The University of New South Wales

Applied Science

1981 Faculty Handbook
How to use this Handbook

The information in this book has been divided into seven parts.

General Information (the yellow coloured pages) lists what you need to know about the University as a whole, introduces some of the services available and notes the most important rules and procedures. You should read this part in its entirety.

For further information about the University and its activities, see the University Calendar.

Faculty Information.

Undergraduate Study outlines the courses available in each school in the faculty.

Graduate Study is about higher degrees.

Subject Descriptions lists each subject offered by the schools in the faculty. The schools are listed numerically.

Information includes:
• Subject number, title and description
• Prerequisite, co-requisite and excluded subjects, where applicable
• Additional information about the subject such as unit values, credit hours, teaching hours per week, sessions when taught.

Financial Assistance to Students is a list of scholarships and prizes, available at undergraduate and graduate level in the faculty.

Staff list.

For detailed reference, see the list of Contents.
The address of the University of New South Wales is:

PO Box 1, Kensington,
New South Wales, Australia 2033

Telephone: (02) 663 0351
Telegraph: UNITECH, SYDNEY
Telex AA26054

The University of New South Wales Library has catalogued this work as follows:

UNIVERSITY OF NEW SOUTH WALES —
Faculty of Applied Science
Handbook.
Annual. Kensington.
1968 +

University of New South Wales — Faculty of Applied Science — Periodicals.
Subjects, courses and any arrangements for courses including staff allocated, as stated in the Calendar or any Handbook or any other publication, announcement or advice of the University, are an expression of intent only and are not to be taken as a firm offer or undertaking. The University reserves the right to discontinue or vary such subjects, courses, arrangements or staff allocations at any time without notice.

Information in this Handbook has been brought up to date as at 8 September 1980, but may be amended without notice by the University Council.

Undergraduate Study: Course Outlines
School of Applied Geology
School of Chemical Engineering and Industrial Chemistry
Department of Biological Process Engineering
Department of Fuel Technology
Department of Polymer Science
### School of Food Technology
- 3060 Food Technology (BSc) Full-time  
- 3070 Food Technology (BSc(Tech)) Part-time

### School of Geography
- 3010 Applied Geography (BSc) Full-time

### School of Metallurgy
- 3120 Metallurgy (BSc) Full-time
- 3160 Metallurgical Process Engineering (BE) Full-time
- 3130 Metallurgy (BSc(Tech)) Part-time
- 3020 Ceramic Engineering (BSc) Full-time
- 3030 Ceramics (BSc(Tech)) Part-time

### School of Mining Engineering
- 3140 Mining Engineering (BE) Full-time
- 4200 Mining Engineering (BE) 7 Stage Part-time
- 4210 Mining Engineering (BSc(Eng)) 6 Stage Part-time
- 4190 Mining Engineering (BE) Full-time
- 4220 Mineral Processing (BSc(Tech)) Part-time

### School of Textile Technology
- 3170 Textile Technology (BSc) Full-time

### School of Wool and Pastoral Sciences
- 3220 Wool and Pastoral Sciences (BSc) Full-time

### Graduate Study
- Graduate Enrolment Procedures
- Graduate Study
- School of Applied Geology
- School of Chemical Engineering and Industrial Chemistry
- School of Food Technology
- School of Metallurgy
- School of Mining Engineering
- School of Wool and Pastoral Sciences

### Graduate Study: Conditions for the Award of Higher Degrees
- Doctor of Philosophy
- Master of Applied Science
- Master of Engineering
- Master of Science
- Master of Science and Master of Engineering without supervision
- Graduate Diploma

### Subject Descriptions
- Identification of Subjects by Number
- School of Physics
- Undergraduate Study

General Information

To obtain the maximum benefit from your studies you should make an effort to learn what facilities the University offers, to investigate the best methods of study and to discover as much as possible about the course for which you are enrolled.

This Handbook has been specially designed as a detailed source of reference for you in all matters related to your Faculty. This General Information Section is intended to help you put the Faculty into perspective with the University as a whole, to introduce you to some of the services available to students and to note some of the most important rules and procedures.

For fuller details about some aspects of the University and its activities you might need to consult the University Calendar.

Some people who can help you

If you are experiencing difficulties in adjusting to the requirements of the University you will probably need advice. The best people to talk to on matters relating to progress in studies are your tutors and lecturers. If your problem lies outside this area there are many other people with specialized knowledge and skills who may be able to help you.

The Deputy Registrar (Student Services), Mr Peter O'Brien, and his Administrative Assistant, Mrs Anne Beaumont, are located on the first floor of the Chancellery. They will help those students who need advice and who have problems but who do not seem to be provided for by the other organizations and services mentioned. As well as dealing with general enquiries they are especially concerned with the problems of physically handicapped and disabled students and those in need of financial assistance. The latter students should see Mrs Beaumont. Enquire at room 148E, phone 2482 (general enquiries) or 3164 (financial assistance).

The Assistant Registrar (Admissions and Examinations), Mr Jack Hill, is located on the ground floor of the Chancellery. General enquiries should be directed to 3715. For information regarding examinations, including examination timetables and clash of examinations, contact the Administrative Officer, Mr John Grigg, phone 2143.

Note: All phone numbers below are University extension numbers. If you are outside the University, dial 663 0351 and ask for the extension or dial 662 – and then the extension number. This prefix should only be used when you are certain of the extension that you require. Callers using 662 cannot be transferred to any other number.
The Assistant Registrar (Student Records, Higher Degrees and Scholarships), Mr Peter Wildblood is located on the ground floor of the Chancellery. For particular enquiries regarding the Student Records Unit, including illness and other matters affecting performance in examinations, academic statements, graduation ceremonies, prizes, release of examination results and variations to enrolment programs, phone 3711.

The Adviser for Prospective Students, Mrs Fay Lindsay, is located in the Chancellery and is available for personal interview. For an appointment phone 3453.

The Assistant Registrar (Student Employment), Mr Jack Foley, is located in the Chancellery. Enquiries should be directed to 3259.

The Housing Officer, Mrs Judy Hay, is located in the Student Amenities and Recreation Section in the huts at the foot of Basser Steps. For assistance in obtaining suitable lodgings phone 3260.

The Student Health Unit is located in Hut E15b at the foot of Basser Steps. The Director is Dr Geoffrey Hansen. For medical aid phone 2679 or 3275.

The Student Counselling and Research Unit is located at the foot of Basser Steps. For assistance with educational or vocational problems ring 3681, 3685 or 2696 for an appointment.

The University Librarian is Mr Allan Horton. Library enquiries should be directed to 2048.

The Chaplaincy Centre is located in Hut E15a at the foot of Basser Steps. For spiritual counselling phone Anglican – 2684; Catholic – 2379; Greek Orthodox – 2683; Lutheran – 2683; Uniting Church – 2685.

The Students’ Union is located on the second floor of Stage III of the University Union, where the SU President, Secretary-Treasurer, Education Vice-President, Welfare-Research Officer, and Director of Overseas Students are available to discuss any problems you might have.

Cashier’s Hours The University Cashier’s office is open from 9.30 am to 1.00 pm and from 2.00 pm to 4.30 pm, Monday to Friday. It is open for additional periods at the beginning of Session 1. Consult noticeboards for details.

### Calendar of Dates

#### The Academic Year

The academic year is divided into two sessions, each containing 14 weeks for teaching. There is a recess of five weeks between the two sessions and there are short recesses of one week within each of the sessions. Session 1 commences on the first Monday of March.

Organization of the University

Rapid development has been characteristic of the University of New South Wales since it was first incorporated by an Act of Parliament in 1949, under the name of the New South Wales University of Technology.

In 1980 the University had 18,359 students and over 3,700 staff who worked in more than eighty buildings. These figures include staff and students at Broken Hill (W.S. and L.B. Robinson University College), Duntroon (the Faculty of Military Studies) and Jervis Bay.

Arms of the University of New South Wales

The arms of the University are reproduced on the front cover of this handbook. The arms were granted by the College of Heralds in London, on 3 March 1952, and the heraldic description is as follows:

Argent on a Cross Gules a Lion passant guardant between four Mullets of eight points Or a Chief Sable charged with an open Book proper thereon the word SCIENTIA in letters also Sable.

The lion and the four stars of the Southern Cross on the Cross of St George have reference to the State of New South Wales which brought the University into being; the open book with SCIENTIA across its page reminds us of its original purpose. Beneath the shield is the motto 'Manu et Mente', which is the motto of the Sydney Technical College, from which the University has developed. The motto is not an integral part of the Grant of Arms and could be changed at will; but it was the opinion of the University Council that the relationship with the parent institution should in some way be recorded.

The Council

The chief governing body of the University is the Council which has the responsibility of making all major decisions regarding its policy, conduct and welfare.

The Council consists of 44 members from the State Parliament, industry and commerce, agriculture, the trade unions, professional bodies, the staff, the students and the graduates of the University.

The Council meets six times per year and its members also serve on special committees dealing with, for example, academic matters, finance, buildings and equipment, personnel matters, student affairs and public relations.

The Chairman of the Council is the Chancellor, the Hon. Mr Justice Samuels, and the Deputy Chancellor is Dr F.M. Mathews.

The Professorial Board

The Professorial Board is one of the two chief academic units within the University and includes all the professors from the various faculties. It deliberates on all questions such as matriculation requirements, the content of courses, the arrangement of syllabuses, the appointment of examiners and the conditions for graduate degrees. Its recommendations on these and similar matters are presented to Council for its consideration and adoption.

The Faculties/Boards of Study

The Dean, who is also a professor, is the executive head of the Faculty or Board of Study. Members of each Faculty or Board meet regularly to consider matters pertaining to their own areas of study and research, the result of their deliberations being then submitted to the Professorial Board.

The term 'faculty' is used in two distinct senses in the University. Sometimes it is used to refer to the group of Schools comprising the Faculty, and at others to the deliberative body of academic members of the Schools within the Faculty.

The eleven Faculties are Applied Science, Architecture, Arts, Biological Sciences, Commerce, Engineering, Law, Medicine, Military Studies, Professional Studies and Science together with the Australian Graduate School of Management. In addition, the Board of Studies in General Education fulfils a function similar to that of the faculties. The Board of Studies in Science and Mathematics, which was established to facilitate the joint academic administration of the Science and Mathematics degree course by the Faculties of Biological Sciences and Science, considers and reports to the Professorial Board on all matters relating to studies, lectures and examinations in the science and mathematics degree course.

The Schools

Once courses of study have been approved they come under the control of the individual Schools (eg the School of Chemistry, the School of Mathematics). The Head of the School in which you are studying is the person in this academic structure with whom you will be most directly concerned.
Executive Officers

As chief executive officer of the University, the Vice-Chancellor and Principal, Professor Rupert Myers, is charged with managing and supervising the administrative, financial and other activities of the University.

He is assisted in this task by three Pro-Vice-Chancellors, Professor John Thornton, Professor Ray Golding and Professor Rex Vowels, together with the Deans and the three heads of the administrative divisions.

General Administration

The administration of general matters within the University comes mainly within the province of the Registrar, Mr Ian Way, the Bursar, Mr Tom Daly, and the Business Manager (Property).

The Registrar's Division is concerned chiefly with academic matters such as the admission of students, and the administration of examinations as well as the various student services (health, employment, amenities, and counselling).

The Bursar's Division is concerned with the financial details of the day-to-day administration and matters to do with staff appointments, promotions, etc.

The Property Division is responsible for the building program and the 'household' services of the University (including electricity, telephones, cleaning, traffic and parking control and maintenance of buildings and grounds).

Student Representation on Council and Faculties/Boards

Three members of the University Council may be students elected by students. All students who are not full-time members of staff are eligible to stand for a two-year term of office. The students who are elected to the Council are eligible for election to the Committees of Council.

Students proceeding to a degree or a graduate diploma may elect members for appointment by the Council to their Faculty/Board. Elections are for a one-year term of office.

Open Faculty/Board Meetings

If you wish you may attend a Faculty/Board meeting. You should seek advice at the office of the Faculty whose meeting you wish to attend, as the faculties have their own rules for the conduct of open meetings.

Award of the University Medal

The University may award a bronze medal to undergraduate students who have achieved highly distinguished merit on completion of their final year.

Identification of Subjects by Numbers

For information concerning the identifying number of each subject taught in each Faculty as well as the full list of identifying numbers and subjects taught in the University, turn to the first page of the section Subject Descriptions. This list is also published in the Calendar.

Textbook Lists

Textbook lists are no longer published in the Faculty handbooks. Separate lists are issued early in the year and are available at key points on the campus.

Students should allow quite a substantial sum for textbooks. This can vary from $250 to $600 per year depending on the course taken. These figures are based on the cost of new books. The Students' Union operates a secondhand bookshop. Information about special equipment costs, accommodation charges and cost of subsistence on excursions, field work, etc, and for hospital residence (medical students) are available from individual schools.

Co-operative Bookshop

Membership is open to all students, on initial payment of a fee of $10, refundable when membership is terminated. Members receive an annual rebate on purchases of books.

General Studies Program

Almost all undergraduates in Faculties other than Arts and Law are required to complete a General Studies program. The Department of General Studies within the Board of Studies in General Education publishes its own Handbook which is available free of charge. All enquiries about General Studies should be made to the General Studies Office, Room G56, Morven Brown Building, phone 3476.
Student Services and Activities

Accommodation

Residential Colleges

There are seven residential colleges on campus. Each college offers accommodation in a distinctive environment which varies from college to college, as do facilities and fees. A brief description of each college is given below, and further information may be obtained directly from the individual colleges. In addition to basic residence fees, most colleges make minor additional charges for such items as registration fees, caution money or power charges. Intending students should lodge applications before the end of October in the year prior to the one in which they seek admission. Most colleges require a personal interview as part of the application procedure.

The Kensington Colleges

The Kensington Colleges comprise Basser College, Goldstein College and Philip Baxter College. They house 450 men and women students, as well as staff members. Fees are payable on a session basis. Apply in writing to the Master, Mr K. W. Bromham, PO Box 24, Kensington, NSW 2033.

International House

International House accommodates 154 students from Australia and up to thirty other countries. Preference is given to more senior undergraduates and graduate students. Apply in writing to the Warden, Emeritus Professor J. S. Ratcliffe, International House, PO Box 1, Kensington, NSW 2033.

New College

New College is an Anglican college and it provides accommodation (with all meals) for 220 graduates and undergraduates, without regard to race, religion, or sex. The College has its own resident tutors, and sponsors a wide range of sporting and social activities. Apply to Dr Stuart Barton Babbage, Master, New College, Anzac Parade, Kensington 2033 (telephone 662 6066).

Shalom College

Shalom College is a Jewish residential college. It provides accommodation for 86 men and women students. Non-resident membership is available to students who wish to avail themselves of the Kosher dining room and tutorial facilities. Fees are payable on a session basis. Conferences are catered for, particularly with Kosher requirements. Rates are available on application. Apply in writing to the Master, Dr S. Engelberg, Shalom College, the University of New South Wales, PO Box 1, Kensington, NSW 2033.

Warrane College

Warrane College provides accommodation for 200 men and is open to students of all ages, backgrounds and beliefs. A comprehensive tutorial program is offered along with a wide range of activities and opportunities to meet members of the University staff informally. Non-resident membership is available to male students who wish to participate in College activities and make use of its facilities. Warrane is directed by the Catholic lay association Opus Dei. Apply in writing to the Master, Dr J. F. Martins, Warrane College, PO Box 123, Kensington, NSW 2033.

Creston Residence

Creston Residence offers accommodation for 25 full-time undergraduate and graduate women students without restriction of denomination or nationality. Non-resident membership provides students with the opportunity to participate in the activities of the Residence and to make use of its facilities. Creston is directed by the Women's Section of Opus Dei, a Catholic lay association. Enquiries should be addressed to the Principal, 35 High Street, Randwick, NSW 2031.

Other Accommodation

Off-campus Accommodation

Students requiring other than College accommodation may contact the Housing Officer in the Student Amenities and Recreation Section for assistance in obtaining suitable accommodation in the way of full board, room with cooking facilities, flats, houses, share flats etc. Extensive listings of all varieties of housing are kept up-to-date throughout the year and during vacations. Accommodation in the immediate vicinity of the University is not usually easy to find at short notice, and is expensive.

No appointment is necessary but there may be some delay in February and March. The Housing staff are always happy to discuss any aspect of accommodation.

Special pamphlets on accommodation, lists of estate agents and hints on house-hunting are available on request.

Associations, Clubs and Societies

The Sports Association

The Sports Association is a student organization within the University which caters for a variety of sports for both men and women. In December 1952 the University Council approved the establishment of the Sports Association, which then consisted of five clubs. As the University has grown, the Association has expanded, and now includes some thirty-eight clubs.

The Association office is situated in Hut E15C near the foot of Basser Steps, and can be contacted on extension
2673. The control of the Association is vested in the
General Committee comprising delegates from the thirty­
eight clubs.

Membership is compulsory for all registered students,
and the annual fee is $11. Membership is also open to all
members of staff and graduates of the University on pay­
ment of an annual fee as prescribed in the By­Laws of the
Association. All members are invited to take part in any of
the activities arranged by the Association, and to make
use of the University’s sporting and recreational facilities.

The Association is affiliated with the Australian Univer­sities Sports Association (AUSA) which is the controlling
body for sport in all Australian universities.

School and Faculty Associations

Many schools and faculties have special clubs with inter­
est in particular subject fields. Enquire at the relevant
Faculty or School Office for information.

Australian Armed Services

The University maintains links with the Royal Australian
Navy, the Citizen Military Forces and the Royal Australian
Air Force, and opportunities exist for student participation
in their activities. See the General Information section of
the Faculty Handbooks for details.

Chaplaincy Centre

The University Chapel

The University provides a small chapel for the use of all
faiths. In its temporary housing it is located in Hut E15a
near the Chemistry Building. The chapel is available for
services of worship by arrangement with the full­time
chaplains. At other times it is available for private medita­
tion to all members of the University.

Chaplaincy Service

A Chaplaincy Service is available within the University of
New South Wales for the benefit of students and staff.

The Service offers fellowship, personal counselling and
guidance, together with leadership in biblical and doc­
trinal studies and in worship. The Chaplains maintain
close liaison with student religious societies.

The chaplains are located in Hut E15a at the foot of
Basser steps, which also contains the temporary chapel.

Deputy Registrar (Student Services)

The Deputy Registrar (Student Services), Mr Peter
O’Brien, and his administrative Assistant, Mrs Anne
Beaumont, are located on the first floor of the
Chancellory.

They will help those students who have problems and
need advice but who do not seem to be provided for by
the other organizations and services mentioned. As well
as dealing with general enquiries they are especially con­
cerned with the problems of physically handicapped and
disabled students and those in need of financial assis­
tance. The latter students should see Mrs Beaumont.

All enquiries should be made either at room 148E or by
telephoning extension 2482 (general enquiries) or 3164
(financial assistance).

Student Amenities and Recreation Section

In general the Student Amenities and Recreation Section
seeks ways to promote the physical, social and educa­
tional development of students through their leisure time
activities, and to provide some services essential to their
day­to­day university life.

The Section is responsible for the continuing manage­
ment of the Physical and Recreational Centre at which
recreational programs are available for both students and
staff; makes bookings for use of sports facilities; and in
consultation with the Sports Association assists various
recognized clubs.

Mr I. Moutray is the Head of the Section, which is located
in the huts at the foot of Basser Steps. The various
services may be contacted by phone on the following
extensions: Recreation Program 3271; Grounds Bookings
2235; Sports Association 2673.

Physical Education and Recreation Centre

The Student Amenities and Recreation Section provides a
recreational program for students and staff at the Physi­
cal Education and Recreation Centre. The Centre con­
sists of eight squash courts, a main building, and a
50­metre indoor heated swimming pool. The main build­
ing has a large gymnasium and practice rooms for
fencing, table tennis, judo, weight­lifting, karate and jazz
ballet, also a physical fitness testing room. The recrea­
tional program includes intramurals, teaching/coaching,
camping. The Centre is located on the lower campus
adjacent to High Street. The Supervisor at PERC may be
contacted on extension 3271.
Student Counselling and Research Unit

The Student Counselling and Research Unit has both service and research and development functions. The service function is to help clients - students, prospective students, parents, and other concerned persons - improve their approach to planning, decision-making and coping with academic, vocational and personal aspects of their life. The research and development function is to develop and evaluate counselling practices and programs and to assist in improving the quality of student life.

Appointments for counselling consultations are available from 9 am to 7 pm, and may be made by phoning 663 0351 extension 3681 or 3685 or by calling at the Unit, which is located at the foot of Basser Steps. In urgent cases interviews can be given on a walk-in basis between 9 am and 5 pm.

Student Employment Section

The Student Employment Section provides assistance with careers and employment.

Assistance with careers and permanent employment opportunities includes: the regular mailing of a Job Vacancy Bulletin to registered students and graduates, a Library, and a Campus Interview Program in which final year students have the opportunity to speak to employers regarding employment prospects.

Assistance is also provided in obtaining course-related industrial or professional employment during long vacations as required by undergraduates in Engineering and Applied Science.

The Section is located in the Chancellery.

For further information, telephone as follows: careers and employment assistance 3259 or 3630; long vacation industrial training 2086.

Student Health Unit

A student health clinic and first aid centre is situated within the University. The medical service although therapeutic is not intended to replace private or community health services. Thus, where chronic or continuous conditions are revealed or suspected the student may be referred to a private practitioner or to an appropriate hospital. The health service is not responsible for fees incurred in these instances. The service is confidential and students are encouraged to attend for advice on matters pertaining to health.

The service is available to all enrolled students by appointment, free of charge, between 9 am and 5 pm Mondays to Fridays. For staff members, immunizations are available, and first aid service in the case of injury or illness on the campus.

The centre is located in Hut E15b on the northern side of the campus in College Road at the foot of the Basser Steps.

Appointments may be made by calling at the centre or by telephoning extension 2679, 3275 or 3841 during the above hours.

The Family Planning Association of NSW conducts clinics at the Student Health Unit and at the adjacent Prince of Wales Hospital which are available for both staff and students. Appointments may be made for the Student Health Unit clinic by telephoning 588 2833 or for the Prince of Wales Hospital clinics by telephoning 399 0111.

The Students' Union

The Students' Union was formed in 1952 as an organization, duly recognized by the University Council, to represent the student body and to provide a central organization for the administration of student activities. In the words of its constitution 'The Students' Union is formed for the purpose of advancing the interests of University men and women, facilitating their general scientific and technical education, and fostering a University spirit among them'.

The Students' Union affords a recognized means of communication between the student body and the University administration, and represents its members in all matters affecting their interests. It aims to promote the cultural, educational and recreational life of the University and to encourage a permanent interest among graduates in the life and progress of student activities within the University. The Students' Union also makes representations to government and other bodies outside the University on behalf of its members.

Membership of the Students' Union is compulsory for all registered students of the University and the annual subscription is $17 for full-time students and $13 for part-time students. All Alumni of the University are eligible for Life Membership.

The Students' Union is governed by a Council consisting in the main of elected student representatives from the various faculties of the University. There are also representatives of the University Council, Life Members, the Staff Association and the Sports Association. The Council is elected annually.

A full-time President, elected each year by popular ballot, directs the entire administration of the Students' Union and its activities, assisted by a Secretary-Treasurer.
Other officers are the Education Vice-President who works towards the implementation of Students' Union education policy; the Welfare-Research Officer concerned with helping students with problems they may encounter in the University; the Electronic Media Officer; and the Director of Overseas Students who deals with specific problems these students may encounter while in Australia.

The activities in which the Students' Union is involved include:

1. Infakt – a student-run information referral service for students who want someone to talk to or need help of any kind. Infakt is located in the bus at the foot of Basser Steps.
2. A casual employment service.
3. Organization of orientation for new students.
4. Organization of Foundation Day.
5. The University's two child care centres.
6. Publication of the student paper Tharunka.
7. A free legal service run by a qualified lawyer employed by the Students' Union Council.
8. SU Record Shop which offers discount records and tapes.
9. The Nuthouse which deals in bulk and health foods.
10. Secondhand Bookshop for cheap texts.
11. CASOC (Clubs and Societies on Campus) which provides money from the SU for affiliated clubs and societies on campus.
12. The sale of electronic calculators and accessories at discount rates.

The SU office is located on the Second Floor, Stage III, the Union.

The University Union

The University Union provides the facilities students, staff and graduates require in their daily University life and thus an opportunity for them to know and understand one another through associations outside the lecture room, the library and other places of work.

The Union is housed in three buildings near the entrance to the Kensington Campus from Anzac Parade. These are the Roundhouse, the Blockhouse and the Squarehouse. Membership of the Union is compulsory at $55 per year for all registered students and is open to all members of staff and graduates of the University.

The control of the Union is vested in the Board of Management whose Chief Executive Officer is the Warden; the President is Mr R. P. Hammond.

The full range of facilities provided by the Union includes a cafeteria service and other dining facilities, a large shopping centre, cloak room, banking and hairdressing facilities, showers, a women's lounge, common, games, reading, meeting, music, practice, craft and dark rooms. Photocopying, sign printing, and stencil cutting services are also available. The Union also sponsors special concerts (including luncheons) and conducts courses in many facets of the arts including weaving, photography, creative dance and yoga. Full information concerning courses is contained in a booklet obtainable from the Union's program department.

The University Union should not be confused with the Students' Union or Students' Representative Council as it is known in some other universities. This latter body has a representative function and is the instrument whereby student attitudes and opinions are crystallized and presented to the University and the community.
Financial Assistance to Students

Tertiary Education Assistance Scheme

Under this scheme, which is financed by the Commonwealth Government, assistance is available for full-time study in approved courses, to students who are not bonded and who are permanent residents of Australia, subject to a means test on a non-competitive basis. The allowances paid are unlikely to be sufficient, even at the maximum rate, for all the living expenses of a student. Family help and/or incomes from vacation or spare-time work would also be needed.

Students in the following types of university courses are eligible for assistance:

- Undergraduate and graduate bachelor degree courses
- Graduate diplomas
- Approved combined bachelor degree courses
- Master's qualifying courses (one year)

The rates of allowance and conditions for eligibility are set out in a booklet obtainable from the Commonwealth Department of Education.

Tertiary students receiving an allowance, and prospective tertiary students, will be sent application forms in January 1981. Forms will also be available from the Admissions Section or the Student Employment Section, or from the Director, Department of Education, 59 Goulburn Street, Sydney, NSW 2000 (telephone 218 8800). Continuing students should submit applications as soon as examination results are available. New students should do so as soon as they are enrolled. All students should apply by 31 March 1981, otherwise benefits will not be paid for the earlier months of the year.

It is most important that students advise the TEAS office if at any time they change or discontinue their study programs, as their eligibility for benefits might be affected.

Other Financial Assistance

In addition to the Tertiary Education Assistance Scheme financed by the Australian Government the following forms of assistance are available:

1. **Deferment of Payment of Fees** Deferments may be granted for a short period, usually one month, without the imposition of a late fee penalty, provided the deferment is requested prior to the due date for fee payments.

2. **Short Term Cash Loans** Donations from various sources have made funds available for urgent cash loans not exceeding $100. These loans are normally repayable within one month.

3. Early in 1973 the Commonwealth Government made funds available to the University to provide loans to students in financial difficulty. The loans are to provide for living allowances and other approved expenses associated with attendance at university. Repayment usually commences after graduation or upon withdrawal from the course. Students are required to enter into a formal agreement with the University to repay the loan. The University is unable to provide from the fund amounts large enough for all or even a major part of the living expenses of a student.

From the same source students who are in extremely difficult financial circumstances may apply for assistance by way of a non-repayable grant. In order to qualify for a grant a student must generally show that the financial difficulty has arisen from exceptional misfortune. Grants are rarely made.

The University has also been the recipient of generous donations from the Arthur T. George Foundation, started by Sir Arthur George and his family, for the endowment of a student loan fund.

In all cases assistance is limited to students with reasonable academic records and whose financial circumstances warrant assistance.

Enquiries about all forms of financial assistance should be made at the office of the Deputy Registrar (Student Services), Room 148E, in the Chancellery.

Financial Assistance to Aboriginal Students

Financial assistance is available to help Aboriginal students from the Commonwealth Government's Aboriginal Study Grant Scheme. Furthermore, the University may assist Aboriginal students with loans to meet some essential living expenses.

All enquiries relating to this scheme should be made at the office of the Deputy Registrar (Student Services), Room 148E, in the Chancellery.

Fund for Physically Handicapped and Disabled Students

The University has a small fund (started by a generous gift from a member of staff who wishes to remain anonymous) available for projects of benefit to handicapped and disabled students. Enquiries should be made at the office of the Deputy Registrar (Student Services), Room 148E, in the Chancellery.

Rules and Procedures

The University, in common with other large organizations, has established rules and procedures which are designed for the benefit of all members of the University. In some cases there are penalties (eg fines or exclusion from examinations) for non-compliance. Therefore, any student who after reading the rules carefully requires further information on their application should contact the Admissions Office or the Registrar.
General Conduct

The University has not considered it necessary to formulate a detailed code of rules relating to the general conduct of students. Enrolment as a student of the University, however, involves an undertaking to observe the regulations, by-laws and rules of the University, and to pay due regard to any instructions given by any officer of the University.

Appeals

Section 5(c) of Chapter III of the By-laws provides that 'Any person affected by a decision of any member of the Professorial Board (other than the Vice-Chancellor) in respect of breach of discipline or misconduct may appeal to the Vice-Chancellor, and in the case of disciplinary action by the Vice-Chancellor, whether on appeal or otherwise, to the Council'.

Admission and Enrolment

The Admissions Office, located in the Chancellery on the upper campus, provides information for students on admission requirements, undergraduate and graduate courses and enrolment procedures. Faculty handbooks and the Calendar may be purchased here. The Admissions Office is open from 9 am to 5 pm Monday to Friday. During enrolment the office is also open for some part of the evening.

The office provides information about special admission, admission with advanced standing and admission on overseas qualifications. The office also receives applications from students who wish to transfer from one course to another, resume their studies after an absence of twelve months or more, or seek any concession in relation to a course in which they are enrolled. It is essential that the closing dates for lodgement of applications are adhered to. For further details see the section on Undergraduate and Graduate Enrolment Procedures and Fees.

Applications for admission to undergraduate courses from students who do not satisfy the requirements for admission (see section on Requirements for Admission) are referred by the Admissions Office to the Admissions Committee of the Professorial Board.

Students seeking to register as higher degree candidates should first consult the Head of the School in which they wish to register. An application is then lodged on a standard form and the Higher Degrees Unit, after obtaining a recommendation from the Head of School, refers the application to the appropriate Faculty or Board of Studies Higher Degree Committee.

Details of the procedure to be followed by students seeking entry to first year undergraduate degree courses at the University may be obtained from the Admissions Office or the Universities and Colleges Admissions Centre.

An Adviser for Prospective Students, Mrs Fay Lindsay, is located in the Chancellery, and is available for personal interview with those who require additional information about the University.

First Year Entry

Those seeking entry to first year courses in one or more of the three universities in the Sydney Metropolitan area (Macquarie University, the University of New South Wales and the University of Sydney) are required to lodge a single application form with the Universities and Colleges Admissions Centre, Challis House, 10 Martin Place, Sydney 2000 (GPO Box 7049, Sydney 2001). On the application form provision is made for applicants to indicate preferences for courses available in any one of the three universities and eighteen other tertiary institutions. Students are notified individually of the result of their applications and provided with information regarding the procedures to be followed in order to accept the offer of a place at this University. Enrolment is completed at the Enrolment Bureau, Unisearch House, 221 Anzac Parade, Kensington.

Deferment of First Year Enrolment

Students proceeding directly from school to University who have received an offer of a place may request deferment of enrolment for one year and will usually receive permission providing they do not enrol at another tertiary institution in that year.

Enrolment Procedures and Fees

Schedules 1981

1. Introduction

All students, except those enrolling in graduate research degree courses (see sections 5. and 6. below), must lodge an authorized enrolment form with the Cashier either on the day the enrolling officer signs the form or on the day any required General Studies electives are approved.

All students, except those enrolling in graduate research degree courses and those exempted as set out in section 17. below, should on that day also either pay the required fees or lodge an enrolment voucher or other appropriate authority.

Such vouchers and authorities are generally issued by the NSW Department of Education and the NSW Public Service. They are not always issued in time and students who expect to receive an enrolment voucher or other appropriate authority but have not done so must pay the fees and arrange a refund later. Such vouchers and authorities are not the responsibility of the University and their late receipt is not to be assumed as automatically exempting a student from the requirements of enrolling and paying fees.
If a student is unable to pay the fees the enrolment form must still be lodged with the Cashier and the student will be issued with a 'nil' receipt. The student is then indebted to the University and must pay the fees by the end of the second week of the session for which enrolment is being effected. Penalties apply if fees are paid after that time (see section 16, below) unless the student has obtained an extension of time in which to pay fees from the office of the Deputy Registrar (Student Services) (Room 148E, the Chancellery). Such an application must be made before the fee is due. Payment may be made through the mail, in which case it is important that the student registration number be given accurately. Cash should not be sent through the mail.

2. New Undergraduate Enrolments
Persons who are applying for entry in 1981 must lodge an application for selection with the Universities and Colleges Admissions Centre, GPO Box 7049, Sydney 2001, by 1 October 1980.

Those who are selected will be required to complete enrolment at a specified time before the start of Session 1. Compulsory fees should be paid on the day.

In special circumstances, however, and provided class places are still available, students may be allowed to complete enrolment after the prescribed time.

Application forms and details of the application procedures may be obtained from the Admissions Office.

3. Re-enrolment
See also sections 4, 6, and 7 below.

Students who are continuing courses (or returning after approved leave of absence) should enrol through the appropriate School in accordance with the procedures set out in the current Enrolment Procedures booklet, available from the Admissions Office and from School offices. Those who have completed part of a course and have been absent without leave need to apply for entry through the Universities and Colleges Admissions Centre, GPO Box 7049, Sydney 2001, by 1 October 1980.

4. Restrictions Upon Re-enrolling
Students who in 1980 have infringed the rules governing re-enrolment should not attempt to re-enrol in 1981 but should follow the written instructions they will receive from the Registrar.

5. New Research Students
Students enrolling for the first time in graduate research degree courses will receive an enrolment form by post. They have two weeks from the date of offer of registration in which to lodge the enrolment form with the Cashier and pay the appropriate fees. Completion of enrolment after this time will incur a penalty (see section 16, below).

6. Re-enrolling Research Students
Students enrolled in purely research degree programs will be re-enrolled each year and sent an account for any fees due, unless they have lodged a thesis or their registration has been cancelled or suspended.

7. Submission of Graduate Thesis or Project Report
Graduate students who at the commencement of Session 1 have completed all the work for a degree or diploma except for the submission of the relevant thesis or project report are required to re-enrol by the end of the second week of Session 1. Completion of enrolment after then will incur a penalty (see section 16, below) but students enrolled in purely research degree programs will be re-enrolled automatically (see section 6, above).

Information about possible fees exemption is set out in section 17 (10) below.

8. Enrolments by Miscellaneous Students
Enrolments by miscellaneous students are governed by the following rules:

(1) Enrolment in a particular subject or subjects as a miscellaneous student – ie as a student not proceeding to a degree or diploma – may be permitted provided that in every case the Head of School offering the subject considers that the student will benefit from the enrolment and provided also that accommodation is available and that the enrolment does not prevent a place in that subject being available to a student proceeding to a degree or diploma.

(2) A student who is under exclusion from any subject in the University may not be permitted to be enrolled as a miscellaneous student in that subject.

(3) A student who is under exclusion from any course in the University may not be permitted to enrol in any subject which forms a compulsory component of the course from which the student is excluded.

(4) A student who is subsequently admitted to a course of the University for which any subjects completed as a miscellaneous student form a part may receive standing for those subjects in accordance with the rules relating to Admission with Advanced Standing, save that a student may not receive standing for any subject completed as a miscellaneous student while under exclusion from a course of the University.

9. Final Dates for Completion of Enrolment
No enrolments for courses extending over the whole year or for Session 1 only will be accepted from new students after the end of the second week of Session 1 (13 March 1981) except with the express approval of the Deputy Registrar (Student Services) and the Heads of the Schools concerned; no later year enrolments for courses extending over the whole year or for Session 1 only will be accepted after the end of the fourth week of Session 1 (27 March 1981) except with the express approval of the
Deputy Registrar (Student Services) and the Heads of the Schools concerned; no later year enrolments for courses extending over the whole year or for Session 1 only will be accepted after the end of the fourth week of Session 1 (27 March 1981) except with the express approval of the Deputy Registrar (Student Services) and the Heads of Schools concerned. No enrolments for courses in Session 2 only will be accepted after the end of the second week of Session 2 (31 July 1981) except with the express approval of the Deputy Registrar (Student Services) and the Heads of Schools concerned.

10. University of New South Wales and University Union Membership Card

All students enrolled in degree or diploma courses or as miscellaneous students, except those exempt from fees under provisions of section 17, below, are issued with a University of New South Wales and University Union Membership Card. This card must be carried during attendance at the University and shown on request.

The number appearing on the front of the card above the student’s name is the student registration number used in the University’s records. This number should be quoted in all correspondence.

The card must be presented when borrowing from the University libraries, when applying for travel concessions, and when notifying a change of address. It must also be presented when paying fees on re-enrolment each year when it will be made valid for the year and returned. Failure to present the card could result in inconvenience in completing re-enrolment.

Life members of the University and those exempt from payment of University Union fees, if enrolled in degree or diploma courses or miscellaneous students use the University’s fees receipt in place of the card when applying for travel concessions and when notifying a change of address. The University Library issues a library borrowing card on production of the fees receipt.

A student who loses a card must notify the University Union as soon as possible.

New students are issued with cards on enrolment if eligible.

11. Payment of Fees

There are no fees for tuition but other fees and charges are payable. These include those charges raised to finance the expenses incurred in operating activities such as the University Union, the Students’ Union, the Sports Association, and the Physical Education and Recreation Centre. Penalty payments are also incurred if a student fails to complete procedures as required. Charges may also be payable, sometimes in the form of a deposit, for the hiring of kits of equipment in certain subjects. Accommodation charges, costs of subsistence on excursions, field work, etc., and for hospital residence (medical students) are payable in appropriate circumstances.

12. Assisted Students

Scholarship holders and sponsored students who have not received an enrolment voucher or appropriate letter of authority from their sponsor at the time when they are enrolling should complete their enrolment by paying their own fees.

A refund of fees will be made when the enrolment voucher or letter of authority is subsequently lodged with the Cashier.

Those unable to pay their own fees in these circumstances can apply to the office of the Deputy Registrar (Student Services) (Room 148E, the Chancellery) for an extension of time in which to pay. Such an application must be made before the fees are due.

13. Extension of Time

Any student who is unable to pay fees by the due date may apply to the office of the Deputy Registrar (Student Services) (Room 148E, the Chancellery) for an extension of time, which may be granted in extenuating circumstances. Such applications must be made before the due date.

14. Failure to Pay Fees and Other Debts

Any student who fails to pay prescribed fees or charges or is otherwise indebted to the University and who fails either to make a satisfactory settlement of his indebtedness upon receipt of due notice or to receive a special exemption ceases to be entitled to the use of University facilities. Such a student is not permitted to register for a further session, to attend classes or examinations, or to be granted any official credentials. In the case of a student enrolled for Session 1 only or for both Sessions 1 and 2 this disbarment applies if any portion of fees is outstanding after the end of the eighth week of Session 1 (24 April 1981). In the case of a student enrolled for Session 2 only this disbarment applies if any portion of fees is outstanding after the end of the sixth week of Session 2 (28 August 1981).

In special cases the Registrar may grant exemption from the disqualification referred to in the preceding paragraph upon receipt of a written statement setting out all relevant circumstances.

15. Student Fees

Fees and penalties quoted are current at the time of publication but may be amended by the University Council without notice.

All students (with the exceptions set out in section 17, below) will be required to pay the following fees if enrolling for a program involving two sessions. Those enrolling for only one session will pay the full University Union Entrance Fee, if applicable, and one half of any other fees due.
Students who consider themselves eligible for life membership of the University Union, the Sports Association, or the Students’ Union, should make enquiries about the matter at the offices of those bodies, not at the office of the Deputy Registrar (Student Services) or at the Cashier’s office.

Students often seek exemption from the fees for reasons other than those set out below. It is stressed that the fees charged are a contribution by students towards services and amenities for the University community (both now and in the future) and exemption from them cannot be claimed because a student is unable or unwilling to make use of some of those services or amenities.

17. Exemptions – Fees

Students often seek exemption from the fees for reasons other than those set out below. It is stressed that the fees charged are a contribution by students towards services and amenities for the University community (both now and in the future) and exemption from them cannot be claimed because a student is unable or unwilling to make use of some of those services or amenities.

(1) Life members of the University Union, the Sports Association, and Students’ Union are exempt from the relevant fee or fees*.

(2) Students enrolled in courses classified as External are exempt from all Student Activities Fees and the University Union Entrance Fee.

(3) Students enrolled in courses at the W. S. and L. B. Robinson University College and in the Faculty of Military Studies are exempt from the fees in section 15. above but shall pay such other fees and charges as the Council may from time to time determine.

(4) University Union fees and subscriptions may be waived by the Deputy Registrar (Student Services) for students enrolled in graduate courses in which the formal academic requirements are undertaken at a part of the University away from the Kensington campus.

(5) Students who while enrolled at and attending another university (or other tertiary institution as approved by the Vice-Chancellor) in a degree or diploma course are given approval to enrol at the University of New South Wales but only as miscellaneous students for subjects to be credited towards the degrees or diplomas for which they are enrolled elsewhere are exempt from all Student Activities Fees and the University Union Entrance Fee**.

(6) Undergraduate students of a recognized university outside Australia who attend the University of New South Wales with the permission of the Dean of the appropriate faculty and of the Head of the appropriate school or department to take part as miscellaneous students in an academic program relevant to their regular studies and approved by the authorities of their own institution are exempt from all Student Activities Fees and the University Union Entrance Fee.

(7) Graduate students not in attendance at the University and who are enrolling in a project only other than for the first time, are exempt from all Student Activities Fees.

(8) Graduate students resubmitting a thesis or project only are exempt from all Student Activities Fees.

(9) All Student Activities Fees, for one or more sessions, may be waived by the Deputy Registrar (Student Services).

* Students who consider themselves eligible for life membership of the University Union, the Sports Association, or the Students’ Union, should make enquiries about the matter at the offices of those bodies, not at the office of the Deputy Registrar (Student Services) or at the Cashier’s office.

** Institutions approved are: New South Wales Institute of Technology and Alexander Mackie College of Advanced Education.

16. Penalties

(1) Failure to lodge enrolment form according to enrolment procedure $20

(2) Payment of fees after end of second week of session $20

(3) Payment of fees after end of fourth week of session $40

Penalties (1) and (2) or (1) and (3) may accumulate.
Withdrawal) for students who are given formal permission to pursue their studies at another institution for one or more sessions.

(10) Graduate students who have completed all the work for a qualification at the commencement of Session 1, except for the submission of the relevant thesis or project report, may be exempted from the payment of Student Activities Fees by the Deputy Registrar (Student Services) on production of an appropriate statement signed by the relevant Supervisor or Head of School.

(11) Students enrolled in a session or sessions devoted entirely to training or experience away from the campus and its associated laboratories, hospitals, centres, institutes, and field stations are exempt from all Student Activities Fees for that session or sessions.

(12) Students whose registration is cancelled or suspended by the University shall receive refunds of fees paid in accordance with the provisions of section 18. (5) below except that a refund of one half of the fees shall be made if such cancellation or suspension takes place between the end of the fourth week of Session 1 and the end of the fourth week of Session 2.

18. Variations in Enrolment (including Withdrawal)

(1) Students wishing to vary an enrolment program must make application on the form available from the appropriate Course Authority.

(2) Students withdrawing from courses (and see also information about withdrawal from subjects below) are required to notify the Registrar in writing. In some cases such students will be entitled to fee refunds (see below).

(3) Enrolment in additional subjects

Applications for enrolment in additional subjects must be submitted by:

27 March 1981 for Session 1 only and whole year subjects;

14 August 1981 for Session 2 only subjects.

(4) Withdrawal from subjects

Applications to withdraw from subjects may be submitted throughout the year but applications lodged after the following dates will result in students being regarded as having failed the subjects concerned, except in special circumstances:

(a) for one session subjects, the end of the seventh week of that session (17 April or 4 September)

(b) for whole year subjects, the end of the second week of Session 2 (31 July).

(5) Withdrawal from Course - Refunds

Whether or not a student’s withdrawal entails academic penalties (covered in item (4) above) there are rules governing possible fee refunds in the case of complete withdrawal from a course, as follows:

(a) if notice of withdrawal from a course is received by the Registrar before the first day of Session 1, a refund of all fees paid will be made

(b) if notice of withdrawal is received on or after the first day of Session 1:

(i) a partial refund of the University Union Entrance Fee will be made on the following bases: any person who has paid the entrance fee in any year and who withdraws from membership of the University Union after the commencement of Session 1 in the same year, or who does not renew his membership in the immediately succeeding year, may on written application to the Warden receive a refund of half the entrance fee paid.

(ii) if the notice of withdrawal is given before the end of the fourth week of Session 1 (27 March 1981) a full refund of other Student Activities Fees paid will be made; if notice is given before the end of the eighth week of Session 1 (24 April 1981) a refund of one half of the other Student Activities Fees paid will be made; thereafter no refund will be made except that provided for in (iii) below.

(iii) if a student’s enrolment in any year is for Session 2 only and the student gives notice of withdrawal prior to the end of the fourth week of Session 2 (14 August 1981) a full refund of Student Activities Fees paid (other than the University Union Entrance Fee for which see item (i) above) will be made; if notice is given before the end of the eighth week of Session 2 (11 September 1981) a refund of one half of the other Student Activities Fees paid will be made; thereafter no refund will be made.

(iv) The refunds mentioned in (ii) and (iii) above may be granted by the Deputy Registrar (Student Services) to a student unable to notify the Registrar in writing by the times required provided evidence is supplied that the student had ceased attendance by those times.

(6) Acknowledgements

The Registrar will acknowledge each application for a variation in enrolment (including withdrawals from subjects) as follows:

(a) variations lodged before the Friday of the seventh week of each session (17 April or 4 September) will be incorporated in the Confirmation of Enrolment Program notice forwarded to students on 27 April or 14 September as appropriate

(b) variations lodged after those dates will be acknowledged by letter

(c) withdrawals from a course are acknowledged individually whenever they are lodged.

(7) It is emphasized that failure to attend for any assessment procedure, or to lodge any material stipulated as part of an assessment procedure, in any subject in which a student is enrolled will be regarded as failure in that assessment procedure unless written approval to withdraw from the subject without failure has been obtained from the Registrar.
19. Exemption – Membership
The Registrar is empowered to grant exemption from membership of any or all of the University Union, the Students’ Union and the Sports Association to students who have a genuine conscientious objection to such membership, subject to payment of the prescribed fees to the Miscellaneous Fund.

Private Overseas Students

Private overseas students should visit the Commonwealth Department of Education immediately on first arrival in Australia. The address is Sydney Plaza Building, 59 Goulburn Street, Sydney.

Private overseas students continuing their studies should confirm their enrolment with the Commonwealth Department of Education as early as possible each year in order to ensure that arrangements for the extension of their temporary entry permits can be made.

All private overseas students must advise the Department if they change their term residential address during the year. Telephone enquiries should be directed to (02) 218 8923, and country students may reverse the charge for the call.

Leave of Absence

Leave of absence from an undergraduate course of study may be granted to students other than those in the first year of a course. Leave of absence has generally been restricted to one year but in special circumstances two years have been granted.

To apply for such leave of absence, a letter should be submitted to the Registrar immediately following the release of annual examination results and must include the student’s full name, registration number, the course and stage in which enrolled in the previous year and, most important, the reason why leave is being sought. The letter advising the result of the application will provide details about how to re-enrol.

Students who withdraw from the first year of their course are not granted leave of absence and must again apply for a place through the Universities and Colleges Admissions Centre.

Course Transfers

Students wishing to transfer from one course to another must complete and submit an application form, obtainable from the Admissions Office, the Chancellery, by Friday 9 January 1981.

Students whose applications to transfer are successful, and who are transferring from one school to another are required to comply with the enrolment procedure laid down for new students with advanced standing. Students transferring from one course to another within the same school are required to attend the appropriate enrolment session for the course to which they have approval to transfer.

Students must present the approval to transfer to the enrolling officer, and those who have not received advice regarding their application to transfer before the date on which they are required to enrol should check with the Admissions Office.

Students should also advise the enrolling officer in the school in which they were enrolled in 1980 of their intention to transfer.

Admission with Advanced Standing

Any person who makes application to register as a candidate for any degree or other award granted by the University may be admitted to the course of study leading to such degree or award with such standing on the basis of previous attainments as may be determined by the Professorial Board provided that:

1. the Board shall not grant such standing under these rules as is inconsistent with the rules governing progression to such degree or award as are operative at the time the application is determined;

2. where a student transfers from another university such student shall not in general be granted standing in this University which is superior to what he has in the University from which he transfers;

3. the standing granted by the Board in the case of any application based on any degree/s or other awards already held by the applicant, shall not be such as will permit the applicant to qualify for the degree or award for which he seeks to register without completing the courses of instruction and passing the examinations in at least those subjects comprising the latter half of the course, save that where such a program of studies would involve the applicant repeating courses of instruction in which the Board deems the applicant to have already qualified, the Board may prescribe an alternative program of studies in lieu thereof;

4. the standing granted by the Board in the case of any application based on partial completion of the requirements for any degree or other award of another institution shall not be such as will permit the applicant to qualify for the degree or award for which he seeks to register by satisfactory completion of a program of study deemed by the Board to be less than that required of a student in full-time attendance in the final year of the course in which the applicant seeks to register;

5. the standing granted by the Board in the case of any application based on the partial completion of the
requirements for any degree or other award of the University may be such as to give full credit in the course to which the applicant seeks to transfer for work done in the course from which the student transfers.

Where the identity between the requirements for any award of the University already held and that of any other award of the University is such that the requirements outstanding for the second award are less than half the requirements of that award, then a student who merely completes such outstanding requirements shall not thereby be entitled to receive the second award but shall be entitled to receive a statement over the hand of the Registrar in appropriate terms.

Resumption of Courses

Students who have had a leave of absence for twelve months and wish to resume their course should follow the instructions about re-enrolling given in the letter granting leave of absence. If these instructions are not fully understood or have been lost, students should contact the Admissions Office before November in the year preceding the one in which they wish to resume their course.

If students have not obtained leave of absence from their course and have not been enrolled in the course over the past twelve months or more, they should apply for admission to the course through the Universities and Colleges Admissions Centre before 1 October in the year preceding that in which they wish to resume studies.

Examinations

Examinations are held in June/July and in November/December.

Provisional timetables indicating the dates and times of examinations are posted on the University noticeboards.

Students must advise the Examinations Unit (the Chancellery) of any clash in examinations. Final timetables indicating the dates, times, locations, and authorized aids are available for students two weeks before the end of each session.

Misreading of the timetable is not an acceptable excuse for failure to attend an examination.

Assessment of Course Progress

In the assessment of a student's progress in a course, consideration may be given to work in laboratory and class exercises and to any term or other tests given throughout the year as well as to the results of written examinations.

Examination Results

Grading of Passes

Passes will be graded as follows:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>High Distinction</td>
<td>an outstanding performance</td>
</tr>
<tr>
<td>Distinction</td>
<td>a superior performance</td>
</tr>
<tr>
<td>Credit</td>
<td>a good performance</td>
</tr>
<tr>
<td>Pass</td>
<td>an acceptable level of performance</td>
</tr>
<tr>
<td>Satisfactory</td>
<td>satisfactory completion of a subject for which graded passes are not available</td>
</tr>
</tbody>
</table>

Pass Conceded

A pass conceded may be granted to a student whose overall performance warrants consideration in a subject where the mark obtained is slightly below the standard required for a pass.

A pass conceded in a subject will normally allow progression to another subject for which the former subject is a prerequisite. In a particular subject, however, a subject authority may specify that a pass conceded is insufficient to meet a particular subject prerequisite.

Availability of Results

Final examination results will be posted to a student's term address, or vacation address if requested. Change of address forms and forms requesting that results be posted to a vacation address are included in the examination timetable and are obtainable at the Student Enquiry Counter, the Chancellery. Both forms can be accepted up to Friday 27 November. Results are also posted on School noticeboards and in the University Library. Results on noticeboards are listed by Student Registration Number.

No examination results are given by telephone.

Review of Results

A student may make application to the Registrar for the review of a result. The application form, accompanied by an appropriate fee, must be submitted not later than fifteen working days after the date of issue of the Notification of Examination Result form.

In reviewing a result, the subject authorities shall ensure that all components of the assessment have been assessed and a mark assigned.

A review of a result is not a detailed reassessment of a student's standard of knowledge and understanding of, and skills in, the subject. It is rather a search for arithmetic error in arriving at the composite mark and for gross and obvious error in assignment of marks in components of the final composite mark.

When a change in grade is recommended, the application fee will be refunded by the Registrar.

Special Consideration

Students who believe that their performance in a subject, either during session or in an examination, has been
adversely affected by sickness or any other reason should inform the Registrar and ask for special consideration in the determination of their standing.

Such requests should be made as soon as practicable after the occurrence. Applications made more than seven days after the final examination in a subject will only be considered in exceptional circumstances.

When submitting a request for special consideration students should provide all possible supporting evidence (eg medical certificates) together with their registration number and enrolment details.

Physical Disabilities
Students suffering from a physical disability which puts them at a disadvantage in written examinations should advise Student Records (Ground Floor, the Chancellery) immediately their disability is known. If necessary, special arrangements will be made to meet the student’s requirements.

Students who are permanently disabled and need the Examinations Unit to make special arrangements for their examinations, should contact Student Records as soon as the final timetable becomes available.

Use of Electronic Calculators
Where the use of electronic calculators has been approved by a faculty or school, examiners may permit their use in examinations. Authorized electronic calculators are battery operated with the minimum operations of addition, subtraction, multiplication and division and are of a type in common use by university students. They are not provided by the University, although some schools may make them available in special circumstances.

Examinations Held Away from the Campus
Except in the case of students enrolled in external courses, examinations will not be permitted away from the campus unless the candidate is engaged on compulsory industrial training. Candidates must advise the Officer-in-charge, Examinations Unit, immediately the details of the industrial training are known. Special forms for this purpose are available at the Student Enquiry Counter in the north wing of the Chancellery.

Arrival at Examinations
Examination Rooms will be open to students twenty-five minutes before the commencement of the examination. Candidates are requested to be in their places at least fifteen minutes before the commencement to hear announcements. The examination paper will be available for reading ten minutes before commencement.

Use of Linguistic Dictionaries
The answers in all examinations and in all work submitted must be in English unless otherwise directed. Students may apply for permission to use standard linguistic dictionaries in the presentation of written work for assessment. Such applications should be made in writing to the Examinations Unit not later than 14 days prior to the need to use the linguistic dictionary.

Conduct of Examinations
Examinations are conducted in accordance with the following rules and procedure:

1. Candidates are required to obey any instruction given by an examination supervisor for the proper conduct of the examination.

2. Candidates are required to be in their places in the examination room not less than fifteen minutes before the time for commencement.

3. No bag, writing paper, blotting paper, manuscript or book, other than a specified aid, is to be brought into the examination room.

4. Candidates shall not be admitted to an examination after thirty minutes from the time of commencement of the examination.

5. Candidates shall not be permitted to leave the examination room before the expiry of thirty minutes from the time the examination commences.

6. Candidates shall not be re-admitted to the examination room after they have left it unless, during the full period of their absence, they have been under approved supervision.

7. Candidates shall not by any improper means obtain, or endeavour to obtain, assistance in their work, give, or endeavour to give, assistance to any other candidate, or commit any breach of good order.

8. All answers must be in English unless otherwise stated. Foreign students who have the written approval of the Registrar may use standard linguistic dictionaries.

9. Smoking is not permitted during the course of examinations.

10. A candidate who commits any infringement of the rules governing examinations is liable to disqualification at the particular examination, to immediate expulsion from the examination room and to such further penalty as may be determined in accordance with the By-Laws.

Acknowledgement of Sources
Students are expected to acknowledge the source of ideas and expressions used in submitted work. To provide adequate documentation is not only an indication of academic honesty but also a courtesy enabling the marker to consult sources with ease. Failure to do so may constitute plagiarism, which is subject to a charge of academic misconduct.
Further Assessment

In special circumstances further assessment including assessment or further assessment on medical or compassionate grounds may be granted.

Further assessment may be given by the subject authority at his or her discretion at any time prior to the meeting of the relevant faculty assessment committee (normally the fourth week of the Midyear Recess and the second week of December). Further assessment may also be awarded at the faculty assessment committee and students affected may need to be free to undertake that further assessment in the last week in the Mid-year Recess and in the period up to the end of the second week in January; students should consult their subject authority for details of further assessment immediately their results are known.

Restrictions upon Students Re-enrolling

The University Council has adopted the following rules governing re-enrolment with the object of requiring students with a record of failure to show cause why they should be allowed to re-enrol and retain valuable class places.

First Year Rule

1. Students enrolled in the first year of any undergraduate course of study in the University shall be required to show cause why they should be allowed to continue the course if they do not pass the minimum number of subjects, units or credits prescribed for this purpose by the relevant faculty or board of studies.

The prescribed minimum for each undergraduate course may be found in Schedule A* below; the schedule may be varied from time to time by the Professorial Board.

Repeated Failure Rule

2. Students shall be required to show cause why they should be allowed to repeat a subject which they have failed more than once. Where the subject is prescribed as part of the course they shall also be required to show cause why they should be allowed to continue that course.

General Rule

3. Students shall be required to show cause if, in the opinion of the faculty or board of studies, their academic record is such as to demonstrate their lack of fitness to pursue a subject or subjects and/or course or courses.

The Session-Unit System

4. (1) Students who infringe the provisions of Rules 1. or 2. at the end of Session 1 of any year will be allowed to repeat the subject(s) (if offered) and/or continue the course in Session 2 of that year, subject to the rules of progression in the course.

(2) Such students will be required to show cause at the end of the year, except that students who infringe Rule 2. at the end of Session 1, and repeat the subjects in question in Session 2, and pass them, will not be required to show cause on account of any such subjects.

Exemption from Rules by Faculties

5. (1) A faculty or board of studies examinations committee may, in special circumstances, exempt students from some or all of the provisions of Rules 1. and 2.

(2) Such students will not be required to show cause under such provisions and will be notified accordingly by the Registrar.

Showing Cause

6. (1) Students wishing to show cause must apply for special permission to re-enrol. Application should be made on the form available from the Registrar and must be lodged with the Registrar by the dates published annually by the Registrar. A late application may be accepted at the discretion of the University.

(2) Each application shall be considered by the Admissions and Re-enrolment Committee of the relevant faculty or board of studies which shall determine whether the cause shown is adequate to justify the granting of permission to re-enrol.

Appeal

7. (1) Students who are excluded by the Admissions and Re-enrolment Committee from a course and/or subject under the provisions of the Rules will have their applications to re-enrol reconsidered automatically by the Re-enrolment Committee of the Professorial Board.

(2) Students whose exclusion is upheld by the Re-enrolment Committee may appeal to an Appeal Committee constituted by Council for this purpose with the following membership:

A Pro-Vice-Chancellor, nominated by the Vice-Chancellor who shall be Chairman.

The Chairman of the Professorial Board, or if its chairman is unable to serve, a member of the Professorial Board, nominated by the Chairman of the Professorial Board, or when the Chairman of the Professorial Board is unable to make a nomination, nominated by the Vice-Chairman.

One of the category of members of the Council elected by the graduates of the University, nominated by the Vice-Chancellor.

The decision of the Committee shall be final.

(3) The notification to students of a decision which has been upheld by the Re-enrolment Committee of the Professorial Board to exclude them from re-enrolling in a

* See reference to Schedule A on next page.
course and/or subject shall indicate that they may appeal against that decision to the Appeal Committee. The appeal must be lodged with the Registrar within fourteen days of the date of notification of exclusion; in special circumstances a late appeal may be accepted at the discretion of the Chairman of the Appeal Committee. In lodging such an appeal with the Registrar students should provide a complete statement of all grounds on which the appeal is based.

(4) The Appeal Committee shall determine appeals after consideration of each appellant's academic record, application for special permission to re-enrol, and stated grounds of appeal. In particular circumstances, the Appeal Committee may require students to appear in person.

Exclusion

8. (1) Students who are required to show cause under the provisions of Rules 1. or 3. and either do not attempt to show cause or do not receive special permission to re-enrol from the Admissions and Re-enrolment Committee (or the Re-enrolment Committee on appeal) shall be excluded, for a period not in excess of two years, from re-enrolling in the subjects and courses on account of which they were required to show cause. Where the subjects failed are prescribed as part of any other course (or courses) they shall not be allowed to enrol in any such course.

(2) Students required to show cause under the provisions of Rule 2. who either do not attempt to show cause or do not receive special permission to re-enrol from the Admissions and Re-enrolment Committee (or the Re-enrolment Committee on appeal) shall be excluded, for a period not in excess of two years, from re-enrolling in any subject they have failed twice. Where the subjects failed are prescribed as part of a course they shall also be excluded from that course. Where the subjects failed are prescribed as part of any other course (or courses) they shall not be allowed to enrol in any such course.

Re-admission after Exclusion

9. (1) Excluded students may apply for re-admission after the period of exclusion has expired.

(2) (a) Applications for re-admission to a course shall be made to the Universities and Colleges Admissions Centre before the closing date for normal applications in the year prior to that in which re-admission is sought. Such applications will be considered by the Admissions and Re-enrolment Committee of the relevant faculty or board of studies.

(b) Applications for re-admission to a subject should be made to the Registrar before 30 November in the year prior to that in which re-admission is sought. Such applications will be considered by the relevant subject authority.

(3) Applications should include evidence that the circumstances which were deemed to operate against satisfactory performance at the time of exclusion are no longer operative or are reduced in intensity and/or evidence of action taken (including enrolment in course/s) to improve capacity to resume studies.

(4) Applications for re-admission to a course or subject that are unsuccessful (see 9. (2) (a), (b) respectively) will be reconsidered automatically by the Re-enrolment Committee of the Professorial Board. The decision of the Re-enrolment Committee will be final.

10. Students who fail a subject at the examinations in any year or session and re-enrol in the same course in the following year or session must include in their programs of studies for that year or session the subject which they failed. This requirement will not be applicable if the subject is not offered the following year or session, is not a compulsory component of a particular course, or if there is some other cause which is acceptable to the Professorial Board for not immediately repeating the failed subject.

Restrictions and Definitions

11. (1) These rules do not apply to students enrolled in programs leading to a higher degree or graduate diploma.

(2) A subject is defined as a unit of instruction identified by a distinctive subject number.

Schedule A

The prescribed 'minimum number of subjects units or credits' for the purposes of determining liability under the 'First Year Rule' is under consideration by faculties and boards of studies at the time of printing. An up-to-date list may be obtained from the Registrar.

Admission to Degree or Diploma

Students whose current program will enable them to complete all requirements for the degree or diploma, including industrial training where necessary, should lodge with the Registrar the form Application for Admission to Degree/Diploma and return it to the Registrar by the second Monday in May for the October ceremonies, and the first Tuesday in October for all other ceremonies. The forms are available from the Student Enquiry Counter in the north wing of the Chancellory.

Students who have indicated on their enrolment form that they are potential graduands are forwarded an application form with their Enrolment Details form in September (or, in the case of students who expect to satisfy requirements at the end of Session 1, with the form issued in
April). Students who do not complete an application form will not graduate; students who do not return their application form by the due date will graduate at a later series of ceremonies.

The Registrar will acknowledge receipt of the application form within two weeks. If no acknowledgement is received within that period students should contact the Student Records Section immediately.

Students enrolled in courses 3400, 3910 and 3970 who have completed an application form to graduate at the pass level and who then decide to proceed to an honours year should advise the Registrar, in writing before 1 September for those completing requirements at the end of Session 1, or before 28 February for those completing requirements at the end of Session 2.

A list of graduands in Medicine who have applied for their degree is published in The Sydney Morning Herald in December.

A list of graduands other than Medicine who have applied for their degree/diploma and who expect to graduate in October is published in The Sydney Morning Herald on the second Wednesday in September.

A list of graduands other than Medicine who have applied for their degree/diploma and who expect to graduate in April/May the following year is published in The Sydney Morning Herald on the second Wednesday in March.

Students who are potential graduands and who wish to notify the Registrar of a change of address should submit an additional form Final Year Students’ Graduation: Change of Address.

Attendance at Classes

Students are expected to be regular and punctual in attendance at all classes in the course or subject in which they are enrolled. All applications for exemption from attendance at lectures or practical classes must be made in writing to the Registrar.

In the case of illness or of absence for some other unavoidable cause students may be excused by the Registrar for non-attendance at classes for a period of not more than one month or, on the recommendation of the Dean of the appropriate Faculty, for a longer period.

Absence from Classes

Explanations of absences from classes, or requests for permission to be absent from forthcoming classes, should be addressed to the Registrar and, where applicable, should be accompanied by a medical certificate. If examinations have been missed, this should be stated in the application.

If students attend less than eighty per cent of their possible classes they may be refused final assessment.

Student Records

Confirmation of Enrolment Program notices are sent to all students on 27 April and 14 September. It is not necessary to return these forms unless any of the information recorded is incorrect. Amended forms must be returned to the Student Records Section within fourteen days. Amendments notified after the closing date will not be accepted unless exceptional circumstances exist and approval is obtained from the Registrar. Amended forms returned to the Registrar will be acknowledged in writing within fourteen days.

Release of Information to Third Parties

The University treats examination results and information it receives from a student as confidential and will not reveal such information to third parties without the permission of the student except at the discretion of senior officers in circumstances considered of benefit to the student and when it is either impossible or impracticable to gain the student’s prior permission. This happens rarely. This policy is considered so important that it often involves officers of the University in very difficult situations, for example, when they must refuse to reveal the address of a student to parents or other relatives.

In spite of the policy, there are sometimes accusations made that the University has revealed information, including addresses (especially to insurance companies).

All students should be aware that students’ addresses are eagerly sought by various commercial agents and that sometimes tricks are used to obtain them. For example, from time to time people claiming to be from the University telephone students or their families and ask for information (usually another student’s address) which is often given, unsuspectingly. There is evidence that this is a technique used by commercial agents.

It would be generally helpful if students (and their families and friends) are cautious in revealing information, making it a practice to ask the name, position, and telephone extension of any caller claiming to be from the University and, if suspicious, returning the call to the extension given.
Change of Address

The Student Records Section of the Registrar’s Division should be notified as soon as possible of any change of address. Failure to do this could lead to important correspondence (including examination results) going astray. The University cannot accept responsibility if official communications fail to reach students who have not given notice of their change of address. Change of Address Advice Forms are available at Faculty and School offices and from the Student Enquiry Counter in the north wing of the Chancellery.

All communications from the University, including examination results, will be sent to the Session or Term address except when arrangements are made otherwise in the case of examination results (see Examinations: Availability of Results, earlier in this section). Change of Address Advice forms will be accepted up to Friday 27 November, except for final-year students wishing to change their Application for Admission for Degree/Diploma form. Changes to this form will be accepted up to a date four weeks before the student’s graduation ceremony.

Ownership of Students’ Work

The University reserves the right to retain at its own discretion the original or one copy of any drawings, models, designs, plans and specifications, essays, theses or other work executed by students as part of their courses, or submitted for any award or competition conducted by the University.

Notices

Official University notices are displayed on the noticeboards and students are expected to be acquainted with the notices which concern them. These boards are in the Biological Sciences Building, the Mathews Building, the Chancellery (lower ground floor), Central Lecture Block, Dalton Building (Chemistry), Electrical Engineering Building, Main Building (Physics and Mining) and in the Western Grounds Area.

Parking within the University Grounds

A limited amount of parking is available on campus. Copies of the University’s parking rules may be obtained on application to Room 240, the Chancellery.

Academic Dress

Information about the University’s academic dress requirements may be obtained from the Alumni Office, Room 148E, the Chancellery (phone extension 2998).

Further Information

Lost Property

All enquiries concerning lost property should be made to the Superintendent on extension 3580 or to the Lost Property Office at the Union.

The Calendar

Please consult the Calendar for a more detailed account of the information contained in this section.
Vice-Chancellor's Official Welcome to New Students

All students initially enrolling in the University are officially welcomed by the Vice-Chancellor and Principal at the following times:

Full-time Students
In the Faculties of Architecture, Arts, Biological Sciences, Commerce, Law:
Thursday 26 February 1981
11 am in the Clancy Auditorium

In the Faculties of Applied Science, Engineering, Medicine, Professional Studies, Science, and the Board of Studies in Science and Mathematics:
Friday 27 February 1981
11 am in the Clancy Auditorium

Part-time Students
Thursday 26 February 1981
6.30 pm in the Clancy Auditorium

Meeting for Parents of New Students
Friday 27 February 1981
7.30 pm in the Clancy Auditorium
The importance of the Applied Sciences in this University's development has always been recognized, and is especially referred to in our Act of Incorporation.

Undergraduate courses well established in the Faculty are: Applied Geography (including Applied Economic Geography and Applied Physical Geography), Applied Geology, Chemical Engineering (including Biological Process Engineering and Fuel Engineering), Industrial Chemistry, Food Technology, Metallurgy (including Ceramic Engineering and Metallurgical Process Engineering), Mining Engineering, Textile Technology (including Textile Chemistry, Textile Physics, Textile Engineering and Textile Manufacture) and Wool and Pastoral Sciences. The Faculty is concerned with a variety of research programs and many of the Faculty's research contributions have achieved international recognition.

It is hoped that students who enter the Faculty will share the enthusiasm and the dedication of those who have taken part in its development. It is of the greatest importance that students should acquire, from the very beginning, the right approach to their studies, and that they should achieve a proper balance between their work and their extra-curricular activities.

In addition to this Handbook, pamphlets and brochures issued in conjunction with the enrolment period and Orientation Week are available. These should be consulted, together with the Calendar, for further information.

It is hoped that this Handbook will be of value to present and prospective students in the Faculty and to employers.

M. Chaikin
Dean
Faculty of Applied Science
Faculty Information

Who to Contact

If you require advice and information of a general nature contact:
Mr. R. Starr, Senior Administrative Officer, Faculty of Applied Science. Room 123, Sir Robert Webster Building, Tel. 662 3401.

For information and advice of a specific nature, contact the appropriate school representative below:
Mr. G. Baldwin, Administrative Officer, School of Applied Geology. Room 810, Applied Science Building, Tel. 662 2336.
Mr. J. Gatenby, Senior Administrative Officer, School of Chemical Engineering and Industrial Chemistry. Room 320, Applied Science Building, Tel. 662 2404.
Mr. R. Greenwood, Administrative Assistant, School of Food Technology. Room 411, Applied Science Building, Tel. 662 3816.
Mr. B. McClenaghan, Administrative Assistant, School of Geography. Room G10, Geography and Surveying, Tel. 662 2084.
Mr. R. Ball, Senior Administrative Officer, School of Metallurgy. Room 110B, Metallurgy Building, Tel. 662 2351.
Mr. R. Rolls, Administrative Assistant, School of Mining Engineering. Room 51B, Main Building, Tel. 662 2912.
Mr. R. Starr, Senior Administrative Officer, School of Textile Technology. Room 123, Sir Robert Webster Building, Tel. 662 3401.

Faculty of Applied Science
Enrolment Procedures

All students re-enrolling in 1981 should obtain a copy of the free booklet *Enrolment Procedures 1981* available from School Offices and the Admissions Office. This booklet provides detailed information on enrolment procedures and fees, enrolment timetables by Faculty and course, enrolment in miscellaneous subjects, locations and hours of Cashiers and late enrolments.

Student Clubs and Societies

Students have the opportunity of joining a wide range of clubs and societies. Many of these are affiliated with the Students' Union. There are numerous religious, social and cultural clubs and also many sporting clubs which are affiliated with the Sports Association.
Clubs and societies seeking to use the name of the University in their title, or seeking University recognition, must submit their constitutions either to the Students’ Union or the Sports Association if they wish to be affiliated with either of these bodies, or to the Registrar for approval by the University Council.

Services of particular interest to undergraduates and academic staff are:

- The Open Reserve Section, housing books and other material which are required reading.
- The Audio Visual Section, containing cassette tapes, mainly lectures and other spoken word material. The Audio-Visual Section has wired study carrels and cassette players for student use.

Undergraduate Librarian  Pat Howard

Applied Sciences Library Facilities

Although any of the university libraries may meet specific needs, the staff and students of the Faculty of Applied Science are served mainly by the Biomedical Library, Physical Sciences Library and the Undergraduate Library.

The Biomedical Library

This library serves the information needs of the staff and students of the Schools of Food Technology and Wool and Pastoral Sciences for life sciences aspects of their study and research.

Biomedical Librarian  George Franki

The Physical Sciences Library

This library serves the information needs of senior undergraduate students, graduate students and members of the academic staff. It contains books, a large collection of journals, and guides to the literature in the form of abstracting and indexing journals in the subject areas of pure and applied science, technology, engineering and architecture. The library also houses a growing map collection and some micro form material. All material housed in the library bears the prefix 'P' and is indexed in the central catalogue on Level 2. There is also a catalogue in the Physical Sciences Library. There is seating for approximately 300 people, and a number of room carrels and seminar rooms are available for use. Photocopying facilities are provided. Journals may not be borrowed from the collection. Staff on Level 7 are ready to assist readers with their enquiries.

Physical Sciences Librarian  Marian Bate

The Undergraduate Library

This library caters for the library needs of first and second year students and other groups where large numbers require mass teaching.

The Undergraduate Library provides a reader education program and reader assistance service aimed at teaching students the basic principles of finding information.

Conditions for the Award of the Degree of Bachelor of Science or Bachelor of Engineering

The courses leading to the award of the degree of Bachelor of Science or Bachelor of Engineering in the Faculty of Applied
Science are normally programmed over four years of full time study. The normal programs may be varied by the Head of the School in which the student is enrolled. The regulations governing the award of these degrees are as follows:

1. A candidate for the degree of Bachelor of Science or Bachelor of Engineering shall:
   (1) comply with the requirements for admission;
   (2) follow the prescribed course of study in the appropriate School, and satisfy the examiners in the necessary subjects;
   (3) complete an approved program of industrial or similar training for such periods as are prescribed.

2. A student may be granted advanced standing by the Professorial Board on the recommendation of Faculty, but in each case must complete the appropriate period of approved industrial training before being eligible for the degree.

3. The degree shall be awarded in the pass or honours grade. Honours may be awarded in the following categories:
   - Honours Class I
   - Honours Class II, Division I
   - Honours Class II, Division II

4. Students shall be required to conform with the general rules relating to University courses.

---

### General Studies Program

Almost all undergraduates in Faculties other than Arts and Law are required to complete a General Studies program. The only course in the Faculty of Applied Science which does not have this requirement is the Bachelor of Science course in Economic Geography.

For further details, consult General Information earlier in this handbook.

---

### Conditions for the Award of the Degree of Bachelor of Science (Technology) or Bachelor of Science (Engineering)

The courses leading to the award of the degree of Bachelor of Science (Technology) or Bachelor of Science (Engineering) in the Faculty of Applied Science are normally programmed over six years of part-time study in the University whilst the student is employed in industry. The normal programs may be varied by the Head of the School in which the student is enrolled. The regulations governing the award of these degrees are as follows:

1. A candidate for the degree of BSc(Tech) or BSc(Eng) shall:
   (1) comply with the requirements for admission;
   (2) follow the prescribed course of study in the appropriate school, and pass the necessary examinations;
   (3) complete an approved program of industrial or similar training for such periods as are prescribed.

2. A student may be granted advanced standing by the Professorial Board on the recommendation of Faculty.

3. The degrees of BSc(Tech) and BSc(Eng) shall be awarded in the pass grade only but in the case of superior performance throughout the course the degree shall be conferred 'with merit'.

4. Students shall be required to conform with the general rules relating to University courses.
Undergraduate Study

Course Outlines

The Faculty of Applied Science consists of the Schools of Applied Geology, Chemical Engineering and Industrial Chemistry, Food Technology, Geography, Metallurgy, Mining Engineering, Textile Technology and Wool and Pastoral Sciences. These Schools offer full-time undergraduate courses leading to the degree of Bachelor of Science or Bachelor of Engineering, and some of the Schools also offer part-time courses leading to the award of the degree of Bachelor of Science (Technology) or Bachelor of Science (Engineering).

Full-time Courses

Full-time courses of four years' duration leading to the award of the degree of Bachelor of Science are offered in Applied Geography, Applied Geology, Ceramic Engineering, Food Technology, Industrial Chemistry, Metallurgy, Textile Technology and Wool and Pastoral Sciences. Four-year courses leading to the award of the degree of Bachelor of Engineering are offered in Chemical Engineering, Metallurgical Process Engineering and Mining Engineering.

Honours: Candidates for honours are required to undertake special reading and other assignments as directed by the Head of the School concerned. In considering the award of honours special attention is paid to the performance of a candidate in the final research project, for which a thesis describing a theoretical or experimental study is required. Honours are awarded in Class I; Class II Division I; and Class II Division II.

Industrial Training Requirements: In the scientific and technological courses close association with industry is maintained on the practical aspects of the professions. This is achieved in most of the courses of the Faculty by expecting students to complete an approved industrial training program prior to graduation. This is normally carried out during the Summer Recess. In the case of Wool and Pastoral Sciences, students are required to complete twenty-four weeks' approved practical work. In Mining Engineering students will undertake a program of practical training of at least 100 days.

Part-time Courses

Six-year, part-time courses leading to the award of the degree of Bachelor of Science (Technology) are offered by the School of Food Technology; in Industrial Chemistry by the School of Chemical Engineering and Industrial Chemistry; in Metallurgy and Ceramic Engineering by the School of Metallurgy; and in Mineral Processing by the School of Mining Engineering (at Broken Hill only). The part-time Mining Engineering course leading to the award of the degree of Bachelor of Science (Engineering) is available at Broken Hill.

The BSc(Tech) degree courses are intended for students who are employed in relevant industries and who wish to prepare for a degree mainly by part-time attendance. As part of the requirements for the award of the BSc(Tech) degree, students are required to complete an approved program of industrial training of not less than one year prior to the award of the degree. Industrial training should normally be completed concurrently with attendance in the course, but with the approval of the Head of School, may be completed after completion of the prescribed course of study.

Students who qualify for the award of the BSc(Tech) degree in the Faculty of Applied Science and who wish to proceed to the award of a BSc or BE degree will normally be required to complete further work which will involve at least one year of full-time attendance.

Holders of the degree of BSc(Tech) or BSc(Eng) will be eligible to proceed to the award of the degree of Master of Science, Master of Engineering or Master of Applied Science, subject to the regulations relating to these degrees.
Transfer is also possible from full-time courses to the part-time BSc(Tech) and BSc(Eng) degree courses, but in both cases a period of approved industrial experience must be gained before graduation. This requirement will apply to students transferring from BSc and BE degree courses within the Faculty.

**BSc(Eng) Courses With Partial Full-time Attendance**

BSc(Eng) degree courses may be completed by a combination of full-time and part-time study. The first two stages are to be completed part-time, in the following two years students complete the second and third years of the corresponding full-time course; and in the fifth stage a special program is prepared. Full details are set out below under the Schools which provide the courses.

---

**School of Applied Geology**

Head of School
Professor G. J. S. Govett

Administrative Officer
Mr G. J. Baldwin

The structure and syllabus of the BSc degree course in Applied Geology are designed to prepare graduates for employment in some field of resource geology. Training to meet this objective demands a thorough understanding of basic geological principles, accordingly, in the early part of the course students receive instruction in standard fundamental geological subjects. As the course progresses, emphasis is increasingly placed on practical applications in engineering and environmental geology, mineral and energy deposits, and mineral exploration techniques including geological, geochemical and geophysical methods.

Attendance at the University for students taking the full-time professional course in Applied Geology is for twenty-eight weeks per year on the basis of two sessions of fourteen weeks each for four years. At least one session of the fourth year is devoted essentially to field and laboratory work on a specialized research project.

A three-year full-time course is available to students in the Faculty of Science, and provision is made for party-time study in the first year of geology within that Faculty. Selected students in the Faculty of Science may read for an honours degree in Geology.

---

Master of Applied Science degree courses in Engineering Geology, Hydrogeology, Environmental Geology, Mineral Exploration, Exploration Geochemistry and Exploration Geophysics are offered on a part-time or full-time basis. The courses are designed to provide specialized training in practical applications of these fields.

*Students taking Year 4 in 1981 should refer to the old course below.

School of Chemical Engineering and Industrial Chemistry

Head of School
Professor D. L. Trimm

Senior Administrative Officer
Mr J. R. Gatenby

The former Schools of Chemical Engineering and Chemical Technology were amalgamated in January 1980 to form the combined School of Chemical Engineering and Industrial Chemistry. The new school offers the courses previously taught by the former two schools, i.e courses in Chemical Engineering and courses in Industrial Chemistry. The combined school contains the Departments of Biological Process Engineering, Fuel Technology and Polymer Science. The courses in Chemical Engineering contain a number of electives in technical areas, including biological process engineering and fuel engineering.

Chemical engineering is the application of the principles of the physical sciences, together with the principles of economics and human relations, to fields in which matter undergoes a change in state, energy content or composition. The chemical engineer is generally responsible for the design, construction and operation of plant and equipment used in the chemical processing industries.

Biological process engineering is the extension of chemical engineering principles to systems involving biological materials. Typical areas of interest are: the manufacture of antibiotics; the fermentation industries; bacterial mineral extraction; and the production of industrially useful materials by the growth and utilization of micro-organisms.

Fuel engineering is primarily concerned with the practical and economic applications of scientific knowledge and engineering experience to the production, processing and utilization of fuels and energy.

*Not available after 1981.
**Field work up to seven days' duration is a compulsory part of this subject.
Industrial Chemistry is the discipline in which the scientific work of the research chemist is translated into the activities of the chemical industry. The thermodynamic feasibility of a reaction in inorganic or organic chemistry, the conditions under which the reaction might proceed, the kinetics of the reaction and the means whereby the reaction might be controlled to produce the desired product are the fundamentals of the course.

For the award of honours, students need to have distinguished themselves in the formal work, in other assignments as directed by the Head of the School, and in the final year project, for which a thesis is required.

It is compulsory that before completion of the course students in the full-time course in Chemical Engineering must obtain a minimum of twelve weeks' professionally oriented, or industrial experience. Students in the part-time courses in Chemical Engineering should complete three years of industrial training concurrently with their University work.

It is recommended that before graduation students in the full-time courses in Industrial Chemistry obtain a minimum of eight weeks' professionally oriented or industrial experience. Students in the part-time courses in Industrial Chemistry obtain a minimum of twelve weeks' professionally oriented, or industrial experience.

**Chemical Engineering — Full-time Course**

**Bachelor of Engineering BE**

This course extends over four years and students study full-time during the day for twenty-eight weeks of each year (excluding examination and recess periods).

Successful completion of the BE degree course is accepted by the Council of Engineering Institutions, UK, the Institution of Engineers, Australia, and the Royal Australian Chemical Institute as sufficient qualification for corporate membership.

Department of Biological Process Engineering

Biological Process Engineering at the undergraduate level is a course in Chemical Engineering with electives in the areas of microbiology and biological process engineering.

3040
Chemical Engineering with Biological Process Engineering Electives — Full-time and Part-time Course
Bachelor of Engineering
BE

Year 1 is the same as for the Chemical Engineering course; Years 2, 3 and 4 are also the same as for the corresponding
years in Chemical Engineering, but in Year 3 the appropriate elective is 44.101 Introductory Microbiology; and in Year 4, 48.211 Biological Process Engineering, plus 48.240 Biological Process Engineering Project.

Successful completion of this degree course is sufficient qualification for corporate membership of the institution of Engineers, Australia, the Royal Australian Chemical Institute, and the Institution of Chemical Engineers, UK.

Department of Fuel Technology

This department, the first of its kind to be established in Australia, offers a course designed to meet the need of Australian industrial and research establishments for graduates trained in the science and technology of fuels and their utilization.

One constant problem of industries is that of developing and improving methods of processing and using solid, liquid and gaseous fuels to suit the continuously shifting patterns of demand. It is in this field of activity that the university-trained fuel technologist has a most important part to play.

In Australia, there is a growing need for people trained in the technology of fuels, and opportunities for employment and advancement of fuel engineers are therefore good.

Many exciting and revolutionary possibilities are apparent in the fuel and energy conversion industries, and there is a wide and varied field of activity which offers opportunity and challenge in the application of science and engineering to the problems of fuel and energy conversion, combustion engineering and environmental pollution control. Opportunities for graduate studies and research for higher degrees in these areas are wide-ranged and interesting.

The Institute of Energy (UK) has accepted the degree courses in Chemical Engineering with the Fuel Electives as providing exemption from the examination required for admission to corporate membership of the Institute.

Successful completion of the BE degree course in Chemical Engineering with Fuel Electives is accepted by the Australian Institute of Energy, the Council of Engineering Institutions, UK, the Royal Australian Chemical Institute, and the Institution of Engineers, Australia, as sufficient academic qualification for corporate membership.

3040 Chemical Engineering with Fuel Electives — Full-time and Part-time Course

Bachelor of Engineering BE

Fuel Engineering is essentially a course in Chemical Engineering with an orientation to the fuel and energy conversion and utilization industries. This course is available as an elective strand in the Chemical Engineering BE degree course. Years 1 and 2 are the same as for the Chemical Engineering course, and all students take the subject 48.311 Fuel Engineering I in their second year; Years 3 and 4 are also the same as for the corresponding years in Chemical Engineering, but in Year 3 the appropriate elective is 48.321 Fuel Engineering II, and in Year 4, 48.331 Fuel Engineering III, and 48.340 the Fuel Engineering Project.

The electives are devoted to professional subjects covering the broad areas of properties, constitution, processing and conversion, and utilization of fossil fuels. Topics include combustion science and engineering; radiation and flames; design and performance evaluation of fuel using plant such as furnaces, boilers and heat recovery appliances; coal and oil conversion processes; energy conservation; and progress in fuel science and fuel processing.

Department of Polymer Science

The Department of Polymer Science offers subjects at both undergraduate and graduate level in courses 3100 BSc (Industrial Chemistry), 3110 BSc (Tech) and 8005 MAppSc (Chemical Technology). The subjects deal with a wide range of matters concerning the chemistry, production and utilization of polymeric materials for science and industry.

School of Food Technology

Head of School
Professor R. A. Edwards

Administrative Assistant
Mr R. J. Greenwood

Food Technology is the application of basic science to the management of foods from the time of production until their
use by the consumer. It is concerned with optimum food quality and quantity, with nutritional status and safety, and with means of production, processing, preservation, distribution and utilization.

A study of food science and technology demands an interdisciplinary and integrated approach, one that brings many scientific disciplines into focus. Its basis is in areas of chemistry, biochemistry and microbiology, and its borders merge with those of agriculture, engineering, nutrition and commerce.

The food technologist acquires new knowledge by laboratory and process research, and applies it to the development of acceptable foods by optimum processes and equipment. Foods are studied in terms of their basic constituents and the changes they undergo when subjected to modern processing and distribution. The technologist is equally concerned with the development and selection of raw materials from agricultural, horticultural, animal and marine sources.

There is a demand, both national and international, for professionally trained people who are prepared to accept responsibility for the quality and safety of man’s food supply, who can contribute to the solution of one of the greatest problems of our age, how to make food supplies grow faster than population.

The School of Food Technology offers a four-year full-time course leading to the award of the degree of Bachelor of Science and six-year part-time course leading to the award of the degree of Bachelor of Science (Technology). Graduates of both courses qualify for membership of the Royal Australian Chemical Institute, the Australian Institute of Food Science and Technology, and the US Institute of Food Technologists.

A Graduate Diploma course in Food Technology of one year full-time or two years’ part-time is designed for graduates in science or agriculture wishing to familiarize themselves with the principles of food technology.

### 3060
**Food Technology — Full-time Course**

**Bachelor of Science**

**BSc**

This course is designed to provide depth and breadth in the relevant physical and biological sciences on which food technology is based. Students completing the Year 1 requirements are eligible for selection for admission to Year 2 of the course.

Food Technology — Part-time Course

Bachelor of Science (Technology) BSc(Tech)

This course is designed for students who are employed in the food processing industries. It extends over six part-time years of study, and leads to the award of the degree of Bachelor of Science (Technology). Students are required to complete an approved program of industrial training of not less than twelve months prior to the award of the degree. Industrial training should normally be completed concurrently with attendance in the course, but with the approval of the Head of School may be completed after completion of the prescribed course of study.

The course covers the same subject matter as the first three years of the full-time course. For the first two years students follow a common course in which general biology is taken, and thereafter specialize in the biological sciences, which are fundamental to the study of food science and technology. The subjects of Stages 4, 5 and 6 may be available only in day-time classes, and substantial day-time release from industry may be required.

Students who have completed the requirements of this course and have qualified for the award of the degree of Bachelor of Science (Technology) may proceed to the award of the degree

During the second, third and fourth years of the course excursions are made to various food industries. Detailed reports of some of these visits are required.

A detailed report of the students's activities during his period in industry is required, and is taken into account in the classification for the honours list.
There are elective specializations in physical geography (with special emphasis on either the biologic or geomorphic aspects), and in economic geography (with emphasis on urban geography). First year courses involve systematic studies of the physical or economic bases of geography. There is progressive specialization in the following years, but the course in physical geography has common training in fundamental observation and data handling. For the award of honours, students will be required to have distinguished themselves in formal work, in additional assignments as directed by the Head of the School, and in the final year project for which a thesis will be required.

All students are expected to spend a period of four to six weeks with organizations concerned with the investigation and planned use of resources et cetera.

Several units in Geography include laboratory and project work involving the use of quantitative techniques. Students need a battery-operated calculator; advice on appropriate machines may be obtained from the School Office. It is also required that students provide their own drawing materials such as tracing and graph paper. Details of exact requirements are given at the beginning of the relevant subjects.

**School of Geography**

**Head of School**
Professor J. A. Mabbutt

**Administrative Assistant**
Mr B. McClanaghan

Geographers study the spatial relationships of the phenomena which make up man's physical and social environment, and aim to establish principles which govern those relationships. The geographer may concentrate on selected variables, as in systematic geography, or may deal with variables operative in a specific area, as in regional geography.

The cultural significance of geography lies in its contribution to an understanding of the total environment, but the geographer's skills also find practical application in the conservation and planned development of resources. Increasing numbers of geographers are finding such professional employment. For instance, geomorphologists and biogeographers are undertaking resource-inventory surveys and environmental assessment, and economic geographers are engaged as urban and regional planners and spatial analysts.

### Geography in Other Faculties

Courses in Geography are available on a full-time basis in the Faculties of Arts, Commerce and Science.

### School of Metallurgy

**Head of School**
Professor H. Muir

**Senior Administrative Officer**
Mr R. A. Ball

The School of Metallurgy consists of the Departments of Chemical and Process Metallurgy, Physical and Industrial Metallurgy, Materials, and Ceramic Engineering. It offers courses in Metallurgy, Metallurgical Process Engineering and Ceramic Engineering.

### Metallurgy and Metallurgical Process Engineering

The metallurgical profession is developing rapidly in importance in Australia, in keeping with the recent spectacular growth of our metal and mineral industry. In terms of value of production this industry has become recognized as one of Australia's most important, especially in terms of export production.
The BSc and BE degree courses are almost identical up to third year and students enrolled in either of these courses may transfer from one to the other up to this point without loss of standing.

These courses meet the formal educational requirements for admission to the professional metallurgical institutes, such as the Australasian Institute of Mining and Metallurgy and the Institution of Metallurgists (London). Further details about membership of these institutes, the Australasian Institute of Metals and the undergraduate Metallurgical Society of the University, all of which students are encouraged to join, may be obtained from the Head of the School. It is expected that submissions to the Institution of Engineers for recognition of the Bachelor of Engineering degree course will meet with success.

Students are required, before graduation, to have gained at least sixteen weeks of approved industrial experience, and to have submitted satisfactory reports on the work done to comply with this requirement. Industrial experience is normally obtained during the long vacations at the end of second and third years. During the second, third, and fourth years of the course, visits are made to various metallurgical works, and students are required to submit reports on some of these.

Metallurgy — Part-time Course
Bachelor of Science (Technology)
BSc(Tech)

This course is designed for students who are employed in the metallurgical industries. It extends over six part-time years of study, and leads to the award of the degree of Bachelor of Science (Technology). Students are required to complete an approved program of industrial training of not less than twelve months prior to the award of the degree. Industrial training should normally be completed concurrently with attendance in the course, but with the approval of the Head of School may be completed after completion of the prescribed course of study.

Ceramic Engineering

The ceramic industry produces an enormous volume and variety of products used in engineering applications, building construction and in our everyday life. As well as the traditional bricks, roof tiles, sheet and container glass and tableware, ceramics have been found essential as abrasives, refractories, enamels and in electrical and electronic applications and nuclear fuels. In many of these cases, ceramic articles make possible the manufacture of other products either by being a key component, such as an electronic or magnetic part, or by forming the material of construction of, for example, a blast furnace or an abrasive wheel.

Modern ceramics comprise such a varied and complex group of materials that a high level of training is required to control their manufacture with the required precision and to supervise their proper use. Ceramic engineers are needed in increasing numbers both in Australia and overseas countries and the Department offers the only degree course in Ceramic Engineering in Australia. The Ceramic Engineering course trains students in the relation between the structure and the properties of ceramic materials, the engineering and process chemistry of their manufacture and the design principles of their use. Careers open to graduates fall into two broad categories. Some go into industry and into industries associated directly with production, i.e. the design and layout of plants, supervision of their construction, and control of their operations. Others move into research and development in industrial laboratories or research institutions. In either case, graduates with organizing ability frequently move into management if they have an interest in this side of the industry.
In Australia, a number of government research organizations are active in ceramic research, e.g., the Australian Atomic Energy Commission Research Establishment, and the Divisions of Materials Science and Building Research of CSIRO. Investigations with more immediate applications are carried out in industrial laboratories. Even when the basic principles of a process have been worked out in the laboratory, its successful transfer to an industrial scale requires a great deal of effort and expertise. This is an area which offers great scope for further development in Australia.

Graduates in Ceramic Engineering are eligible for membership of the Institute of Ceramics (Great Britain) and the Royal Australian Chemical Institute.

To prepare graduates for these tasks, the School of Mining Engineering provides an education in a wide range of engineering topics and associated scientific subjects, at the same time providing a comprehensive insight into the techniques and practices of modern mining, mineral processing and mine management.

The School offers a 4 year full-time course in Mining Engineering leading to the award of the degree of Bachelor of Engineering (pass or honours) and a graduate course requiring one year of full-time or two years of part-time study leading to the award of the Graduate Diploma (GradDip) in Mining and Minerals Engineering.

Part-time courses are conducted at the W. S. & L. B. Robinson University College, Broken Hill — in Mining Engineering leading to the award of the BSc(Eng) or BE degree and in Mineral Processing leading to the award of the BSc(Tech) degree. It is also possible to take the BE degree course at Broken Hill as a full-time student.

After graduation, mining engineers are equipped to enter any sector of the mining industry such as coal mining, metalliferous mining, petroleum production, sea-floor mining, quarrying or mineral processing. If they choose to develop careers in production management, they will be required to gain further practical experience before obtaining a Mine Managers Certificate of Competency, in either Coal or Metalliferous Mining. These statutory certificates of competency are issued by the State Government Department of Mines, which in the case of New South Wales coal mining comes under the Coal Mines Regulation Act No. 37, 1912, and for metalliferous mining under the Mines Inspection Act No. 75, 1901.

Graduate mining engineers are not, however, restricted to primary production for employment. Many find posts in civil sub-surface construction; research and development; with consultants, governments or universities; or with their broad engineering training, in a wide range of manufacturing industries.

Arrangements have been made with the University of Newcastle for students who have completed a specified program at these institutions to be admitted with advanced standing to Year 3 of the Mining Engineering degree course at the University of New South Wales.

Mining Engineering — Full-time Course
Bachelor of Engineering
BE

The first year of the course is essentially the same as that for several other Engineering courses and second year includes those subjects of common relevance to the Engineering disciplines. The third year is largely devoted to basic mining subjects and the fourth year provides advanced instruction in subjects essential to all mining engineers. In addition, the fourth year offers a wide range of elective subjects, allowing students, if they so wish, to concentrate their studies on a particular sector of the industry, such as coal mining or metalliferous mining. An important fourth year requirement is for students to undertake a personal research or study project in mining or minerals engineering on which they are required to submit a thesis for examination.

For the award of Honours at the conclusion of the full-time course, students will need to have distinguished themselves in the formal work, in other assignments as directed by the Head of School, and in the final year project.

In the undergraduate course it is compulsory for students to gain practical experience in the mining industry during successive long recesses. The minimum requirement is 100 days which must be completed before graduation. The School assists students in securing suitable vacation employment. Students are required to submit for assessment an industrial training report on the vacation and other relevant experience acquired.

| Approval for a group of subjects must be obtained from the Head of School and must include at least one of the subjects marked *.
The School of Mining Engineering offers two part-time courses in Mining Engineering at Broken Hill. One course is presented as a seven-stage enrolment and there is provision for acceleration by a combination of full and part-time study. Exceptional students may be given permission to increase their part-time enrolment to fifteen hours per week and may finish their course in six stages.

The second course is based on a selection of appropriate subjects from the seven-stage course and may be completed in six stages.

A minimum of three years' concurrent industrial training in approved industries is required before graduation for both courses 4200 and 4210.

Mining Engineering — Full-time Program
W. S. and L. B. Robinson University College, Broken Hill
Bachelor of Engineering
BE

Year 1
Stages 1 and 2 of Course No. 4200 combined.

Year 2
Stages 3 and 4 of Course No. 4200 combined. Mine visits are necessary in conjunction with subject 7.113R Mining Methods.

Year 3 and Year 4
Consists of Stages 5, 6 and 7 of Course No. 4200, plus, in Year 3 — Subject No. 7.193R Mine Technology, and in Year 4 — Subject No. 7.194R Mine Design Practice. In addition at least 100 days of practical experience must be gained before graduation.

4220
Mineral Processing — Part-time Course
W. S. and L. B. Robinson University College, Broken Hill
Bachelor of Science (Technology)
BSc(Tech)

This course is designed to meet the requirements of students who are employed by the mineral processing industries. It extends over six part-time years of study and leads to the award of the degree of Bachelor of Science (Technology). A minimum of three years’ concurrent industrial training in approved industries is required before graduation.
School of Textile Technology

Head of School
Professor M. Chaikin

Senior Administrative Officer (Faculty)
Mr R. F. Starr

The conversion of textile raw materials into their finished products is simply a succession of, and an interaction between, a number of chemical, physical and engineering processes. Graduates with a good background in physics, chemistry or engineering, and with a broad training in the range of textile sciences and technologies, as provided in the courses in Textile Technology, will substantially meet the present and future technological requirements of the textile and allied industries. Since present day textile technology is based on engineering and the fundamental sciences, excellent opportunities also await university-trained scientists and technologists in research and development organizations. Such scientists and technologists will play a decisive part in bridging the gap which exists between fundamental research and its industrial application.

Students are given the opportunity of choosing from four courses, viz Textile Chemistry, Textile Physics, Textile Engineering and Textile Manufacture. The course in Textile Manufacture, which includes subjects in Commerce, is especially designed to meet the need for executives in industry who have been given a comprehensive technological training. Each course extends over four years. All students take a common first year, and they need not choose the option they desire to follow until the end of that year. The aim of all four courses is to produce graduates who have acquired a comprehensive knowledge of all the textile sciences and technologies, the courses themselves differing only in the subjects offered outside the School in the second and third years. Students are normally required to undertake twelve weeks' industrial training during the long recesses between Years 2 and 3, and 3 and 4.

Wool and Pastoral Sciences is concerned with the productivity of the pastoral industries and the quality and marketing of the products of these industries. The School of Wool and Pastoral Sciences offers a full-time course of four year's duration leading to the award of a Bachelor of Science.

The aims of the course are to provide opportunities for students to prepare themselves for careers in research, extension, education, marketing, management and administration in those institutions, corporations, government departments, firms and farms which are involved with pastoral production in Australia and overseas.

The course consists of education in the theory and application of scientific, economic and business management principles which are relevant in the production and utilization of pastures; the reproduction, nutrition, health, genetic improvement, ecology and management of sheep and cattle; the production, preparation for sale, measurement, specification and marketing of wool and meat animals; communication with the scientific, producer and marketing communities which are involved with the pastoral industries; and, the design and interpretation of experimental investigations.

There are similarities with courses in Agriculture and Rural Science, however special features of Wool and Pastoral Sciences are the education in Wool Science and the concentration on Australia's largest animal industries (sheep and cattle). Graduates of the course are eligible for corporate membership of the Australian Institute of Agricultural Science.

At the graduate level the School offers a course requiring one year of full-time or two years of part-time study leading to the award of the Graduate Diploma in Wool and Pastoral Sciences. Research may also be undertaken for the award of the degrees of Master of Science and Doctor of Philosophy.

### Industrial Training Requirements

1. Students are required to obtain twenty-four weeks’ practical experience on commercial properties. At least twenty weeks of experience must be obtained concurrently with the course, while up to four weeks may be allowed for practical experience obtained immediately prior to the commencement of the course.

2. Students are encouraged to obtain experience in a diversity of pastoral enterprises, i.e., cattle, sheep and cropping, in different climatic zones.

3. A maximum of eight weeks shall be allowed for practical experience on any one property, including home properties. Up to eight weeks employment at research or teaching institutions is allowed towards the industrial training requirement.

4. In order to obtain recognition for practical work carried out, students shall, within six weeks of the commencement of the Session immediately following the period of employment:

   (1) Submit written evidence from the owner/manager of the property or the director of the institution as to the length of employment.

   (2) Submit a written report along the guidelines which are available from the School.

Graduate Study

Graduate Enrolment Procedures

All students enrolling in graduate courses should obtain a copy of the free booklet *Enrolment Procedures 1981* available from School Offices and the Admissions Office. This booklet provides detailed information on enrolment procedures and fees, enrolment timetables by Faculty and course, enrolment in miscellaneous subjects, locations and hours of Cashiers and late enrolments.

The Faculty offers courses leading to the award of the degree of Master of Applied Science. The institution of this degree springs from the recognition of the considerable advance of knowledge in the fields of applied science and engineering which has marked recent years and the consequent increased scope for advanced formal instruction in these fields. Students are usually in attendance at the University for one year on a full-time basis, or for two years part-time.

Courses are also offered at the graduate level leading to the award of a Graduate Diploma. Students are required to attend courses of study for one year full-time or two years part-time. The courses available for the Graduate Diploma are Corrosion Technology, Food Technology, Mining and Mineral Engineering and Wool Technology.

Courses leading to the award of the degree of Master of Applied Science and Graduate Diplomas are available at Kensington only. Candidates may register for all the research degrees at Kensington and for the degrees of Master of Science and Master of Engineering at the W. S. and L. B. Robinson University College, Broken Hill, subject to adequate research facilities and satisfactory supervision being available in the candidate’s particular field of study. Where these special conditions can be met the Professorial Board may grant permission to a candidate to register for the degree of Doctor of Philosophy in these centres.

The conditions governing the award of the various higher degrees and graduate diplomas are set out later in this handbook in *Conditions for the Award of Higher Degrees*.

The Faculty provides facilities for students to proceed to the award of the higher degrees of Doctor of Philosophy, Master of Engineering, Master of Science and Master of Applied Science. Courses leading to the award of a Graduate Diploma are also offered. The degree of Doctor of Science is awarded for a contribution of distinguished merit in the fields of science, engineering or applied science.

The degrees of Doctor of Philosophy, Master of Engineering and Master of Science are all awarded for research and require the preparation and submission of a thesis embodying the results of an original investigation or design. Candidates for the Doctorate of Philosophy may read for the degree in this Faculty and are normally involved in three years’ work. The work for the award of a Master’s degree may be completed in a minimum of one year, but normally requires two years of study.

Short, intensive graduate and special courses are provided throughout each year designed to keep practising scientists and technologists in touch with the latest developments in their various fields.
# School of Applied Geology

## 8020

### Engineering Geology-Hydrogeology-Environmental Geology Course

**Master of Applied Science**  
**MAppSc**

The course consists of a Project (Group A) and six subjects chosen from Group B, at least one of which must be 25.402G Hydrogeology, 25.404G Environmental Geology, or 25.408G Engineering Geology. In special cases, e.g., where students have achieved a satisfactory standard in Geomechanics, those students taking 25.408G Engineering Geology and/or 25.409G Foundation Geology, may select in place of 25.406G either another subject from Group B, or one subject from another Faculty, provided such a subject is relevant to the course.

The Project normally consists of field and laboratory work, and is related to the student's major interest. Students must consult the Professor of Engineering Geology for approval of the Project.

## 8091

### Mineral Exploration Graduate Course

**Master of Applied Science**  
**MAppSc**

The course is designed to give broad training in techniques of modern mineral exploration to geologists and mining engineers. Practical aspects are emphasized and the field-laboratory project is oriented to current problems of mineral exploration. The duration of the course is one academic year of full-time study; the course is, however, divided into three units to facilitate part-time study. All students must complete Units A, B, and C. Formal course work (Units A and B) accounts for 20-22 hours per week during Session 1. Some students (depending on their qualifications) may be required to take a Special Project, 25.000G, either as a pre- or co-requisite. The courses within the three units may be varied at the discretion of the Head of the School to suit the requirements of individual students.

## 8092

### Exploration Geophysics Graduate Course

**Master of Applied Science**  
**MAppSc**

This is a specialized course in the techniques of exploration geophysics relevant to the current needs of the exploration industry. Practical applications are emphasized, and the field-laboratory project is designed to investigate aspects of specific exploration problems.
The duration of the course is one academic year full-time study; the course is, however, divided into three units to facilitate part-time study. All students must complete Units A, B and C. Formal course work (Units A and B) accounts for 20-22 hours per week during Session 1. Some students (depending upon their qualifications) may be required to take a Special Project 25.000G either as a pre- or co-requisite. The courses within the three units may be varied at the discretion of the Head of the School to suit the requirements of individual students.

Unit A (Weeks 1-7 Session 1)

25.800G Seminar
25.801G Geology in Exploration I
25.802G General Introduction to Exploration Geophysics
25.803G Introduction to Exploration Geochemistry
25.804G Introduction to Data Processing and Interpretation
25.805G Resource Economics I
25.807G Exploration Geophysics

Seven days field tutorials are an integral part of Unit A.

Unit B (Weeks 8-14 Session 1)

25.840G Seminar
25.831G Geological Interpretation
25.832G Advanced Exploration Geophysics

Unit C (Session 2)

25.839G Field — Laboratory Project

8093 Exploration Geochemistry Graduate Course
Master of Applied Science MAppSc

This is a specialist course in the techniques of exploration geochemistry covering general principles, specific field applications, laboratory techniques, and data display and interpretation. Practical applications are emphasized and the field-laboratory project is designed to investigate aspects of mineral exploration problems.

The duration of the course is one academic year of full-time study; the course is, however, divided into three units to facilitate part-time study. All students must complete units A, B and C. Formal course work (Units A and B) accounts for 20-22 hours per week during Session 1. Some students (depending upon their qualifications) may be required to take a Special Project, 25.000G, either as a pre- or co-requisite. The courses within the three units may be varied at the discretion of the Head of the School to suit the requirements of individual students.

Unit A (Weeks 1-7 Session 1)

25.800G Seminar
25.801G Geology in Exploration I
25.802G General Introduction to Exploration Geophysics
25.803G Introduction to Exploration Geochemistry
25.804G Introduction to Data Processing and Interpretation
25.805G Resource Economics I
25.807G Exploration Geophysics

and either
7.013* Principles of Mining
and
7.044* Mining Economics
or
25.808 Exploration Project

Seven days field tutorials are an integral part of Unit A.

*These are one session subjects, ie weeks 1-14

Unit B (Weeks 8-14 Session 1)

25.840G Seminar
25.821G Geology in Exploration II
25.823G Advanced Exploration Geochemistry
25.824G Advanced Data Processing and Interpretation
25.827G Laboratory methods
and either
7.013* Principles of Mining
and
7.044* Mining Economics
or
25.828G Exploration Project

*These are one session subjects, ie weeks 1-14

Unit C (Session C)

25.829G Field — Laboratory Project
**School of Chemical Engineering and Industrial Chemistry**

Formal courses in the School of Chemical Engineering and Industrial Chemistry lead to the award of the Master of Applied Science or the Graduate Diploma.

**Master of Applied Science Degree Courses**

The MAppSc courses involve a project which must integrate and apply the principles treated in the course. It may take the form of a design feasibility study or an experimental investigation. Evidence of initiative and of a high level of ability and understanding is required in the student’s approach, and the results must be embodied in a report and submitted in accordance with the University’s requirements.

The following graduate courses are available to Master of Applied Science degree candidates. Candidates may specialize in the following areas:

- 8000 Bioprocess Engineering
- 8005 Chemical Technology
- 8010 Chemical Engineering
- 8040 Environmental Pollution Control
- 8060 Fuel Technology
- 8080 Industrial Pollution Control

The MAppSc degree courses provide for a comprehensive study of theoretical and practical aspects of many advanced topics. The courses are formal and elective in nature and provide an opportunity for graduates to apply their basic skills in fields in which the School has developed special expertise.

The courses specializing in Chemical Engineering, Chemical Technology, Industrial Pollution Control and Fuel Technology are primarily intended for graduates in Applied Science, Engineering, or Science with principal interests in Chemistry, Mathematics and/or Physics. The course specializing in Bioprocess Engineering is primarily intended for graduates in Agriculture, Applied Science, and Science with principal interests in Biochemistry, Chemistry and/or Microbiology. They are designed to allow the maximum flexibility consistent with the standing of the award.

Intending candidates are invited to submit proposed study programs to the Head of the School for advice and recommendation. Each individual course must be approved by the Higher Degree Committee of the Faculty of Applied Science. An acceptable course would be a program of formal study aggregating approximately 20 hours weekly for two sessions full-time or ten hours weekly for four sessions part-time, and which could comprise:

1. A major strand of course material making up 75% of the total program. This includes a project constituting not less than 15% and not more than 30% of the program;

2. A minor strand of broader-based supporting material making up to 25% of the total program; and

3. Undergraduate material (generally designated as subjects without a suffixed G number), which may be included in one or both strands but may not exceed 25% of the total program.

Approximately 60% of the program (including the project) must be undertaken in the School of Chemical Engineering. The remainder, subject to approval and availability, may be undertaken in other Schools within the University. Full details of all subjects are listed under Disciplines of the University in the Calendar.

**8000 Bioprocess Engineering Graduate Courses* **

**Master of Applied Science MAppSc**

The graduate subjects offered have been unitized to provide maximum flexibility. Any combination of units may be selected, subject to prerequisites or co-requisites as specified. Further, some of these units are designed as bridging material and would not be offered to graduates with previous qualifications in these particular areas.

The units offered are summarized below:

<table>
<thead>
<tr>
<th></th>
<th>Hours per week</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>S1</td>
</tr>
<tr>
<td>48.281G Design of Microbial Reactors</td>
<td>1</td>
</tr>
<tr>
<td>48.282G Microbial Kinetics and Energetics</td>
<td>1</td>
</tr>
<tr>
<td>48.283G Bioprocess Unit Operations and Equipment Design</td>
<td>3</td>
</tr>
<tr>
<td>48.284G Heat, Mass and Momentum Transport</td>
<td>1</td>
</tr>
<tr>
<td>48.285G Bioprocess Laboratory</td>
<td>3 or 3</td>
</tr>
</tbody>
</table>

This course is designed to provide professional training in the application of chemical engineering principles in the bioprocess industries. It extends over one full-time year or two part-time years and leads to the award of the degree of Master of Applied Science as outlined above.

*For additional information on the MAppSc degree course see above.
As the material in this course will be of interest to graduates from a wide range of disciplines, the suggested course outlines consist of a central core selected from the subjects above and a range of background material. This background material can be designed to suit graduates from either of the two groups consisting of firstly Applied Science, Engineering or Science with principal interests in Chemistry, Mathematics, or Physics, or, secondly, Agriculture or Science graduates with principal interests in Biochemistry, Chemistry and/or Microbiology. Graduates with an inadequate background in Mathematics and/or rate processes will be required to do a bridging course consisting of a specified reading list with associated assignments up to a maximum of 1 hour per week.

Suggested course outlines for graduates from the two primary areas are given below, however these outlines maybe modified to suit individual interests within the general requirements for the MAppSc degree course described above.

Applied Science Graduate or equivalent

8005

Chemical Technology Graduate Course*

Master of Applied Science  
MAppSc

The aim of this course is not to produce narrow specialists but to train graduates to identify and solve a wide range of problems in those areas of the chemical industry concerned with the production and development of inorganic chemicals, organic chemicals, surface coatings, plastics, elastomers, or ceramic materials. The method is student participation in formal courses and projects of a collaborative kind.

Graduate subjects in Industrial Chemistry may be selected from:

<table>

</tbody>
</table>
8010
Chemical Engineering Graduate Course*
Master of Applied Science
MAppSc

The graduate course in Chemical Engineering provides an opportunity, primarily for graduates in Chemical Engineering, to continue first degree formal studies into topics to a depth not found in an undergraduate course. It also provides an opportunity for graduates of some experience to periodically undertake advanced or refresher courses.

8040
Environmental Pollution Control Graduate Course*
Master of Applied Science
MAppSc

The graduate course in Environmental Pollution Control leads to the award of the degree of Master of Applied Science. It extends over one full-time year or two part-time years. The course is primarily intended for candidates who have completed a four year Bachelor degree program in Chemical Engineering or Industrial Chemistry, but candidates from other disciplines may be admitted.

The advent of new laws governing the disposal of effluents into the environment will make the problems of industry more acute as industrial processes are developed and expanded. This course is intended to cover the problems in environmental engineering which may be encountered in industrial plants.

*For additional information on the MAppSc degree course see earlier this section.
The course is based on the general formula for a MAppSc degree program, whereby the subjects 48.311 and 48.321 can comprise the 25% undergraduate component, the project (15 or 30% of the program) is 48.900G, and the remainder of the hours can be taken from the units offered in the 48.38-G series of subjects. There are also compulsory seminar and laboratory practice subjects.

The course allows reasonable flexibility with a choice of subjects, and units within subjects, subject to the availability of staff.

Provision is made for subjects outside those offered by the Department to be incorporated in the program at either graduate or undergraduate level.

The course is designed for those professionals in industry who are faced with the problem of combating corrosion. Its aim is to develop an appreciation of the fundamentals, principles of corrosion and of the available methods of overcoming it.

For graduates from Engineering (non-chemical) or Science (in a particular major) a bridging course is a necessary introduction to the graduate level of certain subjects. For this purpose the subject, 48.170G Process Principles, is specified.

The first year of the course introduces elementary aspects of corrosion technology and suitably orientates students depending on their initial qualifications. The second year of the course contains more detailed instruction at a graduate level in corrosion theory and prevention, together with suitable laboratory assignments.

8080
Industrial Pollution Control Graduate Course*

Master of Applied Science
MAppSc

This course is intended for graduates who wish to undertake further studies in environmental topics of a more specialized nature than the class of subjects offered in course 8040. For this reason applicants will normally have undertaken a first degree in an area of application to industrial processes.

Candidates design their proposed programs of study on the basis of subjects available in the 8040 course in a chosen specialized field. Supplementary supporting subjects, as may be available, are taken subject to the general rules above for acceptable formal study programs. In the design of their course candidates are expected to have an objective of contributing to the relief of industrial pollution problems.

<table>

*For additional information on the MAppSc degree course see earlier this section.
School of Food Technology

The School of Food Technology conducts formal courses leading to the award of the Master of Applied Science degree and of the Graduate Diploma in food technology.

In addition, the School welcomes enquiries from graduates in Chemistry, Biochemistry, Microbiology, Applied Science, Chemical Engineering, Physiology, Nutrition and Agriculture who are interested in pursuing research in food science and technology for the award of the degrees of Master of Science and Doctor of Philosophy.

The Head of School provides information on research scholarships, fellowships, grants-in-aid and School research activities. Graduates are advised to consult the Head of School before making a formal application for registration.

8030
Food Technology Graduate Course

Master of Applied Science
MAppSc

This course provides for a comprehensive study of theoretical and applied aspects of the science and technology of foods. The course is formal and elective in nature, providing an opportunity for graduates to apply their basic skills in areas relevant to this field of applied science. It is a course particularly relevant to graduates in Agriculture, Applied Science and Science with principal interests in Chemistry, Biochemistry, Microbiology, Physiology, Nutrition and Chemical Engineering.

Intending candidates are invited to submit proposed study programs to the Head of the School for advice and recommendation. Each individual course must be approved by the Higher Degree Committee of the Faculty of Applied Science. An acceptable course would be a program of formal study aggregating approximately 20 hours weekly for two sessions full-time or ten hours weekly for four sessions part-time, and which could comprise:

1. A major strand of course material making up 75 per cent of the total program. This would include a project constituting not less than 15 per cent and not more than 30 per cent of the program.

2. A minor strand of broader-based supporting material making up to 25 per cent of the total program.

Undergraduate material may be included in one or both strands but may not exceed 25 per cent of the total program. Approximately 60 per cent of the program (including the project) must be taken in the School of Food Technology. The remainder, subject to approval and availability, may be undertaken in other schools within the University.

Graduate subjects in Food Technology may be selected from:

</tr>
</tbody>
</table>

The work involved in the project must be embodied in a report and submitted in accordance with the requirements of the Faculty.

Depending on the candidate’s background, enrolment in some of the above subjects may be accompanied by enrolment in related undergraduate subjects as prerequisites or co-requisites. A particular subject may not necessarily be conducted in any one year.

5020
Food Technology Graduate Diploma Course
Graduate Diploma
GradDip

The Graduate Diploma course is designed to provide professional training at an advanced level for graduates in Science, Applied Science or Engineering who have not had previous training in Food Technology.

*Weekly equivalent of total hours for subject. These hours may be concentrated in one session.
Requirements are a first degree and, in some cases, the successful completion of assignments or examinations, as directed by the Head of the School.

The course is a blend of formal lectures and laboratory work at the undergraduate and graduate levels. The Graduate Diploma in Applied Science in Food Technology (GradDip) is awarded on the successful completion of one year of full-time study (18 hours/week), or two years of part-time study (9 hours/week). It involves the following program:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Hours per week</th>
</tr>
</thead>
<tbody>
<tr>

</tbody>
</table>

†Electives are to be selected from the following list of subjects according to availability and with the approval of the Head of School.

---

School of Metallurgy

The School of Metallurgy conducts courses which lead to the award of Master of Applied Science.

In addition, the School welcomes enquiries from graduates in Science, Engineering and Applied Science who are interested in doing research leading to the award of the degrees of Master of Science, Master of Engineering or Doctor of Philosophy in metallurgy or ceramic engineering.

The Head of the School is pleased to give information about research scholarships, fellowships and grants-in-aid. Graduates are advised to consult him before making a formal application for registration.

---

8050 Metallurgy Graduate Course

Master of Applied Science MAppSc

This course provides for a comprehensive study of theoretical and practical topics at an advanced level. It is designed to allow the maximum flexibility in choice of topics consistent with the standing of the award.

Intending candidates are invited to discuss proposed study programs with the Head of the School for advice and recommendation.

An acceptable program would be:

1. A program of formal study (including a project) totalling approximately twenty hours per week for two sessions full-time.

2. A project comprising about twenty per cent of the program.

At least eighty per cent of the total program must be composed of units selected from those available as part of the graduate subjects listed below, except that not more than eight hours per week for two sessions may be devoted to each of 4.211G Metallurgical Practice and 4.231G Advanced Theoretical Metallurgy and not more than six hours per week for two sessions may be devoted to 4.221G Advanced Metallurgical Techniques.

or such other electives approved by the Head of School. In all cases the hours devoted to graduate subjects constitute at least 50 per cent of the total course hours.

*Weekly equivalent of total hours for subject. These hours may be concentrated in one session.
Graduate Subjects

4.241G Graduate Metallurgy Project
4.211G Metallurgical Practice
Detailed studies relating to one or more of the following:
1. Extractive Metallurgy
2. Metal working and forming
3. Foundry practice
4. Welding and metal fabrication
5. Metal finishing and corrosion protection
4.221G Advanced Metallurgical Techniques
4.231G Specialist lectures in Advanced Theoretical Metallurgy
Offered in units of 7 hours (ie 1 hour/week for 7 weeks)
4.251G Advanced Materials Technology
4.270G Solid State and Mineral Chemistry
4.271G Refractory Technology I
4.272G Refractory Technology II
4.281G Chemistry of Glass Melting

Undergraduate Subjects

These subjects are intended for inclusion in qualifying courses and to satisfy prerequisites and co-requisites for students whose first degree is in a field other than metallurgy.

4.121 Principles of Metal Extraction
4.131 Principles of Physical and Mechanical Metallurgy
4.141 Experimental Techniques in Physical Metallurgy

The above undergraduate subjects offered by the School of Metallurgy and undergraduate and graduate subjects offered by other Schools of the University may be included, but may not exceed 20 per cent of the total program.

School of Mining Engineering

The School offers a graduate course leading to the award of a Graduate Diploma (GradDip).

5040 Mining and Mineral Engineering Graduate Diploma Course

Graduate Diploma GradDip

The Graduate Diploma course in Mining and Mineral Engineering is designed to provide professional training for graduates in Science, Applied Science or Engineering who wish to specialize in the fields of mining and mineral beneficiation. The course is concerned primarily with instruction in the scientific and engineering principles associated with the mining and beneficiation of minerals and coal.

The Graduate Diploma in Mining and Mineral Engineering (GradDip) will be awarded on the successful completion of one year full-time or two years part-time study. The course is a blend of lecture and laboratory work and allows the choice of elective specialization in either mining engineering or mineral processing and coal preparation.

It should be noted that some degree of specialization will be possible in the laboratory investigations.

When appropriate, certain sections of the course may be offered as a unit over a short period of time to permit mineral industry personnel to attend the advanced course in a particular area of that discipline.

Plus a maximum of 8 hours per week of study of approved undergraduate subjects.

Graduate Diploma students are expected to work at the level of honours students in the undergraduate courses and to carry out prescribed study of current research material in the appropriate field.

School of Wool and Pastoral Sciences

5080 Wool and Pastoral Sciences Graduate Diploma Course

Graduate Diploma GradDip

The course leading to the award of the Graduate Diploma in Wool and Pastoral Sciences is specially designed for graduate students preparing themselves for careers in the pastoral industry. One of the principal functions of the course is to provide a bridge from other disciplines such as Agriculture, Veterinary Science and Pure Science for graduates who wish to study and work in the field of Wool and Pastoral Sciences, which is of such overall importance to Australia.

The normal requirement for admission to the course is a degree in Agriculture, Veterinary Science or Science in an appropriate field. In addition, students may be required to take a qualifying examination. Such qualifying examination will be of a standard which will ensure that the student has sufficient knowledge of the subject and the principles involved to profit by the course.

Applicants from Colleges of Advanced Education who have obtained credit passes or better in the Diploma of Applied Science (Agriculture) are eligible for consideration for direct entry into the Graduate Diploma course in Wool and Pastoral Sciences.

The following program may be completed either in one year on a full-time basis or over two years on a part-time basis. Students are required to carry out full-time study or its equivalent of two optional graduate level subjects to the extent of ten hours lecture and laboratory work per week for two sessions plus approved undergraduate subjects to the extent of eight hours per week for two sessions. Both graduate subjects and undergraduate subjects may be chosen to suit the requirements of the student subject to their availability and the approval of the Head of the School.
Graduate Study

Conditions for the Award of Higher Degrees

Rules, regulations and conditions for the award of first degrees are set out in the appropriate Faculty Handbooks.

For the list of undergraduate courses and degrees offered see Disciplines of the University: Faculty Table (Undergraduate Study) in the Calendar.

The following is the list of higher degrees and graduate diplomas of the University, together with the publication in which the conditions for the award appear.

For the list of graduate degrees by research and course work, arranged in faculty order, see Disciplines of the University: Table of Courses (by faculty): Graduate Study in the Calendar.

For the statements Preparations and Submissions of Project Reports and Theses for Higher Degrees and Policy with respect to the Use of Higher Degree Theses see the Calendar.

*Faculty of Science.
†Professorial Board.
‡Faculty of Biological Sciences.

---

1. The degree of Doctor of Philosophy may be granted by the Council on the recommendation of the Professorial Board to a candidate who has made an original and significant contribution to knowledge and who has satisfied the following requirements:

2. A candidate for registration for the degree of Doctor of Philosophy shall:
   
   (1) hold an honours degree from the University of New South Wales; or
   
   (2) hold an honours degree of equivalent standing from another approved university; or
   
   (3) if the candidate holds a degree without honours from the University of New South Wales or other approved university, have achieved by subsequent work and study a standard recognized by the higher degree committee of the appropriate faculty or board of studies (hereinafter referred to as the committee) as equivalent to honours; or
   
   (4) in exceptional cases, submit such other evidence of general and professional qualifications as may be approved by the Professorial Board on the recommendation of the committee.

3. When the committee is not satisfied with the qualifications submitted by a candidate, the committee may require the candidate, before being permitted to register, to undergo such examination or carry out such work as the committee may prescribe.

4. A candidate for registration for a course of study leading to the degree of Doctor of Philosophy shall apply to the Registrar on the prescribed form at least one calendar month before the commencement of the session in which registration is to begin.

5. Subsequent to registration the candidate shall pursue a program of advanced study and research for at least six academic sessions, save that:
   
   (1) a candidate fully engaged in advanced study and research for the degree, who before registration was engaged upon research to the satisfaction of the committee, may be exempted from not more than two academic sessions;
   
   (2) in special circumstances the committee may grant permission for the candidate to spend not more than one calendar year of the program in advanced study and research at another institution provided that the work can be supervised in a manner satisfactory to the committee;
   
   (3) in exceptional cases, the Professorial Board on the recommendation of the committee may grant permission for a candidate to be exempted from not more than two academic sessions.
6. A candidate who is fully engaged in research for the degree shall present for examination not later than ten academic sessions from the date of registration. A candidate not fully engaged in research shall present for examination not later than twelve academic sessions from the date of registration. In special cases an extension of these times may be granted by the committee.

7. The candidate shall be fully engaged in advanced study and research, save that:

(1) the committee may permit a candidate to undertake a limited amount of University teaching or outside work which in its judgement will not interfere with the continuous pursuit of the proposed course of advanced study and research;

(2) a member of the full-time staff of the University may be accepted as a part-time candidate for the degree, in which case the committee shall prescribe a minimum period for the duration of the program;

(3) in special circumstances, the committee may, with the concurrence of the Professorial Board, accept as a part-time candidate for the degree a person who is not a member of the full-time staff of the University and is engaged in an occupation which, in its opinion, leaves the candidate substantially free to pursue a program in a school* of the University. In such a case the committee shall prescribe for the duration of the program a minimum period which, in its opinion, having regard to the proportion of the time which the candidate is able to devote to the program in the appropriate University school* is equivalent to the six sessions ordinarily required.

8. Every candidate shall pursue a program under the direction of a supervisor appointed by the committee from the full-time members of the University staff. The work, other than field work, shall be carried out in a school* of the University save that in special cases the committee may permit a candidate to conduct the work at other places where special facilities not possessed by the University may be available. Such permission will be granted only if the direction of the work remains wholly under the control of the supervisor.

9. Not later than two academic sessions after registration the candidate shall submit the topic of research for approval by the committee. After the topic has been approved it may not be changed except with the permission of the committee.

10. A candidate may be required by the committee to attend a formal course of appropriate study.

11. On completing the course of study every candidate must submit a thesis which complies with the following requirements:

(1) the greater proportion of the work described must have been completed subsequent to registration for the PhD degree;

(2) it must be an original and significant contribution to the knowledge of the subject;

(3) it must be written in English except that a candidate in the Faculty of Arts may be required by the Faculty on the recommendation of the supervisor to write the thesis in an appropriate foreign language;

(4) it must reach a satisfactory standard of expression and presentation.

12. The thesis must present the candidate's own account of the research. In special cases work done conjointly with other persons may be accepted, provided the committee is satisfied on the candidate's part in the joint research.

13. Every candidate shall be required to submit with the thesis a short abstract of the thesis comprising not more than 600 words. The abstract shall indicate:

(1) the problem investigated;

(2) the procedures followed;

(3) the general results obtained;

(4) the major conclusions reached;

but shall not contain any illustrative matter, such as tables, graphs or charts.

*Or department where a department is not within a school.
14. A candidate may not submit as the main content of the thesis any work or material which has previously been submitted for a university degree or other similar award.

15. The candidate shall give in writing two months’ notice of intention to submit the thesis.

16. Four copies of the thesis shall be presented in a form which complies with the requirements of the University for the preparation and submission of higher degree theses. The candidate may also submit any work previously published whether or not such work is related to the thesis.

17. It shall be understood that the University retains the four copies of the thesis submitted for examination, and is free to allow the thesis to be consulted or borrowed. Subject to the provisions of the Copyright Act, 1968, the University may issue the thesis in whole or in part, in photostat or microfilm or other copying medium.

18. There shall normally be three examiners of the thesis, appointed by the Professorial Board on the recommendation of the committee, at least two of whom shall be external to the University.

19. At the conclusion of the examination each examiner shall submit to the committee a concise report on the merits of the thesis and shall recommend to the committee that:

(1) The candidate be awarded the degree without further examination; or

(2) the candidate be awarded the degree without further examination subject to minor corrections as listed being made to the satisfaction of the head of the school*; or

(3) the candidate be awarded the degree subject to a further examination on questions posed in the report, performance in this further examination being to the satisfaction of the committee; or

(4) the candidate be not awarded the degree but be permitted to resubmit the thesis in a revised form after a further period of study and/or research; or

(5) the candidate be not awarded the degree and be not permitted to resubmit the thesis.

20. If the performance at the further examination recommended under Rule 19 (3) is not to the satisfaction of the committee the committee may permit the candidate to re-present the same thesis and submit to a further oral, practical or written examination within a period specified by them but not exceeding eighteen months.

21. The committee shall, after consideration of the examiners’ reports and the reports of any oral or written or practical examination, recommend whether or not the candidate may be admitted to the degree.

22. A candidate shall be required to pay such fees as may be determined from time to time by the Council.

1. The degree of Master of Applied Science may be awarded by the Council on the recommendation of the Professorial Board to a candidate who has satisfactorily completed a program of advanced study comprising formal course work and including, where set down in course programs, the submission of a report on a project approved by the Higher Degree Committee of the Faculty or Board of Studies.

*Or department where a department is not within a School.
Qualification for Registration as a Candidate for the Degree

2. (1) An applicant for registration for the degree shall normally be a graduate from an appropriate four-year, full-time undergraduate course in the University or other approved university or tertiary institute.

(2) The Higher Degree Committee of the Faculty (hereinafter referred to as the Committee) may consider applications from graduates of three-year, full-time courses in the University or other approved university or tertiary institute who have satisfactorily completed an approved qualifying program of not less than one year full-time or its equivalent or have submitted evidence of attainment in appropriate graduate studies extending over a period of not less than one full-time year or its equivalent.

(3) The Committee may also consider applications from graduates of the Bachelor of Science (Technology) and Bachelor of Science (Engineering) courses of the University who have satisfactorily completed an approved qualifying program of not less than one year part-time or who can submit evidence of academic attainment in appropriate graduate studies extending over the same period or its equivalent.

(4) Notwithstanding any other provisions of these conditions the Committee may require an applicant to demonstrate fitness for registration by carrying out such work and taking such examinations as the Committee may determine.

3. (1) An application to register as a candidate for the degree of Master shall be made on the prescribed form which shall be lodged with the Registrar at least six (6) weeks before the commencement of the course.

(2) A candidate for the degree shall be required to undertake such course of formal study, pass such examinations and, where specified, submit a report on a project, as prescribed by the Committee.

(3) No candidate shall be considered for the award of the degree until the lapse of two sessions in the case of a full-time candidate or four sessions in the case of a part-time candidate from the date from which registration becomes effective. The Committee may approve remission of up to two sessions for a part-time candidate.

(4) The progress of a candidate shall be reviewed annually by the Committee on the recommendation of the Head of School or Department in which the candidate is registered and as a result of such review the Committee may terminate the candidature.

Project

4. (1) Where specified, a report on a project approved by the Committee may be submitted at the completion of the formal section of the course, but in any case shall be submitted not later than one year after the completion of such course.

(2) The format of the report shall accord with the instructions of the Head of School and shall comply with the requirements of the Committee for the submission of project reports.

(3) (a) The report shall be examined by two examiners appointed by the Committee.

(b) A candidate may be required to attend for an oral or written examination.

Recommendation for Admission to Degree

5. Consequent upon consideration of the examiners’ reports, where appropriate, and the candidate’s other results in the prescribed course of study, the Committee shall recommend to the Professorial Board whether the candidate may be admitted to the degree.

Fees

6. An approved candidate shall pay such fees as may be determined from time to time by the Council.
1. The degree of Master of Engineering may be awarded by the Council on the recommendation of the Higher Degree Committee of the appropriate Faculty (hereinafter referred to as the Committee) to a candidate who has demonstrated ability to undertake research by the submission of a thesis embodying the results of an investigation.

2. (1) An applicant for registration for the degree shall have been admitted to the degree of Bachelor in the University of New South Wales, or other approved university, in an appropriate school.

(2) In exceptional cases a person may be permitted to register as a candidate for the degree if he submits evidence of such academic and professional attainment as may be approved by the Professorial Board on the recommendation of the appropriate Committee.

(3) Notwithstanding any other provisions of these conditions, the Committee may require an applicant to demonstrate fitness for registration by carrying out such work and sitting for such examinations as the Committee may determine.

3. (1) An application to register as a candidate for the degree shall be made on the prescribed form which shall be lodged with the Registrar at least one full calendar month before the commencement of the session in which the candidate desires to register.

(2) In every case, before permitting an applicant to register as a candidate, the Committee shall be satisfied that adequate supervision and facilities are available.

(3) An approved applicant shall register in one of the following categories:

(a) student in full-time attendance at the University

(b) student in part-time attendance at the University

(c) student working externally to the University

(4) Every candidate for the degree shall be required to carry out a program of advanced study to take such examinations and perform such other work as may be prescribed by the Committee which shall include the preparation and submission of a thesis embodying the results of an original investigation. The work shall be carried out under the direction of a supervisor appointed by the Committee or under such conditions as the Committee may determine.

(5) No candidate shall be considered for the award of the degree until the lapse of four complete sessions from the date from which registration becomes effective save that, in the case of a candidate who obtained the degree of Bachelor with Honours or who has had previous research experience, this period may, with the approval of the Committee, be reduced by up to two sessions.

4. (1) A candidate for the degree shall be required to submit three copies of the thesis referred to in paragraph 3. (4) which shall be presented in a form which complies with the requirements of the University for the preparation and submission of higher degree theses. The candidate may submit any work he has published whether or not such work is related to the thesis.

(2) For each candidate there shall be at least two examiners appointed by the Professorial Board, on the recommendation of the Committee one of whom shall, if possible, be an external examiner.

(3) It shall be understood that the University retains the three copies of the thesis submitted for examination and is free to allow the thesis to be consulted or borrowed. Subject to the provisions of the Copyright Act, 1968 the University may issue the thesis in whole or in part, in photostat or microfilm or other copying medium.

5. Having considered the examiners' reports the Committee shall recommend whether or not the candidate should be admitted to the degree.

6. An approved candidate shall pay such fees as may be determined from time to time by the Council.

Master of Engineering (ME)

Qualifications

Registration

Thesis

Recommendation for Admission to Degree

Fees
1. The degree of Master of Science may be awarded by the Council on the recommendation of the Higher Degree Committee of the appropriate Faculty or Board of Studies (hereinafter referred to as the Committee) to a candidate who has demonstrated ability to undertake research by the submission of a thesis embodying the results of an original investigation.

2. (1) An applicant for registration for the degree shall have been admitted to the degree of Bachelor in the University of New South Wales, or other approved University in an appropriate School or Department.
(2) In exceptional cases a person may be permitted to register as a candidate for the degree if he submits evidence of such academic and professional attainments as may be approved by the Professorial Board on the recommendation of the appropriate Committee.
(3) Notwithstanding any other provisions of these conditions the Committee may require an applicant to demonstrate fitness for registration by carrying out such work and sitting for such examinations as the Committee may determine.

3. (1) An application to register as a candidate for the degree of Master of Science shall be made on the prescribed form which shall be lodged with the Registrar at least one full calendar month before the commencement of the session in which the candidate desires to register.
(2) In every case before permitting an applicant to register as a candidate the Committee shall be satisfied that adequate supervision and facilities are available.
(3) An approved applicant shall register in one of the following categories:
(a) student in full-time attendance at the University
(b) student in part-time attendance at the University
(c) student working externally to the University
(4) Every candidate for the degree shall be required to submit three copies of a thesis embodying the results of an original investigation or design, to take such examinations and to perform such other work as may be prescribed by the Committee. This work shall be carried out under the direction of a supervisor appointed by the Committee or under such conditions as the Committee may determine.
(5) At least once a year and at any other time that the Committee sees fit the candidate's supervisor shall present to the Head of School in which the candidate is registered a report on the progress of the candidate. The Committee shall review the report and as a result of its review may cancel registration or take such other action as it considers appropriate.
(6) Unless otherwise recommended by the Committee, no candidate shall be awarded the degree until the lapse of four complete sessions from the date of registration, save that the case of a candidate who obtained the degree of Bachelor with Honours or who has had previous research experience, this period may be reduced by up to two sessions with the approval of the Committee. A candidate who is fully engaged in research for the degree shall present for examination not later than six academic sessions from the date of registration. A candidate not fully engaged in research shall present for examination not later than twelve academic sessions from the date of registration. In special cases an extension of these times may be granted by the Committee.

4. (1) A candidate for the degree shall be required to submit three copies of the thesis referred to in paragraph 3. (4) which shall be presented in a form which complies with the requirements of the University for the preparation and submission of higher degree theses. The candidate may submit also for examination any work he has published whether or not such work is related to the thesis.
(2) For each candidate there shall be at least two examiners, appointed by the Professorial Board on the recommendation of the Committee, one of whom, if possible, shall be external to the University.
(3) It shall be understood that the University retains the three copies of the thesis submitted for examination and is free to allow the thesis to be consulted or borrowed. Subject to the provisions of the Copyright Act, 1968 the University may issue the thesis in whole or in part in photostat or microfilm or other copying medium.
5. Having considered the examiners' reports the Committee shall recommend whether or not the candidate should be admitted to the degree.

6. An approved candidate shall pay such fees as may be determined from time to time by the Council.

1. Where it is not possible for candidates to register under the normal conditions for the degree of Master of Science, Master of Engineering or Master of Surveying by reason of their location at centres which are distant from University Schools or where effective supervision is not practicable, registration may be granted in these categories under the following conditions:

2. An applicant for registration shall have been admitted to a degree of Bachelor in the University of New South Wales.

3. (1) An application to register as an external candidate for the degree of Master of Science, Master of Engineering or Master of Surveying without supervision shall be lodged with the Registrar for recommendation by the Head of School and consideration by the Higher Degree Committee of the appropriate Faculty (hereinafter referred to as the Committee) not less than six months before the intended date of submission of the thesis. A graduate who intends to apply in this way should in his own interest at an early stage, seek the advice of the appropriate School with regard to the adequacy of the subject matter for the degree. A synopsis of the work should be enclosed.

(2) A candidate shall not be considered for the award of the degree until the lapse of six sessions in the case of honours graduates and eight sessions in the case of pass graduates from the date of graduation.

4. (1) (a) Every candidate for the degree shall be required to submit three copies of a thesis embodying the results of an investigation or design. The thesis shall be presented in a form which complies with the requirements of the University for the preparation and submission of higher degree theses. A candidate may submit also for examination any work he has published, whether or not such work is related to the thesis.

(b) Every candidate shall submit with the thesis a statutory declaration that the material contained therein is his own work, except where otherwise stated in the thesis.

(2) For each candidate there shall be at least two examiners appointed by the Professorial Board on the recommendation of the Committee, one of whom shall be an internal examiner.

(3) If the thesis reaches the required standard, the candidate shall be required to attend for an oral examination at a time and place nominated by the Committee. The examiners may also arrange at their discretion for the examination of the candidate by written and/or practical examinations on the subject of the thesis and/or subjects related thereto.
(4) It shall be understood that the University retains the three copies of the thesis submitted for examination and is free to allow the thesis to be consulted or borrowed. Subject to the provisions of the Copyright Act, 1968 the University may issue the thesis in whole or in part, in photostat or microfilm or other copying medium.

**Recommendation for Admission to Degree**

5. Having considered the examiners' reports the Committee shall recommend whether or not the candidate should be admitted to the degree.

**Fees**

6. An approved applicant shall pay such fees as may be determined from time to time by the Council.

**Graduate Diploma (GradDip)**

1. An application for admission to a graduate diploma course shall be made on the prescribed form which should be lodged with the Registrar at least two full calendar months before the commencement of the course.

2. An applicant for admission to a graduate diploma course shall be:
   (1) a graduate of the University of New South Wales or other approved university.
   (2) a person with other qualifications as may be approved by Faculty.

3. Notwithstanding clause 2. above, Faculty may require an applicant to take such other prerequisite or concurrent studies and/or examinations as it may prescribe.

4. Every candidate for a graduate diploma shall be required to undertake the appropriate course of study, to pass any prescribed examinations, and if so laid down in the course, to complete a project or assignment specified by the Head of the School. The format of the report on such project or assignment shall accord with the instructions laid down by the Head of the School.

5. An approved applicant shall be required to pay the fee for the course in which he desires to register. Fees shall be paid in advance.
Subject Descriptions

Identification of Subjects by Number

A subject is defined by the Professorial Board as 'a unit of instruction approved by the University as being a discrete part of the requirements for a course offered by the University'.

Each approved subject of the University is identifiable both by number and by name as this is a check against nomination of subject other than the one intended.

Subject numbers are allocated by the Registrar and the system of allocation is based on the following guidelines:

1. The authority offering the subject, normally a School of the University, is indicated by the number before the decimal point.
2. Each subject number is unique and is not used for more than one subject title.
3. Subject numbers which have not been used for some time are not used for new subject titles.
4. Graduate subjects are indicated by a suffix 'G' to a number with three digits after the decimal point. In other subjects three or four digits are used after the decimal point.

Subjects taught are listed in full in the handbook of the faculty or board of studies responsible for the particular course within which the subjects are taken. Subject descriptions are contained in the appropriate section of the handbooks.

Details of subjects available in Faculty of Applied Science courses but not included in this list may be obtained from the School responsible for the subject. Details of subjects in the Faculty of Arts which may be taken as humanities subjects may be found in the current Arts Faculty Handbook.

The identifying numerical prefixes for each subject authority are set out below.

Servicing Subjects are those taught by a School or Department outside its own faculty and are listed at the end of Undergraduate Study and Graduate Study of the relevant School. Their subject descriptions are published in the handbook of the Faculty in which the subject is taught.

HSC Exam Prerequisites

Subjects which require prerequisites for enrolment in terms of the HSC Examination percentile range, refer to the 1978 and subsequent Examinations.

Candidates for enrolment who obtained the HSC in previous years or hold other high school matriculation should check with the appropriate School on what matriculation status is required for admission to a subject.

Information Key

The following is the key to the information supplied about each subject: S1 (Session 1); S2 (Session 2); F (Session 1 plus Session 2, ie full year); S1 or S2 (Session 1 or Session 2, ie choice of either session); SS (single session, ie which session taught is not known at time of publication); L (Lecture, followed by hours per week); T (Laboratory/Tutorial, followed by hours per week); Sem (Seminar, followed by hours per week) hpw (hours per week); C (Credit or Credit units), CR (Credit), DN (Distinction).

Aims and nature of physics and the study of motion of particles under the influence of mechanical, electrical, magnetic and gravitational forces. Concepts of force, inertial mass, energy, momentum, charge, potential fields. Application of the conservation principles to solution of problems involving charge, energy and momentum. Electrical circuit theory, application of Kirchhoff’s Laws to AC and DC circuits. Uniform circular motion, Kepler’s Laws and rotational mechanics.

A molecular approach to energy transfer, kinetic theory, gas laws and calorimetry. The wave theories of physics, transfer of energy by waves, properties of waves. Application of wave theories to optical and acoustical phenomena such as interference, diffraction and polarization. Interaction of radiation with matter, photoelectric effect. Compton effect, spectroscopy. Resolution of the wave-particle paradox by means of wave mechanics and the uncertainty principle.

1.011 Higher Physics I  F L3T3
Prerequisite: As for 1.001. Co-requisite: 10.001 or 10.011.

For students of all Faculties except Medicine who have a good secondary school record and who wish to do a more challenging course. Entry to this course requires permission from the Head of the School of Physics.

Vector algebra, kinematics, uniform circular motion, coriolis acceleration, dynamics of particles, motion in a resistive medium, work and energy, gravitation, rotational motion of rigid bodies about fixed axis, rotational motion about a fixed point. Lagrange and Hamilton equations, harmonic motions, waves in elastic media. Sound waves, physical optics, polarization and double refraction.

1.021 Introductory Physics I  (For Health and Life Scientists)  F L3T3

An introductory subject in physics designed principally for students majoring in the life and health science disciplines. Discusses the following topics at an introductory level:

The methods of physics, describing motion, the dynamics of a particle, conservation of energy, kinetic theory of gases, properties of liquids, vibrations and waves, electricity and conduction in solids, ions and ionic conduction, magnetism and electromagnetic induction, alternating current, atomic nature of matter, X-rays, the nucleus and radioactivity, electronics, geometrical optics, optical instruments, wave optics, microscopes and their uses.

Physics Level II units

1.012 Mechanics and Thermal Physics  S1 L3T2
Prerequisites: 1.001 or 1.011, 10.001. Co-requisites: 10.2111.

Properties of solids and liquids, elasticity, hydrostatics, hydrodynamics, damped and forced vibrations, resonance, coupled systems, normal modes, Fourier analysis, waves, group velocity, reflection and transmission at a boundary.

Kinetic theory, Maxwell velocity distribution, transport coefficients, first and second laws of thermodynamics, thermodynamic functions, simple applications, microscopic approach to thermodynamics, Boltzmann probability.

1.022 Electromagnetism and Modern Physics  S2 L3T2
Prerequisites: 1.001 or 1.011, 10.001. Co-requisites: 10.2111. Excluded: 1.9322.

Electrostatics in vacuum and in dielectrics, Gauss’ law, current density, magnetostatics in vacuum and in magnetic materials, electromagnetic induction, displacement current, Maxwell’s equations, simple solutions, applications.

Special theory of relativity, Lorentz transformation, simultaneity, relativistic mass, momentum and energy, formalism of wave mechanics, Schrodinger’s equation, simple solutions, hydrogen atom, spectra, electron spin, selection rules, exclusion principle, Zeeman effect molecules.
1.032 Laboratory F T3
Prerequisite: 1.001 or 1.011, 10.001. Excluded: 1.9222.
Alternating current circuits, complex impedance, resonance, mutual inductance, introductory electronics, diode characteristics and circuits, power supplies, transistor characteristics, single stage and coupled amplifiers, experiments using AC circuits. Experimental investigations in a choice of areas including radioactivity, spectroscopy, properties of materials, Hall effect, nuclear magnetic resonance, photography, vacuum systems.

Terminating Physics Level II units

1.9222 Electronics S1 L1T2
Prerequisites: 1.001 or 1.011 or 1.021, 10.001 or 10.011 or 10.021B and 10.021C.
The application of electronics to other disciplines. Principles of circuit theory and analogue computing; amplifiers, their specification and application; transducers; electronic instrumentation; industrial data acquisition.

1.9322 Introduction to Solids S2 L2T1
Prerequisites: 1.001 or 1.011 or 1.021, 10.001 or 10.011 or 10.021B and 10.021C. Excluded: 1.022, 4.402, 4.412.
Introductory quantum mechanics and atomic physics; crystal structure, point and line defects; introductory band theory; conductors, semiconductor and insulators; energy level diagrams.

Physics Level III units

1.013 Quantum Mechanics and Nuclear Physics F L1½T½
Prerequisites: 1.012, 1.022, 10.2111, 10.2112. Excluded: 2.023A, 10.222F.
Concepts and formulation, expectation values and measurement, steps, wells, and barriers, tunnelling, harmonic oscillator, perturbation theory, hydrogen atom, angular momentum operators, spin and spin orbit coupling, vector model, fine structure, identical particles, helium atom, spectroscopy, electron states in molecules and solids.
Detecting instruments for nuclear particles, counting statistics, Rutherford scattering, radioactivity, radiative processes, reactions, optical model, parity, introduction to particle physics, mesons, baryons, quarks.
Additional material is studied for the award of Distinction/High Distinction.

1.023 Statistical Mechanics and Solid State Physics S1 L3T1
Prerequisites: 1.012, 1.022, 10.2111, 10.2112. Co-requisite: 1.013 or 2.023A.
Canonical distribution, paramagnetism, Einstein solid, ideal gas, equipartition, grand canonical ensemble, chemical potential, phase equilibria, Fermi and Bose statistics, Bose condensation, blackbody radiation. Crystal structure, bonding, lattice dynamics, phonons, free-electron model of metals, band theory, point defects, dislocations.
Additional material is studied for the award of Distinction/High Distinction.

School of Chemistry

Undergraduate Study

2.002A Physical Chemistry S1 or S2 L3T3
Prerequisites: 2.121 or 2.141 and 10.011 or 10.001 or 10.021B & 10.021C.
Thermodynamics: First, second and third laws of thermodynamics; statistical mechanical treatment of thermodynamic properties; applications of thermodynamics; chemical equilibria, phase equilibria, solutions of non-electrolytes and electrolytes, electrochemical cells.
Kinetics: Order and molecularity; effect of temperature on reaction rates; elementary reaction rate theory.

Surface Chemistry and Colloids: Absorption, properties of dispersions; macromolecules and association colloids.

2.002B Organic Chemistry S1 or S2 L3T3
Prerequisite: 2.131 or 2.141.
Chemistry of the more important functional groups: aliphatic hydrocarbons, monocyclic aromatic hydrocarbons, halides, alcohols, phenols, aldehydes, ketones, ethers, carboxylic acids and their derivatives, nitro compounds, amines, and sulphonic acids.

2.002C Inorganic Chemistry S1 or S2 L2T4
Prerequisites: 2.121 & 2.131, or 2.141.
Chemistry of typical metals; transition metals; introduction to nuclear chemistry. Quantitative inorganic analysis.

2.002D Analytical Chemistry S1 or S2 L2T4
Prerequisites: 2.121 & 2.131, or 2.141, 10.011 or 10.001 or 10.021B & 10.021C.
Chemical equilibria in analytical chemistry. Acid-base, complex formation, redox systems, solid/solution, and liquid/liquid equilibria with applications to volumetric, gravimetric and complexometric analysis, and to liquid/liquid extractions.

2.003B Organic Chemistry S1 or S2 L2T4
Prerequisite: 2.002B.
Alicyclic Chemistry: Stereochemistry of acyclic systems; classical and non-classical strain in cyclic systems; stereochemistry and conformation of monocyclic and polycyclic compounds; synthesis, reactions and rearrangement of monocyclic compounds, including stereo-chemical selectivity; transannular reactions in medium rings. Synthesis and reactions of fused and bridged polycyclic systems.
Heterocyclic Chemistry: Synthesis and reactions of the following heteroaromatic systems: pyridine, quinoline, isoquinoline. Flavones and isoflavones; pyrimidine; pyrrole, furan, thiophen, indole, imidazole.

2.003H Molecular Spectroscopy and Structure S2 L3T3
Prerequisites: 2.121 & 2.131, or 2.141.
Absorption and emission of radiation. Atomic spectra. Molecular spectroscopy: vibrational, including infrared and Raman; UV-visible; instrumentation and sample handling. Magnetic resonance. Mass spectrometry with particular reference to structure determination. Laboratory and tutorial work to illustrate the above, including inspection of major instruments.

2.013L Chemistry and Enzymology of Foods F L1T2
Prerequisite: 2.002B. Excluded: 2.023L, 2.043L, 2.053L.
The chemistry of food constituents at an advanced level and the relationship between the chemistry and enzymology associated with the origin and handling of foodstuffs. Treatment of the stability of constituents, changes in colour and texture occurring during processing and storage. Methods of assessment, chemical and physical.
General classification of constituents, role of free and combined water. Fixed oils and fats, reactivity of enzyme and autolysis. Oxidants — natural and synthetic — theories on mechanisms of action. Carbohydrates, reactivity, role in breeding processes, carbohydrate polymers, starch structure, enzymic susceptibility and mode of action, estimations, enzymic degradation and enzyme bronzing, reactions and stability of natural pigments, vitamins, preservatives.

2.042C Inorganic Chemistry S1 or S2 L2T4
Prerequisites: 2.121 & 2.131, or 2.141.
Chemistry of the non-metals, including B, C, Si, N, P, S, Se, Te, halogens, and noble gases. Chemistry of the metals of groups IA, IIA and Al. Typical ionic, giant-molecule and close packed structures. Transition metal chemistry, including variable oxidation states, paramagnetism, Werner's theory, isomerism of six- and four-coordinate complexes, chelation, stabilization of valency states. Physical methods of molecular structure determination. Chemistry of Fe, Co, Ni, Cu, Ag, Au.

2.043L Chemistry and Enzymology of Foods
Prerequisite: 2.002B. Excluded: 2.013L, 2.023L, 2.053L.
Syllabus as for 2.013L but in greater detail and depth.

2.111 Introductory Chemistry† S1 L2T4
Prerequisite: Nil.
Classification of matter and the language of chemistry. The gas laws and the Ideal Gas Equation, gas mixtures and partial pressure. The structure of atoms, ions and ions, chemical bonding, properties of ionic and covalent compounds. The periodic classification of elements, oxides, hydrides, halides of selected elements. Acids, bases, salts, neutralization. Stoichiometry, the mole concept. Electron transfer reactions. Qualitative treatment of reversibility and chemical equilibrium, the pH scale. Introduction to the diversity of carbon compounds.

†Students who have passed 2.121 or 2.131 may not enrol in 2.111 or 2.141. Students meeting the 2.121 or 2.141 prerequisites are not permitted to enrol in 2.111 without permission of the Head of the School of Chemistry. Once students enrol in 2.111 they must pass 2.111 before proceeding to 2.121 or 2.131 or 2.141.
2.121 Chemistry IA†

Prerequisites:
- 2 unit Science (any strands)
- or
- 4 unit Science (multistrand)
- or
- 2.111.

Stoichiometry and solution stoichiometry. Structure of matter, solids, liquids, gases. Thermochemistry. Equilibria and equilibrium constants, entropy changes, free energy changes, the relationship between equilibrium and standard free energy changes. Ideal solutions, colligative properties. Equilibrium in electrolyte solutions, acid-base equilibria, solubility equilibria, and redox equilibria. The rate of a chemical change and chemical kinetics.

2.131 Chemistry IB

Prerequisite: 2.111 or 2.121.

2.141 Chemistry IM†

Prerequisites:
- 2 unit Science (Chemistry)
- or
- 4 unit Science (multistrand)
- or
- 2.111.

HSC Exam Percentile Range Required
- 31-100

This is an integrated syllabus of 2.121 and 2.131.

†Students who have passed 2.121 or 2.131 may not enrol in 2.111 or 2.141. Students meeting the 2.121 or 2.141 prerequisite are not permitted to enrol in 2.111 without permission of the Head of the School of Chemistry. Once students enrol in 2.111 they must pass 2.111 before proceeding to 2.121 or 2.131 or 2.141.

Graduate Study

2.271G Chemistry and Analysis of Foods

Illustrates the bases and application of analytical techniques as applied to foods. Emphasis is placed on the design of methods, on the preparation of material for instrumental analysis and on the interpretation of data.

Subject matter includes: proteins and flesh foods, carbohydrates and saccharine foods, fats and oils, dairy and fermentation products, vitamins, food additives — preservatives and colouring matters, pesticide residues, metal contaminants — food microscopy.

School of Metallurgy

Undergraduate Study

4.001 Introduction to Materials Science S1 or S2 L1

Forms part of 5.010 Engineering A.

The structure and properties of the main types of engineering materials, with emphasis on the way in which properties may be controlled by controlling structure.

4.002 Introduction to Metallurgical Engineering S2 L2

Forms part of 5.030 Engineering C.

History and significance of the exploitation of metals. Ores, mineral economics, mineral processing, and metal extraction and processing methods illustrated by reference to the Australian mineral and metal industries. Properties, uses, and applications of metallic materials. The role of the metallurgist in industry and in processing and materials research, and in relation to conservation and the environment.

4.024 Metallurgy Project S1 6 S2 3

An experimental investigation of some aspects of metallurgy. Includes three weeks laboratory work during the mid-year recess.

4.034 Industrial Metallurgy Project F3

An experimental investigation of some aspects of industrial metallurgy.

4.054 Metallurgy Seminar F L2

Lectures on the preparation and presentation of technical papers. Each student is required to prepare and present a paper on a nominated subject.

4.121 Principles of Metal Extraction L2T1

The fundamental principles of metal extraction. Oxidation and reduction, roasting, slag reactions, distillation, leaching, precipitation and electrolysis.

4.131 Principles of Physical and Mechanical Metallurgy L3T0

A condensed treatment of physical and mechanical metallurgy.
4.141 Experimental Techniques in Physical Metallurgy

A condensed course of instruction in metallographic, crystallographic and X-ray diffraction techniques.

4.202 Ceramic Materials

History of ceramics, introduction to ceramic raw materials, processing of ceramics including forming, drying, firing, introduction to crystal chemistry and phase changes in ceramics, the nature and properties of crystalline ceramic glasses, ceramic fibres and composites.

4.213 Chemical Ceramics

Structural principles: crystal chemistry, structure of glasses, defect solid state: phase equilibria and transformations; diffusion; solid state reactions. A systematic treatment of the chemistry of ceramic products.

Students are required to take part in a series of factory inspections.

4.224 Physical Ceramics

Prerequisites: 4.213, 4.233.

Physical Ceramics: Application of the principles of physical chemistry and solid-state physics to a study of the preparation and properties of ceramic materials. Clay Mineralogy: Structures and properties of the various clay minerals; techniques employed in the identification of clay minerals; composition and properties of the ceramic clays of New South Wales.

4.231 Introductory Ceramic Engineering

4.231 is an option in 5.030 Engineering C.

4.232 Ceramic Engineering I

Co- or prerequisites: 48.311, 7.023.

The principles of operation, construction and fields of application of equipment used in the mining, preparation and fabrication of raw materials, and the drying and firing of ceramic products.

4.233 Ceramic Process Principles

F L1T2½

Students are required to take part in a series of factory inspections.

4.234 Ceramic Engineering II

F L2T2

Prerequisites: 48.311, 4.233, 4.232, 8.112.

Students are required to take part in a series of factory inspections.

4.294 Project (Ceramic Engineering) S1 T6 S2 T9

An experimental or technical investigation or design related to some aspect of ceramic engineering. Prerequisites and/or co-requisites are determined depending on the nature of the project.

4.302 Chemical and Extraction Metallurgy I

L1T2

Co-requisite: 2.002A.

Metal extraction from ores in terms of unit operations and overall systems, illustrated by the extraction of iron, copper, aluminium and other metals. Elementary process analysis. Laboratory — analysis and solution of problems.

4.303 Chemical and Extraction Metallurgy II

L3T2

Prerequisites: 4.302, 4.602 and 4.402 or 4.412.

4.312 Chemical and Extraction Metallurgy IA

S1 L1T0 S2 L2T3

Co-requisites: 2.002A.

As for subject 4.302 above.
4.314 Chemical and Extraction Metallurgy IIIA  
Prerequisite: 4.303.

4.324 Chemical and Extraction Metallurgy IIIB  
Prerequisite: 4.303.
A selection of advanced topics in chemical and extractive metallurgy.

4.374 Metal Extraction Processes  
Analysis of pyrometallurgical and hydrometallurgical extraction and refining processes using the principles of chemical equilibrium and kinetics.
Extraction and refining processes for commercially important ferrous and non-ferrous metals.
Nature of the inter-relationship between raw material, extraction process and product characteristics. Economic factors in process selection and operation; acceptance standards for ores and concentrates, smelter changes; penalties and bonuses; by-products.

4.402 Physical Metallurgy I  

4.403 Physical Metallurgy II  
Prerequisite: 4.402.

4.404 Physical Metallurgy III  

4.412 Metallurgical Phases — Structure and Equilibrium, Part 1  
The crystal structure of metallic phases. Crystal defects. Physical properties of solids. Phase equilibrium in alloy systems. The genesis of microstructure. Metallography.

4.414 Physical Metallurgy IIIA  
Prerequisite: 4.403.

4.422 Metallurgical Phases — Structure and Equilibrium, Part 2  

4.424 Physical Metallurgy IIIB  
Prerequisite: 4.403.
Selection of advanced topics in physical metallurgy including radiation damage, martensitic transformations, neutron diffraction, internal friction, sintering, creep, superelasticity, fracture, microplasticity.

4.433 Physical Metallurgy IIC  
Prerequisite: 4.402.

4.502 Mechanical Properties of Solids  
Co-requisite: 4.402.
4.503 Mechanical Metallurgy  
**Prerequisite:** 4.502.

4.504 Mechanical and Industrial Metallurgy  
**Prerequisites:** 4.403 or 4.433, 4.503.

The application of metallurgical principles to industrial processing with particular reference to casting, welding, shaping, properties and selection of materials. Metal finishing. Metallurgical aspects in engineering design. Fracture mechanics, design against fatigue, brittle and ductile fracture.

4.514 Industrial Metallurgy  
**Prerequisites:** 4.433, 4.503.

Description as for subject 4.504.

4.602 Metallurgical Engineering I  
**Co-requisite:** 4.302.

Mass and energy accounting in metallurgical processes. An introduction to the principles and applications of transport processes in systems with specific reference to industrial processes in primary and secondary metallurgy.

4.604 Metallurgical Engineering III  
**Prerequisite:** 4.623.

Process dynamics and automatic control. Dynamics of simple linear systems; representation and analysis of metallurgical processes by linear models; effect of various control elements; analysis by empirical models; design of control systems for metallurgical processes. Optimization: as for 3.042 Chemical Engineering IIB, Unit 3. Atmospheric Pollution Control: As for 3.043 Chemical Engineering IIIC, Unit 3. Water Pollution Control: As for 3.043 Chemical Engineering IIIC, Unit 4.

Industrial Practice: Case studies, design studies and assignments related to industrial practice and integrated process schemes for metal extraction, refining, fabrication, treatment and finishing.

4.613 Metallurgical Engineering IIA  
**Prerequisite:** 4.602.

An extension of the principles and applications of transport processes to metallurgical systems. The principles of metallurgical heating and cooling including fuels, refractories and furnace design and operation. Solidification in moulds, continuous casting.

Process Economics: As for 3.032 Chemical Engineering IIB Unit 4.

4.623 Metallurgical Engineering IIB  
**Prerequisite:** 4.613.

Continuous Processes: The application of theoretical models and empirical data to the design of continuous processes involving two or more phases in contact.

The principles of instrumentation and their application to research and on-stream measurement in metallurgical plants.

4.624 Metallurgical Engineering Project  
**F3**

(Includes three weeks laboratory work during the mid-year recess.) An experimental investigation of some aspects of metallurgical engineering.

4.703 Materials Science  
**S2 L2T1**

**Co-requisite:** 4.403.

The application of the principles of physical metallurgy to the development of modern materials. Particular attention is paid to the structure property relationships that determine the design of materials. The topics covered include materials used for structural purposes, high temperature applications, corrosive environments, nuclear engineering, fuel cells, magnetic applications.

4.802 Metallurgical Physics  
**S2 L2T0**

**Prerequisites:** 1.001 or 1.011.

4.813 Mathematical Methods  
**L2T1**

**Prerequisites:** 10.031 or 10.211A.

1. 10.351 Statistics SM (see Engineering Handbook)

4.911 Materials Science  
**L1T1/2**

The atomic structure of metals. The grain structure of metals; origin; modification. Structure of alloys, theory. Structure, properties and heat treatment of commercially important alloys based on aluminium, copper and iron in particular. Corrosion. Control of structure and properties, commercial alloys, materials selection.

4.913 Materials Science  
**L2T1**

The structure and properties of crystalline substances. Crystal structures, crystal planes and directions. Examination of crystals by X-ray, electron and neutron diffraction techniques. The properties of crystalline solids. Defect structure of crystals. Influence of defects on the

4.921 Materials Science

4.931 Metallurgy

4.941 Metallurgy for Engineers

4.951 Materials Technology

The structure, properties and technology of wood.

4.961 Materials and Corrosion
A short subject covering the theory of corrosion and materials of construction.

4.972 Materials for Mining Engineers

4.974 Mining Materials

Graduate Study

4.211G Metallurgical Practice
Detailed studies relating to one or more specialized areas of metallurgical practice, such as founding, welding, mineral treatment.

4.221G Advanced Metallurgical Techniques
Lectures and laboratory instruction will be offered in advanced techniques including the following: X-ray metallography; electron microscopy; electron probe microanalysis; quantitative metallography; stress and strain analysis; fracture toughness testing; metal melting and casting; mechanical testing; electrochemical technique; research techniques — physical; research techniques — chemical; mineral investigation techniques.

4.231G Advanced Theoretical Metallurgy
Covers a wide range of theoretical topics drawn from physical metallurgy, chemical and extractive metallurgy, mineral chemistry, physics of metals and mechanical metallurgy.

4.241G Graduate Metallurgy Project
An experimental or technical investigation or design related to a branch of metallurgy.

4.251G Advanced Materials Technology

4.261G Modern Microscopy of Materials
Descriptions of light optical and electron optical instruments from the point of resolution, depth-of-field, contrast and additional data obtainable from the specimen as well as the application of these instruments to the study of materials.
**4.270G Solid State and Mineral Chemistry**

Principles of crystal chemistry; structures of selected crystal types and glasses. Thermodynamics of solid systems; phase relations. Defects in crystals; non-stoichiometry. Solid state diffusion. Thermodynamics and kinetics of solid state reactions. Hydrothermal reactions.

Stability of compounds at elevated temperatures; effect of heat on clay minerals; hydrothermal reactions between silica and lime; volatility of compounds; reactions in nuclear fields; solid state electrolytes; biodegradation of rocks and minerals. Chemical strengthening of ceramics.

**4.271G Refractory Technology I**

Chemical Property and Service Behaviour. This subject deals with the study of chemical reactions occurring between refractories and reaction products in typical industrial situations. It will provide a basis for evaluating the predicting refractory performance in the manufacture of ferrous and non-ferrous metals, glass, enamels and cements. A detailed consideration of the chemical reactions occurring between refractories and solid, liquid and vapour phases will be made. Laboratory experiments and demonstrations will form part of the course.

Candidates are expected to have a background knowledge equivalent to that expressed in the syllabus for 4.213 Chemical Ceramics (Session 1).

**4.272G Refractory Technology II**

Engineering Properties and Applications: This subject deals with the philosophy and methods of development of refractories and reaction products in typical industrial situations. It will provide a basis for evaluating the predicting refractory performance in the manufacture of ferrous and non-ferrous metals, glass, enamels and cements. A detailed consideration of the chemical reactions occurring between refractories and solid, liquid and vapour phases will be made. Laboratory experiments and demonstrations will form part of the course.

Candidates are expected to have a background knowledge equivalent to that expressed in the syllabus for 4.232 Ceramic Engineering I.

**4.281G Chemistry of Glass Melting**

Pre- or co-requisites may be specified depending on student's background.

Glass structure — property relations; melting reactions and rates; refining; analytical techniques; economics of glass compositions; melting and refining agents; process chemistry; chemical durability; glass colour; glass-refractory reactions; phase transformations. Laboratory exercises.

<td>5.030</td>
<td>Engineering C</td>
<td>Engineering Drawing: Graphic communication first and third angle orthographic projection and isometric projection. Descriptive geometry fundamentals and their application to engineering problems with special emphasis on visualization of problems and development of methods for their solution. Australian standard engineering drawing practice. Applications involving detail and assembly drawings, functional dimensioning and tolerancing.</td>
<td>and either Introduction to Chemical Industry: For subject description see under 48.001. or Introduction to Metallurgical Engineering: For subject description see under 4.002. or Introduction to Mining Engineering (Compulsory for Mining Engineering students): Mineral deposits; metallic, non-metallic and fuels. Elements of prospecting and exploration. Basic mining techniques. Mining phases; development, exploitation, beneficiation and withdrawal. Mining and the environment. Mining services. Relevance of basic science and engineering subjects to mining design and operations. or Introduction to Ceramic Engineering (Compulsory for Ceramic Engineering students): The classification of materials. The nature of ceramics. The materials science approach. The scope of the ceramic industry. The origin, classification, physical properties and uses of clay minerals and other non-clay raw materials. Principal unit operations used in the ceramic industry. Drying and firing of ceramics, melt forming, pot forming and other forming procedures. or Introduction to Textile Technology (Compulsory for Textile Technology students): For subject description see under 13.001.</td>
</tr>
<tr>

**School of Electrical Engineering and Computer Science**

**Undergraduate Study**

6.832 **Industrial Electrical Machinery**  
*Prerequisite: 1.001 or equivalent.*

An applications-oriented introduction to the usage of electrical machinery in industry. Provides a basis of circuit-theory then considers the characteristics and selection of electrical machinery, their interface with the prime power supply, protection and electrical safety. Included is a project illustrating the application of electrical engineering to other disciplines.

6.851 **Electronics and Instrumentation**  
*Prerequisite: 1.001 or equivalent.*

An applications-oriented introduction to electronics. Provides a basis of circuit theory and elementary electronics and then treats filters, frequency response, general amplifier characteristics, operational amplifiers and their use in instrumentation, power supplies, analog computers and their use in modelling non-electrical systems. Included is a project illustrating the application of electrical engineering to other disciplines.

6.854 **Electrical Engineering**  
*Prerequisite: 1.001 or equivalent.*

Extensive introduction to the theory and application of heavy current electrical engineering. Requisite circuit theory, the distribution of electrical power and the characteristics and selection of electrical machinery. Topics include DC power supplies, three-phase AC supply, voltage regulation, transformers, AC and DC machines and their rating. Project illustrating application of electrical engineering to various aspects of industry. Two 2-hour tutorial or laboratory sessions per week each commencing with a structured mini-lecture. Detailed lecture notes are provided.

6.855 **Electrical Power Utilization**  
*Prerequisite: 6.851.*

Introduction to the distribution and utilization of electrical power in industry. Characteristics and selection of electrical machinery, its interface with the supply, protection and electrical safety. Project illustrating application of electrical engineering to various aspects of industry. Two 2-hour tutorial or laboratory sessions per week each commencing with a structured mini-lecture. The subject commences in week 4 of Session 2.

**School of Mining Engineering**

**Undergraduate Study**

7.013 **Principles of Mining**  
7.013R  
*Prerequisite: 1.001 or equivalent.*

7.023 **Mineral Process Engineering**  
7.023R  
*Prerequisite: 1.001 or equivalent.*

7.033 **Mineralogical Assessment**

Assessment of the physical and chemical properties of economic minerals. Significance of the textures of minerals on the selection of mineral beneficiation processes. Destructive and non-destructive testing of bore cores. Factors influencing effective comminution and liberation.
7.044 Mining Economics  

7.111 Introduction to Mining Engineering  
Forms part of 5.030 Engineering C.

7.112 Mineral Resources  
Historical and economic introduction, definitions. Geological time scale. Renewable and non-renewable resources. Types of mineral resources, their abundance, distribution and availability. The consumption and use of metals, precious stones, industrial minerals and rocks, fossil and nuclear fuels. Ownership and leasing of mineral rights. Exercises in mine planning.

7.113 Mining Methods  
Prerequisite: 7.122.

7.114 Geotechnical Engineering  

7.115 Secondary Mining  

7.122 and 7.122R Mine Development  

7.123 and 7.123R Geomechanics  

7.124 Coal Face Mechanisation  

7.125R Introduction to Geotechnical Engineering  
7.133 and
7.133R Mine Transport  S2 L2T½

7.134 Metalliferous Mining Systems  F L2T1

Prerequisite: 7.113.

7.143 and
7.143R Mine Environment and Safety Engineering  F L2T½

Prerequisites for 7.143: 5.611, 7.122.

7.144 Surface and Offshore Mining  F L2T1

7.153 Power Supply in Mines  S2 L1T½ and 7.153R  S1 L1T½

7.154 Petroleum Engineering  F L2T1

7.163 Excavation Engineering  F L1T1 and 7.163R  F L1T½

7.164 Tunnel Engineering  F L2T1

7.173 Computer Applications in Mining  F L1T1

Prerequisite: 10.022.

FORTRAN programming. Simulation of mining problems. Application of selected programs to mining exploration, operations, economics and design.

7.174 Mining Legislation  FL1

An appreciation of the laws relating to mining practice and to safety and health in mines.
7.193R  Mine Technology  
F T4

A program of tutorials and laboratory work as the alternative to concurrent industrial experience. The student is given reading and technical assignments to complement the study of third year subjects in a full-time course.

7.194R  Mine Design Practice  
F T5

The student is given exercises in the application of mine equipment, and in safety and environmental precautions, to complement the lecture materials in third and fourth years of a full-time course. This is the alternative to concurrent industrial experience.

7.213  Mine Surveying  
S1 L1T1

and 7.213R  
F L1

Prerequisites for 7.213: 10.341 and 29.441

Surveying methods applied to the development and extraction of minerals. Instruments of special value in mine surveying. Correlation of underground and surface surveys. Progress measurement. Determination of reserves. The surveying and logging of boreholes. Preparation of mine plans.

7.214  Mine Economics and Planning  
F L2T2

and 7.214R  
F L2T1

Prerequisite for 7.214: 7.113.

7.224  Operational Management  
F L1T1

and 7.224R  
F L1T½

7.234  Mineral Economics  
F L3T1

7.313  Minerals Engineering Processes  
F L1T2

Prerequisites: 25.101 or 25.201, 5.030.

7.313R  Mineral Processing  
F L2T3

A combination of 7.313, with selected topics from 4.374.

7.314 and 7.314R  Mineral Process Technology  
F L2T1

Prerequisite for 7.314: 7.313.

Broken Hill students take 7.313R.

7.316R  Mineral Process Technology II  

7.326R  Mineral Industry Processes  

Principles underlying extraction of some common metals, pyrometallurgy, hydrometallurgy, electro-metallurgy, chemical extraction, agglomeration, sintering, mineral processing as a bridge between mining and metallurgical industries.

7.411R  Fluid Mechanics  

Graduate Study

Generally the subjects are of three hours' duration per week or multiples of that time.

7.414 Minerals Industry Project

Candidates are required to submit a dissertation or thesis on a mining, minerals engineering or other topic approved by the Head of School. The work may take the form of an engineering analysis, experimental investigation, theoretical study or design project. Candidates may be required to present themselves for oral examination on the subject of their submission.

7.414R Minerals Industry Project

Periods are set aside each week to provide time for the students to consult library references, prepare notes and undertake experimental work. The project supervisor is available for discussion at agreed times but the student is expected to work on his or her own initiative. The only examination is by assessment of a submitted written thesis, which must consist of two parts: a literature survey and a report on research.

The thesis is to be based on a modest, but significant, research project, which may be on some aspects of a staff member's or mine company research interests. Most projects are experimental in nature but some may be largely theoretical.

7.415R Minerals Industry Project

A shorter version of 7.414R above.

7.424 Industrial and Research Seminars

The program includes two types of seminar. One deals with research work being undertaken or recently completed by members of the School of Mining Engineering. The other involves engineers and scientists from industry, other University Schools and research establishments discussing projects of special or topical interest in mining and allied fields.

7.424R Feasibility Studies and Seminars

Group work on the creation of a mining complex from an original mineral deposit with its approximate costing. Appraisal of the result as an investment.

The work draws on all other courses and consists mainly of tutorials and seminars by students, and by visiting lecturers. Students are expected to present written technical reports and memoranda for assessment.

7.001G Exploratory Drilling and Development

7.111G Mining Engineering

7.122G Mining Engineering Technology

7.132G Mining Engineering Laboratory

A selection of advanced laboratory investigations in sampling and valuation, mine support, temporary or long term; mine design and plant related to extraction and servicing functions; rock properties; programming of mining methods and transport; non-entry mining; petroleum engineering; gasification; solvent processes.

7.151G Ground Control and Excavation Engineering

7.152G Mining Conservation
The reclamation of excavated land; integration with operational stages of mining. Mining cycles of alluvial, strip, and open cuts; land clearing; stabilizing the mined area; socio-economic aspects of mining, rehabilitation costs, government regulations. Examination and evaluation of a current operation.

7.153G Environmental Conditions in Mines
The energy equation applied to ventilation; sources of heat in mines, geothermal gradients, thermodynamics, pressure-volume diagrams; practical aspects of high air temperatures and the control of atmospheric conditions in deep underground mines. Fan design, installation and testing. Psychrometry, ventilation planning. Computer applications. Selected laboratory experiments and network designs.

7.154G Rock Excavation and Transportation
Rock fragmentation drilling, blasting large rounds. Loading techniques, shovels, draglines, bucket wheel excavators, dredges, front-end loaders, tractor scrapers. Operating factors, selection procedures, cost estimating. Materials handling, continuous, semi-continuous, batch systems, cost analysis.

7.311G Mineral Beneficiation
Prerequisite: 7.023.

7.322G Mineral Beneficiation Technology
Prerequisite: 7.311G.

7.332G Mineral Engineering Laboratory
Prerequisite: 7.311G.
Laboratory investigations may be selected from the following according to availability and specialization: metaliferous ore concentration, coal preparation; beneficiation of non-metallics; processing of mineral fluids.

7.351G Mineral Beneficiation
Prerequisite: 7.313 or 7.311G.
Process design based upon mineral properties; extraction processes and environmental conditions. Selection of technology to be adopted. Basis of feasibility studies. Special considerations for coal preparation and treatment of industrial minerals. Flowsheet planning, solid and fluid flows, auxiliary units, materials handling, product disposal. Experimental techniques used in testing. Scale up procedures. Plant control, automation, use of computers. Management of mineral processing operations.

7.442G Mineral Industry Analysis
Advanced work in the technical and economic analysis of mining or mineral operations. Cases are selected for examination and analysis, and a critical review must be written of the operations analysed.

School of Civil Engineering

Undergraduate Study

8.112 Structures
Theory of Structures: Moduli of elasticity, simple stress and strain. Compound bars, temperature stresses. Thin shells. Stress at a point. Strain at a point. Principal stresses and strains. Relationship between...

8.171 Mechanics of Solids I

Prerequisite: 8.170.

8.172 Mechanics of Solids II

Prerequisite: 8.171.

Structural statics. Bending moments, shear force and torsion. Stresses due to shear force in solid and thin-walled sections; shear centre. Torsion of circular, non-circular and thin-walled sections. Principal stresses and strains; yield criteria. Combined stresses. Concepts of instability.

8.250 Properties of Materials

8.413G Transport Economics

Cost and price analysis off each of the transport modes (road, rail, air and sea). Welfare analysis and taxation theory with respect to transport. Economics of location; economics of land use models; regional trade model.

8.820G Structural Analysis and Finite Elements I (SAFE 1)

8.753G Soil Engineering

School of Wool and Pastoral Sciences

Graduate Study

8.403G Theory of Land Use/Transport Interaction

Theoretical aspects of land use transport planning. Basic concepts, data collection methods, systems models and equation of state (functional, behavioural, optimizing). Introduction to land use-transport modelling (land use, generation, distribution, modal assignment, network assignment, evaluation). Planning methodologies (short-, medium- long-term; action planning, strategic planning; local, urban, regional, national).

Undergraduate Study

9.001 Project

Students are required to conduct an experimental or theoretical investigation under supervision and to submit a thesis describing the results of their investigations. Throughout the year students are required to submit progress reports to their supervisors and to present seminars. The written reports of the project shall be submitted by the last day of Session 2.
9.002 Seminar

Seminars deal with research and/or development work being undertaken or recently completed by members of the School of Wool and Pastoral Sciences, other University schools and research organisations. There are also seminars on communication in wool and pastoral sciences and on problems facing rural industries.

9.101 Biology of Grazing Sheep and Cattle  S1 L2T4

Introduces the principles of Wool and Pastoral Sciences. Covers the sheep and cattle industries and wool and meat as end products of these industries; production and use of pasture, nutrition of grazing ruminants; reproduction in sheep and cattle; climate and animal production; and introduction concepts of animal health.

Field excursions and laboratory work are integral parts of the course.

9.111 Livestock Production I  F L2T1

Prerequisite: 9.101.

The sheep and beef cattle industries and their place in the economic life of Australia; levels of production and trends. The physical, biological, managerial and economic conditions influencing production. Sheep producing zones. Sheep breeds for wool production. Cross-breeding, prime lamb production.

Sheep and cattle management; nutrition, reproduction, survival.

A field excursion of one week's duration is held in session 1

9.112 Livestock Production II  S1 L2T1

Prerequisite: 9.111.

The scope for intensification of ruminant production. The behaviour, nutrition, environmental physiology and health of intensively managed animals. Housing and environmental control of facilities. Examples of intensification, eg feed lots, sea transport.

9.113 Livestock Production III  F L1T2

9.132 Animal Health  S1 L2T1

Prerequisite: 9.131.

9.201 Agronomy  F L2T2

Prerequisite: 9.101.

9.202 Pastoral Agronomy  F L2T1

Prerequisite: 9.201.

9.203 Crop Agronomy  S2 L2T1

Prerequisite: 9.201.

9.204 Range Management  S2 L1T2

Co- or Prerequisite: 9.202.

The course involves one week of instruction at Fowlers Gap Research Station.

9.301 Agricultural Economics and Management I  S1 L2 S2 L2T2

The subject covers two broad strands: basic economic principles, and applied methods for farm management planning. The material on economic principles centres on (a) the theory of production economics, which provides the background for many of the tools of applied farm management; and (b) price theory with emphasis on agricultural markets.

The management planning strand emphasises basic farm planning procedures such as partial, whole-farm and parametric budgeting, and gross margins analysis. As necessary background for the application of such methods, the course also includes coverage of valuation principles, land tenure, systems of title, discounting procedures, depreciation methods, tax and credit structures, and discussion of the design and use of farm record systems.
### 9.302 Agricultural Economics and Management II

**Prerequisite:** 9.301.

Analysis of agricultural policies; agricultural marketing concepts; and an introduction to international trade theory. Investment appraisal and cost-benefit analysis.

Quantitative methods in agricultural economics and farm management with emphasis on — (i) Response surface estimation and analysis, (ii) Linear programming methods, with an introduction to other mathematical programming methods (iii) Systems analysis and simulation methods.

### 9.411 Agricultural Chemistry I

**Prerequisite:** 2.131.

An integrated program in various aspects of chemistry directed to the special interests of pastoral science. Experimental techniques, preparative and analytical, built around biological interest. Correlations of theoretical chemistry with biological processes.

Treatment of separation techniques, theory and design of chromatographic and distillation processes. Reaction principles, functional groups, analytical chemistry and roles in biological processes. Colorimetric and spectrophotometric control. Oxidation reactions and redox reactions. Separations and reactions of proteins, fats and carbohydrates, chemical and physical properties, cyanogenic glycosides.

Isomerizations and transesterification. Colloids and gel structures. Introductory heterocyclic chemistry, poisonous plants and alkaloid detection. Trace metals and soil analysis.

### 9.412 Agricultural Chemistry II

**Prerequisite:** 9.411.

Animal milks, analysis and heat treatment changes and detection. Roles of trace metals in biological processes, metal complexes with proteins and metal catalysis.

### 9.421 Animal Nutrition

**Prerequisite:** 9.421.

Feeding standards and the quantitative application of nutritional data with particular reference to Australian conditions. Utilization of forage by grazing ruminants. Supplementary and drought feeding. Consideration of disorders due to nutrition.

While particular emphasis is given to nutritional requirements of sheep, those of other farm livestock are dealt with in this section.

### 9.501 Wool Science I

**Prerequisite:** 9.101.

Raw materials and fibre identification; yarn manufacture; fabric manufacture; dyeing and finishing; testing and quality control. Wool biology; wool growth; wool fibre properties. Physical fleece characteristics; clip preparation; fleece defects; wool marketing procedures.

### 9.502 Wool Science II

**Prerequisite:** 9.501.

The effect of clip preparation on textile processing; wool metrology (raw wool); distribution of fibre parameters.

### 9.503 Wool Science III

**Prerequisite:** 9.502.

Evaluation and typing; organisational structure of the wool industry.

Marketing schemes: Commercial (reserve price: AWC marketing plan); Technical (traditional, sale by sample, sale by separation, sale by description).

Wool metrology; advanced appraisal and evaluation; current wool outlook; research developments.

### 9.601 Animal Physiology I

**Prerequisite:** 17.021.

Physiological systems of mammalia are treated with special attention to homeostasis. Cell membranes; blood and body fluids; the immune reaction. Cardiac control, functions and haemodynamics. Respiration. The endocrine system with particular emphasis upon growth, reproduction, lactation and stress. The nerve impulse, its excitation and transmission. Physiology of digestion, the gastro-intestinal tract and of the kidney. Heat tolerance and climatic adaptation.

### 9.602 Animal Physiology II

**Prerequisite:** 9.601.

**Applied Science**

**9.801 Genetics I**  
Prerequisite: 9.111.

**9.802 Genetics II**  
Prerequisite: 9.801.

**9.811 Biostatistics I**  
Prerequisite: 45.101.

**9.812 Biostatistics II**  
Prerequisite: 9.811.

**9.901 Rural Extension**  
Development of communication skills through experiential or active learning situations. Educational, psychological and sociological factors relating to the diffusion of innovations. Program planning and evaluation.

**9.504G Wool Science**  
F L2 T4  

**9.803G Animal Breeding**  
F L2 T2  
Co-requisite: 9.802.
Definition of breeding objectives; case studies of production recording and breed improvement programs for sheep and beef cattle. Development of performance recording systems: choice of traits to be recorded, recording and processing methods. Estimation of breeding value from performance records. Breed evaluation. Optimal design for breeding programs. The impact on genetic improvement of techniques for controlling reproduction.

**9.813G Quantitative Methods**  
F L2 T2  
Selected topics in: biostatistics and economic statistics, with emphasis on experimental design and on least squares procedures; response surface estimation and analysis; mathematical programming methods for rural industries; data processing and computer programming; systems analysis and simulation methods.

**School of Mathematics**

Excluded**: 10.011, 10.021A, 10.021B, 10.021C.

Calculus, analysis, analytic geometry, linear algebra, an introduction to abstract algebra, elementary computing.

**If a unit in this list is counted the unit above may not be counted.**

**Graduate Study**

**9.105G Livestock Production**  
F L2 T4  
Biology of reproduction and reproductive performance of sheep and cattle; growth and body composition; meat production and quality.
10.011 Higher Mathematics I  
**Prerequisites:**  
HSC Exam Percentile  
Range Required  
3 unit Mathematics  
71-100  
or  
4 unit Mathematics  
11-100  
Excluded**: 10.001, 10.021A, 10.021B, 10.021C.  

Calculus, analysis, analytic geometry, linear algebra, an introduction to abstract algebra, elementary computing.

10.021A General Mathematics IA*  
**Prerequisites:**  
HSC Exam Percentile  
Range Required  
2 unit Mathematics  
51-100  
or  
3 unit Mathematics  
11-100  
or  
4 unit Mathematics  
1-100  
Excluded**: 10.001, 10.021A.  

Number systems (including absolute value, inequalities, surds, etc.); coordinate geometry; polynomials, quadratics; concepts of the function; trigonometric functions, logarithmic and indicial functions and their laws of operation; introduction to differentiation and integration with simple applications.

10.021B General Mathematics IB  
**Prerequisites:**  
HSC Exam Percentile  
Range Required  
2 unit Mathematics  
51-100  
or  
3 unit Mathematics  
11-100  
or  
4 unit Mathematics  
1-100  
Excluded**: 10.001, 10.011.  

Functions (and their inverses), limits, asymptotes, continuity; differentiation and applications; integration, the definite integral and applications; inverse trigonometric functions; the logarithmic and exponential functions and applications; sequences and series; mathematical induction; the Binomial Theorem and applications; introduction to probability theory; introduction to 3-dimensional geometry; introduction to linear algebra.

10.021C General Mathematics IC  
**Prerequisite:** 10.021B. Excluded**: 10.001, 10.011, 10.021A.  

Techniques for integration, improper integrals; Taylor's Theorem; first order differential equations and applications; introduction to multivariable calculus; conics; finite sets; probability; vectors, matrices and linear equations.

10.022 Engineering Mathematics II  
**Prerequisite:** 10.001.  

Differential equations, use of Laplace transforms, solutions by series; partial differential equations and their solution for selected physical problems, use of Fourier series; introduction to numerical methods; matrices and their application to theory of linear equations, eigenvalues and their numerical evaluation; vector algebra and solid geometry; multiple integrals; introduction to vector field theory.

10.031 Mathematics‡  
**Prerequisite:** 10.001 or 10.021C (CR).  

Differential equations, use of Laplace transforms, solutions by series; partial differential equations and their solution for selected physical problems, use of Fourier series; multiple integrals, matrices and their application to theory of linear equations, eigenvalues, introduction to numerical methods.

10.032 Mathematics‡  
**Prerequisite:** 10.031.  

Vector calculus; special functions; convolution theorem and applications, complex variable theory; Fourier integrals; Laplace transforms with application to ordinary and partial differential equations.

10.111A Pure Mathematics II —  
**Linear Algebra**  
**Prerequisite:** 10.001. Excluded: 10.121A.  

10.1113 Pure Mathematics II —  
**Multivariable Calculus**  
**Prerequisite:** 10.001. Excluded: 10.1213.  

Multiple integrals, partial differentiation. Analysis of real valued functions of one and several variables.

10.1114 Pure Mathematics II —  
**Complex Analysis**  
**Prerequisite:** 10.001. Excluded: 10.1214.  

Analytic functions, Taylor and Laurent series, integrals. Cauchy's Theorem, residues, evaluation of certain real integrals.

10.121A Higher Pure Mathematics II —  
**Algebra**  
**Prerequisite:** 10.011 or 10.001 (DN). Excluded: 10.111A, 10.1111.  

*Entry to General Mathematics IA is allowed only with the permission of the Head of the School of Mathematics, and that permission will be given only to students who do not qualify to enter General Mathematics IB.  
**If a unit in this list is counted the unit above may not be counted.  
†Mathematics 10.031 is included for students desiring to attempt only one Level II Mathematics unit. If other Level II units in Pure Mathematics or Applied Mathematics are taken, 10.031 Mathematics will not be counted.  
‡Mathematics 10.032 is included for students desiring to attempt only one Level III Mathematics unit. If other Level III units in Pure Mathematics, Applied Mathematics or Theoretical Mechanics are taken, 10.032 Mathematics will not be counted.
10.1213 **Higher Pure Mathematics II — Multivariable Calculus**  
Prerequisite: 10.011 or 10.001 (DN). Excluded: 10.113.  
As for 10.113 but in greater depth.

10.1214 **Higher Pure Mathematics II — Complex Analysis**  
Prerequisite: 10.1213. Excluded: 10.114.  
As for 10.114 but in greater depth.

10.2111 **Applied Mathematics II — Vector Calculus**  
Prerequisite: 10.001. Excluded: 10.2211, 4.813.

Vector fields; divergence, gradient, curl of a vector; line, surface, and volume integrals. Gauss' and Stokes' theorems. Curvilinear coordinates.

10.2112 **Applied Mathematics II — Mathematical Methods for Differential Equations**  
Prerequisite: 10.001. Excluded: 10.2212, 4.813.

10.2211 **Higher Applied Mathematics II — Vector Analysis**  
Prerequisite: 10.011 or 10.001 (DN). Excluded: 10.2111.  
As for 10.2111 but in greater depth.

10.2212 **Higher Applied Mathematics II — Mathematical Methods for Differential Equations**  
Prerequisite: 10.2211. Excluded: 10.2112.  
As for 10.2112 but in greater depth.

10.301 **Statistics SA**  
Prerequisite: 10.001 or 10.021C. Excluded: 10.331, 10.311A, 10.311B, 10.321A, 10.321B, 4.5.101.

Probability, random variables, independence, binomial, Poisson and normal distributions, transformations to normality, estimation of mean and variance, confidence intervals, tests of hypotheses, contingency tables, two sample tests of location, simple and multiple linear regression, analysis of variance for simple models.

10.331 **Statistics SS**  

An introduction to the theory of probability, with finite, discrete and continuous sample spaces. The standard elementary univariate distributions; binomial, Poisson and normal; an introduction to multivariate distributions. Standard sampling distributions, including those of $\chi^2$, $t$ and $F$. Estimation by moments and maximum likelihood (including sampling variance formulae, and regression); confidence interval estimation. The standard tests of significance based on the above distributions, with a discussion of power where appropriate. An introduction to experimental design: fixed, random and mixed models, involving multiple comparisons and estimation of variance components.
Textile Engineering I

Mil illumination. Elements of strength of materials — tension, compression, shear, torsion and bending. Dynamics of rotary motion and mechanical power transmission. Industrial electricity.

Textile Engineering II

Textile Science I

Textile Science II

Textile Science III

Advanced Textile Chemistry

Advanced Textile Physics

(b) Varieties of macromolecules. Interactions with macromolecular structures. The physical properties of polymeric solids (including biopolymers). Absorption and the role of water in polymers.
13.313 Advanced Textile Engineering F L2
(a) Same as (a) in 13.233 Textile Physics.
(b) Heat and mass transfer. Conveying of gases, fluids and solids.

13.411 Project F T7
Students are required to carry out a research project and to submit a thesis describing the results of their investigations. It is usual for students to be allocated projects in areas related to the particular course strand they are studying.

The following examples are typical:

Textile Chemistry: Topics related to the dyeing and finishing of textiles and to the chemistry of fibres.

Textile Engineering: Engineering design work, some engineering aspect of textile processes, or some other topic of an engineering nature.

Textile Manufacture: A topic related to textile processing or a topic of a commercial nature, such as some aspect of marketing, management or economic planning as applied to the textile industry.

Textile Physics: The application of some aspects of physics to textile processing or to fibre, yarn or fabric structure and properties.

14.511 Accounting and Financial Management IB S1 or S2 LT4½
Prerequisite: 14.501.
Development of basic concepts introduced in 14.501 Accounting and Financial Management IA including management accounting and operations research, corporate reporting, business finance, system design, elementary computer programming and applications.

14.602 Information Systems IIA S1 or S2 L2T1
Prerequisites: 14.511 plus HSC Exam Percentile Range Required
2 unit Mathematics or 51-100
3 unit Mathematics or 21-100
4 unit Mathematics or 1-100
approved studies in computer science

Introduction of Information Systems in business and commerce; systems design concepts; the theory of modelling; feasibility studies; internal control and auditing. An introduction to programming.

School of Economics

School of Accountancy

Undergraduate Study

14.501 Accounting and Financial Management IA S1 or S2 LT4½
Prerequisite: Nil.
The basic concepts of financial model building and information systems, including the double-entry recording system, the accounting cycle, income measurement and financial reporting, and an introduction to basic elements of taxation and auditing.

Undergraduate Study

15.001 Microeconomics I S1 or S2 L2T1½
Prerequisites: HSC Exam Percentile Range Required
2 unit A English or 31-100
2 unit English or 21-100
3 unit English or 11-100

An introduction to micro-economic analysis and its application to contemporary policy issues. The indifference curve approach to consumer behaviour, income and substitution effects, market demand, consumer surplus. Isoquants, cost concepts, supply curves. Perfect and

15.002 Microeconomics II S1 L2T2
Prerequisite: 15.011 plus
HSC Exam Percentile
2 unit Mathematics or
3 unit Mathematics or
4 unit Mathematics
Range Required
51-100
21-100
1-100

Revealed preference theory of demand, index numbers and aggregation; externalities, time preference, consumer surplus and compensation concepts. Short and long-run costs, returns to scale, producer surplus and quasi-rents. Monopolistic competition, oligopoly, cartels, public enterprise. Investment criteria, benefit-cost analysis. Efficiency and equity trade-offs, microeconomic policy in a second best framework.

15.003 Macroeconomics III S1 L2T2
Prerequisite: 15.042.

Macroeconomic theory and policy, including an introduction to the theory of economic policy, the structure and dynamic characteristics of macro-models, recent developments in monetary theory and policy, theories of inflation and policy in a dynamic setting.

15.011 Macroeconomics I S1 or S2 L2T1½
Prerequisite: 15.001.
The economics of output, employment and inflation, including social accounting, consumption and investment functions, the Keynesian goods market model, supply and demand for money, interactions between the goods and money markets in equilibrium and disequilibrium situations, inflation and the balance of payments.

15.042 Macroeconomics II S2 L2T2
Prerequisite: 15.011 plus HSC results as for 15.002.

Extensions to the Keynesian model of income determination to include the government and overseas sectors and a more detailed examination of both demand and supply functions; money and financial institutions; an introduction to dynamic economics.

15.043 Marxian Political Economy S1 L2T1
Prerequisite: 15.011.
Varieties of political economy, Marx and the classics, the Marxian system, Marxian economics since Marx, Marx and socialist planning, Marxian analysis of current economic problems.

15.053 Economics of Developing Countries S2 L2T1
Prerequisite: 15.072 or 15.103 or 15.113.
The gap between the welfare of the rich and the poor nations. Earlier theories of development as a basis for an appreciation of the various economic and non-economic theories of underdevelopment; such as social and technological dualism, balanced and unbalanced growth, structural change and development. The general principles and techniques of development planning and their application in particular countries.

15.073 Natural and Environmental Resources Economics S2 L2T1
Prerequisite: 15.002 or 15.012 or 15.072.
An introduction to the concepts and issues in the management and evaluation of natural and environmental resources.

15.082 Labour Economics S1 L2T1
Prerequisite: Any Year II Economics subject.
The theory of the labour market and applications to the Australian situation, including labour supply and demand, with emphasis on structural changes in the labour force, and the effects of technology and migration; work-leisure preferences and job satisfaction; unemployment and underemployment; wage theory and practice, with reference to market forces, collective bargaining and government regulation; the Australian arbitration system and its interaction with other wage determinants; wage differentials.

15.093 Public Sector Economics S1 L2T1
Prerequisite: 15.002 or 15.072 with the approval of the Head of the Department of Economics.
Public goods and social issues, such as poverty, health, education, transport and conservation. Analysis of case studies employing cost-benefit analysis to evaluate public projects and examine economic, social and environmental impacts of investment projects. The pricing policies of public utilities.

15.103 International Economics S2 L2T1
Prerequisite: 15.002 or 15.012.

15.143 Microeconomics II S1 or S2 L2T2
Prerequisite: 15.002 or 15.012.
15.163 Industrial Organization and Policy S1 L2T1
Prerequisite: 15.002 or 15.012 or 15.072.

The structure of industry: interrelationships between the role of the business firm and industrial structure; multinational corporations; factors affecting size-structure and performance such as economies of scale; barriers to entry, vertical integration, diversification and mergers, patents, the development and transmission of technology; industrial policy in Australia with special reference to competition policy, foreign investment and mergers, and some specific industry policies (e.g. on motor vehicles, electronics, steel, petroleum).

15.501 Introduction to Industrial Relations S1 or S2 L2
Prerequisite: Nil.

For student enrolled in Faculties other than Commerce and Arts. It is designed to provide a practical introduction to important industrial relations concepts, issues and procedures. Topics covered include the origins, evolution and operation of the Australian system of industrial relations; the structure and role of trade unions and employer bodies; the function of industrial tribunals such as the Australian Conciliation and Arbitration Commission and the N.S.W. Industrial Commission; wages structure and determination; employment, unemployment and retraining, the nature and causes of strikes and other forms of industrial conflict; the processes and procedures for conflict resolution.

Where appropriate to class composition, particular attention is paid to individual industries.

15.601 Economic History IA — The Making of Modern Economic Society S1 or S2 L2T1½

Analysis of the forces that have determined the pattern and course of economic and social development in the twentieth century. Modern problems placed within a historical perspective including the relationship between economic growth, the emergence of the corporate economy, and the changing quality of life. The development of interdependence in modern economies in terms of the growth of big business, multinational enterprise, and changes in the distribution of income since the nineteenth century. Use of historical material as the basis of understanding of the background to the contemporary economic world.

15.611 Economic History IB — Australian Economic Development in the Twentieth Century S1 or S2 L2T1½
Prerequisite: 15.601.

The development of the Australian economy from the Long Boom and the deep depression at the end of the nineteenth century to the present day. Topics include: a general overview of Australian economic development and its main features; economic fluctuations and their consequences, especially the Great Depression of the 1930s; the rise of Australian economic institutions; changes in the philosophy of development and the role of the State; impact of war; migration and the development of the States; the growth of manufacturing and the creation of an industrial base; problems of the rural sector; and changes in the Australian standard of living. Throughout the course particular attention is given to Australia’s changing economic relations with other countries.
animals, and the complex organ systems they possess. The structure and function of these organs, as well as their coordination and control, examined in practical experiments to form the basis of lecture and tutorial programs.

Department of Industrial Engineering

Undergraduate Study

18.121 Production Management  F L3T0

Prerequisites: 10.031, 10.331.

Engineering Economy: Economic objectives of the firm. Economic measures of performance: net present value, annual equivalent value and the DCF rate of return (including the incremental rate of return) and their application in the selection and replacement of processes and equipment. The Use of Human and Physical Resources: Methods engineering, ergonomics, motion and time study, financial incentives, applications to machine controlled processes, work sampling and data collection. Plant location, factory layout. Production and Quality Control: Control of jobbing, repetitive batch and continuous production. Manufacturing organizations, functions, inter-relationships and information flow. Sampling techniques in quality control, control charts. Introduction to Inventory Control: Analysis of some engineering planning decisions. Introduction to Operational Research: The formation and optimization of mathematical models of industrial processes. The development of decision rules. Some techniques of operational research and applications, eg mathematical programming, queueing theory, inventory models, simulation.

18.131 Operations Research

Introduction to Operational Research: The formation and optimization of mathematical models of industrial processes. The development of decision rules. Some techniques of operational research and applications, eg mathematical programming, queueing theory, inventory models, simulation.

18.551 Operations Research  F L2T1

Prerequisites: either 5.071 and 18.021 or 10.031, 10.331 and 18.121.

The formulating and optimization of mathematical models. The development of decision rules. Some techniques of operations research such as mathematical programming, queueing theory, inventory models, replacement and reliability models, and simulation will be introduced. These techniques will be applied to situations drawn from industrial fields, eg production planning and inventory control. Practical problems of data collection, problem formulation and analysis will be included.

Field Work of up to two days is a compulsory part of the subject.

25.212 Earth Environments I S1 L3T3

Prerequisite: 25.120.

Field Work of up to five days is a compulsory part of the subject.

25.223 Earth Physics S2 L2T4

Global Geophysics: Principles of gravity, geomagnetism, palaeomagnetism, geothermy and seismology and their relation to shape, internal constitution, dynamic processes and major tectonic features of the earth.

Exploration Geophysics: Physical properties of rocks and soils. An introduction to electrical, electromagnetic, seismic, gravity, magnetic and radiometric methods of geophysical exploration. Application of these methods in the search for mineral deposits, petroleum, coal and groundwater and in civil and mining engineering projects.

Field Work of one day is a compulsory part of the subject.

25.221 Earth Materials II S2 L3T3

Prerequisite: 25.211.

Sedimentary Petrology: The influence of transportation, deposition and diagenesis on the composition, texture and structure of detrital sedimentary rocks. The chemically formed sedimentary rocks including the phosphates, zeolites, evaporites, ferruginous and siliceous deposits.

Field Work of up to eight days is a compulsory part of the subject.
25.321 Earth Materials IV  S2 L3T3
Prerequisite: 25.311.
Clay Mineralogy: The structure and properties of the clay mineral groups including the kaolinites, illites, smectites, chlorites, mixed layered and fibrous clay minerals. Techniques for the identification of the clay minerals. Clay-water systems and ion exchange. Chemical weathering and the origin of the clay minerals.
Field Work of up to six days is a compulsory part of the subject.

25.312 Earth Environments II  S1 L3T3
Prerequisite: 25.212. Co-requisite: 25.326.
Stratigraphy: Biological and physical methods of correlation. Definition of international stratigraphic boundaries, stratotypes and reference points. The development of the Precambrian craton of Australia. The geological evolution of eastern Australia, particularly the late Palaeozoic and Mesozoic history of the Tasman Mobile Belt. Intracratonic basins of western and southern Australia and the effects of the dispersal of Gondwanaland. Geological evolution of the northern margin of the Australian plate, particularly the Mesozoic to Recent of Papua-New Guinea. Stratigraphic and structural evolution of autacogens.

25.313 Exploration and Data Processing  S1 L4T2
Prerequisite: 25.223.
Exploration Geophysics: The practice and theory of geophysics as a basic tool of geological exploration with applications in areas of energy, mineral and ground-water resources and engineering projects.
Mathematical Geology: An introduction to develop proficiency in the acquisition, display and analysis of geological data utilizing digital computer processing. Elementary descriptive and inferential statistics and sampling. Fortran programming language (including hands-on computing experience). Analytical methods of mathematical geology including time series analysis, Markov Chain analysis, map analysis and multivariate identification and classification techniques. A practical approach is adopted throughout whereby the student makes extensive use of a library of programs implemented on the University's CDC multi-mainframe Cyber 72/171 installation for processing and interpretation of real data.
Field Work of up to five days is a compulsory part of the subject.

25.314 Mineral and Energy Resources I  S1 L3T3
Prerequisite: 25.221. Co-requisite: 25.311.
Metallurgical Resources: Classification and origin of ore deposits, geochemical processes, research methods. Orthomorphic, hydrothermal, porphyry, volcanic-sedimentary, Mississippi Valley type, chromium, iron, manganese ores, residual and mechanical ores. Introduction to mineral exploration. Laboratory study of hand specimens, thin sections and polished sections of various ore types; study of selected mining areas representing various genetic types of ore.
Economic Mineralogy: Nature of reflected light. Orthoscopic and conoscopic rotation, dispersion phenomena. Microhardness and reflectivity, etch tests, XRD and microprobe techniques. Ore textures and their interpretation. Phase relations and paragenesis of ore minerals. Practical work in optical properties of ore minerals, hardness and reflectivity measurements; study of selected ores and ore minerals under the microscope including textural studies.
Field Work of up to four days is a compulsory part of the subject.

25.324 Mineral and Energy Resources II  S2 L3T3
Prerequisite: 25.312.
Field Work of up to ten days is a compulsory part of the subject.

25.325 Engineering and Environmental Geology  S2 L4T2

Field Work of up to ten days is a compulsory part of the subject.

25.326 Geological Techniques
S2 L3 T3
Prerequisites: 25.212, 25.311.

Field Work of up to ten days is a compulsory part of the subject.

25.411 Resource Geology

Geophysics: The planning of geophysical surveys within the context of overall exploration and engineering development programs. Geological interpretation of geophysical data and discussion of selected case studies.

Mineral Exploration: Use of geology in mineral exploration and area selection; principles of exploration geochemistry; radiometric and remote sensing methods, exploration drilling; ore reserve estimation; exploration ground tenure in New South Wales.

World Evolution: Seminars on the world's geology from varied aspects.

25.412 Mineral and Energy Resources

Students taking this option are expected to show preference for either mineral or energy resources. Projects, lectures, tutorials and seminars are designed accordingly.

Mineral Resources: A major part is a student field/laboratory research project in some aspect of mineral resources. This may be a general geological project, or a specialised mineral exploration project, eg, geochemical, geophysical, mineralogical, etc. During the first session, only there are additional lectures/seminars that follow on from 25.411 to give more detailed appreciation of various aspects of mineral resources and include exploration management, mine evaluation, exploration geochemistry, exploration geophysics and mathematical geology. The content and extent of tuition in these subjects varies from year to year according to student requirements.

Energy Resources: A major section consists of a field mapping project in a sedimentary terrain. Depending on students' requisites, specialised field/laboratory studies are arranged in sedimentology, macro- and micropalaeontology, palynology, mathematical geology, geophysics and well-log analysis. Where possible, projects are directly related to problems of coal and petroleum occurrence. During the first session attendance is expected at lectures/seminars described in the Mineral Resources section above and of common interest to understanding evaluation and exploitation of energy resources.

25.413 Engineering and Environmental Resources

A major part is a field/laboratory research project in some aspect of engineering or environmental geology. During the first session additional lectures are given on: foundation geology; construction materials; rock weathering and fabric analysis applications to engineering problems; site investigations; practical construction geology; soil slope stability analyses and stabilization; geomechanical principles; engineering geophysical techniques; engineering geological case histories; and advanced geological surveying applied to engineering works.

Old course 3000 subjects

25.013 Geology IIIA
Prerequisites: 2.121, 2.131, 25.012, 25.022.

Laboratory: Hand specimen study of ores and associated features; introductory mineragraphy.

Mineralogy and Petrology

Sedimentary Petrology: The influence of transportation, deposition and diageneis on the composition, texture and structure of detrital sedimentary rocks including limestones. The classification of the detrital sedimentary rocks. The chemically formed sedimentary rocks including the phosphates, zeolites, evaporites, ferruginous and siliceous deposits. Introduction to coal petrology.

25.023 Geology IIIB
Prerequisites: 2.121, 2.131, 25.012, 25.022.

Geophysics

Global Geophysics: The physics, shape, structure and constitution of the earth seismology, gravity, geology, geothermy, geomagnetism, palaeomagnetism, geo-electricity and geochronology. Geotectonics and
geodynamics, geophysical expression and relation to geology and
geochemistry. Exploration Geophysics: Covering the following methods
seismic, electrical, electromagnetic, gravity, magnetic and radioactive
with applications for mining, petroleum, engineering, hydrology and well
logging.

Stratigraphy and Palaeontology

Stratigraphy: Theoretical stratigraphy including stratigraphic
classification, reference points and stratotypes, correlation by fossil
zones and physical methods. Continental margins, mobile zones, with
a detailed study of the New England Fold Belt. Comparison between
mobile zones and intracratonic basins. Intracratonic basins of Western
and Southern Australia and effects of the dispersal of Gondwanaland.
Mesozoic to Recent sedimentation in Papua New Guinea. Stratigraphic
and structural development of aulacogens. Palaeontology: Principles of
systematics. Theory of evolution. Functional morphology and
biostratigraphic significance of arthropods, echinoderms and
graptolites. Introduction to Palaeobotany. Practical applications of
palaeontology.

Field Mapping

Geological mapping in a complicated geological terrain with emphasis
on stratigraphical and structural interpretation. Geological report writing
and cartography.

25.033 Geology IIIIC

Mathematical Geology and Geological Surveying

Mathematical Geology: Mathematical techniques and concepts which
may be applied to the analysis of geological data. Measurement scale,
probability axioms, frequency analysis and basic geostatistics. Sampling
theory and techniques. FORTRAN computer programming forms a
substantial part of the course with programming exercises in the analysis
of map information and other geological data. Quantitative map
interpretation with emphasis on trend surface analysis and automatic
contouring techniques.

Geological Surveying: Levels, tacheometers and theodolites. Field
techniques. Precision of angular measurements. Stadia surveying.
Levelling. Field computations. Topographic maps.

Geochemistry and Petrology

Geochemistry: Some modern methods of rock and mineral analysis.
Accuracy, precision and quality of geochemical data. The distribution of
elements in terrestrial rocks. Norms.

Clay Mineralogy: The structures and properties of the clay mineral
groups including the kandites, illites, smectites, chlorites, mixed layered
and fibrous clay minerals. Techniques for the identification of the clay
minerals. Clay-water systems and ion exchange. Chemical weathering
and the origin of the clay minerals.

Isograds. Mineral assemblages as geobarometers and geotherm-
ometers. Fluids in metamorphism. Fabric. Relationships of deformation
and recrystallization. Metamorphic petrology of Australia.

Practice: Macroscopic and microscopic study of igneous and
metamorphic rocks.

Advanced Structural Geology

Analysis of structural elements at the microscopic, mesoscopic and
macroscopic scales. Modern methods of analysis, especially petrofabric
analysis and A.V.A. Detailed studies of the analysis of metamorphic
terrains, e.g. Otago Schists; Cooma Complex.

Sedimentary Basin Analysis and Geology of Hydrocarbons

Basin evolution. Analysis of sedimentary and palaeoecological systems
in fluvial deltaic, nearshore and deepwater environments. Structural
systems formed by tensional, compressional and strike-slip tectonics.
Geochemistry of hydrocarbons and formation fluids. Factors critical to
occurrence of oil, gas and coal. Typical Australian and overseas
occurrences. Techniques of exploration, assessment and development
of reserves.

Field Mapping and Remote Sensing

Field Mapping: Field mapping in a complex geological terrain, with
concentration on the structural geology of deformed and metamor-
phosed sequences. Writing geological reports, and drafting geological
maps.

Remote Sensing: Exercises in the combined usage of air photos and
ERTS imagery for the interpretation of regional and structural geology.

In addition, one of the following topics are selected after consultation
with the Head of School:

1. Economic Geology B, Mineragraphy, Experimental Petrology

Economic Geology B: Detailed study of selected major deposits
representing particular types of mineralization — geological setting,
petrology, mineralogy and genetic aspects. Experimental work in ore
genesis — isotope studies, trace elements, phase equilibria, inclusions
in minerals.

Mineragraphy: Reflected light optics: orthoscopic and conoscopic
rotation phenomena, determinative methods, textural interpretation of
ores.

Experimental Petrology: Theoretical Petrology. Phase diagrams. Ap-
lication of thermodynamics to petrological problems. Experimental
petrology.

Laboratory: Economic Geology and Mineragraphy: Study of regional
setting, current research, petrology and mineragraphy of selected
deposits dealt with in lectures.

2. Micropalaeontology

Morphology, stratigraphic distribution and significance of the principal
microfossil groups: foraminifera, ostracoda, conodonts, spores and
pollen, dinoflagellates, coccoliths and chitinozoa. Extraction techniques.

3. Surficial Geology

Processes — weathering and landforms, mass movement, gully and
sheet erosion. Fluvial processes and drainage development. Aeolian,
glacial, periglacial and coastal processes. Neotectonics. Soil nd surficial
sediment evaluation — pedological processes, gilgai formation. Soil
fabric analysis at all scales. Principles of surficial stratigraphy.

Map analysis and preparation — contour patterns of landforms;
geological and geomorphic interpretation of topographic maps. Soil
classification, soil map preparation, lithogeomorphic maps. Problems of
mapping Quaternary geology.

Quaternary geology — methods of dating, sea level change, glacial
sequences, surficial geology of non-glaciated areas of Australia —
especially the Riverine Plain. Quaternary sequences in Canada and
Europe.
25.014 Geology IV: Advanced Applied Geology

Prerequisites: 25.013, 25.023, 25.033.

Computer Applications in Geology: Advanced methods in mathematical geology, including time series analysis, Markov chain analysis, deterministic simulation of sedimentary processes such as delta techniques, factor analysis as applied to facies delineation. A major section of the course is devoted to processing geological data using library programs available on the computer.

Exploration Geophysics: An introductory course in the practice, theory and interpretation of geophysical methods of exploration in petroleum, mineral deposits and engineering geology, extending beyond Exploration Geophysics of Geology III.

Seminar: A weekly participatory activity.

25.024 Geology IV: Project

Prerequisites: 25.013, 25.023, 25.033.

An individual field assignment carried out under supervision and consisting essentially of geological mapping plus supporting laboratory work.

25.034 Geology IV: Engineering Geology

Prerequisites: 25.013, 25.023, 25.033.

Introductory Geomechanics: Engineering classification behaviour, and tests of rocks and soils. Stress and strain: elasticity and plasticity, stress distribution in virgin rock masses, about excavations, and beneath foundations.

Environmental Geology: Geology in urban development and regional planning. Terrain evaluation, with special reference to beaches. Rehabilitation.

Site and Material Investigations: Methods and field tests. Petrography, physical and chemical properties of concrete aggregates, road and earth construction materials. Quarry sites and borrow areas.

25.044 Geology IV: Mineral Exploration

Geochemistry: Sampling and sample preparation. Principles of the analysis of silicate rocks by X-ray fluorescence spectrometry; accuracy and precision. Acquisition and interpretation of geochemical data. A field and laboratory project is an essential; part of the course.

Students taking this option are required to take 7.023.

25.054 Geology IV: Sedimentary Basins

Prerequisites: 25.013, 25.023, 25.033.

Lectures, tutorials and a laboratory project in Advanced Sedimentology, Palaeontology, Palaeoecology and Petroleum Geology

25.064 Geology IV: Applied Geophysics

Prerequisites: 25.013, 25.023, 25.033.

Exploration and applied geophysics, its practice, theory and interpretation in petroleum, mining and engineering exploration and in applied geology.

25.074 Special Project

A field-laboratory project related to the option selected by the student.

Other Geology subjects

25.332 Geology for Geomorphologists and Pedologists

S2 L2T3

Prerequisites: 25.211, 25.221, 25.212.

Clay Mineralogy: The structure and properties of the clay groups, including the kaolinites, illites, smectites, chlorites, mixed layered and fibrous clay minerals. Techniques for the identification of the clay minerals. Clay-water systems and ion exchange. Chemical weathering and the origin of the clay minerals.

25.520 Geology for Engineers I

Outline of the main branches of geology and their application to Mining Engineering. Introduction to geomorphological processes and resulting landscapes. Fundamentals of the atomic structure of minerals including major rock forming minerals and ore minerals, their crystal symmetry, their physical and chemical properties. Igneous Rocks: formation,

Practical Work: Laboratory work consists of exercises related to the Lecture course: geological mapping including structure contour problems. Study of minerals and rocks in hand specimens.

Field Tutorials: Two field tutorials are conducted at which attendance is compulsory. Satisfactory reports must be submitted.

Note: Total hours: 56. The course is divided equally between lectures and laboratory work. Field Tutorial hours are additional.

25.521 Geology for Mining Engineers II

Structural Geology: Elements of structural geology. Stereographic projection and fracture analysis applied to mining operations.

Geology of Fuels: Origin of coal, oil and natural gas. Stratigraphic and structural considerations of oil and coalfields.

Hydrogeology: Principles of hydrogeology. Transmission of ground water in rocks and soils applied to mining operations.

Ore Deposits: Mineralogy of industrially important metallic and non-metallic minerals. Theories of ore formation including secondary enrichment processes.

Exploration Procedures: Theories and application of exploration techniques in mineral and coalfield exploration including geological and geophysical methods.

Field Tutorial: A geology field excursion is held at the end of Session 1. Attendance is compulsory.

25.532 Advanced Engineering Geology

Prerequisite or co-requisite: 8.272.

The fabric of rocks at various scales; fabric analysis at the mesoscopic scales; the influence of anisotropy on rock properties; engineering applications. The role of geological structure in determining the stability of slopes and excavations; probability analysis of structures in slope studies; case histories. Petrology of rock and earth construction materials; fabric changes with weathering; soil fabrics; engineering aspects, and engineering classification of weathered rocks.

25.541 Mineralogy (Applied Science Course)

Crystallography, crystalline state and crystal growth of minerals. Fundamentals of the atomic structure of minerals, with examples of Bravais lattices and introduction to space lattice group theory. Physical properties of crystals; cleavage, gliding, secondary twinning, elasticity. Elements of crystal optics in polarized light. Classification, descriptive mineralogy and occurrence of primary and secondary minerals with special emphasis on economic metallic and non-metallic minerals. Introduction to petrology. Mode of formation of minerals and ores in the igneous, sedimentary and metamorphic cycles. Examples of principal types of economic mineral deposits, their mode of formation, paragenesis, textures and intergrowths. Elements of fuel geology, construction and refractory materials. Laboratory: Crystallography — Examination of crystals and crystal models for symmetry. Stereographic projection of crystals. Optical Mineralogy — Examination of minerals and rocks in transmitted and incident light using the polarizing microscope. Determination of refractive indices of crystal fragments by the immersion method. Descriptive and Determinative Mineralogy — Macroscopic examination of common minerals with emphasis on economic minerals. Study of texture and intergrowths of common mineral parageneses including the principal rock types in which they occur.

25.112R Geology for Mining Engineers IIA

Prerequisite: 25.520.

Laboratory Work: Examination of rocks in hand specimen and thin section. Examination of hand specimens of economic minerals. Mineragraphic examination of ore mineral suites. Study of geological maps of economic mineral deposits.

25.122R Geology for Mining Engineers IIB

Prerequisite: 25.520.

Laboratory Work: Exercises in structural analysis including the analysis of structure of an ore deposit. Hand specimen examination of non-metallic economic minerals. Exercises in groundwater hydrology.

25.201R Mineragraphic Laboratory Work

Comprises the mineralogy and Introductory Mineragraphy topics from 25.112R Geology for Mining Engineers IIA.

25.301R Geoscience IIIA

Stratigraphy, palaeontology, oceanography.
25.302G  Geoscience IIIB  F 3 hpw
X-ray crystallography, mineralogy, metamorphic petrology, structural geology, tectonics.

25.303R  Geoscience IIIC  F 3 hpw
Igneous petrology, geochemistry, clay mineralogy, sedimentary petrology.

25.304R  Geoscience IIID  F 3 hpw
Economic geology, mathematical geology, geophysics.

Servicing Subjects

25.621  Marine Geology I
25.622  Hydrological and Coastal Surveying
25.631  Marine Geology II
25.632  Estuarine Geology
25.634  Marine Mineral Deposits and Exploration
25.635  Marine Resources

Graduate Study

25.335G  Applied Geophysics Project Assignment
A project involving interpretation of geophysical field data which may be collected by the students.

25.402G  Hydrogeology  S1 L1½T1½
Surface and sub-surface methods of geological and geophysical investigation; ground water exploration of confined and unconfined aquifers. Geological and hydraulic characteristics of rocks; aquifer boundaries, groundwater storage and quality. Hydraulics of wells, hydrogeological systems analysis, including computer methods, mapping techniques and groundwater resources evaluation. Hydrogeology of arid and semi-arid zones. Case history studies of groundwater fields.

25.403G  Project (Engineering Geology Graduate Course)  S2
The project is a research investigation consisting of field and laboratory work in any of the disciplines. Engineering Geology, Hydrogeology, Environmental Geology.

25.404G  Environmental Geology  S1 L1½T1½

25.405G  Engineering Geophysics  S1 L2T1
Shallow seismic refraction: elastic theory, sources and equipment. Determination of fracture index, rippability. Applications to damsites, highways, depth of weathering, material quality. Seismic reflection, Sparker and boomr profiling, side scan sonar with application to coastal harbours, sewer outfalls. Electrical methods: direct current geoelectric theory, resistivity sounding and profiling with applications to determination to bedrock depth, location of water table, clay filled dykes, shear zones. Magnetic, electromagnetic and gravity methods as applied; to engineering problems. Geophysical well logging: resistivity, self-potential, gamma ray and sonic logs applied to determination of rock properties and location of clay-filled joints.

Field tutorials: Short field tutorials are included.

25.406G  Geological Basis of Geomechanics  S1 L2T1

25.407G  Geopollution Management  S1 L1½T1½
25.408G  Engineering Geology  S1 L2T1
Co-requisite: 25.406G.
Several field tutorials form part of this subject.

25.409G  Foundation Geology  S1 L1½T1½
Co-requisite: 25.406G.

25.410G  Coastal Environmental Geology  S1 L1½T1½

25.800G  Seminar  S1* Sem 2
A weekly seminar to present and discuss student papers on exploration topics: speakers from industry are invited to attend and present papers from time to time.

25.801G  Geology in Exploration I  S1* L4
The development of conceptual models in mineral exploration and formulation of exploration programs. Consideration of significant guides to ore including structure, lithology, alteration and gossans.

25.802G  General Introduction to Exploration Geophysics  S1* L3
A basic introduction to the theory and practice of exploration geophysics, including treatment of applications and limitations of the main methods of seismic, electric, electromagnetic, gravity, magnetic and radiometric methods to geological problems in hydrocarbon, coal, ground water, mineral and engineering exploration. Treatment includes fundamental aspects of the method and case histories illustrating applications areas.
An integrated, geological, geophysical and geochemical field tutorial survey camp of seven days' duration is an integral part of this course.

25.803G  Introduction to Exploration Geochemistry  S1* L3
Basic principles of exploration geochemistry and the role of exploration geochemistry in the generalized exploration sequence. Principles and problems of anomaly recognition. Examples of main applications.

25.804G  Introduction to Data Processing and Interpretation  S1* L3
FORTRAN and computer programming; use of terminal facilities. Basic data storage and retrieval. Simple interpretative procedures for exploration data.

25.805G  Resource Economics I  S1* L1
Interdependence of political, economic and technical factors in mineral resource supplies. Examination of the main factors in reserves and resources estimation.

25.807G  Exploration Geophysics  S1* L6
An introduction to the theory and practices of all geophysical methods in exploration for energy, minerals, groundwater and engineering applications. These will include seismic reflections, seismic refraction, electrical, electro-magnetic, magnetic, gravity and radio-metric methods of exploration, including the planning and conduct of field surveys for general and particular applications, and the theory and practice of the interpretation of geophysical results in terms of geological problems, conditions and occurrences.

25.808G  Exploration Project  S1* T6
Interpretation of exploration case-history data designed to familiarize students with the type of information normally required by exploration companies.

25.811G  Advanced Geology in Exploration  S1† L4
Definition of the geological environment and search techniques for major categories of mineral deposits including porphyry coppers, carbonate- and shale-hosted lead-zinc ores, volcanogenic massive sulphide ores, vein and sandstone uranium. Geological aspects of reserve estimation. Exploration case histories.
* Weeks 1-7 only.
† Weeks 8-14 only.
25.815G Resource Economics II  
S1†  L2

Distribution, production, consumption and trade in minerals. Supply adequacy and resource assessments and projected requirements. Review of the Australian minerals industry in a global context.

25.816G Remote Sensing  
S1†  L4

The physics of various remote sensing techniques; interpretation of conventional aerial photography in exploration; Infrared remote sensing techniques; side looking airborne radar; theory and applications of Landsat imagery; enhancement techniques for satellite imagery; interpretation of Landsat photographic products and application to several case history areas.

Integration of remote sensing information with the overall data base as applied to exploration.

25.817G Mining Law and Exploration Management  
S1†  L1

Mining law in Australia with special reference to land tenure and lease acquisition; organization and management of exploration programs.

25.818G Exploration Project  
S1†  T6

Design and costing of exploration program by students. This may be based on simulated conditions or actual situations.

25.819G Field-Laboratory Project  
S2

An individual exploration project that requires the student to acquire field and laboratory data on geological, geochemical and geophysical aspects of an actual exploration problem. As far as possible the project should be designed in consultation with the exploration industry. A report is required.

25.821G Geology in Exploration II  
S1†  L2

Specialized search techniques for selected types of metallic ores, with appropriate case histories.

25.823G Advanced Exploration Geochemistry  
S1†  L2T6

Detailed consideration of the main techniques with emphasis on soil, drainage and rock surveys. All applications and problems will be examined on the basis of case-histories of actual surveys. Special consideration is given to problems of applications under Australian conditions.

25.824G Advanced Data Processing and Interpretation  
S1†  L2T2

Advanced concepts of data storage and retrieval; problems of display of geochemical data; multi-variate statistical data interpretation. Students are encouraged to supply their own data sets for processing.

25.827G Laboratory Methods  
S1†  L1T3

Instruction in the main techniques of sample preparation and instrumental analysis appropriate to exploration geochemistry. Practical experience with AAS and XRF. Students are encouraged to supply their own samples.

25.828G Exploration Project  
S1†  T6

Interpretation of exploration data from geochemical surveys; this may be based on data from actual surveys, or data generated by the students themselves.

25.829G Field-Laboratory Project  
S2

An individual research project designed to contribute to the solution of a practical exploration problem; as far as possible the project should be chosen in consultation with the exploration industry to ensure relevancy to current exploration problems. In general the project involves collection of field data and samples, chemical analysis of samples, and interpretation of the results. A report is required.

25.832G Advanced Exploration Geophysics  
S1†  L16

An extension of, and considerable advanced treatment of the subject matter in 25.807G, in the theory and practice of field and interpretational procedures in all methods and aspects of exploration geophysics, including instrumentation, manual and electronic data processing and interpretation. Specific applications areas for prominent geophysical exploration techniques in the solution of relevant geological problems, are treated in detail in both field and theoretical aspects of the methods.

*Weeks 1-7 only.
†Weeks 8-14 only.
25.839G Field-Laboratory Project  S2
Exploration geophysical project on one or more topics of relevance in energy, water, mineral or engineering exploration. Includes tutorial sessions and seminars on relevant topics of geophysical/geological/geochemistry exploration.

25.840G Seminar  S1† Sem2
A weekly joint seminar of Mineral Exploration, Exploration Geochemistry, and Exploration Geophysics students who present papers on aspects of their own particular specialization. Outside speakers from industry and government organizations are invited to participate in the seminars from time to time.

A systematic introduction to physical geography as a basis for applied studies.

27.133 Pedology  S2 L2T3
Methodology of pedogenic studies and the application of these studies to the understanding of soil-landform relationships. Soil physical and chemical properties and their interrelationships, emphasizing clay-mineral structure and behavior, soil solution chemistry, soil water movement and the application of these properties to elements of soil mechanics. Soil properties in natural, rural and urban landscapes, including assessment of soil fertility, swelling characteristics, dispersibility, erodibility and aggregate stability. Laboratory analysis of soil physical and chemical characteristics with emphasis on properties associated with land capability assessment. Statistical analysis of soil data and its application to mapping.

27.143 Biogeography  S1 L2T3

27.153 Climatology  S2 L2T3

†Weeks 8-14 only.
27.163 Methods in Physical Geography F L1T1
Research design and data sources for studies in physical geography. Quantitative methods having application over several areas in physical geography, including forms of multivariate analysis, time series analysis, use of stochastic models including Markov applications, numeric taxonomic methods and simulation. Laboratory work includes use of CYBER and HP30 facilities. In Session 2 students undertake a project in their specialist areas based upon an application of one of the basic methodologies studied in Session 1.

27.172 Environmental Measurements F L2T4
Sampling strategies and survey methods for the collection of environmental data. Data analyses using laboratory and statistical methods. The collection and analyses of weather and climatic data. The maintenance of meteorological stations. Methods of field surveying and instrumentation for the study of geomorphologic and hydrologic processes. Drainage basin morphology, dynamics and function, including controls on run-off and sediment transport. The measurement of soil physical and chemical properties in the field and laboratory with special reference to plant growth and hydro-geomorphic parameters. The use of soil data in classification and mapping schemes. Measurement and description of vegetation. Vegetation survey, sampling and species abundance measure. Monitoring energy and nutrient flow and the effects of man on ecosystems.

27.173 Remote Sensing Applications† S2 L1T2
Principles and technical aspects of remote sensing. Forms of available imagery, their utility and facilities for their interpretation. Application of remote sensing for the assessment and mapping of land properties, resources and land use. Applications in resource and environmental management.

27.183 Geomorphology S1 L2T3

27.193 Environmental Impact Assessment S1 L1½
Rationale and basic objectives: standardized types of Environmental Impact Assessment (EIA), including Matrix Approach; adopted methods of EIA in NSW and other Australian states. Frequently used assessment techniques and their limitations: meteorological, hydrological, biological, socio-economic. Environmental decision making and planning under conditions of uncertainty. Local case studies exemplifying various techniques and issues. Trends, changes and likely future developments in EIA. Practical exercises representing components of typical EIAs.

27.194 Assessment and Management of Physical and Biological Resources S1 L6T6
A core of study relating to methods of assessment of resources and of natural and man-made environments; assessment of land capability and conservation management; evaluation of risk from natural hazards; application of remote sensing for mapping and assessing land, water and biological resources; investigational procedures relating to community and governmental perception and response. This core is supplemented by study in two of the following areas, chosen as to suit the project:

2. Soils Methods of classifying and mapping soils. Movement of water and nutrients through soils and problems of physical and chemical instability with differing land use. Soil properties in relation to the stability of natural or introduced ecosystems.

27.504 Projects in Applied Geography
Biogeography and Bioclimatology: study of the vegetation in an area, and detailed consideration of a problem arising from this survey, preferably with an applied aspect, or a study of the climate of some well defined plant or animal habitat as related to characteristics of the vegetative cover and substrate. Economic Geography: a problem in applied economic geography involving experimental design, the acquisition and manipulation of field data, and the presentation of a report. Geomorphology and pedology: an area study introducing soils-landscape relationships in a dynamic or chronologic sense; or a systematic study which may be primarily geomorphic or pedologic, but with some interdisciplinary aspect.
To include a field element and a supporting laboratory program.

27.514 Practical Applications in Geography S2 T3
Seminars with practitioners in the fields of urban and regional analysis and environmental studies, including: environmental impact statements; research proposals; report writing; the roles of government agencies and consultants; and budgeting for research projects.
†Offered subject to availability of staff.
27.611 Applied Economic Geography I  F L2T4/L2T1

Prerequisite:

HSC Exam Percentile
Range Required

2 unit Geography
71-100

or

3 unit Geography
31-100

or

2 unit Economics
71-100

or

3 unit Economics
31-100

or

2 unit Mathematics
71-100

or

3 unit Mathematics
31-100

or

4 unit Mathematics
11-100

Emphasis is on basic concepts, themes and issues in economic geography. Topics include: spatial interaction and analysis of movement patterns; location principles, the organization of settlement patterns and the space economy; behavioural and decision-making processes. Australian case studies are stressed. Laboratory classes deal with handling and presentation of data in economic geography.

27.612 Applied Economic Geography IIA  S1 L2T4

The exploration of concepts relating to the city as a complex system with emphasis on spatial structure and processes and change in the spatial organisation of urban areas. Particular emphasis is on industrial location, residential development, population distributions, and service provision.

27.613 Applied Economic Geography IIIA  S1 L2T2

Selected topics in applied economic geography with particular reference to urban and regional analysis and planning.

27.622 Applied Economic Geography IIB  S2 L2T4

Theoretical principles underlying the location of the firm and the spatial organization of land use are emphasized. Topics include: factor costs and the location problem; demand, scale and agglomeration; rent theory and location patterns; location decisions under conditions of uncertainty; linear models in location analysis.

27.623 Applied Economic Geography IIIB  S2 L2T2

Selected topics in applied economic geography with particular reference to the spatial implications of economic, social, and technological change.

27.624 Geographic Thought and Perspectives  S1 T3

Aspects of social science theory and philosophy as they relate to the development of human landscapes and as they enter into planning and policy making. Themes to include: The persistent utopian element; utilitarianism and positivist economic geography; conflict approaches; value-critical stances; the political economy critique; participation, advocacy and action-research; humanistic and welfare approaches; ideology and planning; theories of the state and the basis for intervention.

27.631 Geographic Data Analysis I  S2 L1T3

Emphasis is on a variety of methods for measuring spatial associations and relationships within a hypothesis-testing framework. Laboratory work is based on the use of S.P.S.S. procedures.

27.632 Geographic Data Analysis II  F L1T2

Focus is on inferential problems in the analysis of location patterns and the application of multivariate methods in economic geography, particularly multiple regression and factor analysis. Laboratory work is based on the use of the CYBER and FORTRAN language with particular reference to geographical information systems.

27.633 Geographic Data Analysis III  F L2T4

Principles of research design; field survey methods; numerical taxonomy; non-metric measurement techniques; multivariate methods. Introduction to additional computer software. Student projects and development of Year 4 thesis topics.

27.642 Mathematical Methods for Spatial Analysis  F L1T2

The application of selected mathematics to spatial problems including: Algebra of space and principles of system description using concepts of co-ordinate geometry; quadrat analysis and network theory; matrix algebra and the use of matrices in spatial analysis; differential and integral calculus in modelling geographic systems, optimization methods — constraint maximization; algorithmic methods including linear programming; stochastic processes.

27.644 Seminars in Applied Geography  S1 T4

Seminars on selected topics relating to problems of rural areas; urban land-use; spatial activity systems; and regional problems and planning.

27.652 Geographic Information Systems  S2 L2T1

An introduction to source material and published statistics of relevance to Economic Geographers; problems of geocoding and spatial identifiers; coding information and data banks; and automated cartography. Project work in the development of information systems for monitoring spatial change.

27.662 Urban and Regional Systems  S1 L2T2

Focus is on processes of change in urban and regional systems. Topics include: the spatial distribution of economic activities; the economic structure of cities and regions; regional linkages and the transmission of
economic change; input-output analysis; urban and regional growth and decline; concentration and dispersion of economic activities; regional disparities; policy issues in urban and regional development. Laboratory classes include methods of urban and regional analysis and an introduction to regional forecasting.

27.713 Marketing Geography* S2 L2T2

Spatial reality as a result of consumer and producer decisions. The relationship between consumer spatial behaviour and the pattern and structure of marketing establishments. Organisation and operation of the marketing function with emphasis upon the pattern of consumer oriented enterprises and the structure of market areas in intra-urban areas. Spatial behaviour of consumers including search and decision processes. Workshop seminars on analytical techniques and issues raised in lectures.

27.723 Transport Geography* S2 L2T2

The analysis of the transportation system in terms of its relationship with economic and geographical indicators. Focus is on network analysis, trip generation models, freight movement, transport impact studies and the transport energy problem. Lectures are accompanied by seminars which stress the consideration of major problem areas in transportation in Australia.

27.733 Regional Policy and Planning* S1 L2T2

Regional forecasting and techniques for evaluating regional plans are emphasised. Topics include: Regional information systems and budgets, exploratory and normative forecasting methods; time series projections, integrated forecasting models; cost-benefit analysis; planning balance sheets, goals — achievement matrix methods of evaluation; reviews of plans and programs for regional development in Australia. Lectures are accompanied by workshop sessions which concentrate on methodology.

27.743 Regional Population Analysis* S1 L2T2

The primary emphasis is on regional population estimation and forecasting with reference to Australian conditions and the use of Australian data. The secondary emphasis is estimation for regions in adjacent Third World countries. The population forecasting is handled within the framework of demographic theory and component analysis; migration analysis is given particular attention because of the importance of mobility in Australia. The derivation of regional and local social indicators in the context of population change and service provision in Australia.

27.753 Social Welfare and Urban Development* S1 L2T2

A consideration of welfare aspects of urban development, including: Social policies and urban structure; social costs and benefits of urban renewal especially in the inner city; growth centres and new towns; distributional aspects of social services; and spatial disparities in social well-being.

27.763 Rural Resource Problems* S2 L2T2

Structural adjustment in agriculture; government intervention; rural land subdivision; competing uses for rural land; conservation/development conflicts; the future of country towns; depressed rural regions as poles of underdevelopment; economic and social organisations — family farms, agribusiness, village co-operatives and farm tourism; integrated rural planning initiatives. Emphasis on Australian cases with international experience as context. Workshops to emphasise planning applications.

27.773 Spatial Aspects of the Housing Market* S2 L2T2

Advanced residential location theory; housing market models; determinants of house prices and the cost of housing; residential growth on the urban fringe; inner city housing and urban renewal. Housing problems in Australia and the determination of housing policy.

27.783 Spatial Impacts and Opportunities* S1 L2T2

Selected problems in the location of public services and measurement of spatial opportunity; methods for assessing the local and regional effects of new facilities; multiplier models; and socio-economic impact studies.

27.793 Models of Spatial Systems* S2 L2T2

The design and development of models of spatial systems, including: Entropy maximisation methods; control theory; evaluation of alternative models; and case studies of models in urban and regional analysis.

Servicing Subjects

27.295 Physical Geography for Surveyors S1 L2T2
27.801 Introduction to Physical Geography
27.802 Introduction to Human Geography
27.811 Physical Geography
27.812 Human Geography
27.2813 Geographic Methods
27.2814 Geographic Field Methods
27.824 Spatial Population Analysis
27.825 Urban Activity Systems
27.826 Urban and Regional Development

*Offered subject to availability of staff.
27.834  Spatial Population Analysis (Advanced)
27.835  Urban Activity Systems (Advanced)
27.836  Urban and Regional Development (Advanced)
27.412  Coastal Geomorphology
27.860  Landform Studies
27.862  Australian Environment and Natural Resources
27.863  Ecosystems and Man
27.870  Landform Studies (Advanced)
27.872  Australian Environment and Natural Resources (Advanced)
27.873  Ecosystems and Man (Advanced)
27.880  Advanced Geographic Methods
27.890  Thesis and Associated Seminars
27.893  Honours Physical Geography
27.894  Honours Urban Geography
27.895  Honours Social Geography

27.904G  Geomorphology for Engineering Geologists†  S2 L1½T1½

27.902G  Meteorological and Hydrological Principles  S2 L3T0

Undergraduate Study

28.012  Marketing Systems
A conceptual introduction to marketing from the systems viewpoint. Discusses the evolution and characteristics of marketing systems, buyer behaviour, marketing, channel flows (equalizing supply and demand, communication, ownership, finance, physical distribution), marketing activities in the firm (planning the marketing program, co-ordination and control of marketing activities, problem solving, product planning, promotion and pricing, physical distribution management), resources allocation by competition, the expanding role of government, social performance of marketing and social efficiency of marketing.

28.022  Marketing Models
Quantitative analysis in marketing decision-making in business situations. The derivative (pricing for profit maximization, inventory policy for cost minimization); linear programming (designing programs to maximize profits), techniques of planning (product launch using PERT); probability competitive bidding theory; market decision-making under conditions of uncertainty; assignment algorithm (allocation of salesmen to territories); physical distribution (total system costing, etc.)

The program is designed to provide students with the opportunity to develop their ability to apply quantitative methods to practical marketing problems.

†Offered subject to availability of staff.
28.032  Behavioural Science  
Prerequisite: Nil.  
SI L2T2  
Major concepts and research in the behavioural sciences which reveal the dynamics of human behaviour and the variety of viewpoints that can be adopted in explaining behaviour. The nature and scope of behavioural science; culture; social institutions; groups; social class; interpersonal and mass media communication; learning; perception; personality.

28.042  Consumer Behaviour  
Prerequisite: 28.032  
The specific sociological and psychological topics in Behavioural Science are applied to the problem of understanding the consumer in the marketing context. The following areas are covered: motivation and arousal; consumer behaviour as a decision process; problem recognition; search behaviour; choice behaviour; purchasing processes; post-purchase behaviour.

School of Surveying

Undergraduate Study

29.441  Surveying for Engineers  
S1 or S2 L2T4  

29.491  Survey Camp  
A one-week field camp for students studying 29.441 Surveying for Engineers.

School of Town Planning

Undergraduate Study

36.411  Town Planning  
School of Food Technology

Undergraduate Study

38.121 Food and Man  S2 L3T3
Prerequisites: 2.121, 2.131, 17.031, 17.021, 41.101, 44.143.

Inspection of bulk food handling facilities in areas of horticultural products; milk, meat and eggs; assessment of modern food retailing systems; quality and nutritional assessment of foods by instrumental and panel techniques.

38.131 Principles of Food Preservation  S1 L4
Prerequisite: 38.121.

38.132 Plant Food Science  S1 L3
Co-requisite: 38.131.

Classification, distribution, production and trade of world plant foods. The science and technology of Fruit and Vegetables: genetic and environmental effects on composition and quality; biology of development, maturation and ripening; harvesting; concept of deterioration of fresh fruit and vegetables; technology of wine production; chemical and sensory quality control procedures. Cereals: structure, composition and uses of wheat, rice, rye, corn, sorghum; wheat milling, flour properties; technology of bread, pasta, biscuit and cake manufacture; starch-gluten separations and derived products.

Plant-Derived Products. Sugars: sources, types, composition, use with other foods; sugar refining, refining; confectionery manufacture, control of spoilage. Lipids: sources, composition, extraction, purification processes, chemistry; processing of cooking oils, margarine, shortenings; use with other foods. Proteins: sources, extraction procedures, nutritional and toxicological factors, texturizing processes, use with other foods.

38.133 Animal Food Science  S2 L2
Prerequisites: 2.002A, 2.002B, 2.002D, 38.121.

Meat: Animal resources, breeds, growth and development, Slaughter, carcass composition, post-mortem biochemistry, meat composition, structure and quality factors, meat microbiology. Cold storage, chilling, freezing, ageing, curing, drying and packaging of meat and meat products; their microbiological and biochemical implications.

Marine Products: Nature and distribution of world resources; harvesting of teleostean and elasmobranch species; spoilage reactions, their control and quality assessment. Chilling, freezing, salting, drying, smoking and fermentation of fishery products. Fish meal and fish protein concentrates.

38.134 Food Science Laboratory  T6

An integrated program of laboratory and pilot plant exercises designed to illustrate the principles and procedures presented in the subjects 38.131, 38.132, 38.133, 38.331, 38.431 and 38.531. Includes examination and use of food processing equipment; food packaging materials; the evaluation of unit processes used in the preservation and modification of foods of plant and animal origin including fruit and vegetables, cereals, sugars, lipids, meat, fish, eggs and dairy products; their properties, uses, microbiological, chemical, biochemical and nutritional status and changes undergone during processing and storage. Includes metropolitan factory inspections and a field excursion of one week to food production, processing and research organizations in Northern N.S.W. and Queensland.

38.140 Food Technology Project  T8

The student undertakes an individual project involving a literature survey, an experimental investigation, and the final preparation of a detailed report on a selected topic in food science or technology.

38.141 Food Regulation and Control  S1 L4
Prerequisites: 2.043L, 38.131, 38.132, 38.133, 38.134, 38.331, 38.531.

Food legislation: State and NH&MRC food standards and mechanisms; Codex standards; case studies in food standards development; food and nutrition policy.

123
Process control: revision of statistics, mean, variance, test of hypotheses, sample procedures; measurement of residence time distribution curves.

Pest control: creation of pest problems; techniques of pest control; effects of control measures on environment.

Non-microbial hazards in foods: definition; types of compounds that can be found in food and their effect on man; foods in which toxics are found; methods of inactivation.

Food additives: functions and modes of action of various classes of food additives; consequences of their use; National, State and international attitudes and standards; principles of toxicological testing and evaluation of results.

Product development: needs for new food products; role of market research, advertising and food technology in the generation of new product ideas; steps in the development of a new product; new product failure and success; practical exercises in new product development.

Microbiological quality control: good manufacturing practice; in-plant testing; microbiological sampling; sampling plans; decision criteria; microbiological criteria for foods.

38.142 Oenology

Prerequisite: 38.132.

History and nature of grape wines; grape and wine statistics; concept of cultivars within Vitis vinifera; other Vitis species; wine and grape physiology and biochemistry; maturity assessment and significance; influence of climate, soil, and other factors on wine quality; harvesting procedures; oenological procedures including crushing, sulfiting, pressing and draining, fermentation procedures, maturation and storage, stabilization and clarification, bottling, packaging, and distribution; wine types and composition; quality assessment; quality control and analytical procedures; distillation and production of fortified spirit and brandy; world wine industry, wine organizations, wine literature; social uses of alcohol.

38.143 Cereal Technology

Prerequisite: 38.132.

A treatment in greater depth of the following topics dealt with in graduate and undergraduate courses: Production, storage, marketing and quality of cereal grains; current trends in these areas, technology of bread, biscuit and cake manufacture; chemical, physical and biochemical interactions in wheat flour doughs; flour milling and assessment of flour quality. Additional topics include cereal protein analysis, properties and behaviour; wheat variety identification; meat-cereal combinations; flour milling and assessment of flour quality; quality control and analytical procedures; distillation and production of fortified spirit and brandy; world wine industry, wine organizations, wine literature; social uses of alcohol.

38.144 Treatment and Utilization of Food Processing Wastes

Prerequisite: 38.131.

Ecological effects of waste discharges into the marine environment. Purification of water for domestic and industrial applications; water reuse; process modifications for effluent reduction. Origin, composition, treatment, disposal and utilization of wastes from food processing operations. Legal and economic aspects of waste disposal. Inspections of water and waste treatment plants. Seminars, assignments.

38.145 Marine Products Technology

Prerequisite: 38.133.

Fish species, quality control and operations used in fish canning, problems encountered with canned marine products. Fish farming, processing of carp and fish roe. Preparation of individual fish portions and utilization of commercially unattractive species. Harvesting, handling, processing and spoilage of molluscs and crustaceans. Utilization of unusual marine organisms. Industrial fishery products.

38.146 Inspections

Inspection of food processing plants, growing areas and research stations in Sydney metropolitan area, New South Wales, Victoria and South Australia.

38.147 Food Quality Assessment

Prerequisite: 38.141.

Characteristics of food quality: colour, its instrumental assessment, standards and grades in food products; flavour perception, theories of taste and odour response, the characterisation of food volatiles by GC, IR, MS; texture and consistency of foods, their subjective and objective assessment.

Taste panel methodology: design of questionnaires, environmental conditions, panel selection and training; case studies of several types of taste tests, including consumer surveys; correlation of objective and subjective results of particular foods; masking and synergism of flavours.

38.148 Communications in Food Science and Nutrition

Prerequisites: 38.131, 38.132, 38.133, 38.134, 38.331, 38.531.

Sociocultural and psychological basis of attitudes and beliefs in food nutrition and food hygiene. Educational techniques for implementing behavioural and attitudinal change at varying levels of specialization. Skills in preparation and delivery of oral and written presentation, use of instructional media, preparation of audiovisual aids. Planning and evaluation of instructional units.

38.331 Food Microbiology I

Prerequisite: 44.143 or other equivalent introductory Microbiology course.

Food spoilage: Microbial ecology of food spoilage; specific microbial associations; taxonomy of dominant species. Biochemistry and physiology of microbial growth in foods; psychrophiles, mesophiles, thermophiles, osmophiles, halophiles; production of degradative enzymes, off-flavours, odours and slimes.

Food fermentation: Microbial fermentation of foods as a means of preservation and flavour enhancement; microbial ecology and biochemistry of food fermentations. Fermented milk, vegetable, meat and seafood products; Baker’s yeast, food yeasts and yeast autolysates. Single cell protein. Microbial enzymes and polysaccharides in foods.

38.341 Food Microbiology II S2 L2T4
Prerequisite: 38.331.
A detailed theoretical and practical treatment of the ecology, taxonomy and biochemistry of bacteria, yeasts, fungi and viruses involved in food spoilage, food-borne disease and food fermentations. Emphasis on specific methodologies for the detection, enumeration and identification of food associated bacteria, yeasts and fungi. Problems of enumerating microorganisms in foods: techniques of food and surface sampling; formulation, performance and evaluation of selective-differential media; sublethal injury; the value of indicator organisms. Rapid methods for microbial enumeration and identification. Control of microorganisms in foods; microbiological quality control in food production; sanitation and disinfection; food legislation and microbiological standards.

38.344 Yeast Technology S2 L2T1
Prerequisite: 38.331.
The ecological, taxonomic and biochemical fundamentals of yeasts. The role of yeasts in alcoholic fermentations; beer, wine, cider, distilled spirits. Baker's yeast production and the role of yeasts in baking. Yeast fermented foods. The spoilage of foods by yeasts. Yeasts and yeast extracts as food for animals and humans. Yeast enzymes in the food industry.

38.431 Food Engineering I F L3
The basic equations describing the transport of momentum, energy and mass through solids, liquids and gases; engineering thermodynamics, automatic process control; the engineering approach to problem solving; the selection and operation of processing equipment relevant to the food industry.

38.441 Food Technology (Chemical Engineering) L4T3

38.442 Food Engineering II F L3
Prerequisite: 38.431.
An extension of material introduced in 38.431 Food Engineering I with an emphasis on the analysis of flowsheets of selected food plants; discounted cash flow analysis; plant layout; energy conservation in the food industry.

38.531 Nutrition S1 L1
Prerequisite: 38.121.
Food consumption patterns of various socio-economic groups. Dietary imbalance; nutritional disorders including coronary heart disease, obesity, hypertension; problems of undernutrition including protein, energy, mineral and vitamin deficiencies. Nutrition of risk groups, particularly infants, children, pregnant women and the elderly. Effects of food processing on macronutrients and micronutrients, significance within normal mixed diet. Effects of nutrification of foods on human nutritional status.

38.541 Advanced Nutrition S1 L2T1
Prerequisite: 38.531.
Detailed study of the role of nutrients in human structure, function and disease, including study of micronutrients and trace minerals. Regulatory mechanisms such as appetite, control of nutrient metabolism and growth. Nutrition and infection. Alcoholism. Therapeutic nutrition and formulation of special dietary foods.

38.543 Field and Laboratory Methods in Nutrition S2 L1T2
Prerequisite: 38.541.
Methods of nutritional assessment including anthropometry, energy expenditure, dietary intakes, biochemical assay of nutrients and metabolites in body tissues and fluids. Survey design, data processing and interpretation. Analytical methods for nutrients in foods, including advanced instrumental techniques.

Graduate Study

38.151G Introductory Food Science S1 L2
Prerequisites or co-requisites: 2.271, 42.211G, 42.212G, or their equivalents.
An introduction to the history of food preservation and human nutrition. Current world food patterns, organisations and trade. Food chemistry and the role of nutrients in human nutrition; elements of food microbiology, food hygiene and public health aspects of foods. Parameters of food quality; food choice and social behaviour; food and society.
38.152G Food Process Laboratory  S1 T6
Co-requisite: 38.154G.
An integrated series of laboratory and pilot plant exercises illustrating the principles and procedures involved in processing of foods.

38.153G Food Technology Seminar  T1
Students present material arising from literature and/or laboratory assignments and/or plant investigations in the food and related industries. Critical assessments are made of the results of research in food science and technology.

38.154G Food Technology  L6
Co-requisite: 38.151G.

38.155G Dairy Technology  L1T1
A detailed review of trends in dairy industries at the national and international levels. The microbiology and biochemistry of dairy products with particular reference to the technology of milk, butter and cheese production. The development of new dairy products, the use of dairy products in other foods. Emphasis is placed upon the use and development of new technologies in the broad areas of dairy product processing.

38.156G Oenology  L1

38.157G Technology of Cereal Products  L1
Prerequisite: 38.132 or cereal strand.

38.158G Marine Products  L1
Prerequisite: 38.133 or marine strand of 38.154G.

38.159G Food Process Wastes  S2L1
Prerequisite or co-requisite: 3.163G.

38.161G Food Additives and Toxicology  L1
Functions, modes of action of food additives, consequences of use; ethical and legislative considerations. National, State and international attitudes and standards. Principles of toxicological testing, the evaluation of results.

38.162G Postharvest Physiology and Handling of Fruit and Vegetables  S2 L2T4
Biochemistry and physiology of metabolism in fresh fruit and vegetables; respiration measurements as an index of metabolism, maturation and senescence; concept of climacteric and non-climacteric produce; physiological and metabolic changes occurring during ripening. Effect of temperature on metabolism — constraints of high and low temperatures; role of humidity control and water loss in quality maintenance; use of atmosphere control to delay senescence and ripening. Physiological disorders of stored produce; microorganisms of importance to postharvest tissue; physical and chemical methods of control; postharvest disinfection and quarantine measures. Examination of current commercial storage and marketing operations.

38.163G Methods in Food and Nutrition Education  S1 L1T2
Co-requisite: 38.151G.
Community food and nutrition habits, knowledge and beliefs. Programs for nutrition education; design and evaluation. Communication and educational skills including use of instructional media and preparation of audiovisual materials.
38.351G The Microbial Ecology of Foods  S2 L2T4
Prerequisites: An introductory course in Microbiology, 38.154G or 38.331.
An integrated lecture and laboratory course covering the ecology, taxonomy and biochemistry of bacteria, yeasts, fungi and viruses involved in food spoilage, food-borne disease and food fermentations. Emphasis on specific methodologies for the detection, enumeration and identification of food associated bacteria, yeasts and fungi. Problems of enumerating microorganisms in foods: techniques of food sampling, formulation, performance and evaluation of selective-differential media; sublethal injury; indicator organisms. Rapid methods for microbial enumeration and identification. Control of microorganisms in foods; microbiological quality control, food legislation, microbiological standards.

38.451G Advanced Food Engineering  S1 L2T1
Prerequisite: 38.341 or an introductory course in material and energy balances, heat transfer and fluid mechanics.
Mathematical representation using vector calculus of heat and mass transfer and fluid mechanics in foods; numerical methods of solution; thermodynamic analysis of processes; laboratory work on the thermophysical properties of foods.

38.452G Drying of Foods  S2 L2T1
Prerequisite: 38.451G.
Psychrometry; water activity of foods; transport in porous media; spray drying, fluidized bed drying, freeze drying, batch and continuous drying; drying of grain in bulk silos; solar drying of fruit and vegetables.

38.551G Advanced Nutrition  S2 L2T1
Prerequisite: 38.151G. Co-requisite: 38.154G.
Detailed treatment of the role of the nutrients in health and disease at different stages of the human life cycle. Nutritional topics of particular relevance to developing countries including population, infection, rehabilitation, productivity, education.

38.552G Methods of Nutritional Assessment and Analysis  S2 L1T2
Co-requisite: 38.551G.
Nutrient assay of foods including bench and instrumental techniques. Human nutritional assessment by anthropometric, dietary and biochemical methods.

Graduate School of the Built Environment

Graduate Study

39.908G Community Noise Control  S2 L1T1
Introduction; sound and sound propagation; sound power, sound pressure, decibels; sound perception, psychoacoustics; loudness, annoyance, phons and dB(A); hearing conservation; acoustic measuring and analysing instruments — sound level meters, filters, analysers, recorders, sound sources; community noise assessment; the NSW Noise Control Act; practical exercises in sound recording, analysis and assessment; noise control — source noise reduction, use of barriers, enclosures, distance, sound absorbing materials; sound transmission through building elements; noise components of environmental impact statements.

School of Biochemistry

Undergraduate Study

41.101 Biochemistry  S1 L4T8
Prerequisites: 17.021, 2.121 and 2.131. Excluded: 2.003J.
The chemical properties of amino acids, peptides and proteins, carbohydrates, nucleic acids and lipids and the biological roles of these compounds. The nature and function of enzymes. The intermediary metabolism of carbohydrates, lipids and nitrogenous compounds. The molecular mechanism of gene expression and protein synthesis. Photosynthesis. Practical work to amplify the lectures.
41.102A  Biochemistry of Macromolecules  S1 L3T9
Prerequisites: 41.101 and 2.002B.
Poly saccharides and glycoproteins including bacterial cell walls. Chemistry and biology of polynucleotides. Methods of amino acid and nucleic acid sequence analysis. Protein structure and synthesis. Active centres of some proteins. Sub-unit organization of proteins. Enzyme kinetics. Practical work to illustrate the lectures and to provide experience in modern biochemical techniques.

41.102B  Physiological Biochemistry  S2 L3T9
Prerequisites: 41.101 and 2.002B.

41.102C  Plant Biochemistry  S2 L2T4
Prerequisites: 41.101 and 2.002B.
The biochemistry of the major pathways characteristic of plants will be studied. Topics include the energetics and carbon path of photosynthesis, glyoxalate cycle, growth hormones and regulatory phenomena, nitrogen fixation and assimilation. Experimental work to illustrate and amplify the subject utilizes radioactive isotopes and a number of newer techniques.

41.102D  Biosynthesis of Plant Metabolites  S2 L2T4
Prerequisites: 41.101 and 2.002B. Co-requisite: 41.102C.
This unit complements 41.102C and is taken with it. Topics covered: cell wall formation and the synthesis and mobilization of reserve materials; biosynthesis of amino acids, its regulation, and their conversion into non-protein material, e.g., alkaloids and cyanogenic glycosides; aromatic ring formation and the isoprene pathway as a source of rubber, steroids, carotenoids and essential oils. Flower pigments and phytoalexins will be discussed briefly. Practical work, combined with 41.102C, illustrates and amplifies the subject and includes a wide range of the latest techniques.

41.111  Biochemical Control  S2 L2T4
Prerequisite: 41.101.
The relationship between structure and function of enzymes, selected protein systems and hormones. Metabolic networks and control mechanisms. Practical work to amplify the lectures.

School of Biotechnology

Undergraduate Study

42.102A  Biotechnology A  S1 L2T4
Prerequisites: 41.101 and 42.101 or 44.101.
The basic principles involved in the operation of microbial processes on an industrial scale, including: the selection, maintenance and improvement of microorganisms; the influence of physical and chemical factors on the microbial environment; the control of environmental factors; the effects of operational patterns on batch and continuous flow cultivation; aeration and agitation; scale-up of microbial processes; air and media sterilization; the harvesting, purification and standardization of products. Discussion of the principles involved in microbial processes for chemical, pharmaceutical and food production, microbial waste treatment and environmental control. The laboratory component includes manipulation of microorganisms, laboratory-scale fermenter operation, microbial enzyme isolation, visits to industrial fermentation plants and industrial seminars.

42.102B  Biotechnology B  S2 L2T4
Prerequisite: 42.101.
Application of principles of biotechnology to the analysis and design of microbial processes of industrial relevance (antibiotics, microbial enzymes, single cell protein from carbohydrates and hydrocarbons, fermented foods and beverages, amino acids and vitamins, microbial polysaccharides, activated sludge and photosynthetic processes for waste treatment, microbial leaching of low-grade minerals). Emphasis on quantitative approach: mass and heat balance calculations, kinetic and thermodynamic analysis, detailed equipment design and specification, process design and layout, process simulation, plant location, application of optimization techniques. The economics of microbial processes will be considered and comparison made with alternative modes of production or treatment. The economics of agro-industry in Australia using microbial processes. Marketing of fermentation products, clinical trials required, legal constraints, patent rights. Technical and economic feasibility studies, and a design project, are major components.

Graduate Study

42.211G  Principles of Biology
The characteristics of living systems including a functional treatment of cytology, metabolism, bioenergetics, structure, function and characteristics of single and multicellular systems; growth; cell division; reproduction; heredity and evolution.
42.212G  Principles of Biochemistry

A condensed treatment of biochemistry comprising the following aspects: the elemental and molecular composition of living organisms; the chemistry and roles of the biological elements and molecules; the thermodynamics and enzymatic catalysis of metabolism; catabolic, anabolic, amphibolic and anaerobic processes, with emphasis on hydrolysis and synthesis of polymers, glycolysis and gluconeogenesis of glucose, \( \beta \)-oxidation and synthesis of fatty acids, deamination and decarboxylation, of amino acids, the tricarboxylic acid cycle, electron transport and oxidative phosphorylation; metabolic regulation and integration.

42.213G  Biochemical Methods

A laboratory program in practical biochemistry. The basic instrumentation and methodology of the biochemist is introduced by practical exercises and demonstrations. A comprehensive treatment of the relevance and applicability of biochemical techniques is covered in tutorials.

42.214G  Biotechnology

The selection, maintenance and genetics of industrial organisms; metabolic control of microbial synthesis; fermentation kinetics and models of growth; batch and continuous culture; problems of scale-up and fermentor design; control of the microbial environment involving computer/fermentor interactions: Industrial examples are selected from: antibiotic and enzyme production, alcoholic beverages, single cell protein (SCP), microbial waste disposal and bacterial leaching.

Tutorial/practical sessions include: problem solving, instrumentation, continuous culture techniques, and mathematical modelling and simulation of industrial processes.

43.111  Flowering Plants  S1 L2T4

Prerequisites: 17.031 and 17.021.

Plant cell structure, structure and functions of the major organs in Angiosperms (flowers, roots, stems and leaves), secondary thickening and arborescence, transport systems in plants, seeds and germination. Variation in structure and function in relation to the environment. Introduction to taxonomy and identification of major Australian plant families. A weekend field excursion forms part of the course.

43.112  Plant Taxonomy*  S2 L2T4

Prerequisite: 43.111. Prerequisite or co-requisite: 43.101.

Considers the assessment, analysis and presentation of data for classifying plants both at the specific and supra-specific level with emphasis on vascular plants. Field work is part of the subject.

43.121  Plant Physiology  S2 L2T4

Prerequisites: 17.031 and 17.021 and 2.001 or any two (2) units of 2.111, 2.121, 2.131.

The physiology of the whole plant: photosynthesis, inorganic nutrition, transport, translocation, physiology of growth and development, plant growth substances and their application in agriculture.

43.142  Environmental Botany*  S1 L2T4

Prerequisites: 17.001 or 17.011 and 17.021 or 17.031 and 17.021.

The soil and atmospheric environments in which plants live and the interaction of plants with their environment. Emphasis is placed on the role of environmental sciences in food production. Students are required to attend one week-day field excursion as part of the practical course.

43.152  Plant Community Ecology  S2 L2T4

Prerequisites: 43.111 and 17.012 or 27.111.

Recognition and delimitation of plant communities. Ecology of selected Australian vegetation types. Use of numerical methods and application of community concept of palaeoecology. Field work forms an integral part of this course.

*Note: 1. The subject 43.112 Plant Taxonomy, alternates with 43.162 The Plant Kingdom (43.112 will be given in 1980). 2. 43.112 Plant Taxonomy and 43.142 Environmental Botany. These units may be taken in either second or third year of the Science course provided that prerequisites have been completed.

School of Botany

Undergraduate Study

43.101  Introductory Genetics  S2 L2T4

Prerequisites: 17.031 and 17.021.

Various aspects of molecular, organismal and population genetics, including: meiotic and non-meiotic recombination, genome variations, mutagens and mutation rates, cytoplasmic inheritance, gene function, genetic code, gene structure, collinearity of polynucleotide and polypeptide, control of gene action, genes and development, population genetics, genetics and improvement of plants and animals.
43.162  The Plant Kingdom*  S2 L2T4

Prerequisite: 43.111.

The major taxa of the Plant Kingdom with emphasis on the green plants. The evolution of basic vegetative structures, reproductive structures and genetic systems are studied. Field work is part of the subject.

School of Microbiology

Undergraduate Study

44.101  Introductory Microbiology  S1 L2T4

The general nature, occurrence and importance of microorganisms. A systematic review of the major groups of microorganisms: the eucaryotic protista (microalgae, protozoa and fungi); procarcotic protista (blue-green algae, “higher” bacteria, typical unicellular bacteria and small bacteria-like forms); plant, animal and bacterial viruses. The relationship between microorganisms and their environment; ecological considerations. Interactions between microorganisms and higher organisms.

Students wishing to enrol in this subject must obtain the written approval of the Head of the School of Microbiology. Those who can provide evidence of previous satisfactory training in biological science will be permitted to enrol immediately. In the absence of such evidence, students will be required to attend a course of lectures in Basic Cellular Biology to be presented in the first three weeks of Session 1. This course introduces the concepts of cellular biology, cell theory and cellular diversity including structure and function of cells. It also briefly describes biologically important molecules (proteins, polyaccharides and nucleic acids), enzyme catalysis and biological dynamics.

44.143  Microbiology AS  S1 L4T6

Prerequisites: 17.031 or 17.011 and 17.021.

School of Zoology

Undergraduate Study

45.121  Evolutionary Theory  S1 L3T3

Prerequisites: 17.031 and 17.021.

Current evolutionary theory, emphasizing the population level. Ecological genetics, evolutionary aspects of ecological niche theory, speciation, coevolution, and general evolutionary genetics. Some background in genetics is desirable.

45.152  Population and Community Ecology  S1 L2T4

Prerequisites: 17.021 and 10.001 or 10.011.

Examination of the dynamics of one, two or more interacting populations. Systems analysis and simulation in ecology. Theoretical and mathematical analysis of the dynamics and stability of ecosystems. Topics in the optimal management of renewable resources. Unifying concepts in ecology.

Previous experience of ecologically oriented courses would be advantageous.

45.201  Invertebrate Zoology  S2 L2T4

Prerequisites: 17.031 and 17.021.

A comparative study of the major invertebrate phyla with emphasis on morphology, systematics and phylogeny. Practical work to illustrate the lecture course. Obligatory field camp.

</tbody>
</table>
Unit 3 Pumps and Pumping

Types of piping and fittings. Blow cases. Air lift pumps. Reciprocating pumps, centrifugal pumps and gear pumps. Blowers and compressors.

48.025 Chemical Engineering for Chemical Technologists

Consists of Units 1 and 2 of 48.021 and Units 1 and 2 of 48.022.

48.031 Chemical Engineering IIA

Unit 1 Mass Transfer (Theory)

Prerequisites: 2.002A, 48.021.

Unit 2 Heat Transfer II (Theory)

Prerequisite: 48.022, Unit 1. Co-requisite: 10.032.

An extension of the work covered in 48.022 Unit 1, with an emphasis on the fundamentals of conduction, convection and unsteady state heat transfer.

Unit 3 Thermodynamics II

Prerequisite: 48.022, Unit 3.

The thermodynamic properties of pure fluids and homogeneous mixtures; an introduction to phase equilibrium; chemical reaction equilibrium.

48.032 Chemical Engineering IIB

Unit 1 Reaction Engineering I

Prerequisites: 2.002A, 10.031.

A course of lectures together with weekly assignments covering the design and analysis of ideal reactor systems, involving single and multiple reactor types, in which simple or complex, single or multiple reactions are effected.

Unit 2 Plant Layout I

Factory Layout: Factors governing location of processing plant. Typical dispositions of process batteries, central utilities, laboratories, workshops, amenities, storage areas, effluent treatments. Distribution of electricity, steam, process and reticulated cooling water. Boiler plants and cooling towers, steam turbine versus electric motors, local versus central location of particular utilities. Provision for expansion.

48.033 Chemical Engineering IIC

Unit 1 Fluid-particle Systems I

Prerequisite: 48.021, Unit 1.

Interaction between particles and fluids: drag, terminal velocity, sedimentation. Flow through porous media, pressure gradient, filtration, fluidization, dispersion; multiphase flow, irrigated packed columns.

Unit 2 Surface Separation Processes

Principles of membrane processes, reverse osmosis, ultrafiltration, dialysis and electrodialysis. Design calculations for batch and continuous operation of reverse osmosis and ultrafiltration equipment. Principles of sorption processes, such as adsorption ion exchange and molecular sieves. Design of fixed-bed sorption equipment. Principles and design of other surface separation processes such as foam and bubble fractionation.
Unit 3  Thermodynamics III

Prerequisite: 48.031 Unit 3.

Applications of thermodynamics, including power cycles, refrigeration and liquefaction. Thermodynamic analysis of processes.

Unit 4  Economics II

Prerequisite: 48.032 Unit 4.

48.034  Chemical Engineering IIE

Unit 1  Reaction Engineering II

Prerequisite: 48.032 Unit 1.

Lectures together with assignments covering the concept of process rate and rate of change of process variables. Differential balances and examples in mass and heat transfer, and reactive systems.

Unit 2  Process Dynamics I

Prerequisite: 10.031.

Unit 3  Instrumentation

Unit 4  Computations II

Prerequisite: 10.031, 48.022 Unit 4.

Analogue computation: An introduction to the theory and programming of analogue and computers, with application to the solution of differential equation and the simulation of dynamic systems.

48.035  Chemical Engineering IIIE

Unit 1  Mass Transfer (Design)

Prerequisite: 48.031 Unit 1.

The design of equipment for absorption, distillation and liquid-liquid extraction. Selection of column type. Design of sieve and other types of plate for plate columns. Design of packed columns. Performance characteristics of plate and packed columns. Selection of equipment for liquid-liquid extraction. Design of mixer settlers and column-type extractors. Factors affecting the performance of liquid-liquid extraction equipment. Other mass transfer equipment.

Unit 2  Heat Transfer II (Design)

Prerequisite: 48.031 Unit 2.

Thermal design procedures for shell and tube heat exchangers and finfan coolers. Service fluids for heating and cooling duties.

Unit 3  Process Vessels

Prerequisite: 8.112.

Mechanical design and fabrication of pressure vessels. Code and legal requirements. Design of supports for vertical and horizontal cylindrical vessels. Visualisation, freehand sketching and presentation of formal drawings and specifications for pressure vessels and equipment components. Relief valves, bursting discs, venting and draining systems.

Unit 4  Safety and Failure Tolerance

48.036  Chemical Engineering Laboratory I

Unit 1 and 2

Prerequisites: 48.021, 48.022, 2.002A.

An integrated chemical engineering laboratory incorporating experiments in fluid flow, heat transfer, mass transfer, thermodynamics and kinetics, instrumentation, process dynamics and control. The objectives of this laboratory are: to demonstrate, reinforce and extend the principles of chemical engineering which are covered in Chemical Engineering IA & B and II A-E, to introduce various laboratory techniques which are used in the experimental investigation of chemical engineering problems; to develop an interest in experimentation, and to develop a proficiency in technical report writing.
48.040 Chemical Engineering Project  
Prerequisite: 48.031

The design of plant for the production of chemicals and the estimation of product costs or an experimental investigation of some aspect of chemical engineering.

48.041 Chemical Engineering IIIA

Unit 1 Convective Mass Transfer  
Models for convective mass transfer at fixed and free interfaces. Calculation of mass transfer rates at surfaces with simple geometry. Mass transfer in dispersions and in systems involving chemical reaction.

Unit 2 Simultaneous Heat & Mass Transfer  
Psychometry, principles of design calculations for cooling towers and for humidification-dehumidification operations. Topics selected from: drying of solids, crystallization, sublimation, molecular distillation, gaseous and thermal diffusion will be discussed.

Unit 3 Multicomponent Separation  

48.042 Chemical Engineering IIIB

Prerequisite: 10.032

Unit 1 Process Dynamics II  
Extension of material on linear systems to distributed-parameter cases. Linear frequency response. Experimental characterization of linear systems. The analysis of non-linear systems by linearization and numerical methods. The application of these techniques to particular processes and instruments will be stressed.

48.043 Chemical Engineering IIIC

Unit 1 Design Workshop  
Considerations of the ways and means of attempting a design project; emphasizes to students the need 1. to study the history and alternatives to the design project, and 2. to use proper design techniques for the assigned process and equipment. Students are each given a design project or some aspect of it and are expected to produce an appropriate report on their assignments.

Unit 2 Industrial Pollution Control  

48.044 Chemical Engineering Laboratory II  
Prerequisite: 48.036.

An integrated chemical engineering laboratory at a more advanced level than the 48.036 laboratory and with an emphasis on open-ended experiments.

48.090 Industrial Experience

Students are expected to accumulate, by the end of their full-time, 12 weeks of industrial experience during recesses.
Advanced Chemical Engineering Electives

48.0451 Plant Layout II
Prerequisite: 48.032 Unit 2.

Plant layout: Site and battery plant layout to suit process, piping and operational requirements. Making the best use of topography. Preparation of plot and site plans and specifications. Logic operations and critical path planning. Project engineering.

Storage: Tank farm arrangement, layout and associated pumps and piping.

Miscellaneous: Pneumatic and slurry transfer systems. Steam reticulation, trapping and condensate handling. Detailed consideration of layout and piping around particular equipment items, and preparation of associated drawings.

48.0452 Advanced Chemical and Phase Equilibria
Prerequisites: 48.031 Unit 3.

Sources of thermodynamic data. Methods of estimating and presenting thermodynamic data. Advanced chemical and phase equilibria of application in chemical and process engineering.

48.0453 Control II
Prerequisite: 48.042 Unit 2.

Material covered in Control I is applied during tutorials to selected case studies, and is illustrated by laboratory work, and by analogue and digital computation. Lecture material complements the laboratory work, and introduces selected topics such as multi-loop system control, system identification and estimation and sequencing control.

48.0454 Reactor Engineering
Prerequisites: 48.031, 48.032.

Differential balances with reaction, non-ideal homogenous reactors, reaction in mixing streams, rate equations for heterogenous reactions, non-catalytic fluid-solid, and fluid-fluid reactors, solid catalysed fluid reactors, examples of complex reactors.

48.0455 Fluid Particle Systems II
Prerequisites: 48.032 Unit 5 and 48.033 Unit 1.

Lectures and demonstrations dealing with fluidized and spouted bed techniques.

Spouted beds: criteria for spouting, minimum spouting velocity, maximum pressure drop. Gas and solids motion in the spouted bed. Design aspects and applications.

48.0456 Process Engineering II
Prerequisites: 48.031, 48.032, 48.033, 48.034, 48.035, 48.043.

Fault Detection and Correction: Detection, location and identification of malfunctions in a simulated chemical plant. Selection of most appropriate remedies. Studies of repair and maintenance practices; on-stream corrections versus those requiring process shut-down. Temporary and permanent corrections. Exercises in fault analysis and correction using cases from practice.

Equipment: Detailed chemical engineering design of selected equipment items.

48.0457 Oil and Gas Processing
Prerequisites: 48.311, 48.0313, 48.032.

Sources of data on hydrocarbon properties. Process design applied to gas and oil treatment plants, pipelines and storage. The petroleum refinery.

48.0461 Introductory Reservoir Engineering
Prerequisites: 48.311, 48.0313, 48.0331.

Origin of petroleum, rock properties, fluid distribution in reservoirs, phase behaviour of hydrocarbons, material balance equations, analysis of reservoirs: gas reservoirs; gas condensate reservoirs; solution gas drive reservoirs; water drive reservoirs.
48.0462 Advanced Reservoir Engineering  S2 L2
Prerequisite: 48.046.
Application of potential flow equations, multi-phase flow through porous media, fluid displacement, recovery efficiency, well testing. Well productivity, maximum efficient rate of withdrawal. Numerical techniques for reservoir simulation, new recovery methods.

48.112 Chemical Process Equipment  S2 L2
Co- or prerequisite: 2.001, 2.121, 2.131.
Review of services in the chemical industry; the principles of operation, construction and fields of application of equipment used in carrying out various processes and operations in the chemical industry.

48.113 Industrial Chemistry Processes  F L1½T2
Prerequisites: 2.002A, 48.112. Co- or prerequisites: 2.002B, 2.042C.
A study of the production of inorganic industrial chemicals from the standpoint of the application of the basic principles of inorganic and physical chemistry (acid industries, alkal industries, industrial gases, electric furnace products, superphosphates, aluminum and glass); a study of some sections of the organic industrial chemical industry — cellulose, industrial alcohols, formaldehyde, phenol, urea, phenolic and urea resins, acetic acid, polymers based on ethylene and acetylene, elastomers.
Laboratory: Students are required to attend lectures on Report Writing, carry out laboratory assignments and attend factory inspections at local and country centres as required.

48.114 Processes  S2 L2
Prerequisite: 48.113.
Topics selected from the following are studied in depth: refractories, high-temperature processes, high pressure processes (especially ammonia synthesis — thermodynamics and equipment), nuclear metals, industrial polymers, fermentation industries (for details see 42.114 Fermentation Processes), applied electrochemistry, applications of thermodynamics to gas/solid and aqueous systems concerned with the processing of inorganic materials.

48.121 Corrosion in the Chemical Industry  S2 L2
Chemical and electrical aspects of corrosion and their application to corrosion problems encountered in the chemical process industries. Selection of materials for chemical plant. Design factors for corrosion prevention. Methods of corrosion prevention.

48.122 Instrumental Analysis  F L1T3
Prerequisites: 1.001, 2.121, 2.131. Co- or prerequisites: 48.132.
Basic principles of volumetric and gravimetric analysis and the application of spectrometric and selected techniques to the analysis of process streams and quality control.

48.123 Chemical Thermodynamics and Kinetics  S1 L2T2 S2 L1½T1½
Thermodynamics: the laws of thermodynamics, power cycles, thermodynamics of fluids, heterogeneous equilibrium, chemical reaction equilibrium, irreversible thermodynamics.

48.124 Applied Kinetics  S1 L2T1
Prerequisite: 48.123.
The defect solid state; solid-state diffusion; heterogeneous catalysis and heterogeneous kinetics; continuous stirred tank reactors; semibatch reactors; tubular reactors; fixed bed catalytic reactors; optimization, scale-up of reactors; residence time distributions.

48.125 Industrial Chemistry IA  S1 L2T3
Comprises 48.021 Units 1 and 2

48.126 Industrial Chemistry IB  S2 L2T2
Comprises 48.022 Units 1 and 2.

48.132 Industrial Chemistry Calculations  S1 L2T1 S2 T1
Prerequisites: 2.121, 2.131, 10.001.
Conversion of units; the role of stoichiometry in industrial chemistry; the influence of the dynamic situation; transposition of chemical and physical data, evaluation of the accuracy of data from experimental analytical measurements. Development of algorithms for the solution of selected examples relevant to the process chemical industry.
48.133 Data Processing  S1 L2T2 S2 L2T1

Prerequisites: 10.331, 48.132.

Computer programming and numerical methods: Fortran IV and Basic II programming, solution of equations (Newton-Raphson), simultaneous linear algebraic equations, numerical differentiation and integration, interpolation, ordinary differential equations, partial differential equations, least squares approximations, matrix operations, numerical optimization (simplex method), linear programming, linear models with one and more than one independent variable, non-linear models. Application of the principles of statistics to chemical problems (z test, t test, F test and x^2 test), analysis of variance, design of experiments, correlation and regression, quality control. Use of graphical methods; fitting empirical equations to experimental data. Preparation of nomograms using constructional determinants.

48.134 Applied Thermodynamics  S1 L1T1

Prerequisites: 48.123, 48.153.

48.143 Introduction to Analog Computation

A course of eight two-hour periods devoted to lectures, demonstrations and laboratory exercises.

Analog computation, theory and application of analog computing elements, analog computer programming, solution of linear differential equations with constant coefficients, equation ordering and the elementary principles of modelling. Illustration by examples.

48.153 Material and Energy Balances  S1 L1T2

Prerequisites: 2.002A, 10.031, 48.132.

Units, material balances, gases, vapours and liquids, energy balances, combined energy and material balances, unsteady-state material and energy balances.

48.154 Process Simulation  S1 L2T1 S2T1

The application of the hybrid computer to the study of the dynamics of processes encountered in the chemical industry.

48.163 Instrumentation and Process Control I  S2 L1½T1½

Prerequisites: 1.922, 10.031, 48.122 or 2.002D. Co- or prerequisite: 48.113 or 48.233.

Analog computation: theory and application of basic analog computing elements, magnitude scaling and time transformation, application to solution of linear differential equations with constant coefficients. Transducers: Measuring instruments, indicators and recorders; analog type instruments, digital measuring instruments, data-logging systems. Introduction to process control: block diagrams, feed-back, transfer functions, final control elements and characteristics, introduction to controllers, empirical timing of controllers.

48.164 Instrumentation and Process Control II  S1 L2T3

Prerequisite: 48.163.

Analog computation: programming techniques, representation of non-linear phenomena, application to non-linear differential equations. Process dynamics: first order processes, response of single and multiple first-order systems to a variety of forcing functions, second and higher order processes, state variable presentation of processes, the complex plane, frequency response of linear systems, identification of ill-defined processes from analysis of indicial response data. Dynamics of closed-loop systems: closed loop transfer functions, derivation of characteristic equation, performance criteria, non-linear and linear controllers, transient response of linear control systems.

Analysis and design of simple control systems: root locus method, Naslin’s Method.

48.174 Seminars  F T3

Co- or prerequisite: 48.184.

Students are required to deliver two lecturettes on selected topics, one related to some aspect of chemical technology, and the other to their research project. The intention is to develop skill in oral expression, as well as ability in critical evaluation and logical presentation. Opportunity is taken, where appropriate, to arrange for guest lecturers.

48.184 Process Analysis  F T2

An assignment on the integrated design of process flow diagrams involving specification of basic chemical reactions and physico-chemical parameters, selection of types of equipment required, statement of variables to be measured for the control of raw materials, process conditions and final product, and the preparation of a process model suitable for automatic control.

48.194 Project (Industrial Chemistry)  S1 T6 S2 T8

An experimental or technical investigation related to some aspect of industrial chemistry. Prerequisites and/or co-requisites will be determined depending on the nature of the project.
Servicing Subjects

48.023 Chemical Engineering Science I
48.024 Chemical Engineering Principles I
48.037 Chemical Engineering Science II
48.038 Chemical Engineering Principles II
48.101 Computation and Modelling in Applied Chemistry

Department of Fuel Technology

48.301 Fuel Engineering (for Mining Engineers) F L2T1
An elective introductory subject in fuels and energy for Mining Engineering students based on the subject 48.311 Fuel Engineering I, supplemented by appropriate laboratory experiments (consisting of 28 lectures and 14 hours of laboratory classes per session, taught over two sessions).

48.302 Fuels and Energy S2 L2T2
A servicing subject for students in Electrical Engineering which deals with sources and properties of fuels (with particular emphasis on coal, crude oil and natural gas), principles of combustion including combustion calculations and the technology of boilers and other fuel plant. A variety of alternative energy sources and review of the national and global energy situation.

Department of Biological Process Engineering

48.211 Biological Process Engineering F L2T4
Prerequisite: 44.101.

48.311 Fuel Engineering I

Unit 1 Fuels and Energy. Sources and Properties S1 or S2 L1
Fossil Fuels: coal, oil, gas; origin, occurrence in Australia; storage, sampling and analysis; properties and their significance; classification. Other energy sources; nuclear, solar, wind, water, etc.

Unit 2 Energy Conversion S1 or S2 L1
Principles of combustion of solid, liquid and gaseous fuels. Limits of inflammability, burning velocity, ignition temperature. Design principles of burners, combustion efficiency, excess air, air supply.

Unit 3 Fuel Processing S1 or S2 L1

Unit 4 Fuel Plant Technology S1 or S2 L1
Design principles of boilers. Boiler water conditioning. Introduction to furnaces, ovens, kilns, etc.

48.321 Fuel Engineering II

Unit 1 Combustion — Fundamentals and Science S1 or S2 L1
Unit 2 Principles of Gasification  
Thermodynamics of basic reactions and calculation of equilibrium compositions. The production of fuel and synthesis gases, controlled furnace atmospheres; gas purification.

Unit 3 Radiation Heat Transfer and Engineering Applications  

Unit 4 Measurements in Flames and Furnaces  

Unit 5 Laboratory  
Analysis and characterization of solid, liquid and gaseous fuels.

48.331 Fuel Engineering III  

Unit 1 Combustion Engineering  

Unit 2 Furnace Design  
Furnace design for continuous or intermittent operation.

Unit 3 Fuel Plant Design  

Unit 4 Fuel Conservation and Efficiency  
A case history and investigative approach to energy saving in industrial, commercial and domestic applications.

Unit 5 Liquid Fuels  

Unit 6 Coal and its Evaluation  
Constitution, classification and evaluation of coals. Carbonization: blending, additives, plastic behaviour.

Unit 7 Laboratory  
48.340 Fuel Engineering Project  
Projects selected involving the design of fuel plant or experimental aspects of fuel science and/or fuel processing and utilization.

No books are recommended. Students are supplied with reading lists appropriate to individual requirements.

Department of Polymer Science  

48.403 Polymer Science  

48.414 Polymer Chemistry  

Prerequisite: 48.403.

Inorganic polymers, polymers for high temperature service, the use of modern instrumental methods for establishing composition and structure of high polymers.

48.424 Physical Chemistry of Polymers II  

Prerequisite: 48.403.

Selected topics from basic texts and the original literature, covering anionic polymerization, polymer degradation, polymer rheology, polymer, visco-elasticity, fracture and environmental stress cracking, polyelectrolytes.
Graduate Study

48.062G Urban Planning

Priorities in urban planning: topography, community services, industry; selective zoning and decentralization; relationships to regional planning. Cost of pollution and control measures; legal aspects; planned development; architectural aspects; density distribution. Case histories.

48.063G Industrial Water and Wastewater Engineering

Environmental consequences of water pollution. Water quality criteria and regulations related to industrial use and disposal. Water sources and requirements of industry. Theoretical and practical aspects of treatment methods, including screening, sedimentation, oil separation, coagulation and flocculation, filtration, biological treatment, adsorption, ion exchange, membrane processes. Strategies for industry including waste surveys, prevention at source, correction before discharge water reuse. Economic aspects. Seminars. Factory visits/laboratory.

48.064G Medical Aspects

Aspects of medicine bearing upon physiological consequences of pollutants. Synergism and antagonisms; photosynthesis and phytoxicity, metabolic mechanisms; morbidity and mortality surveys; exposure indices. Particular pollutants: aldehydes, nitro-olefins, carbon monoxide, sulfur dioxide, oxides of nitrogen, hydrocarbons, ozone and oxidants, particulates, carcinogens.

48.066G Legislative Aspects

48.070G Process Principles

48.071G Corrosion Technology I

48.072G Corrosion Laboratory

Laboratory assignments to illustrate and measure the mechanism of corrosion: Electroplating/anodising experiments.

48.073G Corrosion Materials

Metallic — types available, properties and applications for each of the following: cast irons, alloy cast irons, carbon steels, low alloy steels, stainless steel, special alloys. The following metals and their alloys: aluminium, copper, nickel, titanium, lead, zinc, magnesium, tin, cadmium, chromium, cobalt. Refractory metals — molybdenum, tantalum, tungsten, zirconium. Noble metals — gold, platinum, silver.

48.075G Corrosion Seminar
Joint University/Industry colloquia on theory and practice of corrosion technology.

Students present material arising from literature and/or laboratory assignments and industrialists are invited to contribute papers and/or participate in the colloquia.

48.076G Corrosion Literature Review
Students are expected to consult and read the wide literature on corrosion and to produce a comprehensive and detailed report on a selected topic, eg, aspects of corrosion in the acid industry; marine corrosion; corrosion problems in the food industry; underground corrosion of pipelines.

48.077G Testing Laboratory
Candidates undertake a project involving the design/evaluation of corrosion testing equipment/techniques. A comprehensive report is submitted.

48.081G Advanced Process Dynamics

48.082G Process Optimization
Multivariable analytical and numerical optimization in free and constrained parameter space. Optimization of functions of a continuous variable. Dynamic programming. Applications of these techniques to specific chemical engineering problems.

48.083G Equilibrium Concepts in Water Systems
The application and limitations of chemical thermodynamics in water systems. Particular attention is given to aqueous inorganic process systems including water treatment and minerals processing and with consideration of the effects and control of pollution.

Thermodynamic diagrams such as InE/pH, potential/pH, temperature/pH and concentration/pH are developed as an aid to assessing system energetics.

Sources and estimation of thermodynamic data. Kinetics and mechanism in relation to aqueous system energetics. Analysis of kinetic data.

48.084G System Simulation and Control
This is a participatory course in which case studies, discussions of recent papers, development of digital simulation programs and analog computer laboratory work play an important part.

Topics are selected from the following areas:

Unit 1 System Simulation
Numerical methods for digital simulation, programming languages and packages for system modelling of distributed parameter systems; use of analog computers in system simulation.

Application of these techniques to the study of process and equipment, environmental systems, and similar areas.

Unit 2 Advanced Process Control
System identification and parameter estimation; control of multi-loop systems; non-linear systems; digital control and data-logging, sequencing control.

48.085G Interphase Mass Transfer
Advanced theories of mass transfer. The effect of interfacial instability and methods for predicting its presence. Theoretical prediction of mass transfer in dispersed systems. Multicomponent mass transfer.

48.086G Fluid Particle Interactions

48.087G Design of Process Envelopes
Theoretical treatments concerning stress analyses with time and temperature as variables, stresses at discontinuities and transitions in vessel geometry. Theories and modes of material behaviour, gas solubility effect, design of insulation, reinforcement, etc. Analyses of stresses and reactions in piping subject to large temperature changes. Code requirements. Practical aspects will include a treatment of high pressure components, eg, valves, fittings, pumps, safety devices. Economic aspects.

48.089G Graduate Colloquia
Colloquia on research developments in Chemical Engineering. Students are required to participate actively in the colloquia and give at least one dissertation based on their own investigations.
48.090G Specialist Lectures

48.091G Advanced Thermodynamics

Molecular theory and statistical thermodynamics; partition functions, monatomic and diatomic gases; Chapman-Enskog theory, evaluation of 1. thermodynamic potentials, 2. virial coefficients.

Compressible flow: flow of compressible fluids in ducts including 1. supersonic flow, 2. shock waves, 3. stagnation properties.

48.092G Computer-aided Design
A workshop type of course with considerable time devoted to discussion, seminars, writing and running of programs.

Programming. Methods, conventions, and standards. Program design, flow-charting, co-ordination and documentation.

Design. Individual plant units and components, flowsheets, optimization and economic analysis. Physical property estimation.

Simulation. Continuous change and discrete change systems.

48.110G Process Evaluation
F L1T2
Critical scientific and economic evaluation of industrial chemistry processes and research and development procedures. Process methodology, physico-chemical data and their implications, equipment and control parameters. Novel and controversial chemical processes relevant to the Australian chemical industry.

48.120G Machine Computation in Chemical Technology S1 or S2 L2T4
Applied numerical methods for solution of industrial chemistry problems; statistical methods including non-linear and multiple regression; model discrimination and experimental design methods; plant tests and product quality control experiments; numerical optimization techniques.

48.130G Chemical Reactor Analysis and Control S1 or S2 L2T4
Concepts of heat and mass transfer; analysis of fixed-bed catalytic reactors; fluidized beds and catalytic risers; residence time distributions; maximum mixedness and segregated flow; multiple steady states; control of tubular and stirred tank reactors.

48.131G Catalysts and Applied Reaction Kinetics S1 or S2 L2T4
Methods of catalyst preparation and characterization; adsorption theories; general mechanisms for gas-phase reactions catalyzed by solids; poisoning and catalyst decay; effectiveness factors; techniques in catalytic research; special topics in reaction kinetics including gas-solid non-catalytic reactions, polymer kinetics, electrochemical reaction kinetics and electrocatalysis; industrial catalytic processes; application of statistical methods to the solution of complex chemical data.

48.140G Chemical Process Simulation S1 or S2 L2T4
The simulation of chemical process models using analog and digital computers. Analog and digital computer simulation techniques. The role and application of hybrid computers to the chemical industry, including simulation techniques.

Optimization of chemical reactions by simulation. The economics of simulation. Practical simulation studies of selected industrial chemical processes.

48.141G Modelling in Chemical Technology S1 or S2 L2T4
Basics of modelling methods and their relationship to chemical industry.

The modelling of dynamics physico-chemical processes common to the chemical industry including the systems and subsystems approach; continuous- and discrete-time physical process models, lumped- and distributed-parameter models, evolution of models from fundamental physico-chemical principles. Approximation methods for complex and ill-defined chemical processes. Integrated chemical process models.

48.142G Chemical Process Control S1 or S2 L2T4
Data acquisition from chemical instrumentation and its application to the control of chemical processes. Modern control techniques in the chemical industry including non-linear control, linear digital control, multivariable process control systems, and optimal control.

48.150G Instrumental Analysis for Industry F L1T2
Role of analysis in process optimization. Accuracies of analytical methods compared to needs for quality control. Frequency of analysis in relationship to control and analytical costs. Importance of speed of analysis for information feedback. Case studies for selected processes in relation to selecting the analytical method.

48.160G Industrial Electrochemistry S1 or S2 L2T4
Fundamentals of electrodes, the Butler-Volmer equation, current/potential laws in relationship to reaction mechanism. Electro-catalysis, gas evolution and co-deposition. Technological aspects of electrochemistry, energy conversion systems, storage systems and plating. Industrial processes — cell design and side reactions, gas bubble effect, current distribution and mass transfer effects. Developments in electrode technology, diaphragms and cell construction. Automation and control for optimal conditions.

48.161G Electrochemical Techniques for Control and Analysis S1 or S2 L2T4
In-depth study of selected electroanalytical methods with respect to theoretical principles, instrumentation and practical utilization. The importance of adsorption and reaction mechanism on accuracies and application. Steady state and rapid scan voltammetry, stripping voltammetry, chronopotentiometry, chronocoulometry, classical coulometry and potentiometry. Instrument design and modification for specific needs.
Department of Biological Process Engineering

General

Units are offered separately subject to specified prerequisites as well as the restrictions on those units designed as bridging materials.

48.281G  Design of Microbial Reactors

Unit 1  Rate Processes

This unit is a bridging course designed to provide the background in rate processes in heterogeneous systems required for Unit 3. This unit could not be offered to a graduate with background in advanced rate processes; the equivalent of 3.845 Unit 6 Reactor Engineering.

Covers process rates and rates of change; generalized definition of a process rate. Material balances with reaction — integral balances and balanced differential with respect to time, space, and both time and space.

Measurement, interpretation and correlation of process rates. Heterogeneous systems, the influence of diffusional processes, linear and non-linear systems, lumped and distributed systems.

Unit 2  Fundamentals of Microbial Stoichiometry

This is a bridging unit offered to students with little or no background in the life sciences. A prerequisite or co-requisite would be 44.111. Microbiology or its equivalent. The unit is designed to provide an understanding of the structure of metabolism to allow the student to carry out the overall metabolic balances necessary for quantification of living systems.

Covers growth of an undifferentiated organism as a physico-chemical process leading to quantification of the growth processes. Overall structure of metabolic processes. Material, energy and redox balances under anaerobic and aerobic conditions. Specific metabolic rates and their quantification.

Unit 3  Design of Microbial Reactors

This unit would normally follow rate processes or fundamentals of microbial stoichiometry and is divided into two strands

Reactor Design Fundamentals: Ideal and non-ideal reactors, residence time distribution and non-ideal reactor models. The significance of mixing and diffusion in microbial reactors for freely suspended microorganisms. The concept of a microfluid and a macrofluid and its application to the description of two-phase reacting systems — gas-liquid, oil-aqueous and solid-fluid systems will be examined with examples relevant to the biological process industries.

Microbial Reactor Calculations: The collection, quantification and interpretation of rate data, and the design of reactors for freely suspended microorganisms; batch, semi-batch and continuous reactors. Gas exchange balances. Rate processes in microbial flocs and microbial films. Design for microbial floc and film reactors.

48.282G  Microbial Kinetics and Energetics

Unit 1  Microbial Kinetics

Prerequisite or co-requisite: 48.281G Unit 2 or equivalent.

Unit 2  Microbial Energetics

Prerequisite or co-requisite: 48.281G Unit 2 or equivalent.

Significance of entropy and free energy changes in microbial growth. Driven reactions, group transfer potentials, driven reaction sequences and the significance of actual and standard free energy changes in open systems. Application to metabolism, energy requiring pathways, energy producing pathways. Thermodynamic efficiency of growth. Mass, heat and entropy balances in growing cultures, prediction of yield.

48.283G  Bioprocess Unit Operations and Equipment Design

Prerequisite or co-requisite: 48.284G or equivalent.

Engineering design and operating characteristics of plant and processes normally used eg sterilization and air purification, dehydration drying at reduced pressure, reduced temperature preservation, radiation, product isolation, sedimentation, filtration, centrifugation, extraction, absorption, chromatography and ion exchange, absorption with reaction, electrophoresis and dialysis, aseptic design, materials of construction, effluent disposal.

48.284G  Heat, Mass and Momentum Transport

A bridging course designed to provide an introductory understanding of the mechanisms of transport processes. This unit could not be offered to a graduate with a background in chemical engineering principles.

48.285G  Bioprocess Laboratory

Practical experience in the industrial processing of biological and microbial systems. The essential nature of this work is small projects in areas of interest to the student.
Note: One Session Unit (SU) is equal to 1 hour per week for session of 14 weeks.

48.380G Fuel Seminar
1 (SU) to be given in Session 2, compulsory in MAppSc (Fuel Engineering) degree course. Content bias to choice of G subjects.

48.381G Atmospheric Pollution and Control
Unit 1 (4 SU) Causes, properties, dispersion, monitoring control and legislation.
Unit 2 (4 SU) Advanced atmospheric pollution (extension for EPC, IPC courses only, Unit 1 is a prerequisite).

48.382G Fuel Constitution
Unit 1 (1 SU) Coal constitution and pyrolytic behaviour.
Unit 2 (1 SU) Constitution and classification of oils
Unit 3 (2 SU) Advanced fuel constitution

48.383G Fuel Processing
Unit 1 (2 SU) Carbonization and gasification processes
Unit 2 (1 SU) Liquid fuels from coals
Unit 3 (1 SU) Chemicals from coals

48.384G Fuel Plant Engineering
Unit 1 (1 SU) Furnace design and heat recovery
Unit 2 (1 SU) Process heat transfer and efficient use of steam
Unit 3 (2 SU) Furnaces and boiler control system
Unit 4 (2 SU) Fuel plant heat transfer

48.385G Combustion and Energy Systems
Unit 1 (1 SU) Combustion technology
Unit 2 (1 SU) Fuel impurities removal of and deposits from
Unit 3 (1 SU) Efficiency in energy utilization
Unit 4 (1 SU) Combined cycles and integrated systems

48.386G Unit Operations in Waste Management
Unit 1 (3 SU) The unit operations and processes associated with modern waste management practices, i.e. the origin, nature, characterization, handling, transportation, size reduction and storage of various waste materials; reduction at source and disposal by composting, landfill, incineration and chemical processes; recovery and re-use of marketable products. Legal aspects; case histories.

48.387G Fuel Technology Practice
Compulsory in MAppSc (Fuel) (4 SU). Content bias towards choice of G subjects.
48.501G Chemical Engineering in Medicine

48.900G Major Project
A substantial project on some aspect of chemical engineering, industrial chemistry, polymer science, fuel technology or biological process engineering.

48.901G Minor Project
A minor investigation on some aspect of chemical engineering, industrial chemistry, polymer science, fuel technology or biological process engineering.

School of Political Science

Undergraduate Study

54.1001 Political Science I F 4CCH
Australian politics and the history of Western political thought. Power, democratic ideas and political institutions in Australia. Political thinkers such as Machiavelli, Burke, Mill and Marx.

54.2008 Public Policy Making S2 4CCH
Prerequisites: 54.1001*
The problems of administering government and the problems of decision making. Models of decision making, eg legal-rational, incremental, 'muddling through', and the systems models as well as some theoretical material on bureaucracy (Weber, Blau, Simon, March).

Areas of public policy in Australia are looked into and problems peculiar to Australia, arising for example from our federal structure and the nature of local government and comparisons made with similar areas in the United States and the United Kingdom and in some instances France and Scandinavia (eg education, urban policy, health and welfare, statutory corporations, bureaucratic responsiveness and open government).

Similarities between public bureaucracy and decision making and private bureaucracy and decision making, multinational corporations and the extent of governmental involvement and support for the private sector.

School of Sociology

Undergraduate Study

53.001 Introduction to Sociology F L2 T1

Topics: social control, power, racism, sexism, work and leisure, class distinctions. These are treated both factually and theoretically and are considered as they relate to the situation in Australia and in the developing countries.
Financial Assistance to Students

The scholarships and prizes listed below are available to students whose courses are listed in this handbook. Each faculty handbook contains its Financial Assistance to Students section the scholarships and prizes available within that faculty. The General Information section of the Calendar contains a comprehensive list of scholarships and prizes offered throughout the University.

Scholarships

Undergraduate Scholarships

As well as the assistance mentioned earlier in this handbook (see General Information: Financial Assistance to Students) there are a number of scholarships available to students. What follows is an outline only. Full information may be obtained from the Student Records, Higher Degrees and Scholarships Section, located on the ground floor of the Chancellery.

Unless otherwise indicated in footnotes, applications for the following scholarships should be made to the Registrar by 14 January each year. Please note that not all of these awards are available every year.

<th>Value</th>
<th>Year/s of Tenure</th>
<th>Conditions</th>
</tr>
</thead>
<tbody>
<tr>
<td>University of New South Wales Research Awards</td>
<td></td>
<td>1-2 years; minimum duration of course</td>
<td>Applicants must be honours graduates (or equivalent). Applications to Registrar by 31 October (30 November in special circumstances).</td>
</tr>
<tr>
<td>Commonwealth Postgraduate Research Awards</td>
<td>Living allowance of $4200 pa. Other allowances may also be paid.</td>
<td>1-2 years for a Masters and 3-4 years for a PhD degree</td>
<td>Applicants must be honours graduates (or equivalent) who will graduate with honours in current academic year, and who are permanent residents in Australia. Preference is given to applicants with employment experience. Applicants must be graduates or scholars who will graduate in current academic year and who have not previously held a Commonwealth Postgraduate Award. Applications to Registrar by 30 September (in special circumstances applications will be accepted 30 November).</td>
</tr>
<tr>
<td>Commonwealth Postgraduate Course Awards</td>
<td></td>
<td></td>
<td>Applicants must be graduates, senior scholars or post-doctoral Fellows. Applications close 30 September.</td>
</tr>
<tr>
<td>Australian American Educational Foundation Travel Grant*</td>
<td>Amount varies, depending on award</td>
<td>Up to 1 year</td>
<td>Applicants must be female graduates who are members of the Australian Federation of University Women.</td>
</tr>
<tr>
<td>Australian Federation of University Women</td>
<td></td>
<td></td>
<td>Applicants must be either senior or junior academic staff. Preference will be given to activities likely to lead to further collaboration through joint research, publication, and/or teaching programs. Applications may be made at any time and should be submitted to the Registrar.</td>
</tr>
<tr>
<td>The British Council Academic Links and Interchange Scheme†</td>
<td>Cost of travel to UK</td>
<td></td>
<td>Applicants must be female graduates who have completed a University degree or diploma this year and who are Australian citizens or have resided in Australia for at least seven years. Selection is based on scholastic and literary achievements, demonstrable qualities of character, and accomplishments in cultural and/or sporting recreational activities.</td>
</tr>
<tr>
<td>The Caltex Woman Graduate of the Year</td>
<td>$5000 pa for further studies in USA, UK, Northern Europe or in special cases Australia. There are no special allowances for travel or accommodation for married graduates.</td>
<td>2 years</td>
<td>Applicants must be female graduates who have completed a University degree or diploma this year and who are Australian citizens or have resided in Australia for at least seven years. Selection is based on scholastic and literary achievements, demonstrable qualities of character, and accomplishments in cultural and/or sporting recreational activities.</td>
</tr>
</tbody>
</table>

*Application forms are available from: The Secretary, Department of Education, AAEF Travel Grants, PO Box 826, Woden, ACT 2606.
†Application forms available from The British Council, PO Box 88, Edgecliff, NSW 2077.
### Graduate Scholarships (continued)

<table>
<thead>
<tr>

<tbody>
<tr>
<td>Commonwealth Scholarship and Fellowship Plan</td>
<td>Usually 2 years, sometimes 3</td>
</tr>
<tr>
<td>Sam Cracknell Memorial</td>
<td>Up to $3000 pa</td>
</tr>
<tr>
<td>The English-Speaking Union (NSW Branch)</td>
<td>$5000</td>
</tr>
<tr>
<td>Gowrie Graduate Research</td>
<td>Maximum $2000 pa in Australia, and $2750 if tenable overseas</td>
</tr>
<tr>
<td>Harkness Fellowships of the Commonwealth Fund of New York*</td>
<td>Between 12 to 21 months</td>
</tr>
<tr>
<td>Frank Knox Memorial Fellowships at Harvard University</td>
<td>1 year, sometimes 2 years</td>
</tr>
<tr>
<td>Nuffield Foundation Commonwealth Travelling Fellowships†</td>
<td>1 year</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Conditions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Applicants must be graduates who are Commonwealth citizens or British Protected Persons, and who are not older than 35 years of age. Applications close with Registrar by 1 October.</td>
</tr>
<tr>
<td>See above under Undergraduate Scholarships, General</td>
</tr>
<tr>
<td>Applicants must be residents of NSW or ACT. Awarded to young graduates to further their studies outside Australia.</td>
</tr>
<tr>
<td>Applicants must be members of the Forces or children of members of the Forces who were on active service during the 1939-45 War.</td>
</tr>
<tr>
<td>Candidates must be either: 1. Members of the Australian or a State Public Service or semi-government Authority. 2. Staff or graduate students at an Australian university. 3. Individuals recommended for nomination by the Local Correspondents. The candidate will usually have an honours degree or equivalent, or an outstanding record of achievement, and be not more than 36 years of age. Applications close July.</td>
</tr>
<tr>
<td>Applicants must be British subjects and Australian citizens, who are graduates or near graduates of an Australian University.</td>
</tr>
<tr>
<td>Australian citizens usually between 25 and 35 who are graduates preferably with higher degrees and who have at least a year’s teaching or research experience at a university. Applications close by February.</td>
</tr>
</tbody>
</table>

*Application forms must be obtained from the Australian representative of the Fund, Mr L. T. Hinde, Reserve Bank of Australia, Box 3947, GPO, Sydney, NSW 2001. These must be submitted to the Registrar by 24 July.

†Applications to the Secretary, The Nuffield Foundation Australian Advisory Committee, PO Box 783, Canberra City 2601.

Faculty of Applied Science

Staff

Comprises Schools of Applied Geology, Chemical Engineering and Industrial Chemistry, Food Technology, Geography, Metallurgy, Mining Engineering, Textile Technology, and Wool and Pastoral Sciences.

Dean
Professor M. Chaikin

Chairman
Professor R. T. Fowler

Executive Officer
John David Collins, BSc PhD N.S.W., ATI

Senior Administrative Officer
Robert Frederick Starr, ASTC

Senior Project Officer
Desmond Rokfalussy, BE Bud.

Professional Officers
Badan-Singh Deol, MSc Punj., PhD Syd.
Endel Nomm, BA Macq., MSC N.S.W.
Dante Simon Santea, Dipling T.Liassy

Electron Microscopist
Vivian Noel Edward Robinson, BSc PhD W. Aust.

Officer-in-charge, Drawing Office
Max Renner

School of Applied Geology

Professor of Geology and Head of School
Gerald James Spurgeon Govett, DSc Wales, PhD Lond., DIC, FIMM

Professor of Engineering Geology
Francis Clifford Beavis, MA Cant., BSc PhD Melb., FGS

Associate Professors
Laric Villier Hawkins, MSc Syd., FGS
Frederick Charles Loughnan, BSc Syd., PhD DSc N.S.W., A AusIMM
John Roberts, BSc N.E., PhD W.Aust.
Bryce Leslie Wood, MSc DSc Otago, A AusIMM

Senior Lecturers
Alberto Albani, Dr GeolSc Florence, MSc PhD N.S.W.
Alan Norval Carter, BSc PhD Melb., MSc Adel.
Philip Richard Evans, BA Oxf., PhD Brist., FGS
Bastiaan Jan Hensen, MSc Ley., PhD A.N.U.
Michael Barry Katz, BS Mich. T.U., MSc McG., PhD Tor.
Peter Cyril Rickwood, BSc Lond., PhD Cape T., CChem, FGS, MRIC
Iftikhar Rasul Qureshi, MSc Punj., PhD Glas., FGS

Lecturers
Alistair Chisholm Dunlop, BSc N.E., PhD Lond., DIC, MIMM
Michael John Knight, BSc PhD Melb.
Geoffrey Robert Taylor, MSc Birm., PhD N.E., FGS, MIMM, A AusIMM
Robert James Whiteley, MSc Syd.
Senior Tutor
Maren Krysko von Tryst, BSc GradDip N.S.W., AMAusIMM

Tutor
Leonie Ann Campbell, BSc W'gong., DipT Kuring-gai C.A.E.

Honorary Associate
John Ringis, BE PhD N.S.W., MGSA

Administrative Officer
Graham John Baldwin, BA A.N.U.

Professional Officers
Peter Richard Atherden, BSc N.S.W., MSc Macq.
Frederick Ivor Roberts, BSc N.S.W.

Senior Lecturers
Denis Barrett, MSc Leeds, PhD N.S.W., CEng, FInstF, FAIE
Kenneth Spencer Basden, BSc PhD N.S.W., ASTC, CEng, FInstF, FAIE, MIEAus, ARACI, AMAusIMM
Michael Paul Brungs, BSc PhD N.S.W.
John Buchanan, ME Syd., PhD N.S.W.
Rodney Phillip Chaplin, BSc PhD Adel., ARACI
Douglas Christopher Dixon, BE MEngSc Syd., PhD N.S.W., MIAus
Anthony Gordon Fane, BSc PhD Lond., CEng, MiChemE
Robert James Hall, BSc PhD N.S.W.
Peter Munro Linklater, RDA, BAgriSc Adel., MAgrSc N.Z., PhD W'gong.
Barry George Madden, BSc PhD N.S.W., ASTC, FIEREAust
Philip Souter, MSc Syd., ARACI
Mark Sebastian Wainwright, MAppSc Adel., PhD Mcm., ARACI
Robert Marsden Wood, BSc Leeds, PhD Camb., CEng, FAppet, MiChemE

Lecturers
Robert Paul Burford, BSc PhD Adel., ARACI
Franklin Owen Howard, BE Syd., CEng
Val Wolf Pinczewski, BE N'cle.(N.S.W.), PhD N.S.W.
John Frank Stubington, BE Qld., PhD Camb., MAIE
David John Young, BSc PhD Melb., ARACI

Honorary Visiting Fellow
Maxwell Kenneth Shaw, MSc Qld., PhD Calif., FAIFST, MASM

School of Chemical Engineering
and Industrial Chemistry

Professor of Chemical Technology and Head of School
David Lawrence Trimm, BSc PhD Exe., DIC

Professor of Chemical Engineering and Director of Graduate Studies
Christopher Joseph Dalzell Fell, BSc N.S.W., PhD Camb., CEng, MiChemE

Professor of Chemical Engineering and Director of Undergraduate Studies
Robert Thomas Fowler, BSc Wales, PhD Lond., DScEng Syd., CEng, FIEAust, FChemE, FInstF, FAIE, MIM, ARIC

Professor of Fuel Technology
Vacant

Associate Professors
Ian Dracup Doig, BSc(Eng) Lond., PhD N.S.W., CEng, MIMechE, MiChemE
Peter Craig Farrell, BE Syd., SM M.I.T., PhD Wash., MASAIO
John Kingsford Haken, MSc PhD N.S.W., ASTC, FRACI
Robert George Robins, MSc PhD N.S.W., MAmeriChE, ARACI, AMAusIMM
Geoffrey David Sergeant, BSc PhD Wales, CEng, FInstF, FAIE
Barry John Welch, MSc PhD N.Z., FNZIC, FRACI

Department of Biological Process Engineering

Head
Dr R. J. Hall

Department of Fuel Technology

Head
Associate Professor G. D. Sergeant

Department of Polymer Science

Head
Associate Professor J. K. Haken

Senior Administrative Officer
John Robin Gatenby, ASTC
Professional Officers
Robert Edmund Brand, BSc N.S.W., ASIC, ARACI
Eric Alan Vincent Durbin, MAppSc N.S.W., CEng, MIChemE, MIEng
Orest Dworjanyn, MSc N.S.W., ASTC, ARACI
David John Kelly, BSc BE Syd.
Cyril Leslie Samways, BSc Syd., MSc N.S.W.
Johannes Peter Smits, BSc(Tech) N.S.W., CEng, MinstE, MAIE

School of Food Technology

Professor of Food Technology and Head of School
Ronald Alexander Edwards, BSc PhD N.S.W., ASTC, FAIFST

Associate Professors
Terence Henderson Lee, BSc PhD N.S.W., FAIFST
Ronald Baden Howe Wills, BSc N.S.W., PhD Macq., ASTC, AAIFST

Senior Lecturers
Ronald Graham Bowrey, BE PhD N.S.W., AAIFST
Kenneth Alan Buckle, BSc PhD N.S.W., AAIFST, AFCIA
Michael Wootton, BSc PhD N.S.W., AAIFST, ARACI, MAGI

Lecturers
Graham Harold Fleet, MSc Qld., PhD Calif., AAIFST
Heather Greenfield, BSc PhD Lond., AAIFST

Tutors
Vera Szopen, BSc N.S.W.
Annesley Jean Watson, BSc N.S.W.
Rosalea Anne Platz, BSc A.N.U.
Nguyen Thi Son, BSc N.S.W.

Administrative Assistant
Richard John Greenwood, BA N.S.W.

School of Geography

Professor of Geography and Head of School
Jack Alan Mabbutt, MA Camb.

Professor of Geography
Barry Jardine Garner, BA Nott., MA PhD Northwestern

Associate Professor
Eugene Albert Fitzpatrick, BA Wash., MA Syd., PhD Rutgers

Senior Lecturers
Frederick Charles Bell, BSc Syd., MSc PhD N.S.W., MSocSigmaXi
Ian Harry Burnley, MA Cant., PhD Well.
Andrew John Hoisman, MA Camb., PhD N.S.W.
Anthony Shepherd, MA Ox.
Peter Leon Simons, BA PhD Syd.

Lecturers
Colin John Chartres, BSc Brist., PhD R'dg.
John Richard Dodson, MSc Monash, PhD A.N.U.
Michael Dick Melville, BScAgr PhD Syd.
Colin Frederick Pain, MA Auck., PhD A.N.U.
Morgan Eugene Cyril Sant, BA Keele, MSc PhD Lond.
Hans Joachim Schneider, Geog Chil. State, DU Bordeaux
Susanne Rae Walker, MA Well., DPhil Ox.
Donald John Webb, BA DipEd Melb., MPhil Lond., PhD N.S.W.
Frank Williamson, MSc Lond., PhD Syd.
David Ian Wilson, BA W.Aust., MS PhD Northwestern

Senior Tutor
Noel Galvin Lonergan, BA DipEd N.E.

Tutors
Philip Weston Greenwood, BA Syd.
Vivienne Rae Milligan, BA Syd.
Henrietta Ann Turner, BA Macq.
Patricia Christina Vorst, BA Macq.
Louise Anne Walsh, BSc N.S.W.

Administrative Assistant
Brian McClanaghan, BA N.E.
Staff: Applied Science

School of Metallurgy

Professor of Physical Metallurgy and Head of School
Hugh Muir, BMetMelb., ScD M.I.T., CEng, FIM, FIIEAust, MAusIMM

Research Professor of Physical Metallurgy
John Stephen Bowles, MSc Melb., CEng, FIM

Professor of Chemical and Extraction Metallurgy
Vacant

Senior Administrative Officer
Reginald Arthur Ball, ASTC, MAusIMM, ARACI, AFAIM, FGAA(Res)

Senior Project Scientist
Anthony Samuel Malin, MSc PhD N.S.W., CEng, MIM

Professional Officers

Associate Professors
Max Hatherly, MSc PhD N.S.W., ASTC, CEng, FIM
Greig Richard Wallwork, PhD DSc N.S.W., ASTC, CEng, FIM

Senior Lecturers
David John Haviland Corderoy, BSc N.S.W., PhD Sheff., CEng, FIM, MWeld(Lond), MIEAust, MAusIMM
Peter George McDougall, BSc PhD N.S.W., ASTC, CEng, MIM
Michael Bernard McGirr, BSc Syd., PhD N.S.W.
Roy Thomas Southin, PhD Camb., CEng, FIM, MIBF

School of Mining Engineering

Professor of Mining Engineering and Head of School
Frank Ferdinand Roxborough, BSc PhD Durh., CEng, FIIMinE, FIMM, MAusIMM

Professional Officers
Christopher Raymond Daly, BE MSc(Acoustics) N.S.W,
Joseph Arthur Shonhardt, BSc(Tech) MSc N.S.W., AIM, MAusIMM

Honorary Associate
Charles Harold Warman, MIEAust, MAusIMM, AWASM
**Department of Mining Engineering**

**Senior Lecturers**
- Ross Leslie Blackwood, BE Syd., PhD Macq., MIAust, MAusIMM
- Edward George Thomas, BE PhD Qld., MAusIMM, MAIME, MCIMM

**Lecturers**
- Amal Krishna Bhattacharyya, BSc Glas., MSc Durh., PhD N'cle.(U.K.), CEng, PEng, MIMinE, MCIMM
- Huw Ronald Phillips, BSc Brist., MSc PhD N'cle.(U.K.), CEng, MIMinE, MIEE, MAIME

**Tutor**
- Victor Rudenko, BE PhD N.S.W.

**Department of Mineral Processing**

**Senior Lecturer and Head of Department**
- Russell George Burden, ME PhD N.S.W., CEng, FInstE, FAIE, MIMM, MAIME, ASASM, AMAusIMM

**Lecturer**
- Anthony Charles Partridge, BSc Leeds, MSc PhD McG., CEng, MCIM, MIMM, AMAusIMM, AMAIME

**School of Wool and Pastoral Sciences**

**Associate Professor and Head of School**
- John Patrick Kennedy, MSc N.S.W., BSc Oxf., MAIAS

**Professor of Pastoral Sciences**
- Haydn Lloyd Davies, PhD W.Aust., BSc Wales, MAIAS

**Associate Professors**
- John William James, BA Qld., DSc N.S.W.
- Walter Raghnell McManus, BScAgr Syd., PhD N.S.W., MAIAS
- Euan Maurice Roberts, MAgSc N.Z., PhD N.S.W., MAIAS

**Administrative Officer**
- John Edward Lawrence

**Senior Lecturers**
- Stephen James Filan, BAgEc N.E., MSc N.S.W.
- John Douglas McFarlane, BScAgr DipEd Syd., MSc N.S.W., MAIAS
- Douglas McPherson Murray, BScAgr PhD Melb., MRurSc N.E.
- Archibald Niven Sinclair, MVSc Syd., FRCSI, FACVS, FACVS

**Senior Instructor**
- Ronald Edward Sallaway
Broken Hill Division

Staff

Director
Professor J. E. Andersen

Librarian
Peter Geoffrey Longrigg, BA P.N.G., DipLib Canberra C.A.E., ALAA

Department of Mining and Mineral Sciences

Professional Officer
Kenneth James Murray, BSc Syd., MSc N.S.W., AMAusIMM

Mechanical Engineering

Lecturers
Llewellyn Ramsay Jones, BSc N.Z., DipAm MEng Sheff., PhD Wales, MIEAust, MIMechE
Ian Lachlan Maclaine-cross, BE Melb., PhD Monash, MIEAust, MAIRAH, MSES
Chakravarti Varadachar Madhusudana, BE Mys., ME I.I.Sc., PhD Monash, MIEAust

W.S. and L.B. Robinson University College

Head of Department of Science
Professor John Everard Andersen, BE Melb., PhD N.S.W., FIEAust, MAusIMM, ARACI

Head of Department of Mining and Mineral Sciences
Professor Leon John Thomas, BSc PhD Birm., CEng, FIEAust, MAusIMM, MIMinE

Mining Engineering

Senior Lecturer
Venkata Semyanarayana Vutukuri, BSc(Eng) Ban., MS Wis., MMGI, AIME, AMAusIMM
Applied Science

Mineral Science
Senior Lecturer
Barenya Kumar Banerji, MSc Patna, PhD Leeds, MAusIMM

Geology
Senior Lecturer
Gerrit Neef, BSc Lond., PhD Well., FGS

Department of Science
Chemistry
Lecturer
Derek Richard Smith, BSc PhD Wales
Senior Tutor
Robert Edward Byrne, MSc N.S.W., ARACI, AMAusIMM

Mathematics
Senior Lecturer
Zdenek Kviz, DipPhys Brno, CSc RerNatlDr Charles, PhD Prague
Lecturers
David Charles Guiney, BSc PhD Adel.
Dennis William Trenerry, BSc PhD Adel.

Physics
Senior Lecturer
Robert John Stening, MSc Syd., PhD Qld., DipTertEd N.E.
FRMetS, MAIP
Lecturer
Kenneth Reid Vost, BSc Glas., MSc N.S.W., AMAusIMM

Fowlers Gap Research Station
Officer-in-charge
Charles Richard Carter, BSc PhD Syd.

This Handbook has been specially designed as a source of reference for you and will prove useful for consultation throughout the year.

For fuller details about the University – its organization, staff membership, description of disciplines, scholarships, prizes, and so on, you should consult the Calendar.

The Calendar and Handbooks also contain a summary list of higher degrees as well as the conditions for their award applicable to each volume.

For detailed information about courses, subjects and requirements of a particular faculty you should consult the relevant Faculty Handbook.

Separate Handbooks are published for the Faculties of Applied Science, Architecture, Arts, Commerce, Engineering, Law, Medicine, Professional Studies, Science (including Biological Sciences and the Board of Studies in Science and Mathematics), the Australian Graduate School of Management (AGSM) and the Board of Studies in General Education.

The Calendar and Handbooks are available from the Cashier’s Office. The Calendar costs $3.50 (plus postage and packing, 90 cents). The Handbooks vary in cost. Applied Science, Arts, Commerce, Engineering and Sciences are $2.50. Architecture, Law, Medicine, Professional Studies and AGSM are $1.50. Postage is 80c in each case, or $1.20 ($3.00 interstate) for a complete set of books. The exception is General Studies, which is free (80 cents postage).
