification. Thermal and regional metamorphism. Composition and classification of sedimentary rocks, sedimentation and sedimentary environments, micro-petrology. Laboratory: Hand specimen crystallography, mineralogy and petrology; thin section petrology.

Geophysics—An introduction to the basic principles of geophysics, and to the principles, methods and applications of geophysical exploration, viz. gravity, magnetic, electrical, seismic, radioactive and miscellaneous. Discussion of various physical properties of rocks.

Exploration and Mining Geology—As for 25.004/3, Part III, Exploration and Mining Geology.

TEXTBOOKS

25.102/1 Geology for Mining Engineers (B.Sc.(Tech.))
An abridged version of 25.102.

25.201 Mineralogy (Metallurgy Course)
The crystalline state of minerals; fundamental laws of crystallography, symmetry elements and symmetry operations; crystal systems and classes; Miller indices; stereographic projection of crystals. Examples of the more common crystal classes. Regular and irregular attachment of crystals, twin-
ning, etc.; crystal growth and its anomalies. Fundamentals of the atomic structure of crystals; Bravais lattices; examples of the atomic structure of some common minerals. Physical properties of crystals; cleavage, gliding, secondary twinning, elasticity. Elements of crystal optics in polarized light. Mode of formation of minerals and ores in the igneous, sedimentary and metamorphic cycles; introduction to petrology. Principal types of economic mineral deposits. Elements of fuel geology; construction and refractory materials. Classification of minerals. Descriptive mineralogy of common minerals, especially economic minerals. Laboratory: Crystallography—Examination of crystals and crystal models for symmetry; perspective drawing of crystal models.

Optical Mineralogy—Examination of minerals by means of the polarizing microscope in transmitted and incident, reflected light. Determination of the refractive indices of crystal fragments by means of the immersion method. Descriptive and Determinative Mineralogy—Macroscopic examination of common minerals, especially economic minerals; study of the paragenesis and mode of occurrence of common mineral groups. Study of principal rock types in which they occur.

TEXTBOOKS

APPLIED GEOLOGY GRADUATE SUBJECTS

25.111G Geology
A series of special courses in aspects of geology which have particular relevance to geophysics: structural geology, stratigraphy, petroleum geology, engineering geology, petrology, economic mineralogy, geochemistry, air-photo interpretation and field methods.

25.321G Geophysics
The physics, shape, structure and constitution of the earth. Extensive treatment of the theory, interpretation, instrumentation, practice and applications of geophysical methods in exploration: seismic, electric, electromagnetic, gravity, magnetic, radioactive and well logging. Laboratory requirements include projects in model experimentation, and field requirements include three weeks of field tutorials on the practice of geophysical methods.

TEXTBOOKS

25.401G Ground Water Investigations
25.402G Hydrogeology
The exploration and evaluation of groundwater, borehole samples and geological well-logging techniques, geological factors influencing the occurrence of groundwater, preparation of hydrogeologic maps. Further studies in arid zone geohydrology. Practical work will cover the preparation of hydrogeologic maps, the classification of borehole samples and the evaluation of the water balance. Field tutorials will be included.

25.403G Project (Hydrogeology Graduate Course)

25.701G Subsurface Geology and Pollution Control
Lithology of main rock types involved in subsurface waste disposal; mass properties of rocks affecting fluid flow, porosity, permeability, capillarity, etc., and their inter-relationships. Elements of structural geology, stratification, lenticularity, folding, faulting, unconformities etc.; use of structural contours in subsurface geology; interpretation of simple geological maps. Hydrostatic and hydrodynamic conditions in subsurface flow of liquids and gases; reservoir engineering topics, compressibility, rock pressure. Design and cementation of casing strings; importance of preservation of subsurface waters, especially fresh water aquifers; rational exploitation of subsurface water for domestic and industrial use. Technology of subsurface disposal of wastes—liquid, gaseous and solid, including radioactive wastes. Some ethical considerations and statutory requirements of governmental bodies. Investigation of sedimentary basins and individual structures for waste injection. Case histories, e.g. Rocky Mountain Arsenal Well etc.

SCHOOL OF NUCLEAR ENGINEERING

23.051 Nuclear Power Technology
(An option for 4th year Chemical Engineering Undergraduates in 1972.)
Nuclear processes, fission and energy deposition, nuclear reaction rates, fuel cycles and nuclear reactor types. Primary and secondary radiation sources, multiplication slowing down and diffusion of neutrons, criticality conditions and reactivity changes with burnup. Fine scale flux in fuel element lattices, effects of control rods and reflectors. Delayed neutrons, point reactor neutron kinetics, and reactor control.
The thermodynamics of nuclear power systems. The special nuclear, thermal and cost characteristics of gas cooled, pressurised water, boiling water and liquid metal fast reactor systems. Isotopic power generators, process heat and other reactor applications.
27.001 Applied Geography I

The course includes three compulsory one-day field tutorials.

TEXTBOOKS
CSIRO. *The Australian Environment*. M.U.P.

REFERENCE BOOKS
Daubenmire, R. F. *Plants and Environment*. Wiley.
Gentilli, J. *Sun, Climate and Life*. Jacaranda.
Hare, K. F. *The Restless Atmosphere*. Hutchinson.
Leeper, G. W. *Introduction to Soil Science*. M.U.P.
Riley, D., and Young, A. *World Vegetation*. C.U.P.
Strahler, A. N. *Physical Geography*. Wiley.
Thornbury, W. D. *Principles of Geomorphology*. Wiley.

27.002 Applied Geography II

Part I (Session 1). *Introduction to Economic Geography*: The geographic problems of scale and distance. The relevance of theory and quantitative methods. Patterns and structures of systems of agriculture, manufacturing and tertiary production in under-developed and advanced societies. Origins and functioning of the settlement network of central places and connecting routes. Includes an urban field tutorial of one day. Laboratory classes consist of the application of statistical methods to areal and point data.

TEXTBOOKS

REFERENCE BOOKS
Abler, R., Adams, J. S. & Gould, P. *Spatial Organisation*. Prentice-Hall.
Chisholm, M. *Rural Settlement and Land Use*. Hutchinson.
Part II (Session 2). Geographic Models. Aims and methods of enquiry as a basis for discerning pattern and order in the economic and social landscape. Emphasis on locational models which attempt to explain the pattern and structure of urban settlement and transportation routes. Introduction to elements of population geography. A compulsory field tutorial of up to three days to study an urban complex.

TEXTBOOK
Haggett, P. Locational Analysis in Human Geography. Arnold.

REFERENCE BOOKS
Berry, B. Geography of Market Centres and Retail Distribution. Prentice-Hall.
Berry, B. & Houghton, F. E. Geographic Perspectives on Urban Systems. Prentice-Hall.
Zelinsky, W. A Prologue to Population Geography. Prentice-Hall.

Part III. Laboratory classes throughout the year dealing with the application of statistical methods to geographic data. Descriptive statistics, sampling techniques, elementary probability, correlation, regression, significance-testing, and an introduction to nonparametric statistics.

TEXTBOOKS

REFERENCE BOOKS
King, L. J. Statistical Analysis in Geography. Prentice-Hall.
This course includes two compulsory field tutorials, one of one day and one of three days' duration. These will involve study of the structure and function of an urban and/or industrial complex and its impact on the adjacent agricultural area.

27.013 Geographic Methods

Classes throughout the year dealing with methods and the interpretation of geographic data; research design, data sources, field methods; collection, classification, and analysis of data, stressing multivariate techniques and computer library programs. Complements all third-year Geography options. Up to five days' field tutorials involving studies related to the options listed above.

TEXTBOOKS

REFERENCE BOOKS
King, L. J. *Statistical Analysis in Geography*. Prentice-Hall.

27.103 Climatology

Spatial and temporal distribution of atmospheric components of special relevance to the exchange of energy and water at the earth surface. Components of the radiation and heat balance of the earth surface as affected by differing atmospheric, soil and surface cover conditions. Factors controlling evaporation and transpiration under freely-available and restricted water supply conditions, and methods for the measurement and estimation of evapotranspiration. Characteristic patterns of energy and water exchange for differing types of natural or man-modified land surface. Present and past world climatic patterns in relation to energy and water balance principles. Man's modification of factors affecting the local climate in rural and urban settings.

Laboratory work is directed toward developing an appreciation of the operational principles and limitations of instruments commonly used in radiation and water balance studies, and toward the practical application of energy and water balance models for evaluation of the climatic environment as related to catchment hydrology, agricultural productivity and land resource management problems.

TEXTBOOKS
Sellers, W. D. *Physical Climatology*. Chicago U.P.
REFERENCE BOOKS

27.203 Biogeography

The physical environment as the controlling agent of species and community distributions. World distribution of plants and animals over time, with particular reference to the Pacific area. Origin and distribution of continental biotas. Island biogeography. Migrations and evolution associated with climatic changes. Man as an ecological dominant.

TEXTBOOK

REFERENCE BOOKS
Thomas, W. L. ed. Man's Role in Changing the Face of the Earth. Chicago U.P.

27.204 Advanced Biogeography*

A study of the factors controlling biomass accumulation and their manipulation in land use and conservation. Production ecology: the efficiency of vegetation in using the environment; microclimate, energy, carbon dioxide and water vapour fluxes and how they control the rates of production; nutrient cycling, the distribution of chemical elements in selected ecosystems, rates of cycling and the role of fire in nutrient cycling; spatial relationships, species area, area of influence, stand density, leaf area index, and root/shoot ratios. Vegetation expression of environmental gradients; vegetation response to changes in environment with particular reference to grazing, soil erosion and forest management. Vegetation cover and the hydrologic cycle. Administrative and legal aspects of conservation. Laboratory sessions supporting the lectures: experimental methods and data collection and collation in biomass, microclimatic, nutrient cycling and spatial relationship studies; visits to projects on conservation and land management.

Two field tutorials: a field project of about one week to investigate plant communities in a selected environment and a two-day excursion for comparative study of a contrasting environment.

* Not to be introduced before 1973.
27.303 Transportation Geography
Includes the structure of transportation systems, for example modal systems, network and flow analysis, communication and circulation theories, and the analysis of specific problems, for example transport and economic development and highway impact studies. Laboratory classes include case studies and practical applications.

REFERENCE BOOKS
Chorley, R. & Haggett, P. *Socio-economic Models in Geography*. Methuen.

Taaffe, E. & Gauthier, W. *Geography of Transportation*. Prentice-Hall.

27.304 Advanced Economic Geography
In Session 1 topics include the formulation of economic models in an interregional framework, linear programming and activity analysis, growth models, growth pole concepts, the spatial transmission of economic growth, and the spatial pattern of short term economic interaction, with emphasis on North America. In Session 2 students attend a series of seminars on the general development of geographic thought and ideas.

27.403 Geomorphology and Pedology

TEXTBOOKS

REFERENCE BOOKS
Dury, G. H. Rivers and River Terraces. Macmillan.
King, C. A. M. Beaches and Coasts. Arnold.
Part II. Pedology: Morphologic, physical and chemical properties of soil, including colour, texture, consistence, structure, aeration, moisture, reaction and nutrients. Physical and chemical aspects of soil fertility; soil erosion and conservation. The zonal concept; soil-landscape relationships. Palaeopedology, including polygenesis and soil stratigraphy. The soil-forming processes of the major Great Soil Groups and their management problems. Laboratory classes include particle size grading, specific gravity and moisture content of soils, soil reaction determination, conductivity and estimation of major plant nutrients; soil profile description; soil survey and mapping; analysis of soil maps.

TEXTBOOK

**27.504 Projects in Applied Geography**

*Biogeography*: study of the vegetation in an area, and detailed consideration of a problem arising from this survey, preferably with an applied aspect. *Economic Geography*: a problem in applied economic geography involving experimental design, the acquisition and manipulation of field data, and the presentation of a report. *Geomorphology and pedology*: an area study introducing soils-landscape relationships in a dynamic or chronologic sense; or a systematic study which may be primarily geomorphic or pedologic, but with some interdisciplinary aspect.

To include a field element and a supporting laboratory programme.

**27.901G Geomorphology for Hydrologists**

General concepts of landscape evolution; geomorphic aspects of overland and channel flow; lithologic and structural controls of surface drainage; stream channels in cross-section, plan and long profile; floodplain characteristics; hillslopes; geomorphic relationships of surficial deposits; catchment morphometry; landscape features due to underground water; landforms and processes of the main morphogenetic zones; drainage types in Australia; vigil and representative catchments; the land-system approach to water resource assessment; air photo and map analysis of characteristic landforms and drainage features; geomorphic and land system mapping; field study of a vigil catchment.
