FOREWORD

Since the dawn of civilization man has sought to endow his environment with physical and spiritual qualities appropriate to his way of life, to explore the limits of his materials and techniques, and in so doing, to create buildings of enduring beauty. In each great culture of the past this search produced a characteristic architecture which was a true reflection of the aspirations and capabilities of its age.

Today’s architects, builders and town planners face the same age-old problem, but their task is made infinitely more difficult by the complexity of modern requirements and the diversity of new materials and techniques available to them. For the first time in history material progress threatens to outstrip man’s visionary powers and to overwhelm his capacity for assimilation.

Within the next twenty years the world must face a gigantic population explosion. Our building industry must undergo a revolution if it is to meet even the most elementary needs of the community, and our search for appropriate building forms must be related to the practical necessities of mass production on a hitherto unprecedented scale. The pressure will be felt in every field of human endeavour, but to those who choose to enter the land-use professions it will represent the greatest challenge and the greatest opportunity of all time.

GENERAL INFORMATION

ADMISSIONS OFFICE

The Admissions Office which is located in the Chancellery on the upper campus provides intending students (both local and overseas) with information regarding courses, admission requirements, scholarships and enrolment. Office hours are from 9 a.m. to 1 p.m. and 2 p.m. to 5 p.m. Monday to Friday and an evening service is provided during the enrolment period.

Applications for special admission, admission with advanced standing and from persons relying for admission on overseas qualifications should be lodged with the Admissions Office. The Office also receives applications from students who wish to transfer from one course to another, resume their studies after an absence of twelve months or more, or seek any concession in relation to a course in which they are enrolled. It is essential that the closing dates for lodgment of applications are adhered to, and, for further details the sections on "Rules Relating to Students" and "Enrolment Procedure for Undergraduate Courses" should be consulted.

Applications for admission to undergraduate courses from students who do not satisfy the requirements for admission (see section on "Requirements for Admission"), from students seeking admission with advanced standing, and from students who have had a record of failure at another university, are referred by the Admissions Office to the Admissions Committee of the Professorial Board.

Students seeking to register as higher degree candidates should discuss their proposals initially with the Head of the School in which they wish to register. An application is then lodged on a standard form and the Admissions Office, after obtaining a recommendation from the Head of the School, refers the application to the appropriate Faculty or Board of Studies Higher Degree Committee.

Details of the procedure to be followed by students seeking entry to First Year courses at the University may be obtained from the Admissions Office or the Metropolitan Universities Admissions Centre.

Persons seeking entry to First Year Courses in one or more of the
three Universities in the Sydney Metropolitan Area (Macquarie University, the University of New South Wales and the University of Sydney) are required to lodge a single application form with the Metropolitan Universities Admissions Centre, Third Floor, 13-15 Wentworth Avenue (near Museum Station), Sydney (P.O. Box 7049 G.P.O. Sydney, 2001.) On the application form provision is made for applicants to indicate preferences for courses available in any of the three Universities. Students are notified individually of the result of their applications and provided with information regarding the procedures to be followed in order to accept the offer of a place at this University and complete their enrolment at the Enrolment Bureau, Unisearch House, 221 Anzac Parade, Kensington.

GENERAL MATRICULATION AND ADMISSION REQUIREMENTS

A candidate may qualify for matriculation by:

(a) attaining passes in five recognized matriculation subjects at one New South Wales Higher School Certificate Examination or at one University of Sydney Matriculation Examination. The subjects shall include English and three subjects shall be taken at Level 2 or higher.

(b) attaining an aggregate of marks as specified by the Professorial Board in not more than five recognized subjects, such marks being co-ordinated in a manner approved by the Board.

REQUIREMENTS FOR ADMISSION TO THE FACULTY OF ARCHITECTURE

For admission to the degree courses in Architecture, Building or Town Planning a candidate must satisfy one of the following requirements:

(a) meet the general admission requirements set out above with the further pre-requisite that the subjects shall include Science and Mathematics, both passed at Level 2S or higher.*

*This Faculty pre-requisite may be satisfied at the examination qualifying for matriculation or at a separate examination.
(b) Hold a Diploma from the New South Wales Department of Technical Education, or any other technical college which may from time to time be recognized by the University, subject to the Professorial Board being satisfied that the applicant's qualifications are sufficient for matriculation.

(c) Be a graduate of any approved university or a matriculant of any university whose requirements for entry are, in the opinion of the Professorial Board, comparable with those of the University of New South Wales.

(d) Produce evidence of at least one year's training at the Royal Military College of Australia or the Royal Australian Air Force College, or evidence of having satisfactorily completed the passing out examination of the Royal Australian Naval College.

The Professorial Board may in special cases declare any person qualified to enter a Faculty as a "provisionally matriculated student" although he has not complied with the requirements outlined above.

Intending applicants are advised to consult the University Calendar for details of approved matriculation subjects and conditions governing each of the above categories, or to contact the Admissions Office in the Chancellery at Kensington between 9 a.m. and 5 p.m. Telephone 663-0351.

RULES FOR PROGRESSION

General Rules

1. A student shall be required to pass all subjects of any year (or its two corresponding part-time stages) before being permitted to proceed to the next year or its corresponding stages except that, subject to the specific course rules set out below, one subject only may be carried with the subjects of the next higher year or its corresponding stages.

2. A student who fails in two or more subjects of a year may be required at the discretion of the Head of the School to repeat any or all the subjects of that year.

3. A student can be enrolled concurrently in the subjects of only two consecutive years, but this will not apply to students entering with advanced standing in their first year of attendance.

4. In exceptional cases the general and specific rules may be varied by the Head of the School.
Specific Course Rules

I Architecture: A student enrolled in the Architecture Course shall not progress to any subject in second year or its part-time equivalent until he has passed Graphic Communication I and Construction I or their part-time equivalents. A student may not progress to any subject of a higher year or its part-time equivalent until he has passed Design and Construction in the immediately preceding year or its part-time equivalent except that this rule shall not apply to the subject of Design I.

II Building: A student enrolled in the Building Course shall not progress to a higher year or its part-time equivalent until he has passed Construction or Graphic Communication in the immediately preceding year or corresponding stages.

III Town Planning: A student enrolled in the Town Planning Course shall not progress to any subject in second year until he has passed Graphic Communication I nor shall he progress to any subject of a higher year until he has passed Town Planning Theory and Practice in the immediately preceding year.

ENROLMENT PROCEDURE

It is the policy of the University to endeavour to admit all properly qualified applicants who have lodged applications by the appropriate closing date. In 1970, however, facilities available to the University will make it necessary to impose quotas in the Faculty of Architecture.

First Enrolments

Students with Overseas Entry Qualifications

Overseas students and Australian residents relying for admission on overseas qualifications must lodge an application for enrolment prior to 31st October of the year preceding that in which admission is sought.

Local and Interstate Residents

(a) Australian residents including students transferring from one course to another or from another University who have undertaken qualifying examinations in 1969 must lodge an application for enrolment by 19th January, 1970.

(b) Australian residents already qualified for admission and
students wishing to resume University studies must apply for enrolment by 31st October, 1969.

First Year Repeat Students

First year students who fail all subjects at the annual examinations and who are not granted any deferred examinations must apply for re-enrolment to the Admissions Office by 19th January, 1970.

Application forms for enrolment and details of the application procedures may be obtained on application to the Registrar, P.O. Box 1, Kensington 2033.

Students in the above categories whose applications for enrolment are accepted will be required to complete their enrolment at a specified appointment time before the start of first term. Fees must be paid on the day of the appointment. However, in special circumstances and provided class places are still available students may be allowed to complete their enrolment after the prescribed week subject to the payment of a late fee.

Later Year Enrolments. All students enrolling other than for the first time and not included above should enrol through the appropriate School and bring with them their notification of examination results for the previous year. This enrolment must be effected before or during the week before the commencement of First Term in accordance with the special arrangements made by the individual Schools.

Miscellaneous Subject Enrolments. Students may be permitted to enrol for miscellaneous subjects (i.e. as students not proceeding to a degree or diploma) provided the Head of the School offering the subject considers it will be of benefit to the student and there is accommodation available. Only in exceptional cases will subjects taken in this way count towards a degree or diploma. Where a student is under exclusion he may not be enrolled in miscellaneous subjects unless given approval by the Professorial Board.

Students who have completed the final examinations but have a thesis still outstanding are required to enrol for the period necessary to complete the thesis and to pay the requisite fees.

Course details must be completed during the prescribed Enrolment Week. For details of fee requirements, including late fee provisions, see under Fees.

Final Dates for Completion of Enrolment. No enrolments will be accepted from new students after the end of the second week of term (13th March, 1970) except with the express approval of the Registrar.
and the Head of the School concerned; no later year enrolments will be accepted after 31st March without the express approval of the Registrar which will be given in exceptional circumstances only.

**Post-graduate Enrolments.** Students enrolling in post-graduate courses which include formal instruction are required to attend the appropriate enrolment centre as prescribed annually in the leaflet "Enrolment Procedure for Students Re-enrolling".

**UNIVERSITY UNION CARD**

All students other than miscellaneous students are issued with a University Union Membership Card. This card must be carried during attendance at the University and shown on request.

The number appearing on the front of the card in the space at the top right-hand corner is the student registration number used in the University's records. This number should be quoted in all correspondence.

The card must be presented when borrowing from the University libraries, when applying for travel concessions and when notifying a change of address. It must also be presented when paying fees on re-enrolment each year when it will be made valid for the year and returned. Failure to present the card could result in some inconvenience in completing re-enrolment.

A student who loses a Union card must notify the University Union as soon as possible.

New students will be issued with University Union cards by mail to their address as soon as possible after fee payment. In the meantime, the fees receipt form should be carried during attendance at the University and shown on request. If the Union card is not received within three weeks of fee payment, the University Union should be notified.
FEES*

Fees for Undergraduate Courses

Fees for undergraduate courses in Architecture, Building and Town Planning are assessed on a term basis.

A full-time course fee will be charged for any term where more than 15 hours' per week instruction, etc., is involved.

(i) Full-time Course Fee (more than 15 hours’ attendance per week) ... ... $132 per term
(ii) Part-time Course Fee (over 6 hours’ and up to 15 hours’ attendance per week) ... $66 per term
(iii) Part-time Course Fee (6 hours’ or less attendance per week) ... ... ... $33 per term

Fees for Higher Degrees

An approved applicant shall be required to pay the following fees:

(i) Qualifying Examination ... ... ... $14
(ii) Registration Fee ... ... ... ... $6
(iii) Internal Full-time Student Annual Fee ... $84
     Internal Full-time Student Term Fee ... $28
(iv) Internal Part-time Student Annual Fee ... $42
     Internal Part-time Student Term Fee ... $14
(v) External Student Annual Fee* ... ... $28
(vi) Final Examination (including Graduation fee) $42

Fees for Graduate Diplomas

(i) Registration Fee, $6.
(ii) Award of Diploma Fee, $8.
(iii) Course Fee—calculated on the basis of a term’s attendance at the rate of $7 per hour per week. Thus the fee for a programme requiring an attendance of 24 hours per week for the term is $168 per term.
(iv) Thesis or Project Fee, $42.

*The fees quoted may be amended by Council without notice.
Other Fees

Students in any of the above categories are also required to pay the following fees:

Library Fee* .................................................. $14
University Union† (entrance fee) .................................. $20
Student Activities Fees*
  University Union† ...................................... $20
  Sports Association† .................................... $2
  Students’ Union† ....................................... $5
  Miscellaneous ........................................ $10

Total ............................................................ $37

Late Fees

First Enrolments

Fees paid on the late enrolment session and before the commencement of term ........................................ $7
Fees paid during the 1st and 2nd weeks of term ................................................................. $14
Fees paid after the commencement of the 3rd week of term with the express approval of the Registrar and Head of the School concerned .............................................. $28

Re-Enrolments

First Term

Failure to attend enrolment centre during enrolment week ....................................................... $7
Fees paid after the commencement of the 3rd week of term to 31st March .................................. $14
Fees paid after 31st March where accepted with the express approval of the Registrar ........... $28

Second and Third Terms

Fees paid in 3rd and 4th weeks of term ................................................................. $14
Fees paid thereafter ................................................................. $28

Late lodgement of corrected enrolment details forms (late applications will be accepted for three weeks only after the prescribed dates) .............................................. $6

*Annual fee.
†Life members of these bodies are exempt from the appropriate fee or fees.
Withdrawal from Course

Students withdrawing from a course are required to notify the Registrar in writing. Fees for the course accrue until a written notification is received.

PAYMENT OF FEES

Completion of Enrolment

All students are required to attend the appropriate enrolment centre during the prescribed enrolment period* for authorization of course programme. Failure to do so will incur a late fee of $7.

First Year students (including students repeating First Year) must complete enrolment (including fee payment) before they are issued with class timetables or permitted to attend classes. A First Year student who has been offered a place in a course to which entry is restricted and fails to complete enrolment (including fee payment) at the appointed time may lose the place allocated.

Fees should be paid during the prescribed enrolment period but will be accepted during the first two weeks of First Term. (For late fees see above.) No student is regarded as having completed an enrolment until fees have been paid. Fees will not be accepted (i.e. enrolment cannot be completed) from new students after the end of the second week of term (i.e. 13th March, 1970), and after 31st March from students who are re-enrolling, except with the express approval of the Registrar, which will be given in exceptional circumstances only.

Payment of Fees by Term

Students who are unable to pay their fees by the year may pay by the term, in which case they are required to pay First Term course fees and other fees for the year, within the first two weeks of First Term. Students paying under this arrangement will receive accounts from the University for Second and Third Term fees. These fees must be paid within the first two weeks of each term.

Assisted Students

Scholarship holders or Sponsored Students who have not received an enrolment voucher or appropriate letter of authority from their

*The enrolment periods for Sydney students are prescribed annually in the leaflets “Enrolment Procedure for New Students” and “Enrolment Procedure for Students Re-enrolling”. 
FACULTY OF ARCHITECTURE

sponsor at the time when they are enrolling should complete their enrolment paying their own fees. A refund of fees will be made when the enrolment voucher or letter of authority is subsequently lodged with the Cashier.

Extension of Time

Any student who is unable to pay fees by the due date may apply in writing to the Registrar for an extension of time. Such application must give year or stage, whether full-time or part-time, and the course in which the applicant wishes to enrol, state clearly and fully the reasons why payment cannot be made and the extension sought, and must be lodged before the date on which a late fee becomes payable. Normally the maximum extension of time for the payment of fees is until 31st March for fees due in First Term and for one month from the date on which a late fee becomes payable in Second and Third Terms.

Where an extension of time is granted to a First Year student in First Term, such student may only attend classes on the written authority of the Registrar, but such authority will not normally be given in relation to any course where enrolments are restricted.

Failure to Pay Fees

Any student who is indebted to the University and who fails to make a satisfactory settlement of his indebtedness upon receipt of due notice ceases to be entitled to membership and privileges of the University. Such a student is not permitted to register for a further term, to attend classes or examinations, or to be granted any official credentials.

No student is eligible to attend the annual examinations in any subject where any portion of his course fees for the year is outstanding after the end of the fourth week of Third Term (25th September, 1970).

In very special cases the Registrar may grant exemption from the disqualification referred to in the two preceding paragraphs upon receipt of a written statement setting out all relevant circumstances.

GENERAL CONDUCT

Acceptance as a member of the University implies an undertaking on the part of the student to observe the regulations, by-laws and other requirements of the University, in accordance with the declaration signed at the time of the enrolment.
In addition, students are expected to conduct themselves at all times in a seemly fashion. Smoking is not permitted during lectures, in examination rooms or in the University Library. Gambling is also forbidden.

Members of the academic staff of the University, senior administrative officers, and other persons authorized for the purpose, have authority, and it is their duty, to check and report on disorderly or improper conduct or any breach of regulations occurring in the University.

ATTENDANCE AT CLASSES

Students are expected to be regular and punctual in attendance at all classes in the course or subject in which they are enrolled. All applications for exemption from attendance at lectures or practical classes must be made in writing to the Registrar.

In the case of illness or of absence for some other unavoidable cause a student may be excused by the Registrar from non-attendance at classes for a period of not more than one month, or on the recommendation of the Dean of the appropriate Faculty for any longer period.

Applications to the Registrar for exemption from re-attendance at classes, either for lectures or practical work, may only be granted on the recommendation of the Head of the appropriate School. The granting of an exemption from attendance does not carry with it exemption from payment of fees.

Application forms for exemption from lectures are available at the Admissions Office and should be lodged there (with a medical certificate where applicable). If term examinations have been missed this fact should be noted in the application.

Where a student has failed a subject at the annual examinations in any year and re-enrols in the same course in the following year, he must include in his programme of studies for that year the subject in which he has failed. This requirement will not be applicable if the subject is not offered the following year; is not a compulsory component of a particular course; or if there is some other cause, which is acceptable to the Professorial Board, for not immediately repeating the failed subject.

Where a student has attended less than eighty per cent of the possible classes, he may be refused permission to sit for the examination in that subject.
ANNUAL EXAMINATIONS

The annual examinations take place in November-December for students in 30-week courses, and in September for students in 21- and 24-week courses. Students must make application to sit for examinations by a specified date, the procedure being described in the University Calendar. Enquiries should be directed to the Examinations Branch. Examination results are posted to the term addresses of students. No results will be given by phone.

APPLICATION FOR ADMISSION TO DEGREE OR GRADUATE DIPLOMA

Application for admission to a degree or graduate diploma must be made on the appropriate form by 14th January. Applicants should ensure that they have completed all requirements for the degree or diploma, including industrial training where necessary.
STUDENT FACILITIES

THE ARCHITECTURE CLUB

Students of the Faculty of Architecture are encouraged to participate in extra-curricular activities through The Architecture Club, of which they automatically become members immediately upon registration. The Club, commonly known as T.A.C., is affiliated with the Australian Architectural Students' Association, and with the International Union of Architectural Students.

In addition to sending representatives interstate and overseas, T.A.C. arranges outings, social functions and lectures, and produces both a broadsheet and a magazine, Atelier. It commands the enthusiastic support of all students, and provides a common interest which is invaluable in creating a school spirit.

LIBRARY

The University Library provides a reference and lending service for staff and students, and is open in term during day and evening sessions. There is also a Faculty reference library located within the Faculty of Architecture building.

THE UNIVERSITY OF NEW SOUTH WALES STUDENTS' UNION

The Students' Union is the parent student organization within the University and membership is compulsory for all registered students. It provides a wide range of cultural societies, and social facilities as well as producing a bi-weekly journal. The annual subscription is $5.

RESIDENTIAL COLLEGES

Accommodation for students is provided within the complex of the Residential Colleges of the University which comprise Basser College, Goldstein College, and the Philip Baxter College. The College complex houses 450 men and women students, as well as staff members. Tutors in residence provide tutorial assistance in a wide range of subjects.
Board and residence fees, which are payable on a term basis, amount to $20 per week. Intending students should apply in writing to the Master, Box 24, Post Office, Kensington, N.S.W., 2033, from whom further information is available.

Accommodation is also available at International House, New College (Church of England) and Warrane College (Roman Catholic). Students should write to the college of their choice for information regarding accommodation.

**STUDENT EMPLOYMENT UNIT**

The Student Employment Unit offers assistance in finding suitable full-time employment for evening students. It will also advise on Cadetships and permanent career employment. The unit is located in the Chancellery, Kensington, and is open 9 a.m.-5 p.m. daily. Telephone 663-0351.

**STUDENT HEALTH UNIT**

A free health service under the direction of a qualified medical practitioner is available to all students during office hours. The service is diagnostic and therapeutic, but is not intended to replace the students’ private doctor or the community health services available. Appointments may be arranged by personal contact or by telephoning 663-0351 ext. 2679.

**STUDENT COUNSELLING AND RESEARCH UNIT**

The Student Counselling and Research Unit is located at Kensington and is normally open from 9 a.m. to 9 p.m. daily. Students wishing to avail themselves of this advisory service should arrange an appointment by phoning 663-0351 ext. 2600-2605.

**SPORTS ASSOCIATION**

In December, 1952, the University Council approved the establishment of the Sports Association as the organization to control and sponsor sporting activities within the University.

Some 20 clubs provide a wide variety of sporting activities. Membership is compulsory for all registered students, the annual subscription being $2.
UNIVERSITY REGIMENT

The University Regiment trains selected undergraduates for commissioned rank in the Citizen Military Forces, and gives military training to undergraduates.

Training is conducted throughout the year both on a part-time and full-time basis, and is planned to fit in with the University's programme of activities. Part-time training is conducted on Friday nights, and on one weekend each month between March and August. Full-time training consists of a 21 day regimental field exercise in February or a 10-14 day camp in the May vacation. Enquiries should be directed to the Adjutant, Regimental Headquarters, Day Avenue, Kensington.

N.S.W. UNIVERSITY SQUADRON

The N.S.W. University Squadron provides selected undergraduates with training which will prepare them for appointment to commissioned rank in the Citizen Air Force. Annual training is organized to fit in with Faculty activities and consists of lectures on Air Force organization, law and administration, and appropriate technical and specialist subjects applicable to the medical, technical, radio, works and administrative flights. Enquiries should be addressed to the Commanding Officer, N.S.W. University Squadron Headquarters, cnr. City and Darlington Roads, Darlington. Tel. 51-4664.

ROYAL AUSTRALIAN NAVY

By agreement with the Department of the Navy, selected cadets of the Royal Australian Naval College at Jervis Bay who have met the appropriate faculty entrance requirements may study certain First Year University subjects at the College. Passes gained in these subjects will be accepted for credit towards a degree of the University. The courses for which this arrangement applies, for the time being, are the full-time courses in the Faculties of Applied Science, Engineering and Science. Further information may be obtained by arranging an interview with the Royal Australian Naval Liaison Officer, Professor J. S. Ratcliffe, Lieutenant Commander, R.A.N.V.R., at the School of Chemical Engineering. Phone 663-0351, ext. 2406.
A wide range of scholarships and cadetships will be offered to students commencing University courses in 1970.

Except where otherwise specified, applications on the forms obtainable from the Admissions Office ('phone: 663-0351, ext. 2485) must be lodged with the Registrar, the University of New South Wales, P.O. Box 1, Kensington, within seven days of the publication of the results of the N.S.W. Higher School Certificate Examination.

UNIVERSITY SCHOLARSHIPS

The University annually awards up to fifteen scholarships tenable in degree courses to students who have matriculated at the Higher School Certificate Examination; ten scholarships to students who have completed certificate courses (Department of Technical Education); ten scholarships to students who have completed Trade Courses (Department of Technical Education); and ten scholarships to part-time students who have taken the Diploma Entrance course of the Department of Technical Education. The scholarships are tenable in any Faculty and exempt the holder from payment of course fees during the currency of the scholarship. Scholarships will be awarded in order of merit on Higher School Certificate Examination results. They may be held only by persons who do not hold another award. Applications for these scholarships, on forms available from the Registrar, must be lodged with the Registrar within seven days of the publication of the results of the New South Wales Higher School Certificate Examination.

COMMONWEALTH SCHOLARSHIPS

Students enrolling in first degree courses at the University are eligible. Benefits include payment of all tuition fees and other compulsory fees, and living allowances (these latter being subject to a means test). The closing date for applications is 30th September in the year immediately preceding that for which the scholarship is desired. Full particulars and application forms may be obtained from the Department of Education and Science, La Salle Building, 70 Castlereagh Street, Sydney, 2000, or Box 3987, G.P.O. Sydney, 2001. Phone 2-0323.
BURSARIES AWARDED BY THE BURSARY ENDOWMENT BOARD

A number of Bursaries tenable at the University are awarded to candidates of merit at the Higher School Certificate Examination whose family income falls within certain limits prescribed by the Bursary Endowment Board.

Applications should be made to the Secretary, Bursary Endowment Board, C/- Department of Education, Bridge Street, Sydney.

COMMONWEALTH SERVICE CADETSHIPS

The Commonwealth Service offers each year a number of cadetships in a wide variety of fields. British subjects, with Australian citizenship, under the age of twenty-eight years, are eligible to apply. These cadetships enable selected students to complete their courses full-time and receive a salary while doing so according to the scale below:

\[
\begin{array}{ccc}
\text{Male} & & \text{Female} \\
\text{Under 18 years} & \ldots & \ldots & \ldots & \$1,590 & \$1,444 \\
\text{At 18 years} & \ldots & \ldots & \ldots & \$1,855 & \$1,644 \\
\text{At 19 years} & \ldots & \ldots & \ldots & \$2,147 & \$1,844 \\
\text{At 20 years} & \ldots & \ldots & \ldots & \$2,412 & \$2,022 \\
\text{Adult Rate} & \ldots & \ldots & \ldots & \$2,553-\$3,061* & \$2,125-\$2,633* \\
\end{array}
\]

Fees are refunded to the cadet on a proportionate basis according to his salary.

Applicants will be required to enter into a bond undertaking to remain in the Commonwealth Public Service for a period of up to five years after graduation. Either full-time or part-time courses may be undertaken if available.

Details of vacancies at any one time may be obtained from the University's Student Employment Officer or the Inquiry Officer, Commonwealth Public Service Inspector's Office, Commonwealth Centre, Chifley Square, Sydney. Telephone 28-5701.

*Four annual increments of $127.
The W. J. Mclver Scholarship is open to students who qualify at the annual examinations for admission to the Final Year course in Architecture. The scholarship provides a living allowance of at least $200 p.a. payable in term instalments.

Applications must be made on the approved form and lodged with the Registrar not later than 15th January each year.

Commonwealth Postgraduate Scholarships

The Department of Education, N.S.W., is prepared to consider as special cases students holding Commonwealth University Scholarships who wish to continue their studies for a further year in a full-time postgraduate diploma course.

Byera Hadley Travelling Scholarship

The Byera Hadley Travelling Scholarship is open to graduates in Architecture of the University of New South Wales. Candidates must be British subjects.

The scholarship is to assist the holder to proceed overseas and remain abroad for not less than one year and not more than three years. Value $1,200.

Byera Hadley Travel Grant

The Byera Hadley Travel Grant is open to graduates in Architecture of the University of Sydney or the University of New South Wales and Associates of the Sydney Technical College. All candidates must be British subjects. The grant is to assist the holder to travel and undertake a course of study. Value $600.

Board of Architects of New South Wales Travelling Scholarships

The Board of Architects of New South Wales offers two scholarships annually to holders of an Architecture degree from the University of Sydney or the University of New South Wales, or the diploma in Architecture of the Sydney Technical College, or to architects registered in the State of New South Wales. All candidates must be British subjects.

The scholarships are to assist the holders to proceed overseas and remain abroad for not less than twelve months and not more than three years. Value of each scholarship, $600.

Closing dates for applications and further details are available upon request from the Head of the School.

Sir Manuel Hornibrook Travel Grant

The Sir Manuel Hornibrook Travel Grant is open to Licentiate or Student members of the Australian Institute of Builders, from whom the Council of the Institute may invite applications in each alternate year.
The object of the Travel Grant is to advance the study and practice of building by competition for the award, and by subsequent travel overseas or interstate. The Travel Grant shall be of such value as the Council may from time to time determine. Details are obtainable from the Australian Institute of Building, N.S.W. Chapter.

**Housing and Neighbourhood Planning Scholarships**

The Peddle, Thorp and Walker Scholarship, valued at $300 per annum, is available to assist suitable candidates attending the postgraduate course in Housing and Neighbourhood Planning.

**Master Builders’ Association of N.S.W. Scholarships**

The Master Builders’ Association of N.S.W. offers two scholarships valued at $500 each, to be awarded upon the recommendation of the Head of the School to students entering the Graduate Diploma Course in Building Construction. Successful applicants will receive $250 at the commencement of their studies and a further $250 upon entry to their second year.

**Alex Rigby Award**

The Alex Rigby Award, consisting of a certificate and cheque for $105 is available to a candidate for the degree of Master of Building, and will be awarded upon the recommendation of the Head of the School to the author of a worthy Thesis, submitted within the year ending March 31st.
UNDERGRADUATE COURSES

The Faculty of Architecture conducts undergraduate courses in Architecture, Building and Town Planning. These courses provide a thorough training in the arts and sciences which today govern the design and construction of buildings and the balanced growth of cities. In addition to professional and vocational training, the courses include general studies in order to provide graduates with a broad understanding of the humanities and social sciences.

THE COURSE IN ARCHITECTURE

Architects play a vital part in the nation's physical and cultural growth. Their contribution to society is primarily one of design, but includes consideration of such practical factors as economy, efficiency and durability. Indeed architecture may be defined as a complete synthesis of art and science, and the syllabus of study has been arranged to achieve this end.

The early years of the course provide fundamental training in the basic sciences underlying building technology in order to familiarize students with the new materials, methods and ideas characteristic of present-day architecture, and to prepare the way for their later, more advanced education. Instruction in the principles of Mathematics and Physics is included as a basis for studies in building science and structural design. Concurrently the students' creative abilities are developed by progressive exercises in imaginative design, which commence as simple projects but become more complex in each successive year.

In the latter part of the course architectural design assumes major importance, for it is through this subject that students learn to integrate all the contributory training they have received. However, the common core subjects taken by all students are handled in such a manner as to allow a student to concentrate on those aspects which most interest him. In addition, a wide variety of elective subjects allows the student to choose so that he may extend his study either in breadth or depth.

The 1968 Course

This course was introduced for the first time in 1968 and is referred to as the 1968 course. The course which operated in 1967
and before is referred to as the 1967 course, a description and details of which are given in the Calendar of the University of New South Wales 1967. The 1968 course is being implemented progressively, i.e. Year 1 in 1968, Years 1 and 2 in 1969, Years 1, 2 and 3 in 1970 etc.

First year of the 1967 course was withdrawn in 1969, and successive years will be withdrawn annually.

General Description of the 1968 Course

The normal course in Architecture consists of six years of which all except the fourth year require full-time attendance at the University. On satisfactory completion of the first three years a student is awarded the degree of Bachelor of Science (Architecture). The fourth year of the course requires no formal attendance at the University. In this period the student is required to obtain practical experience (see Practical Experience below). Admission to the fifth and sixth years is selective and is based upon the ability revealed and the performance achieved up to the awarding of the first degree at Pass level. On satisfactory completion of the fifth and sixth years of the course the student is awarded a second degree of Bachelor of Architecture (B.Arch.).

The Part-time Programme

There is only one course in Architecture in respect of subjects, content, examinations and standards, which in the first three years leading to the B.Sc.(Arch.) and to meet the varying needs of students, may be taken on an attendance timetable which is wholly or largely full-time or wholly or largely part-time. The part-time programme requires up to three half-days' attendance each week during the day with the balance of the attendance in the evenings.

The subjects of two part-time stages are equivalent in all ways to those of one full-time year. At the end of the first or second year, or the second and fourth stages (i.e. Stages 1B and 2B), a student may elect to transfer to a different attendance programme. The fifth and sixth years of the course are available by full-time attendance only.

Practical Experience

During the whole of the part-time period of the programme being followed a student is required to be employed on architectural work under the supervision of an approved architect. For this purpose an architect registered under any Australian State Architects'
Registration Act is considered to be an approved architect. Students wishing to gain their practical experience under the supervision of any other person must submit the circumstances to the Professor of Architecture for approval.

Honours

Any student who satisfactorily completes the first three years of the course leading to the B.Sc.(Arch.) may elect to attempt the Honours requirement for this degree which requires formal attendance at the University for additional advanced work, and evidence of approved practical experience. A student cannot obtain both a Pass and an Honours first degree. The holding of an Honours first degree is not a pre-requisite for admission to the fifth and sixth years of the Architecture course, nor does it have any influence in gaining admission to those years, but it will be a pre-requisite for entry to enrolment in any Master's or Ph.D. degree which may in the future be built upon the first, B.Sc.(Arch.), degree.

In the second degree, Bachelor of Architecture, Honours are awarded on the basis of quality of performance during the fifth and sixth years of the course and in accordance with current Faculty regulations.

Professional Recognition

The degree of Bachelor of Architecture of the University of New South Wales is recognized by the Royal Australian Institute of Architects and the Royal Institute of British Architects, and graduates are eligible for membership of these bodies provided they satisfy certain conditions.

The degree is also recognized by the Board of Architects of New South Wales for the purpose of legal registration. At present the Board makes no stipulation regarding experience or a special examination, but as from 1st July, 1971, graduates wishing to obtain registration in New South Wales will be required to meet similar conditions to those established by the two Institutes.

The foregoing is a general statement, and students are strongly advised to obtain further particulars from the Institutes and the Board of Architects of New South Wales.

---

*Fifth year electives to a total minimum weekly time of four hours to be freely selected from the following, at least one hour being taken from either sub-section (b) or (c):

(b) Any Arts or Commerce subjects consistent with the rules for enrolment of the Faculty concerned.

(c) Any Humanities subjects consistent with the rules for enrolment of the Department of General Studies.

Sixth year electives to a total minimum weekly time of four hours to be freely selected from the following:

(d) Any subjects under (a), (b) or (c) above.

(e) Theory of Architecture B, Construction B, Structures B, Building Science B, Historical Research B, Interior Design B, Landscape Design B. (All to require the corresponding subject under (a) as a pre-requisite.)

†The subject of the thesis will be submitted by the student for the approval of the Head of the School at the beginning of fifth year and submitted for examination towards the end of the sixth year. Staff supervision will be available for one hour per week.
DEGREE COURSE IN BUILDING—B. BUILD.

The course in Building provides a basic training for management and executive careers in the building industry. It aims to develop in the student a sound conception of the related requirements and functions of the building-owner, the architect, the structural and mechanical engineers, the materials manufacturer and the builder in the process of planning, detailing and erecting buildings.

The course places emphasis on subjects dealing with law, management, accounting and finance. The course has relevance to a wide variety of careers in the management and supervision of building enterprises, building materials production and many other activities in building technology, administration and research—both in private and public employment.

General Description of the Course

The normal full-time course consists of four years, three years being full-time attendance and the fourth year part-time.

The Building degree course also provides University training in Quantity Surveying and the elective subject Quantity Surveying II is available in the fourth year (or Stage 7) for students who wish to make Quantity Surveying their career. It is expected that students who intend to practise Building will choose the alternative subjects of Management III and Law for Builders II. It is possible to acquire qualifications for both vocations by completing the three elective subjects.

The course leads to the degree of Bachelor of Building (B.Build.).

The Part-time Programme

There is only one course in Building in respect of subjects, content, examinations and standards which, to meet the varying needs of students, may be taken on an attendance timetable which is largely full-time or wholly or largely part-time. The part-time programme requires up to three half-days attendance during the day per week with the balance of the attendance in the evenings.

The subjects of two part-time stages are equivalent in all ways to one full-time year. At the end of the first and second years or the second and fourth part-time stages a student may elect to transfer to a different attendance programme.
Practical Experience

Students are required to be in approved employment related to their course during the whole of the part-time period of their programme. The type of employment proposed must be submitted to the Associate Professor of Building for approval.

Honours

In the Bachelor of Building degree Honours are awarded on the basis of quality of performance throughout the whole course with particular emphasis on the later years and in accordance with current Faculty regulations.

Professional Recognition

The award of the degree, Bachelor of Building, is recognized for admission to membership by the Australian Institute of Building or, alternatively, for membership by the Institute of Quantity Surveyors, Australia, or both.

DEGREE COURSE IN TOWN PLANNING—B.T.P.

As town planning is concerned with determining the best use of land and creating a better environment, students in this course are trained in aesthetic and civic design principles as well as in land-use studies. A particular feature of the course is the emphasis on the study of new techniques in planning strategies, decision-making, programming, budgeting and implementing of development plans; on urban research and on the inter-action of land uses and transportation.

General Description of the Course

The course is of five years’ duration. The first and second years are full-time, the third and fourth years part-time requiring up to three half-days attendance with the balance in the evenings, and the fifth year full-time.

The course leads to the degree of Bachelor of Town Planning (B.T.P.).

Practical Experience

For the two part-time years the students must be engaged in approved employment related to the course; for example, in govern-
ment planning and housing authorities, in municipal and shire councils preparing or implementing town and country planning schemes, in private development companies or with planning consultants. The type of employment proposed must be submitted to the Associate Professor in Town Planning for approval.

Honours

In the Bachelor of Town Planning degree, Honours are awarded on the basis of quality of performance throughout the whole course with particular emphasis on the later years and in accordance with current Faculty regulations.

Professional Recognition

The course is recognized by the Australian Planning Institute as an academic qualification for corporate membership. The Institute requires that for corporate membership graduates must also have at least one year of practical experience subsequent to graduation.

EXTENSION COURSES

The School of Architecture and Building from time to time conducts extension courses in specialist fields of study related to architecture and building. These courses are normally open to qualified members of the various land-use professions, upon payment of a fee appropriate to the length of the particular course.
POSTGRADUATE STUDY

HIGHER DEGREES

Following the award of a first degree in Architecture, Building or Town Planning of the University of New South Wales or other approved university, graduates may apply to register for the degree of Master of Architecture, Master of Building or Master of Town Planning. Facilities are also available for research towards the degree of Doctor of Philosophy. For details concerning this degree consult the Calendar or write to the Dean.

Summary of the Conditions for the Award of a Master’s Degree

(1) Every candidate for the degree shall be required to carry out a programme of advanced study, to take such examinations, and to perform such other work as may be prescribed by the Faculty. The programme shall include the preparation and submission of a thesis embodying the results of an original investigation or design relative to architecture, building or town planning. The candidate may also submit any work published, whether or not such work is related to the thesis.

(2) No candidate shall be considered for the award of the degree until the lapse of six complete terms from the date from which the registration becomes effective, save that in the case of a candidate who has obtained the degree of Bachelor with Honours or who has had previous research experience, this period may, with the approval of the Faculty, be reduced by not more than three terms.

(3) For each candidate there shall be two examiners appointed by the Professorial Board, one of whom shall, if possible, be an external examiner.

(4) Every candidate shall submit three copies of the thesis as specified in the University Calendar, and it shall be understood that the University retains the three copies of the thesis and is free to allow the thesis to be consulted or borrowed. Subject to the provisions of the Copyright Act, 1968, the University may issue the thesis in whole or in part in photostat or micro-film or other copying medium.
Admission

An application to register as a candidate for the degree of Master of Architecture, Master of Building or Master of Town Planning shall be made on the prescribed form, which shall be lodged with the Registrar at least one full calendar month before the commencement of the term in which the candidate desires to register.

POSTGRADUATE COURSES

In addition to the facilities available for the pursuit of higher degrees, formal diploma courses are offered in the following postgraduate fields:

1. Architectural Acoustics
2. Building Construction
3. Housing and Neighbourhood Planning
4. Landscape Design.

Duration

Each course is programmed over two years of part-time study in the University, involving attendance on two or three evenings per week. In the case of Housing and Neighbourhood Planning a one-year full-time programme is also available.

Nature of Award

Successful completion of the prescribed course of study will lead to the award of a postgraduate diploma.

GRADUATE DIPLOMA IN ARCHITECTURAL ACOUSTICS
(Dip.Arch.Acoustics)

Over the past decade the science of acoustics has received such widespread attention that it is now recognized as a vital factor in the establishment of optimum conditions for human efficiency and comfort.

The course in Architectural Acoustics concentrates upon those aspects which are typical of our urban environment, ranging from the control of community noise and noise in buildings to the design of concert halls and auditoria. Consultants in this field are normally graduates in architecture, engineering or science, and the course has been designed to provide specialized graduate training appropriate to each of these disciplines.
The School possesses an extensive range of precise acoustic measuring equipment, and the course will include practice in its use.

**Admission Requirements**

An applicant for admission to the Architectural Acoustics course shall be—

(i) a graduate in Architecture, Engineering, or Science of the University of New South Wales; or

(ii) a person with such other qualifications as may be approved by Faculty.

*The co-requisites to be undertaken (1.291G Introductory Mathematical Physics or 11.941G Construction) will be determined by the Head of the School, but in general, the following will be the requirement:

1.291G Introductory Mathematical Physics—for graduates in architecture.
11.941G Construction—for graduates in engineering or science.

†In addition to the formal course work, there will be occasional field excursions.
BUILDING CONSTRUCTION GRADUATE COURSE  
(Dip.Build.Const.)

This two year, part-time course has been designed to provide opportunities for advanced study in the science of construction with emphasis on two broad fields: (i) theoretical and practical studies in techniques and methods of structures, materials, services, fabrication and assembly; and (ii) analysis and design of operational procedures in building contracts. It aims at attracting the practising qualified builder who wishes to widen his knowledge and understanding of construction elements and processes.

Admission Requirements

Candidates should be graduates in Building, but other graduates of the School of Architecture and Building at the University of New South Wales, and any qualified applicant who has had suitable experience in building may be admitted to the course on the recommendation of the Head of School and the approval of Faculty.

*All students except those holding the degree of Bachelor of Building of the University of New South Wales, will be required to complete Law for Builders I as an additional subject.
†Involves co-ordinated projects.
HOUSING AND NEIGHBOURHOOD PLANNING
GRADUATE COURSE (Dip.H.N.P.)

This course provides for postgraduate study in the design and layout of residential areas. It is concerned with the study of the physical structure and form of new and old residential neighbourhoods; and of the elements of the neighbourhood including dwellings, open spaces, shopping and community centres. In addition to design considerations, specific study will be made of social and economic factors in the provision of public and private housing.

It is a one year full-time or two years' part-time course, depending upon demand and leads to the award of a Graduate Diploma in Housing and Neighbourhood Planning (Dip.H.N.P.).

Admission Requirements

A candidate shall be—

(i) a graduate in Architecture of the University of New South Wales; or

(ii) a person with such other qualifications as may be approved by Faculty.

GRADUATE DIPLOMA IN LANDSCAPE DESIGN (Dip.L.D.)

This course, the first of its kind to be offered in Australia, has been designed to extend the knowledge of architects to embrace an important environmental study closely associated with that of their own profession. It is a discipline which has so far received little attention in this country, yet may be expected to play a significant part in the future shaping of our environment.

Admission Requirements

An applicant for admission to the Landscape Design course shall be—

(i) a graduate in Architecture of the University of New South Wales; or

(ii) a person with such other qualifications as may be approved by Faculty.

Course Structure

Practical work will include a number of Saturday excursions.

Enquiries

Initial enquiries regarding postgraduate courses should be addressed to:

The Dean,
School of Architecture and Building,
University of New South Wales,
P.O. Box 1,
Kensington,
New South Wales, Australia, 2033.
BUILDING RESEARCH LABORATORY

The Faculty controls a Building Research Laboratory situated in the University of New South Wales Research Station, King Street, Randwick. The Laboratory which concentrates on postgraduate research and research for industry has sections equipped for work on Environment and Climate, Materials, Model Testing, Services, Lighting and Acoustics. The Laboratory has extensive testing and research equipment and workshop facilities including a wind-rain machine, a weatherometer, an artificial sky, a structural testing bay and a controlled atmosphere chamber. The equipment and facilities of the Laboratory are continually being added to. Research work and testing programmes carried out in the Laboratory include:

- Efficiency of tiled roofs of various pitch, under extreme weather conditions.
- Study of the performance of bricks and brickwork.
- Condensation behaviour of double-glazed windows.
- Abrasion properties of floor materials.
- Transfer of heat and moisture through wall elements.
- Vibration characteristics of large pre-stressed concrete structures.
- Applications of mortar-mesh (ferro-cimento) structures in building.
- Penetration of moisture into and through concrete.
DESCRIPTION OF SUBJECTS

The following brief synopses are intended to outline the scope of individual subjects. The subjects are not arranged numerically but are grouped in the following categories: Design, History of Fine Arts and Architecture, Construction, Structures, Building Science, Graphic Communication, Management, Town Planning, Theses and Postgraduate subjects.

Subject synopses are followed by lists of recommended text and reference books. In cases where no list appears students will be informed of their needs at the beginning of the year.

The Board of Studies in General Education has published a handbook in which details concerning the general studies subjects may be found. The handbook also contains information regarding general studies text and reference books, and is available free of charge.

DESIGN

The design and construction of buildings and environment, including the solution of functional problems, study and application of specialized building techniques, engineering services and equipment; documentation; estimating and building job organization. In all years theoretical aspects are covered in lectures and applied by the student in studio work. The first three years give a basic understanding primarily in the functional and practical aspects of architecture; the last two years involve the student additionally in aesthetic and philosophic values.

11.111 Design I

(In studio work of other subjects the principles of two- and three-dimensional composition are introduced and exercises are given beginning with the simple elements including building elements and simple spaces with simple functions.)

REFERENCE BOOKS

11.112 Design II

Introduction to the design process. Design for needs of individuals and small groups based on physical factors of health, comfort, safety and convenience. Emphasis on internal environment.

Inter-relation of people within small groups. Relationship between internal and external spaces. Design of small and simple multi-cell buildings. Influence of climate, structure and materials on architecture.

REFERENCE BOOKS
Kira, A. The Bathroom. (Bantam, New York) Cornell Center for Housing and Environmental Studies, 1966.

11.113 Design III

Design process and its application in larger and more complex architectural problems. Larger groups of people and adequate provision for their needs. Design of buildings becoming more complex in function, form and structure. Related buildings with simple functions and massing, and control of external spaces. Design for comfort and efficiency under diverse conditions. Design of buildings with special requirements of structure, material and/or equipment.

REFERENCE BOOKS

11.151 Architecture A

Discussion and application in the studios. The study of various theories and philosophies of architecture with the emphasis on aesthetics. The aims and responsibilities of the architect. Study of spatial relationships. Group building design and equipment of interior and exterior spaces. Landscaping. The development of the concept of the totality of architecture and an awareness of the inter-relation of the multiplicity of factors and influences which determine the final result. Problems in design within the concept of total architecture, involving the creation and control of the human environment, its construction and implementation in all aspects.
11.152 Architecture B

The development of a personal philosophy of architecture with the emphasis on mental and spiritual needs. The continuation at a more detailed and complex level of the concept of "total architecture". Problems involving the mental and spiritual needs of the individual and the society. Advanced planning involving urban environmental design and the associated questions of economics and services.

REFERENCE BOOKS
HISTORY OF FINE ARTS AND ARCHITECTURE

In these subjects fine arts and architecture are treated as the expression of a cause/effect relationship, and the student is guided in understanding why and how artistic expression and the man-made environment have developed during the history of Western civilization.

11.011H History of Fine Arts
An outline of the development of nineteenth and twentieth century painting and sculpture. Follows the movements concerned in the development of modern art from the stylistic background of the European tradition to contemporary works. Development of some phases of painting and sculpture during the Ancient, Medieval and Renaissance epochs. The influence of religious, economic and social factors on the more important works of the period.

11.021H History of Architecture
The role of the architect; architecture as an art, a science, and a profession; the origins of architectural form in ancient civilizations, and the development of these forms throughout the Middle Ages and the Renaissance; the effects of the Industrial Revolution and its aftermath, and the growth of modern architecture; the development of an Australian idiom in architecture and building.

11.031H History of Fine Arts and Architecture
An introduction to the history and aesthetics of the visual arts of the Western world, i.e. architecture, painting, sculpture, design and craftsmanship. Lectures are illustrated by slides and films.

TEXTBOOKS—11.011H and 11.031H

REFERENCE BOOKS
Berenson, B. The Italian Painters. Collins.
Brion, M. Modern painting from Impressionism to Abstract Art. Thames & Hudson.
Seuphor, M. *A Dictionary of Abstract Painting.* Methuen.

11.121 History of Architecture I
A broad and general treatment of the history of architecture from the earliest times to the present day.
(a) Introduction. A framework of reference for architectural history: (i) Architecture as the “built environment”—a partnership of man and nature. (ii) The human and environmental influences that affect architecture throughout history.
(b) A general chronological survey: part (i)—Primitive and communal architecture; the ancient world; the Classic world of Greece and Rome; the Dark Ages; Medieval architecture; Renaissance architecture.
(c) A general chronological survey: part (ii)—Baroque and Rococo architecture; Rationalism, Romanticism and the Industrial Revolution; the twentieth century.

11.122 History of Architecture II
A more detailed treatment of some aspects of history of architecture and their relevance today.
(a) A brief history of planning as a response to human needs and its expression as architectural space.
(b) A study of some important structural, constructional, technological and organizational innovations and their influences, particularly in the Middle Ages, nineteenth and twentieth centuries.
(c) An outline of the evolution of form, proportion and detail, and other related visual aspects of architecture, particularly in Classic, Renaissance and twentieth century architecture.

11.123 History of Architecture III
A history of architecture in Australia, in which the general studies of first and second years find more particular application.
(a) The historical, human and environmental context of Australian architecture.
(b) Architecture from the foundation of the colony to the end of World War I.
(c) Architecture since World War I.

TEXTBOOKS HISTORY OF ARCHITECTURE I, II, and III
(for History of Architecture III only)—

REFERENCE BOOKS

Note: Additional lists of reference books will be made available to students during lectures.

11.851 Historical Research A (Elective)
A basic knowledge and training in research in the field of Australian architectural history. An appreciation of the purpose of the research, familiarization with sources of materials and the way in which these are best used; proper techniques in the recording and cataloguing of material together with its critical assessment and evaluation and its integration, interpretation and presentation.

11.852 Historical Research B (Elective)
A development of Historical Research A in which the student’s endeavours are directed towards the initiation and completion of an original research project in Australian architectural history.

CONSTRUCTION
The study of the fabric of buildings: the materials, elements, systems, procedures for erection and performance of the fabric determined by considerations of building functions, material properties, environment, climate and site: methods of communicating information. The order of study is from simple buildings for basic functions to buildings for multiple functions and complex procedures.
The theoretical lecture material is reinforced by visits to factories and building works and is applied and integrated with design in the studio and in special projects.

11.211 Construction I
Unit shelter for simple activity: single storey: level site.
(a) Single roofs: solid and framed walls: footings. Stones, bricks, tiles, slates, sheets, timber, lime and cement.

(c) Windows, ventilators. Glass, metals. Cold water supply, waste and rain water disposal.

TEXTBOOKS

REFERENCE BOOKS

Australia—Department of Labour and National Service—Industrial Training Division.

(i) *Bricklaying*. The Department, Melbourne, 1945.

(iv) *Drainage*.

11.212 Construction II

Single and two-storey, multi-cell shelters: group activity shelter; sloping sites.

(b) Upper timber floors, stairs: retaining walls and membranes, semi-basements, concrete floors on the ground. Fuels and power supplies; thermal insulation: condensation; vapour barriers. Hot water supply; drainage and sanitary plumbing.

(c) Roof coverings; lighting. Introduction of steel and concrete as structural materials; simple trusses and connections; single span r.c. floors. Tiles, renders, paints, steel sections, concrete mixes. Ventilation, ducting, pumps. Heating and cooling appliances and plant.
TEXTBOOKS
See Construction I.

REFERENCE BOOKS

Standards Association of Australia.

—together with Reference Books for 11.211 Construction I.

11.213 Construction III

Buildings requiring structural frames: multiple activities.

(a) Framing systems and floors. Water and drainage services, fire protection and fire-fighting. Lifts and escalators.

(b) Roofs, claddings, internal provisions. Central conditioning plant. Light fittings. Integration of services.

(c) Basements, tanking, footings. Additions and alterations, adjustable and demountable structures. Procedures, economics. Communication systems.
TEXTBOOKS

REFERENCE BOOKS
—together with Reference Books for 11.212 Construction II.

11.213/1 Construction III, Part 1
The same theoretical and lecture material and specifically Construction assignments as for Construction III.

11.213/2 Construction III, Part 2
The Construction assignments of Construction III taken in connection with Design III.

11.203 Construction IIIA
In addition to 11.213 Construction III, the following: (a) Building Techniques and Materials—Investigations and analyses of various methods and materials. Survey of building projects, and field trips. Research, readings and reports in seminars on uses of new materials and structural systems, industrial prefabrication of component parts of buildings. (b) Specialist Services—Instruction in the specialist services of the various sub-contractors normally engaged in the execution of building construction projects. (c) Building Analysis Project—A study of the functional, structural and equipment relationships of various types of building. Approved projects for analysis are selected by the student and are based on construction in progress, or proposed buildings. Emphasis is placed on the integration of structural, mechanical and electrical systems with the architectural scheme.

11.203/1 Construction IIIA, Part 1 The syllabus of Construction IIIA taken over two years.
11.203/2 Construction IIIA, Part 2
11.821 Construction A (Elective)

The study of such aspects as services, environment control, shelter provisions, materials testing and constructional performance in greater depth.

11.822 Construction B (Elective)

Continues the provisions of Construction A. The field is extended to include such aspects as prefabrication, modular construction, the design and use of industrially produced components, the integration of functions and the design for special environments.

11.761 Soil Mechanics for Building

STRUCTURES

The course covers structures as it affects the architect and the builder. Exercises in structural design and testing work in Structure Laboratory supplement the theoretical work.

11.221 Structures I

TEXTBOOK

REFERENCE BOOKS

11.222 Structures II

stresses and Mohr circle. Simple building systems. Materials of construction: concrete (ingredients, properties, mix design, manufacture), steel, timber and plywood, etc. Laboratory work associated with the above.

TEXTBOOKS

REFERENCE BOOKS

11.223 Structures III

TEXTBOOKS
Standards Association of Australia:

REFERENCE BOOKS
Concrete Reinforcing Steel Institute. *C.R.S.I. Recommended Practice for Placing Reinforcing Bars*. The Institute, Chicago, 1963.

**11.224 Structures A (Elective)**

Structures will be studied in greater detail with lectures given in the earlier part of the year. Students will then select topics for further individual supervised study in the latter part of the year.

**TEXTBOOK**

**REFERENCE BOOKS**

**11.225 Structures B (Elective)**

The study of further topics other than those studied in Structures A, or those topics studied in Structures A can be taken to a more advanced level with supervised study.
11.831 Structures A (Building Elective)

This study aims to complete the builder's basic store of knowledge in Structures.

Structural calculations and acquaintance with Codes form the core of this work, mainly on statistically determinate structures. In some measure, studies in Construction have supplemented design, often providing examples for detailed calculation.

The ultimate aim is to attain a critical appreciation of structural design with special reference to efficiency of construction and cost.

BUILDING SCIENCE

The application of the methods and findings of science to the design and construction of buildings.

Study commences with basic physical phenomena and their mathematical description. The principles so established are applied to the analysis of the functional requirements of buildings, in terms of their ability to withstand and control the natural environment, and to satisfy human, thermal, visual and auditory requirements.

11.271 Building Science I

Mathematics

(a) Elementary computer programming; differentiation and integration of simple functions; the definite integral.

(b) Application to curve sketching, arc lengths, areas and volumes, moments of inertia, fluid pressures.

(c) Plane curves; conics and surfaces of revolution; quadric surfaces; ruled and warped surfaces; convex bodies; spherical trigonometry; projective configurations.

Physics

(b) Reflection and refraction of light; lenses, mirrors, dispersion and spectra, polarization; photometry. Electricity and magnetism; Ohm's law, resistance, conductance, capacitance; direct current circuits and measurement.

(c) Application: Analysis of the functional requirements of buildings. Climate and shelter from the elements; temperature, humidity and air flow; exclusion of water, thermal and moisture movement, durability and weathering. Density, elasticity and mechanical properties of building materials; testing methods and statistical interpretation.

TEXTBOOK

REFERENCE BOOKS

11.272 Building Science II
(a) The sky as a sphere; map projections as representations of a spherical surface; geometrical aspects of natural lighting and sun control. Sky factors, Waldram diagrams, daylight protractors.
(b) Sun position and its representation by solar charts; radiant energy from the sun; design of hoods; louvres and sun control devices.
(c) Thermal properties of buildings, heat transmission and insulation. Hygrometry and condensation. Principles of heating, cooling and natural ventilation.

TEXTBOOKS
Drysdale, J. W. *Designing Houses for Australian Climates*. Australia—Commonwealth Experimental Building Station, Bulletin No. 6, 1952 (serial).

REFERENCE BOOK

11.273 Building Science III
(a) The lighting of buildings; the eye and vision; general requirements of good lighting. Natural lighting from non-uniform skies; inter-reflected light. Use of charts, tables and other design aids. Artificial lighting; light sources and their spectral characteristics. Luminaires and light control; the lumen method of design. Quality of lighting and glare control.
(b) Fire in buildings; fire load; fire resistance of buildings. Acoustics, basic concepts and units. The ear and hearing. Transmission of air-borne and structure-borne sound; methods of noise control and sound insulation.
(c) Design of auditoria including analysis of shape and control of reflected sound; sound absorbent materials. Simple sound reinforcement systems. Application to various building types.
TEXTBOOKS

REFERENCE BOOKS
Hopkinson, R. G. and Kay, J. D. *The Lighting of Buildings*. Faber.

11.841 Building Science A (Elective)
The study of acoustics, lighting, sun control and similar topics at greater depth, with particular emphasis on co-ordination with studio projects.

11.842 Building Science B (Elective)
A continuation of Building Science A involving project work on a specific topic and the presentation of a research report.

GRAPHIC COMMUNICATION
The development of visual awareness and the practical skills basic to the observation, analysis and recording of appearance and to the construction of visualization and co-ordination drawings.

11.131 Graphic Communication I

TEXTBOOKS
REFERENCE BOOKS
Kepes, G. The Language of Vision. Theobald, Chicago, 1944.

11.131/1 Graphic Communication I, Part 1; 11.131/2 Graphic Communication I, Part 2
The syllabus of Graphic Communication I taken over two years.

11.132 Graphic Communication II

Graphic Structure. Analysis, in theory and in practice, of a communication process. Studies in the development of symbolic and literal systems of representation. Media studies include the more sophisticated contemporary range.

Technical Drawing. Extension and development from the Stage 1 series in the context of the Architectural design and construction programme.

Visual Drawing. Extension and development from the Stage 1 series in the construction of visualization and co-ordination drawings.

11.133 Graphic Communication III
Further extension of Graphic Communication II with special emphasis on analytical observation and the capacity to construct visualization and co-ordination drawings.

MANAGEMENT

11.311 Specifications and Reports 11.331 Estimating and Specifications

(a) Estimating
The practical methods used in the estimating of the financial cost of architectural works.

Methods used for estimating; standard mode of measurement; examples of “building up” the elements of a unit cost for pricing a bill of quantities; typical problems in estimating costs of building works.

Measuring and methods of adjusting variation; comparison of costs for alternative methods of construction related to structural parts of buildings; preparation of preliminary estimates from sketch plans.
(b) Specifications

The principles and methods and the changing trends involved in the compilation of a specification complementing other architectural documents.

Definition, objects and purposes of a specification; evolution of specifications; specification as a contract, legal and working document; relationship to Bill of Quantities and drawings; schedules; reference material; specification writing; "Master" specifications; outright and performance specifications; prime cost and provisional sums; specification sections, clauses and language; preparation and format of specifications; printing, binding and distribution.

Explanation of documents; general conditions; specifications of individual "trades"; schedule of p.c. and provisional sums; specifications for alterations, additions and new works; specification assignment.

(c) Reports

The presentation of technical information, both written and graphical.

The nature of communication; preparation of draft for a report; presentation and structure of reports; style and punctuation.

TEXTBOOKS

REFERENCE BOOK

11.321 Professional Practice

The ethical, legal and common standards and responsibilities governing the relations between the architect, the client and the builder; office practices and procedures; financial aspects of the practice of architecture and building.

(a) Historical background; professional institutions; code of ethics; conditions of engagement; scale of professional charges; specialist consultants.

(b) The Architects' Registration Act of New South Wales. Laws of contract; types of contract; articles of agreement; relationship of contracting parties and the architect; architects' responsibilities; negligence; arbitration; litigation; statutory controls; copyright.

(c) Office administration; correspondence; reports; insurance; finance; tenders; contract administration; organization of the building industry; problems of practice.

REFERENCE BOOKS

11.711 Quantity Surveying I

Instruction in the method of obtaining from plans and specifications and otherwise the quantities of material and labour necessary in the construction of a building and other structures. The use of scales, figures, dimensions, plans, sections, elevations and details in relation to quantities. Techniques used in taking off and billing of quantities.

11.712 Quantity Surveying II

11.721 Estimating I

Methods used for estimating; standard mode of measurement; profit; establishment and other on-cost charges; awards, insurance, taxes, etc.; scale of fees and charges by local and other authorities.

The subject matter for each trade or operation includes: current material prices; schedule of labour units. Memoranda in respect to: weights, mixing proportions and yields of materials, waste allowances, working costs and depreciation of plant, scaffolding, etc.; examples of “building up” the elements of a unit cost for pricing a bill of quantities; topical problems in estimating costs of building works.

Measuring and methods of adjusting variations; grouping of unit items to obtain a bulked cost rate for different structural parts of buildings; comparison of costs for alternative methods of construction related to structural parts of buildings; preparation of preliminary estimates from sketch plans.

TEXTBOOK

REFERENCE BOOK

11.722 Estimating II

Further examples of estimating the costs of unit rates for various trades and operations for building projects; pricing of a selected bill of quantities; construction scheduling; preparing a forecast of costs for a project which is at the preliminary planning stage.

11.731 Management I

REFERENCES BOOKS
International Labour Office. *Introduction to Work Study*. Geneva International
1965.
Massie, J. L. *Essentials of Management*. Prentice-Hall, Englewood Cliffs,
1947.

11.732 Management II
Management functions—planning, organizing, staffing, directing, co-ordinating,
controlling and appraisal. Construction planning and control. Critical path
method. Functions of personnel—job specifications—organization structure
Administrative procedures. Conditions of contract. Cost analysis—statistical
data—work study. Reports and records—conduct of meeting. Technical super-
vision.

Voss, W. C. *Construction Management and Superintendence*. Van Nostrand,

11.733 Management III
Construction management. Construction analysis—preplanning. Construction
methods—appraisal and quantitative decision making. Case studies and models
for construction planning. Services aspects of construction.

REFERENCES BOOKS
Keating, D. *Law and Practice of Building Contracts*. 2nd ed., Sweet & Maxwell,

14.011 Accounting and Costing for Builders I
An examination of basic accounting theory and its application to the accounting
needs of the construction industry. The preparation, analysis and interpretation
of accounting reports. An introduction to the use of accounting in the area of management decision making.

**TEXTBOOKS**

**REFERENCE BOOKS**

---

**14.012 Accounting and Costing for Builders II**

A treatment of accounting information for management purposes. Management planning and control, including such techniques as critical path method.

**TEXTBOOKS**

**REFERENCE BOOKS**

---

**14.051 Law for Builders I**

Introduction to the law, including brief outline of sources of law in New South Wales and the system of judicial precedent.

**TEXTBOOK**

14.052 Law for Builders II

TEXTBOOKS

TOWN PLANNING

11.411 Town Planning

The study of factors influencing the direction of the development and use of land in the public interest.
Objectives of town and regional planning; historical background; contemporary planning techniques; New South Wales planning law and administration; parks and playing field; housing and neighbourhood planning; traffic and transport; the central area; elements of civic design; the city of the future.
Studio work in the design and layout of residential neighbourhoods.

TEXTBOOK

REFERENCE BOOKS

11.431 Town Planning Theory and Practice I

Fundamental human needs. Improving the quality of human life in urban areas. Improving the physical environment. The planning process: objects, civic survey, plan preparation and implementation. The nature and purpose of zoning. The elements of a residential neighbourhood. Studio and field exercises in civic survey, environmental studies, and the layout of residential areas.

TEXTBOOK

REFERENCE BOOKS
11.432 Town Planning Theory and Practice II

The town—its elements and structure. Town geometry. The metropolis—its characteristics and problems of expansion. Theories of urban growth and structure. The central area, district and regional shopping centres. Metropolitan communications and major open spaces. The satellite city. Housing. Urban renewal. Studio and field exercises in the preparation of (a) a development plan for a "new town" and (b) a redevelopment scheme for an obsolete urban area.

TEXTBOOK

REFERENCE BOOKS

11.433 Town Planning Theory and Practice III

National and regional planning. Village planning. Patterns of urban and rural land uses. Industrial development and decentralisation. Responsibilities of Commonwealth, State and Local Governments for planning policies. Regional development committees. Citizen participation in planning. National Capital cities. Studio and field exercises in the preparation of a regional planning scheme for (a) a rural area and (b) a metropolis.

TEXTBOOK

REFERENCE BOOKS

11.434 Town Planning Theory and Practice IV

Introduction to location theory and spatial interaction models. Existing and emerging techniques in the collection, projection and analysis of planning data. Decision-making, problems of prediction and choice. Planning strategies. Operational models. Programming. Preparation of policies, programmes and budgets for detailed physical development or redevelopment plans including the design of operational models.
REFERENCE BOOKS

11.441 Design II for Town Planners
The lectures are those given in the subject of 11.112 Design II but the studio exercises are specially adapted for planning purposes, and to emphasize environmental design problems.

THESES

11.171A and 11.171B Thesis (Architecture)
A specialized individual study taken under staff supervision with the object of allowing the student either to gain knowledge in some aspect of architecture which is not covered in the course or to increase his knowledge of some aspect which has been covered. As such the thesis is essentially evidence of this individual study. The study does not require original experimental research for the purpose of discovering new facts or the testing of an hypothesis. Neither is it an essay permitting the student's unsupported opinion. The topic of the thesis is submitted by the student for the approval of the Professor of Architecture at the beginning of the fifth year and the completed thesis submitted for examination towards the end of the sixth year.

11.491 Thesis (Town Planning)
An individual study of an approved subject similar to 11.171A and 11.171B but done in one year by Town Planning students.

GRADUATE SUBJECTS

1.291G Introductory Mathematical Physics
Revision and extension of background materials; S.H.M., wave theory; Fourier analysis; complex numbers; electrical circuit analogies; statistics and computation.

1.292G Acoustic Theory A
Characteristics of sound and vibration; the wave equation; sound propagation in solid, liquid and gaseous media, impedance, resonance and modes; pulses; complex sound waves; Fourier analysis.

1.293G Electro-Acoustics
Principles of design of sound reinforcement systems for speech and music; artificial reverberation; ambiophony; assisted resonance; special requirements for translation, language laboratories, etc. Specification of sound systems. Characteristics of microphones, amplifiers and loudspeakers.
11.910G History of Landscape Design

Early cultures and their impact upon the primitive landscape through farming, transport and settlement patterns. Religious and social influences as reflected in the design of parks and gardens throughout history. Architectural expression and aesthetic beliefs. The Industrial Revolution and its effect upon the humanized landscape.

REFERENCE BOOKS

11.912G Landscape Engineering

(a) Classification of soils, shear, compaction, consolidation and permeability. Stability of walls, embankments, cuttings and earth dams. Common causes of failure and remedial measures.

(b) Elementary hydrostatics and hydraulics. Bernoulli’s Theorem, flow through orifices, over notches, in channels and pipes. Pumps and reticulating equipment.

REFERENCE BOOKS

11.913G Theory and Practice of Landscape

Aesthetic philosophies of landscape design; scale, texture and colour. Design, construction and maintenance in urban and rural environments, including highways, residential areas, parks and gardens. Erosion control and shore protection. Landscape surveys and analyses, specifications, contracts and office procedure.

REFERENCE BOOKS

11.914G Forestry and Horticulture

Principal commercial trees—identification—planting techniques, care and maintenance, including fire and insect pests, and felling techniques. Forest nursery practice and forest economics.

Characteristics, identification and specific requirements of selected plants and shrubs. Soil requirements and cultivation. Grasses, lawn and playing field
construction. Use of herbicides and selective weed killers—control of insect pests.

REFERENCE BOOKS

11.915G Landscape Design
A series of design assignments involving the application of lecture material. It is anticipated that extra-mural work will be necessary in addition to the studio periods provided for this subject.

11.920G Theory of Neighbourhood Planning
The neighbourhood concept: its historical evolution and development. The contributions of Ebenezer Howard, Unwin and Parker, Clarence Perry, Stein and Wright, Frank Lloyd Wright, Le Corbusier, Walter Burley Griffin, Frederick Gibberd, Steen Eiler Rasmussen, and others. Neighbourhood structure, elements and form. Relationship to town and metropolitan planning.

TEXTBOOK

REFERENCE BOOKS
Creese, W. L. *The Search for Environment*. Yale U.P.

11.921G Practice of Neighbourhood Planning
REFERENCE BOOKS

11.922G Communications and Public Utilities
Interaction of land use and transportation. Vehicular and pedestrian circulation patterns. Traffic function and capacity of district and neighbourhood roads. Principles and practice of local road construction, water supply, sewage treatment and disposal, and drainage. Local supply of electricity, gas, telephone, and other services.

11.923G Land and Housing Economics

11.924G Urban Sociology
A sociological approach to the study of urban phenomena. Lectures will deal with both methodological and theoretical issues relating to the study of urban social structures. Seminars will provide students with the opportunity to examine critically a number of community studies. A research project will be undertaken by each student.

REFERENCE BOOKS
Boskoff, A. The Sociology of Urban Regions. Appleton.
Dickinson, R. E. City and Region, a Geographical Interpretation. Routledge & Kegan Paul.
Hall, P. The World Cities. Weidenfeld.

11.925G Housing Law and Administration
Housing acts and regulations at Commonwealth, State and local levels. Related town planning acts and ordinances. Commonwealth-State Housing Agreements. The organization and administration of public housing authorities. Significant overseas housing policies.

11.941G Construction
Elements of construction, single and multi-storey buildings; building services; materials. Exercises in analysis of architectural and engineering drawings.
11.942G  Acoustic Theory B

Characteristics of airborne sound sources, speech, musical instruments, machinery, traffic; vibration and structure-borne sound. Sound power and sound intensity; propagation of sound in open air, sonic boom. I.S.O. Standards for acoustic measuring apparatus and measurement of sound powers and intensity. Practical field and laboratory measurements.

REFERENCE BOOKS

11.943G  Subjective Acoustics

Perception of sound and vibration; frequency, intensity and time dependence; subjective scales of loudness; speech intelligibility, masking; echo discrimination; noise annoyance; hearing damage criteria, ear protection and hearing conservation programmes.

TEXTBOOK

REFERENCE BOOKS

11.944G  Applied Acoustics A

Airborne and impact sound transmission in buildings; single, multiple and complex partitions; floors; flanking transmission. Machinery and services noise reduction, vibration reduction and duct silencers. Criteria for sound insulation in buildings; methods of specification. Community noise and town planning; zoning and traffic engineering; effect of screens, embankments, distance. I.S.O. Standards of measurement of Sound Transmission Loss in the field and laboratory; practical measurements.

TEXTBOOK

REFERENCE BOOKS

**11.945G Applied Acoustics B**

**REFERENCE BOOKS**

**11.949G Research Project**

An individual topic to be selected from one of the following fields; physical theory; machinery, duct and vibration noise; building insulation; community noise; room acoustics; or electro-acoustics.

**11.961G Building Components**

**11.962G Advanced Construction I**

**11.963G Advanced Construction II**

Construction methods: plant, formwork, transport, assembly and erection. Individual building elements: foundations; floors and walls (lift slab and flat plate, slip and climbing forms); industrial buildings and frame design; prestressed concrete design and construction. Construction problems of high rise buildings. Discussion of materials of construction; timber engineering; the use of aluminium and plastics; lightweight concrete; sandwich panels.

**11.964G Construction Planning I**

**11.965G Advanced Construction II**

Construction analysis, methods of estimating, use of statistical data and dissection for control functions. Cost analysis and cost control analysis of elements and activities. Operations research, mathematical techniques in decision-making and computer techniques. Network analysis, graphical presentation of logic and critical path planning and scheduling.

**11.966G History of Building**

11.967G  Advanced Equipment and Services

Fabrication and installation of services for large building projects: lifts, air conditioning, fire services. Refrigeration facilities. Cool-houses. Large industrial installations of services.

11.968G  Building Operations

Efficiency and general productivity factors in building work. Site organization. Job specification for personnel and standard procedure on buildings. Work study—method study and work measurement. Developing better building methods and improved controls.

43.211G  Botany and Ecology

The role of the environment in plant development—plant adaptations. Community origin, development and structure. The nature and measurement of the interrelationships of plants with climate, soil and organisms—ecosystem dynamics.
