## FACULTY OF ENGINEERING

### UNDERGRADUATE COURSES:
- Faculty of Applied Science
- School of Civil Engineering
  - Department of Surveying
- School of Electrical Engineering
- School of Mechanical Engineering
  - Department of Industrial Engineering

### DESCRIPTION OF SUBJECTS:
- School of Civil Engineering
- Department of Surveying
- School of Electrical Engineering
- School of Mechanical Engineering
  - Department of Industrial Engineering

### TEXT AND REFERENCE BOOKS:
- School of Civil Engineering
  - Department of Surveying
- School of Electrical Engineering
- School of Mechanical Engineering
  - Department of Industrial Engineering
CALENDAR OF DATES FOR 1966

Term 1 .................. March 7 to May 21.
Term 2 .................. June 6 to August 13.
Term 3 .................. September 5 to November 5.

JANUARY —
Monday 24 .................. Deferred examinations begin.
Last day for acceptance of applications to enrol by new students and students repeating first year.

FEBRUARY —
Saturday 5 .................. Deferred examinations end.
Monday 21 .................. Enrolment Week begins for new First Year students.
Monday 28 .................. Enrolment Week begins for students re-enrolling.

MARCH —
Monday 7 .................. First term lectures begin.
Friday 18 .................. Last day for acceptance of enrolments of new students.
Thursday 31 .................. Last day for acceptance of enrolments of students re-enrolling.

APRIL —
Friday 8 to Monday 11 ........ Easter.
Friday 15 .................. Graduation Ceremony, Wollongong University College.
Thursday 21 .................. Graduation Ceremony, Kensington —Faculty of Engineering (except School of Mechanical Engineering).

MAY —
Wednesday 4 .................. Graduation Ceremony, Kensington—School of Mechanical Engineering.
Saturday 21 .................. First term ends.

JUNE —
Monday 6 .................. Second term begins.
Monday 13 .................. Queen's Birthday—Public Holiday.
Thursday 30 .................. Last day for acceptance of applications for examinations — 24-week courses.
Last day for acceptance of applications for re-admission after exclusion under rules governing re-enrolment.
JULY —
  Tuesday  5  Foundation Day.

AUGUST —
  Friday  12  Last day for acceptance of applications for examinations — 30-week courses.
  Saturday  13  Second term ends.
  Sunday  14  Survey camp begins for Second and Third Year Surveying students.
  Saturday  27  Survey camp ends.

SEPTEMBER —
  Monday  5  Third term begins.
  Saturday  24  Annual Examinations begin—24-week courses.

OCTOBER —
  Monday  3  Six Hour Day—Public Holiday.
  Saturday  8  Annual Examinations end — 24-week courses.
  Sunday  9  One-week Survey Camp begins for students taking 8.421, 8.421S and 8.423S.
  Saturday  15  One-week Survey Camp ends.
  Sunday  16  One-week Survey Camp begins for students taking 8.422.
  Saturday  22  One-week Survey Camp ends.

NOVEMBER —
  Saturday  5  Third term ends—30-week courses.
  Saturday  12  Annual examinations begin—30-week courses.

DECEMBER —
  Saturday  3  Annual Examinations end.

1967

JANUARY —
  Mon. 23 to Sat., Feb. 4  Deferred examinations.

FEBRUARY —
  Monday  20  Enrolment Week begins for new First Year students.
  Monday  27  Enrolment Week begins for students re-enrolling.

MARCH —
  Monday  6  First term lectures begin.
Dean
Professor A. H. Willis

Chairman
Professor W. R. Blunden

SCHOOL OF CIVIL ENGINEERING

School of Civil Engineering Advisory Committee
Chairman
Professor A. H. Willis, Dean of the Faculty

Professor of Civil Engineering and Head of Department of Water Engineering
C. H. Munro, BE Syd., FRSH, FRSA, MIE Aust., MASCE, MIWE

Professor of Civil Engineering and Head of Department of Structural Engineering

Professor of Surveying and Head of Department of Surveying
P. V. Angus-Leppan, BSc(Eng.) Rand, PhD DipTP Natal, MILS(Natal), LSA

Executive Assistant to the Dean
I. J. Somervaille, BE N.S.W., ASTC

Department of Water Engineering
(Including Civil Engineering Practice, Public Health Engineering, Soil Mechanics and the Water Research Laboratory)

Associate Professor
P. W. S. Ryan, ME N.S.W., DIC, ASTC, MIE Aust.

Senior Lecturers
D. N. Foster, BE Syd.
R. T. Hattersley, ME N.S.W., ASTC, MIE Aust.
D. T. Howell, BE Syd., ME N.S.W.
G. C. Y. Hu, BSc Kwangtung Kuomin, Canton, MSc PhD Birm., DipTP Lond., AMTP, AMIMunE, AMIE Aust., MASCE
E. M. Laurenson, BE PhD N.S.W., AMIE Aust.
J. R. Learmonth, BE Syd., ME N.S.W.
A. F. S. Nettleton, BSc BE Syd., ME N.S.W., DIC, AMIE Aust.
L. V. O'Neill, BE Syd., AMIE Aust.
D. H. Pilgrim, BE N.S.W., AMIE Aust.
K. K. Watson, BE Syd., ME N.S.W., AMIE Aust.
C. J. Wiesner, BSc Adel., FRMetS
I. R. Wood, BE N.Z., ME N.S.W.

Lecturers
J. B. Clampett, BE Syd., PhD N.S.W.
A. G. Douglas, ME N.S.W., AMIE Aust.
C. R. Dudgeon, ME N.S.W.
T. R. Fietz, BE N.S.W., AMIE Aust.
G. S. Harris, ME N.Z., AMNZIE
V. J. Summersby, BE N.S.W., AMIE Aust.

Teaching Fellows
M. G. McGarry, MS(Eng.) Alberta, PEng.
M. Sadhanandham, BE MSc(Eng.) Annam.

Technical Officers
F. C. Bell, BSc Syd.
F. A. J. Stein, BE N.S.W.

Department of Structural Engineering
(Including Materials and Applied Mechanics and Concrete Technology)

Associate Professor
A. S. Hall, BSc(Eng.) Lond., DIC, AMIE Aust., MASCE

Associate Professor
A. J. Carmichael, BE PhD N.S.W., ASTC, AMIE Aust. AMIMechE

Senior Lecturers
F. E. Archer, BSc BE Syd., AMIE Aust.
P. S. Balint, DiplEng. Bud., ME N.S.W., AMIE Aust.
H. J. Brettle, BE Syd., PhD N.S.W., DIC, ASTC, MIE Aust.
R. A. Frisch-Fay, DiplEng. Bud., ME N.S.W., AMIE Aust.
G. J. Haggarty, BE Syd., SM M.I.T., PhD N.S.W., MIE Aust.
Lecturers
L. Cridland, BE N.S.W., ASTC
L. S. Edwards, BCE Melb., BEc Syd., ARMTC, AMIE Aust.
H. K. Fischer, DiplIng Hanover, AMSE
P. B. Jones, B.E. Syd., AMIE Aust.
A. P. Kabaila, MTech N.S.W., FRMTG, AMIE Aust.
A. W. Manton-Hall, BE MTech N.S.W., AMIE Aust.
W. M. Newman, BSc Lond., DIC, AMIStuEc, AMIE Aust.
B. J. F. Patten, BE Syd., DIC, AMIE Aust.
I. J. Somervaille, BE N.S.W., ASTC

Teaching Fellows
T. Katayama, BSc(Eng.), ME Tokyo
H. U. Rajasekhariah, BE Mys., MSc Madr.
P. L. Utting, BE N.Z.

Technical Officers
I. Graudins, ASTC
D. E. Hattersley, MSc N.S.W., ASTC
H. N. Lunsmann, BE N.S.W., ASTC
I. Schuchowzoff, DiplEng Dnepropetrowsk, MIE Aust.

Department of Surveying

Senior Lecturers
G. G. Bennett, MSurv Melb., LS (N.S.W.), MIS Aust.
J. G. Freislich, BSc(Eng.) Rand, MILS(Tvl), AMIMS(SA)
P. Richardus, GradGeodEng Delft, ME PhD N.S.W., MAIC

Lecturers
J. S. Allman, BSurv N.S.W., AssocISAust., MAIC
L. Eekhout, BSc(Eng.) Rand, BScPhotEng. I.T.C., Delft
A. P. H. Werner, DiplIng Bonn, AMIE Aust., MIS Aust.

Senior Instructor
F. L. Clarke, LS(N.S.W.), MIS Aust.

Technical Officer (School of Civil Engineering)
R. A. Duncan, ASTC
SCHOOL OF ELECTRICAL ENGINEERING

Professor of Electrical Engineering and Head of School
R. E. Vowels, ME Adel., SMIEEE, AMIE Aust., AMIEE

Professor of Electrical Engineering
C. B. Speedy, BE(Hons) N.Z., PhD Syd., AMIEEE, MIEEE, MIE Aust.

Professor of Electrical Engineering (Communications)
A. E. Karbowiak, BSc(Eng.) PhD Lond., AMIEE

Professor of Electronic Computation and Director of Digital Computing Laboratory
M. W. Allen, BE Adel., PhD Syd., AMIEEE, MIEEE

Executive Assistant to Head of School
A. P. Blake, BSc BE Syd., AMIE Aust.

Senior Administrative Officer
H. G. Phillips

Department of Communications

Senior Lecturers
H. S. Blanks, BSc ME Syd., AMIEI, MIREE Aust.
G. J. Parker, BSc BE Syd., ME N.S.W., AMIE Aust., MIREE Aust.

Lecturers
P. T. Bason, ME N.S.W., AMIE Aust.
J. B. Hiller, BE N.S.W., AMIEEE
T. L. Hooper, BSc Syd., MSc N.S.W., AMIEEE, AMIREE Aust., MIEEE
H. L. Humphries, BSc BE BEc Syd., AMIE Aust.
V. J. Nicholson, BSc BE Syd., MS Stan.

Technical Officers
K. Poronnik, ASTC
J. Swift, BSc Melb.

Department of Control Engineering

Associate Professor
C. H. Miller, BE Tas., DPhil Oxon., AMIE Aust.
Senior Lecturers
A. Dunworth, BSc PhD Manc., GradInstP, AMIE Aust.
C. A. Stapleton, BSc BE Syd., AMIE Aust.

Lecturers
R. F. Brown, BE Liv., AMIEE
F. Lewin, BSc BE Syd.
O. Pawloff, DiplIng Berl., AMIE Aust.
K. E. Tait, BE(Hons) BSc N.Z., AMIE Aust.

Technical Officers
K. J. Flynn, BE N.S.W., ASTC
K. W. Ford, ASTC
J. H. Sieuwertz, BE N.S.W., ASTC

Department of Electronic Computation
Associate Professor
Vacant

Lecturer
L. C. Hill, BE N.S.W., AMIE Aust.

Computer Programmers
Margaret R. Donald, BA Melb.
R. A. Vowels, BE Syd.

Technical Officers
T. Kaldor, BSc Bud.
K. W. Titmuss, BSc(Tech) N.S.W.

Department of Electric Power Engineering
Associate Professors
G. C. Dewsnap, MEE Melb., MIEE, AMIE Aust.
R. M. Huey, BSc BE Syd., MIE Aust., SMIREEE Aust.

Senior Lecturers
A. P. Blake, BSc BE Syd., AMIE Aust.
R. H. J. Clarke, ME N.S.W., ASTC, AMIE Aust.
G. W. Donaldson, BE Qld., BSc MA Oxon., AMIE Aust.,
AMIEE
H. Harrison, BSc BE Syd., ME N.S.W., AMIE Aust.
G. J. Johnson, MSc Syd., AInstP, AMIEE
C. St. J. Lamb, BE N.S.W., MSc(Eng.) Lond., ASTC, AMIEE
E. L. Mortimer, BSc(Eng.) Lond., AMIEE
Lecturer
I. F. Morrison, BSc BE Syd.

Tutor
P. L. Chu, BE NSW.

Teaching Fellows
K. Jeyarasasingam, BSc Ceyl.
K. K. Li, BE NSW.
R. N. Nyak, BSc(Eng.) Ban.
P. A. O’Kelly, BE NSW.
B. A. Vazey, BE Auck.
J. J. Yee, BSc BE NSW.

SCHOOL OF HIGHWAY ENGINEERING

Professor of Highway Engineering and Head of School
D. F. Orchard, BSc PhD Lond., DIC, ACGI, MIE Aust.
MInstT, AMICE, AMIStruck, AMIMunE

Senior Lecturers
W. H. Cogill, MSc Cape T. and Cantab.
D. A. Cumming, MA Oxon., AMICE, AMIE Aust.

Lecturer
J. Dunlop, BE NSW., ASTC

Technical Officer
C. E. Quinlan, ASTC

SCHOOL OF MECHANICAL ENGINEERING

Professor of Mechanical Engineering and Head of School
A. H. Willis, BSc(Eng.) PhD Lond., MIMechE, AMIE Aust., MemASAE, WhSc

Professor of Mechanical Engineering
Vacant

Nuffield Professor of Mechanical Engineering
R. A. A. Bryant, ME NSW., ASTC, MIE Aust., AMIMechE, AFRAeS

Professor of Industrial Engineering
P. B. Oxley, BSc PhD Leeds
Associate Professor

J. Hirschhorn, DiplIng DrTechSc Vienna, MIE Aust. MSocSigmaXi (U.S.A.)

Executive Assistant to Head of School

R. E. Corbett, DIC, ASTC, AMIE Aust., AMIMechE

Senior Lecturers

R. D. Archer, BSc Melb., BE Syd., MS PhD Minn., AMIE Aust., FBIS, AFRAeS, MAIAA
H. A. Borchardt, DiplIng E.T.H., Zur., ME N.S.W., AMIE Aust.
R. E. Corbett, DIC, ASTC, AMIE Aust., AMIMechE
G. de Vahl Davis, BE Syd., PhD Cantab., AMIE Aust., AMIMechE
J. Y. Harrison, BE Syd., AMIE Aust.
E. C. Hind, ME N.S.W., ASTC, AMIE Aust.
J. N. Hool, BE Syd., DPhil Oxon., ASTC, AMIE Aust., AMIMechE
P. G. Morgan, BSc(Eng.) Lond.
R. G. Robertson, MA Oxon., ME N.S.W., AFRAeS, AMIMechE
C. M. Sapsford, BSc(Eng.) Lond., ME N.S.W., AMIE Aust. AMIMechE
J. Taylor, BSc Nott., AMIMechE
R. J. Tuft, ASTC, AMIE Aust., MRINA
K. Weiss, DiplIng Vienna, ME N.S.W., AMIE Aust.

Lecturers

L. H. Baker, BE N.S.W., ASTC
H. G. Bowditch, ASTC, AMIE Aust., AMIAgrE
J. W. Bugler, BSc(Eng.) Lond., DIC, DCAe, AFRAeS
R. A. V. Byron, BE Syd., AFRAeS, MIAS
N. Cooke, BSc Lond., ASTC, AMIProdE
H. S. Craddock, BE Syd.
R. G. Fenton, DiplEng Bud.
O. F. Hughes, SB, SM(NavArch) M.I.T. AMIE Aust., AMSNAME (U.S.A.)
A. K. James, ASTC
R. T. B. McKenzie, MSME Purdue, ARCST(Glas.), AMIMechE
D. J. S. Mudge, BSc Lond., WhSc, AMIMechE
FACULTY OF ENGINEERING

J. O. Muiznieks, DiplIng Latvia, DrIngAer Rome
B. Osman, BE Adel., FSASM, AMIE Aust.
C. Samonov, DiplIng Vienna, AMIE Aust.
J. J. Spillman, BE MEngSc W.Aust.
R. C. P. Walters, ASTC, AMIE Aust.
H. E. Wulff, DiplIng DiplVocEd Cologne, PhD N.S.W.

Project Scientist
W. Ferguson, BSc Edin., MSc Durh., AMIMechE, MASAE, AMIAE

Teaching Fellows
D. Chantrill, BSc Wales
T. C. Chawla, BSc(Eng.) Ban., MTech N.S.W., AMINucE (Lond.)
Q. B. Chou, BE Shanghai
A. E. Churches, BE N.S.W., ASTC
C. T. Huey, BSc Lond., MSc H.K.
S. G. Liddle, BSc Utah

Technical Officers
R. H. Beaton, ASTC, AMIMechE
E. A. Carter, BE N.S.W., ASTC, GradlE Aust.
W. Dollar, ASTC
C. A. James, BE N.S.W.
B. C. Motson, BE N.S.W., ASTC, AMIE Aust., GradlMechE
C. B. Smith, BE N.S.W., ASTC, GradlE Aust.

Department of Industrial Engineering
Associate Professor of Industrial Engineering
N. A. Hill, BE BSc Syd., SM M.I.T., AMIE Aust., AMIMechE

Senior Lecturers
A. F. Allen, BE N.S.W., DIC, ASTC, AMIE Aust., AMIProdE

SCHOOL OF NUCLEAR ENGINEERING

Professor of Nuclear Engineering and Head of School
J. J. Thompson, BE PhD Syd.

Senior Lecturer
Z. J. Holy, DiplIng Prague, MSc Birm., M Tech N.S.W.

Lecturers
O. O. C. A. Bils, DiplIng Berl.
L. G. Kemeny, BE Syd., AMIE Aust.

Teaching Fellow
A. G. Abrahart, BSc Syd.

SCHOOL OF TRAFFIC ENGINEERING

Professor of Traffic Engineering and Head of School
W. R. Blunden, BSc BE Syd., AMIE Aust., AInstP, AMITE (U.S.A.), MInstT

Senior Lecturers
R. D. Munro, BSc W.Aust., BA Melb.
H. J. A. Turner, BSc Lond., ME N.S.W., ARCS, AMIEE

Lecturer
J. I. Tindall, BE Qld.

Teaching Fellow
R. R. Allan, MSc Auck.
ADMISSIONS OFFICE

The Admissions Office provides intending students (both local and overseas) with information regarding courses, admission requirements, and enrolment.

Applications for special admission or admission with advanced standing to courses should be made at the Admissions Office. Local residents should apply prior to 31st December of the year preceding that in which admission is sought. Where applicable, documentary evidence should be tendered with the application, and copies should accompany original documents, as this will allow the immediate return of the latter. Students applying from overseas for admission to undergraduate courses and to those postgraduate courses which require completion of formal lecture courses should lodge their applications prior to 1st October of the year preceding that in which admission is sought.

Applications for admission to undergraduate courses from students who do not satisfy the requirements for admission (see section on "requirements for admission"), from students seeking admission with advanced standing, and from students who have had a record of failure at another University, are referred by the Admissions Office to the Admissions Committee of the Professorial Board.

Students seeking to register as higher degree candidates should discuss their proposals initially with the Head of the School in which they wish to register. An application is then lodged on a standard form and the Admissions Office, after obtaining a recommendation from the Head of the School, refers the application to the appropriate Faculty or Board of Studies Higher Degree Committee.

The Admissions Office also receives applications from students who wish to transfer from one course to another, or seek any concession in relation to a course in which they are enrolled. These applications should, wherever possible, be lodged before the commencement of the academic year in which the concession is to apply.

Students wishing to resume their studies after an absence of twelve months or more are required to apply to the Admissions Office for permission to re-enrol. It should be noted that, unless permission has been given to defer their studies for a specified period which will not normally exceed twelve months, students will be required to re-enter the course under the regulations prevailing at the time of
resumption. This condition will apply also to students who have been re-admitted to a course after exclusion under the rules restricting students re-enrolling.

The Admissions Office operates an Enrolment Bureau for undergraduate students enrolling in the University for the first time. Details of the procedure to be followed by such students will be published in the preamble to the New South Wales Leaving Certificate results or may be obtained on application to the Admissions Office.

The Admissions Office is located in the Main Building at Kensington, telephone 663-0351. Office hours are from 9 a.m. to 1 p.m., and 1.45 p.m. to 5 p.m. Monday to Friday, although an evening service is provided during the enrolment period.

As from March, 1966, the Office will be located on the upper campus in the Chancellery.

**REQUIREMENTS FOR ADMISSION**

**Introductory Information**

Candidates may qualify for entry to undergraduate courses by complying with the matriculation requirements set out hereunder at the New South Wales Leaving Certificate Examination, or the University of Sydney Matriculation Examination.

The New South Wales Leaving Certificate Examination is usually held in November and entries must be lodged with the Department of Education during August.

The Matriculation Examination is held in February, and applications must be lodged at the University of Sydney during the first ten days of January except by candidates who have taken the Leaving Certificate Examination in the previous November. The closing date for such candidates will be announced when the Leaving Certificate results are published.

**Matriculation Requirements** (to operate from 1st January, 1961).*

1. (i) A candidate for any first degree of the University must satisfy the conditions for admission set out hereunder before entering upon the prescribed course for a degree. Compliance with these conditions does not in itself entitle a student to enter upon a course.

*With the introduction of the Higher School Certificate Examination in November, 1967, the matriculation requirements will be amended. Details of the amended requirements for admission in 1968 and subsequent years may be secured on application to the Registrar.
(ii) A candidate who has satisfactorily met the conditions for admission and has been accepted by the University shall be classed as a "matriculated student" of the University after enrolment.

(iii) A person who has satisfactorily met the conditions for admission may be provided with a statement to that effect on the payment of the prescribed matriculation fee.

2. (i) For the purpose of matriculation approved subjects† are grouped as follows:

A. English.
B. Latin, Greek, French, German, Italian, Hebrew, Chinese, Japanese, Russian, Dutch, Geography, Ancient History, Modern History, Economics.
C. Mathematics I, Mathematics II, Mathematics III.
E. Accountancy, Art, Descriptive Geometry and Drawing, Music, Theory and Practice of Music.

(ii) In order to satisfy the conditions for admission to undergraduate courses leading to a degree candidates must pass the New South Wales Leaving Certificate Examination conducted by the Department of Education, or the University of Sydney Matriculation Examination, in at least five approved subjects at the one examination; provided that:

I. either (a) the five subjects include English and at least one subject from each of Groups B and C, but do not include more than one subject from Group E, except that candidates may qualify for admission to the Faculty of Arts only, by passing in one subject from Group D in lieu of the subject from Group C,

or (b) the five subjects include English, and at least one subject from either Group B or Group C, but do not include more than one subject from Group E, and provided further that the five passes include either one first class Honours and two A's or two Honours of which one is first class,

†It should be noted that certain subjects taken for the Leaving Certificate are not approved subjects for admission to the University of New South Wales.
and further provided that:

II.  (a) neither Physics nor Chemistry is offered with the combined subjects Physics and Chemistry;
(b) neither Botany nor Zoology is offered with Biology;
(c) neither Botany nor Zoology nor Biology is offered with Physiology;
(d) neither Mathematics I, Mathematics II nor Mathematics III is offered with General Mathematics;
(e) neither Mathematics I nor Mathematics II is offered with Mathematics III;
(f) Mathematics I or Mathematics II may be counted as an approved subject only if the candidate presented himself for examination in both Mathematics I and Mathematics II;
(g) Theory and Practice of Music is accepted only in cases where the pass was obtained at an examination in 1946 or subsequent years;
(h) Ancient History is accepted only in cases where the pass was obtained at an examination held in 1945 or subsequent years; and further both Modern History and Ancient History may be offered as qualifying subjects at the examinations held at the end of 1951 and subsequent years;
(i) Agriculture is accepted only in cases where the pass was obtained at an examination held in 1945 or subsequent years;
(j) Economics is accepted only in cases where the pass was obtained at an examination held in 1947 or subsequent years.
(k) Descriptive Geometry and Drawing is accepted only in cases where the pass was obtained at an examination held in 1954 or subsequent years.

(iii) Candidates who have satisfactorily met the matriculation requirements of the University of Sydney, but who have not obtained the requisite pass in Mathematics where prescribed for entrance to the University of New South Wales, will be permitted to complete their qualifications to enter the University of New South Wales by passing only in a Mathematics subject from Group C, at a subsequent Leaving Certificate Examination or University of Sydney Matriculation Examination.
ENROLMENT PROCEDURE

First Enrolments. Application for enrolment in first year must wherever possible be made in person to the Student Enrolment Bureau, Kensington, as soon as the results of the Leaving Certificate Examination are published, but in any event not later than 24th January.

Country residents who wish to enrol with the University should write to the Registrar, P.O. Box 1, Kensington, for a form on which to make their preliminary application. This form must be returned not later than 24th January.

New students complete their enrolment at a specified appointment time in the second week before the start of First Term. Fees must be paid on the day of the appointment. However, in special circumstances and provided class places are still available students may be accepted for enrolment after the prescribed week subject to the payment of a late fee.

Applicants for enrolment with advanced standing or applicants relying on overseas examinations for matriculation should lodge an application with the Admissions Office prior to 1st October of the year preceding that in which admission is sought.

First Year Repeats. First Year students who fail all subjects at the annual examinations and who are not granted any deferred examinations must apply for re-enrolment to the Student Enrolment Bureau at the time set out above for First Enrolments. Other first year repeat students follow the procedure set out below for Later Year Enrolments.

Later Year Enrolments. All students enrolling other than for the first time should enrol through the appropriate School and bring with them their notification of examination results for the previous year. This enrolment must be effected before or during the week before the commencement of First Term in accordance with the special arrangements made by the individual Schools. However, Medical students in the third and later years of their course enrol earlier since their academic year commences in advance of the normal commencement date.

Miscellaneous Subject Enrolments. Students may be permitted to enrol for miscellaneous subjects (i.e. as students not proceeding to a degree or diploma) provided the Head of the School offering the subject considers it will be of benefit to the student and there is accommodation available. Under no circumstances will subjects taken in this way count towards a degree or diploma.
Students who have completed the final examinations but have a thesis still outstanding are required to enrol for the period necessary to complete the thesis and to pay the requisite fees.

Course details must be completed during the prescribed Enrolment Week. For details of fee requirements, including late fee provisions, see under Fees.

**Final Dates for Enrolment.** No enrolments will be accepted from new students after the end of the second week of term (18th March, 1966) except with the express approval of the Registrar and the Head of the School concerned; no later year enrolments will be accepted after 31st March without the express approval of the Registrar which will be given in exceptional circumstances only.

**UNIVERSITY UNION CARD**

All students other than miscellaneous students are issued with a University Union membership card. This card must be carried during attendance at the University and shown on request.

The number appearing on the front of the card in the space at the top right-hand corner is the student registration number used in the University's records. This number should be quoted in all correspondence.

The card must be presented when borrowing from the University libraries, when applying for travel concessions and when notifying a change of address. It must also be presented when paying fees on re-enrolment each year when it will be made valid for the year and returned. Failure to present the card could result in some inconvenience in completing re-enrolment.

A student who loses a Union card must notify the University Union as soon as possible.

New students will be issued with University Union cards by mail to their term address as soon as possible after fee payment. In the meantime, the fees receipt form should be carried during attendance at the University and shown on request. If the Union card is not received within three weeks of fee payment, the University Union should be notified.
FEES*

COURSE FEES

Where course fees are assessed on the basis of term hours of attendance the hours for each subject for purposes of fee assessment shall be those prescribed in the Calendar, irrespective of any variation from the prescribed hours which may be necessary in conducting the subject.

Fee determination for courses in the Faculty of Engineering is on a term basis. A full-time course fee will be charged for any term where more than 15 hours' per week instruction, etc., is involved.

(i) Full-time Course Fees (more than 15 hours' attendance per week) — $96 (£48) per term. (In those years of Engineering courses which include industrial training, students will complete their formal studies in the third week of third term. The fee for this short term is $48 (£24).)

(ii) Part-time Course Fee — over 6 hours' and up to 15 hours' attendance per week — $48 (£24) per term.

(iii) Part-time Course Fee (6 hours' or less per week attendance) — $24 (£12) per term.

(iv) Course Continuation Fee — A fee of $20 (£10) per annum (no term payment) is payable by:
   (a) students who have once been enrolled for a thesis and have only that requirement outstanding, or
   (b) students given special permission to take annual examinations without attendance at the University. (Students in this category are not required to pay the subscriptions to the University Union, the Students' Union, the Sports Association and the Library Fee.)

OTHER FEES

In addition to the course fees set out above all registered undergraduates will be required to pay:

Matriculation Fee — $6 (£3) — payable at the beginning of first year.

Library Fee — annual fee — $10 (£5).

*Fees quoted are current at time of publication. The Council reserves the right to alter them at any time.
Student Activities Fees:

- University Union* — $12 (£6) — annual subscription.
- Sports Association* — $2 (£1) — annual subscription.
- Students' Union* — $4 (£2) — annual subscription.
- Miscellaneous — $6 (£3) — annual fee.
- Total — $24 (£12).

Graduation or Diploma Fee — $6 (£3) — payable at the completion of the course.

Depending on the course being taken, students may also be required to pay:

- Biochemistry Kit Hiring Charge — $4 (£2) per kit. Additional charge for breakages and losses in excess of $1 (10/-) may be required.
- Chemistry Kit Hiring Charge — $4 (£2) per kit. Additional charge for breakages and losses in excess of $1 (10/-) may be required.
- Excursion Fee — $2 (£1) per subject (biology, botany, zoology, entomology).
- Anatomy Dissection Manual and Histology Slides deposit — $10 (£5) (refundable on return in satisfactory condition).
- Pathology Instrument Kit — $10 (£5) (refundable on return in satisfactory condition).

SPECIAL EXAMINATION FEES

- Deferred examination — $4 (£2) for each subject.
- Examinations conducted under special circumstances — $6 (£3) for each subject.
- Review of examination result — $6 (£3) for each subject.

LATE FEES

First Enrolments

Fees paid on the late enrolment session and before the commencement of term .... .... .... .... $5 (£2/10/-)
Fees paid during the 1st and 2nd weeks of term $10 (£5)
Fees paid after the commencement of the 3rd week of term with the express approval of the Registrar and Head of the School concerned $20 (£10)

*Life members of these bodies are exempt from the appropriate fee or fees.
†Students in the original Applied Biology degree course pay an excursion fee of $1 (10/-) per subject for botany, zoology and entomology.
Re-Enrolments

First Term

Failure to attend enrolment centre during enrolment week $5 (£2/10/-)

Fees paid after the commencement of the 3rd week of term to 31st March $10 (£5)

Fees paid after 31st March where accepted with the express approval of the Registrar $20 (£10)

Second and Third Terms

Fees paid in 3rd and 4th weeks of term $10 (£5)

Fees paid thereafter $20 (£10)

Late lodgement of Application for Admission to Examinations (late applications will be accepted for three weeks only after the prescribed dates) $4 (£2)

Withdrawal from Course

Students withdrawing from a course are required to notify the Registrar in writing. Fees for the course accrue until a written notification is received.

Where notice of withdrawal from a course is received by the Registrar before the first day of First Term a refund of all fees paid other than the matriculation fee will be made.

Where a student terminates for acceptable reasons a course of study before half a term has elapsed, one half of the term's fee may be refunded. Where a student terminates a course of study after half a term has elapsed, no refund may be made in respect of that term's fees.

The Library fee is an annual fee and is not refundable where notice of withdrawal is given after the commencement of First Term.

On notice of withdrawal a partial refund of the Student Activities Fees is made on the following basis:

University Union — $2 (£1) in respect of each half term.

University of New South Wales Students' Union — where notice is given prior to the end of the fifth week of first term $2 (£1), thereafter no refund.

University of New South Wales Sports Association — where notice is given prior to 30th April a full refund is made, thereafter no refund.

Miscellaneous — where notice is given prior to 30th April $2 (£1).
PAYMENT OF FEES

Completion of Enrolment

All students are required to attend the appropriate enrolment centre during the prescribed enrolment period* for authorisation of course programme. Failure to do so will incur a late fee of $5 (£2/10/-).

First year students (including students repeating first year) must complete enrolment (including fee payment) before they are issued with class timetables or permitted to attend classes. A first year student who has been offered a place in a course to which entry is restricted and fails to complete enrolment (including fee payment) at the appointed time may lose the place allocated.

Fees should be paid during the prescribed enrolment period but will be accepted without incurring a late fee during the first two weeks of First Term. (For late fees see below.) No student is regarded as having completed an enrolment until fees have been paid. Fees will not be accepted (i.e., enrolment cannot be completed) from new students after the end of the second week of term (i.e., 18th March, 1966) and after 31st March from students who are re-enrolling, except with the express approval of the Registrar, which will be given in exceptional circumstances only.

Payment of Fees by Term

Students who are unable to pay their fees by the year may pay by the term, in which case they are required to pay first term course fees and other fees for the year, within the first two weeks of First Term. Students paying under this arrangement will receive accounts from the University for Second and Third Term fees. These fees must be paid within the first two weeks of each term.

Assisted Students

Scholarship holders or Sponsored Students who have not received an enrolment voucher or appropriate letter of authority from their sponsor at the time when they are enrolling should complete their enrolment paying their own fees. A refund of fees will be made when the enrolment voucher or letter of authority is subsequently lodged with the Cashier.

*The enrolment periods for Sydney students are prescribed annually in the leaflets “Enrolment Procedure for New Students” and “Enrolment Procedure for Students Re-enrolling”.

Extension of Time

Any student who is unable to pay fees by the due date may apply in writing to the Registrar for an extension of time. Such application must give year or stage, whether full-time or part-time, and the course in which the applicant wishes to enrol, state clearly and fully the reasons why payment cannot be made and the extension sought, and must be lodged before the date on which a late fee becomes payable. Normally the maximum extension of time for the payment of fees is until 31st March for fees due in First Term and for one month from the date on which a late fee becomes payable in Second and Third Terms.

Where an extension of time is granted to a first year student in First Term, such student is not permitted to attend classes until fees are paid, and if seeking to enrol in a restricted faculty may risk losing the place allocated.

Failure to Pay Fees

Any student who is indebted to the University and who fails to make a satisfactory settlement of his indebtedness upon receipt of due notice ceases to be entitled to membership and privileges of the University. Such a student is not permitted to register for a further term, to attend classes or examinations, or to be granted any official credentials.

No student is eligible to attend the annual examinations in any subject where any portion of his course fees for the year is outstanding after the end of the fourth week of Third Term (30th September, 1966).

In very special cases the Registrar may grant exemption from the disqualification referred to in the two preceding paragraphs upon receipt of a written statement setting out all relevant circumstances.

Cashier's Hours

The cashier's office is open for the payment of fees from 9.30 a.m. to 1.00 p.m., and from 2.00 p.m. to 4.30 p.m. Monday to Friday. It is open for additional periods during the first three weeks of each term.
GENERAL CONDUCT

Acceptance as a member of the University implies an undertaking on the part of the student to observe the regulations, by-laws and other requirements of the University, in accordance with the declaration signed at the time of the enrolment.

In addition, students are expected to conduct themselves at all times in a seemly fashion. Smoking is not permitted during lectures, in examination rooms or in the University Library. Gambling is also forbidden.

ATTENDANCE AT CLASSES

Students are expected to be regular and punctual in attendance at all classes in the course or subject in which they are enrolled. All applications for exemption from attendance at lectures or practical classes must be made in writing to the Registrar.

Where a student has failed a subject at the annual examinations in any year and re-enrols in the same course in the following year, he must include in his programme of studies for that year the subject in which he has failed. This requirement will not be applicable if the subject is not offered the following year; is not a compulsory component of a particular course; or if there is some other cause, which is acceptable to the Professorial Board, for not immediately repeating the failed subject.

COURSE TRANSFERS

Students wishing to transfer from one course to another (including transfer from full-time to part-time study or vice versa) must make application to the Admissions Office as soon as possible and preferably before Enrolment Week. The Admissions Office will give each applicant an acknowledgement of his application to transfer.

Having made application to the Admissions Office students transferring are required to attend the School Enrolment Centre at the time set down for the year/stage of the new course in which they expect to enrol. They must present the letter granting approval of the transfer to the enrolling officer.

Students who have not received a letter granting approval to the transfer before the date on which they are required to enrol must present their acknowledgement to the enrolling officer who will decide whether to permit them to attend classes provisionally in the new course. Students who are permitted to attend classes provisionally should not pay fees until they have received their letter granting formal approval to transfer.
CHANGES IN COURSE PROGRAMMES AND WITHDRAWAL FROM SUBJECTS

Students seeking approval of a change in their course programme or seeking to withdraw from subjects must make application to the Head of the School responsible for the course on a form available from school offices. The Registrar will inform students of the decision. Approval of withdrawal from subjects is not automatic, each application being determined after considering the circumstances advanced as justifying withdrawal. It should be noted that a student is regarded as having failed in a subject if he enrolled in it in any year and did not pass the annual examination — not sitting for the examination is regarded as not passing the examination.

(Unless there are special circumstances, withdrawal from a subject after Term I will not be approved; students withdrawing after this date will therefore be held to have failed to satisfy the examiners.)

RESUMPTION OF COURSES

Students wishing to resume their studies after an absence of twelve months or more are required to apply to the Admissions Office for permission to re-enrol. Students re-enrolling in this way will normally be required to satisfy conditions pertaining to the course at the time of re-enrolment. This condition applies also to students who have been re-admitted to a course after exclusion under the rules restricting students re-enrolling.

ANNUAL EXAMINATIONS

The annual examinations take place in November-December for students in 30-week courses, and in September for students in 24-week courses. Timetables showing time and place at which individual examinations will be held are posted on the central notice boards. Misreading of the timetable will not under any circumstances be accepted as an excuse for failure to attend an examination. Examination results are posted to the term addresses of students. No results will be given by telephone.

All students (including students enrolled for a thesis only) must lodge an application for admission to examinations by the prescribed dates which are:

(a) Annual examinations for 24-week courses — 30th June.
(b) Annual examinations for three-term courses — last Friday of Second Term (12th August, 1966).
(c) Annual examinations for other courses — 14 weeks prior to
date of first examination.

The Accountant is authorized to receive application forms during
the three weeks immediately following the prescribed closing dates if
they are accompanied by a late fee of $4 (£2). Applications forwarded
more than three weeks after the closing date will not be accepted
except in very exceptional circumstances and with the approval of
the Registrar. Where an application is not accepted the student
concerned is not eligible to sit for the examination.

Applications lodged prior to the due date will be acknowledged
by postcard. Students who do not receive an acknowledgement within
ten days of lodging the application should contact the Examinations
Branch or the office of the college attended.

As a result of the application of machine methods to the process-
ing of examination results, all students in Sydney, Wollongong and
Broken Hill receive a pro-forma application for admission to
examinations listing the subjects for which the student has formally
enrolled. The return of this pro-forma duly completed constitutes the
application for admission to examinations. Pro-forma applications
will be posted to students in 24-week courses by the end of May
and to students in 30-week courses by the end of June. Any student
who does not receive a pro-forma application must contact the
Examinations Branch prior to the date prescribed for the return of
applications.

DEFERRED EXAMINATIONS

Deferred examinations may be granted in the following cases:

(i) When a student through illness or some other acceptable
circumstance has been prevented from taking the annual
examination or has been placed at a serious disadvantage
during the annual examinations.

(ii) To help resolve a doubt as to whether a student has reached
the required standard in a subject.

Applications for deferred examinations in the first category must
be lodged with the Registrar with appropriate evidence of the
circumstances (e.g., medical certificate) not later than seven days
after the examination concerned.

A student eligible to sit for a deferred examination must lodge
with the Accountant an application, accompanied by the fee of $4 (£2)
per subject, by the date indicated on the notification of results.
APPLICATION FOR ADMISSION TO DEGREE OR DIPLOMA

Applications for admission to a degree or diploma of the University must be made on the appropriate form by 31st January. Applications for the award of a diploma of Associateship of Sydney Technical College (A.S.T.C.) awarded by the N.S.W. Department of Technical Education must be made on the appropriate form by 31st March. Applicants should ensure that they have completed all requirements for the degree or diploma, including industrial training where necessary.

RULES RELATING TO COMMON FIRST YEAR SUBJECTS IN THE FACULTIES OF APPLIED SCIENCE, SCIENCE, ENGINEERING AND MEDICINE

1. Each student intending to follow any course leading to the degree of Bachelor in any of the Faculties of Science, Applied Science, Medicine or Engineering must have satisfied the examiners in the subjects of 1.001 Physics I, 2.001 Chemistry I, 10.001 Mathematics I, and in a fourth subject (elective) chosen from 5.001 Engineering I, 25.511 Geology I, 12.011 Psychology I or 17.001 General Biology, before progressing further in his course, except that progression may be permitted with outstanding subjects if Faculty regulations permit, provided that for students intending to follow the course leading to the Bachelor of Surveying degree, the subject 2.001 Chemistry I above shall be replaced by the subject 8.801 Surveying I.

2. Notwithstanding Faculty regulations to the contrary, full-time students will be required to complete the four subjects of Rule 1 in not more than two years' study and part-time students in not more than four years' study.

The re-enrolment of students who have not complied with this rule shall be subject to the General Regulations governing re-enrolment.

3. At enrolment, each student to whom Rule 1 applies will be required to nominate and apply for admission to the course which he desires to follow.

Although application for transfer from one course to another within these Faculties may be made at any time, students are advised that such transfers are most readily effected prior to re-enrolment in the second year of full-time courses and the third stage of part-time courses.

All such transfers will be subject to the regulations of relevant Faculties and the concurrence of the Professorial Board.
RESTRICTION UPON STUDENTS RE-ENROLLING

The University Council has adopted the following rules governing re-enrolment with the object of requiring students with a record of failure to show cause why they should be allowed to re-enrol and retain valuable class places. These rules will be applied retrospectively from January, 1962.

(i) As from 1st January, 1962, a student shall show cause why he should be allowed to repeat a subject in which he has failed more than once. (Failure in a deferred examination as well as in the annual examination counts, for the purpose of this regulation, as one failure.) Where such subject is prescribed as a part of the student's course he shall be required to show cause why he should be allowed to continue the course. A student in the medical course shall show cause why he should be allowed to repeat the second year of the course if he has failed more than once to qualify for entry to the third year.

(ii) Notwithstanding the provisions of Clause (i), a student shall be required to show cause why he should be allowed to continue a course which he will not be able to complete in the time set down in the following schedule:

<table>
<thead>
<tr>
<th>Number of years in course</th>
<th>Total time allowed from first enrolment to completion (years)</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>5</td>
</tr>
<tr>
<td>4</td>
<td>6</td>
</tr>
<tr>
<td>5</td>
<td>8</td>
</tr>
<tr>
<td>6</td>
<td>9</td>
</tr>
<tr>
<td>7</td>
<td>11</td>
</tr>
<tr>
<td>8</td>
<td>12</td>
</tr>
</tbody>
</table>

(iii)* No full-time student shall, without showing cause, be permitted to continue a course unless all subjects of the first year of his course are completed by the end of his second year of attendance. No student in the Faculty of Arts shall, without showing cause, be permitted to continue a course unless he completes four subjects, one of which must be from Group VII, by the end of his second year of attendance.

No part-time student shall, without showing cause, be permitted to continue a course unless all subjects of the first two stages of his course are completed by the end of his

* Rule (iii) in so far as it relates to students in the Faculty of Arts will apply retrospectively as from the 1st January, 1967.
fourth year of attendance and all subjects of the third and fourth stages of his course by the end of his seventh year of attendance.

(iv) A student who has a record of failure in a course at another University shall be required to show cause why he should be admitted to this University. A student admitted to a course at this University following a record of failure at another University shall be required to show cause, notwithstanding any other provisions in these rules, why he should be permitted to continue in that course if he is unsuccessful in the annual examinations in his first year of attendance at this University.

(v) Any student excluded under any of the Clauses (i)-(iii) may apply for re-admission after two academic years and such application shall be considered in the light of any evidence submitted by him.

(vi) A student wishing “to show cause” under these provisions shall do so in writing to the Registrar. Any such application shall be considered by the Professorial Board, which shall determine whether the cause shown is adequate to justify his being permitted to continue his course or re-enrol as the case may be.

(vii) The Vice-Chancellor may on the recommendation of the Professorial Board exclude from attendance in a course or courses any student who has been excluded from attendance in any other course under the rules governing re-enrolment and whose record at the University demonstrates, in the opinion of the Board and the Vice-Chancellor, the student’s lack of fitness to pursue the course nominated.

(viii) A student who has failed, under the provisions of Clause (vi) of these rules, to show cause acceptable to the Professorial Board why he should be permitted to continue in his course, and who has subsequently been permitted to re-enrol in that course or to transfer to another course, shall also be required to show cause, notwithstanding any other provisions in these rules, why he should be permitted to continue in that course if he is unsuccessful in the annual examinations immediately following the first year of resumption or transfer of enrolment as the case may be.

(ix) A student may appeal to an Appeals Committee, constituted by Council for this purpose, against his exclusion by the Professorial Board from any subject or course.
RE-ADMISSION AFTER EXCLUSION

Applications for re-admission must be made on the standard form and lodged with the Registrar not later than 30th June of the year prior to that for which re-admission is sought. An application should include evidence of appropriate study in the subjects (or equivalents) on account of which the applicant was excluded. In addition, evidence that the circumstances which were deemed to operate against satisfactory performance at the time of exclusion are no longer operative or are reduced in intensity should be furnished. An applicant may be required to take the annual examinations in the relevant subjects as qualifying examinations in which case re-admission does not imply exemption from the subject.

It should be noted that a person under exclusion may not be enrolled in miscellaneous subjects unless he has received the approval of the Professorial Board.

Persons who intend applying for re-admission to the University at a future date may seek advice as to ways in which they may enhance their prospects of qualifying for re-admission. Enquiries should be made on a form obtainable from the Examinations Branch, and lodged with the Registrar.

OWNERSHIP OF STUDENTS' WORK

The University reserves the right to retain at its own discretion the original or one copy of any drawings, models, designs, plans and specifications, essays, theses or other work executed by students as part of their courses, or submitted for any award or competition conducted by the University.

CHANGE OF ADDRESS

Students are requested to notify the Registrar in writing of any change in their address as soon as possible. Failure to do this could lead to important correspondence or course information not reaching the student. The University cannot accept responsibility if official communications fail to reach a student who has not notified the Registrar of a change of address.

NOTICES

Official University notices are displayed on the notice boards and students are expected to be acquainted with the contents of those announcements which concern them.
LOST PROPERTY

All enquiries concerning lost property should be made to the Chief Steward on Extension 2502 or to the Lost Property Office at the Union.

PARKING WITHIN THE UNIVERSITY GROUNDS

Because of the limited amount of parking space available, only full-time final year undergraduates, Stage 5 part-time and post-graduate students may apply for parking permits. Applications should be made to the Property Section (Bursar's Division). It should be noted that increasing demand for parking space may require the imposition of further restrictions.

APPLICATION OF RULES

General

Any student who requires information on the application of these rules or any service which the University offers may make inquiries from the Admissions Office, the Student Counselling Centre or the Registrar.

Appeals

Section 5(c) of Chapter III of the By-laws provides that "Any person affected by a decision of any member of the Professorial Board (other than the Vice-Chancellor) in respect of breach of discipline or misconduct may appeal to the Vice-Chancellor, and in the case of disciplinary action by the Vice-Chancellor, whether on appeal or otherwise, to the Council".
STUDENT SERVICES

THE LIBRARY

The University Library is on the upper campus and adjacent to the Chancellery and the Arts and Commerce buildings. The Bio-Medical Library is in the Biological Sciences building with a branch at Prince Henry Hospital (Phone: 661-0111). There are also branches at Broken Hill and Wollongong.

THE UNIVERSITY UNION

The University Union is a common meeting ground for all students. Eating and general recreational facilities are available as well as a shop for stationery and other student requisites, branches of several banks, a pharmacy, a branch of Anthony Horderns, and hairdressing facilities. Membership is compulsory for all registered students.

STUDENT ACCOMMODATION

Residential Colleges

Accommodation for students is provided within the complex of the Residential Colleges of the University which comprise Basser College, Phillip Goldstein Hall, Post-Graduate Hall, and a new college, the Philip Baxter College, which will accept students for the first time in 1966. The College complex houses 500 men and women students, as well as staff members. Tutors in residence provide tutorial assistance in a wide range of subjects.

Board and residence fees, which are payable on a term basis, amount to $18.50 (£9/5/-) per week. Intending students should apply in writing to the Master, Box 24, Post Office, Kensington, NSW, from whom further information is available.

Other Accommodation

Students requiring other than Residential College accommodation may make application to the Student Amenities Service where current lists are kept of accommodation available at recognised boarding houses, private homes, and in serviced and unserviced apartments.

STUDENT AMENITIES SERVICE

The Student Amenities Service was established to promote the physical, social and educational development of students through their leisure time activities.
The Amenities Service, working in close liaison with the Sports Association and the University authorities, assists various recognised clubs by arranging and providing facilities essential to their general development, and by handling on their behalf all inquiries and applications for membership.

**Concession Fares**

Application forms for travelling concessions may be obtained at the Inquiry Office, Main Building, Kensington, or at the Amenities Service Offices, Kensington.

**Omnibus:** Concessions are available to:

(a) students under 18 years of age irrespective of whether they are employed or receive income or remuneration,

(b) students between 18 and 30 years of age who are not in employment or in receipt of any income or remuneration.

NOTE: Income or remuneration includes allowances paid to Colombo Plan students, Public Service trainees, etc., but does not include allowances paid to holders of Commonwealth Scholarships or Scholarships granted by the State Bursary Endowment Board.

**Train:**

(a) Periodical tickets are available during term time to full-time students not in employment or in receipt of any remuneration.

(b) Vacation travel concessions are available to students qualifying under (a) above.

**Ferry:** Concession fares are available for travel on ferries controlled by the Port Jackson & Manly Steamship Co. Ltd. and Sydney Harbour Ferries Pty. Ltd. All applicants must be registered full-time students under the age of 21 years.

**Aircraft:** Concession fares for travel overseas, interstate and intrastate are available under the conditions ruling for the various operating companies.

**Location**

The Student Amenities Service at Kensington is located opposite the Basser College end of the new Electrical Engineering building ('Phone: 663-0351, Ext. 2235).

**STUDENT EMPLOYMENT SERVICE**

Assistance is offered in finding vacation employment, continuous part-time employment, casual employment and odd jobs, full-time employment for evening students, and permanent employment after graduation. This Service is located in the Main Building, Kensington, just near the main entrance.
CHAPLAINCY SERVICE

The Service is provided for the benefit of students and staff by six Christian Churches (Anglican, Roman Catholic, Methodist, Presbyterian, Baptist, Churches of Christ) and by the Jewish congregation. Chaplains are in attendance at the University at regular times.

STUDENT HEALTH SERVICE

Director: M. A. Napthali, MB, BS, Syd.

A student health and first aid centre is situated within the University, staffed by a qualified medical practitioner, a nursing sister and secretary.

The centre is located in hut "E" on the northern side of the campus, adjacent to Basser College, and is open between 9 a.m. and 5 p.m. Monday to Friday, and 6 p.m. to 8 p.m. Tuesdays and Thursdays during term.

The medical service is diagnostic and therapeutic but is not intended to replace the student's private doctor or the community health services. Thus, where chronic or continuing conditions are revealed or suspected, the student will be advised and referred to his own doctor or to an appropriate hospital for specialist service and treatment. The health service is not responsible for fees incurred in these instances.

Students are encouraged to attend the centre for advice on all matters pertaining to health.

Appointments may be arranged by calling at the centre or by telephoning 663-0351, extension 2679.

STUDENT COUNSELLING AND RESEARCH UNIT

Prospective students seeking advice or guidance regarding the selection and planning of courses (particularly in relation to a career), or advice regarding their suitability for a particular course, are invited to consult the University's Student Counselling and Research Unit. Appointments may be made by telephone (663-0351, extensions 2600 to 2605).

In addition to its counselling service, the Unit provides a variety of study skills programmes throughout the year, on a group or individual basis. Programmes offered in the past have included Reading Improvement, Study Methods, Written Expression, Note Taking, Studying Mathematics, Improving Listening, Preparing for Statistics.
STUDENT LOAN FUND

The Students' Union and the University have co-operated to provide assistance to students who are in financial difficulties which are considered likely to prejudice their progress with their studies.

Two forms of assistance are available. In the first, the University considers, in certain circumstances, deferment of the payment of fees; this scheme is not intended to replace the established procedure for granting deferment for short periods but rather to supplement it by making deferment over longer periods possible. Secondly, students in need may receive a cash loan not exceeding $200 (£100) from the Student Loan Fund established from contributions made by the Students' Union and the University.

In both cases assistance is limited to students with reasonable academic records and whose financial circumstances warrant loans. Students granted assistance of either kind are required to give an undertaking to repay the loan under the conditions agreed upon.

Applications are made personally to Mr. J. B. Rowe, Deputy Registrar (Student Services).

UNIVERSITY CO-OPERATIVE BOOKSHOP LTD.

Membership is open to all students, on payment of a fee of $2 (£1), refundable when membership is terminated. Members receive an annual rebate on purchases of books.
LOCATION OF SCHOOLS AND LABORATORIES OF THE FACULTY OF ENGINEERING

The Schools and Laboratories of the Faculty of Engineering, the servicing schools and the administrative division are located as follows:

(i) Kensington

The Schools of Civil, Electrical and Mechanical Engineering and the Department of Industrial Engineering; the School of Nuclear Engineering; the servicing Schools of Physics, Architecture, Mathematics, Mining Engineering, Applied Geology, Metallurgy, Chemistry and Biological Sciences; the Department of General Studies, which provides the Humanities and Social Science subjects for engineering students.

In addition to the teaching schools, there are at Kensington the Library, the Examinations Branch, the Admissions Office, the Union, the Students' Union, the Student Amenities Office and the Student Counselling Service.

The School of Civil Engineering, formerly located at Broadway, will have been transferred to the Kensington campus by the end of March, with the exception of its Structures Laboratory.

(ii) Broadway

The Structures Laboratory of the School of Civil Engineering.

(iii) Randwick

The Schools of Highway and Traffic Engineering occupy new buildings on the site of the old Tramway Depot at King Street, Randwick.

(iv) Manly Vale

The Water Research Laboratory of the School of Civil Engineering.
Students undertaking courses in the Faculty of Engineering are eligible to apply for the following scholarships.

Except where otherwise specified, applications on the forms obtainable from the Admissions Office (phone: 663-0351, ext. 2485) must be lodged with the Registrar, the University of New South Wales, P.O. Box 1, Kensington, within seven days of the publication of the results of the N.S.W. Leaving Certificate Examination.

A separate application must be lodged for each category of scholarship, except that applicants for scholarships in Textile Technology and Wool Technology will automatically be considered for the scholarships which are offered in the same field by the Wool Research Trust Fund.

In addition to those scholarships made available by the University and other bodies as set out below, cadetships are offered by the Commonwealth Service, the New South Wales Public Service Board, the Department of Railways and a number of private industrial organizations. Cadets generally have their University fees paid by the employer, and are employed at cadet rates of pay during their course.

Commonwealth Scholarships

There are three types: Open Entrance Scholarships, which are awarded on the results of the Leaving Certificate Examination to students who are under twenty-five years of age on 1st January of the year in which they begin their course and who, with their parents, are permanent residents of Australia; Second or Later Year Scholarships, which are available to students who have completed at least one year of a full-time or two years of a part-time course without failure (age and residential qualifications are the same as for Open Entrance); and Mature Age Scholarships, which are available to students who are over twenty-five and under thirty years of age at the beginning of their course and who have been residents of Australia for at least two years immediately preceding the award of the scholarship. Benefits include payment of all tuition fees and other compulsory fees and living allowances (these latter being subject to a means test) up to $520 (£260) per annum or $793 (£396/10/-) per annum if living away from home.

University Scholarships

The University annually awards up to fifteen scholarships tenable in degree courses to students who have matriculated at the Leaving
Certificate Examination; ten scholarships to students who have completed certificate courses (Department of Technical Education); ten scholarships to students who have completed Trade Courses (Department of Technical Education); and ten scholarships to part-time students who have taken the Qualifying and Matriculation course of the Department of Technical Education. The scholarships exempt the holder from payment of course fees during the currency of the scholarship. Scholarships will be awarded in order of merit on Leaving Certificate Examination results. They may be held only by persons who do not hold another award. Applications must be lodged after publication of Leaving Certificate Examination results and after the announcement of the award of Commonwealth Scholarships, but not later than 31st January.

Bursaries

A number of Bursaries tenable at the University are awarded to candidates of merit at the Leaving Certificate Examination whose family income falls within certain limits prescribed by the Bursary Endowment Board. Applications should be made to the Secretary, Bursary Endowment Board, C/- Department of Education, Bridge Street, Sydney.

Public Service Association Scholarship

The Public Service Association of New South Wales is offering a scholarship in 1966 to children of members of the Association who are entering the first year of any full-time course. It is valued at $200 (£100) per annum and is tenable for the normal duration of the course.

South Sydney Junior Rugby League Club Ltd. Scholarships

Two scholarships, each valued at $300 (£150), are available to male residents in the South Sydney area who wish to enrol in a full-time course at the University. The scholarships, tenable for one year only, will be awarded on the results of the Leaving Certificate Examination in the immediately preceding year and may not be held concurrently with any other scholarship award. The scholarship is intended to enable a student to undertake the first year of a course with the possibility (provided that his first-year performance warrants it) of obtaining a later year Commonwealth Scholarship. Applications must be lodged with the Registrar after the announcement of the award of the Commonwealth Scholarships, but not later than 31st January each year.
The Fell Scholarship (University Residential Colleges)

The Fell Scholarship is available to any undergraduate who is or will be in residence at one of the Colleges under the administration of Kensington College Ltd. during 1966. The annual value of the Scholarship is $100 (£50). It may be held concurrently with Commonwealth and other scholarships.

In awarding the scholarship the academic merit and financial need of the applicant will be taken into consideration.

Applications must be made on the appropriate form and lodged with the Master, Kensington College Ltd., Box 24, P.O., Kensington.

Joint Coal Board and Australian Coal Association (Research) Limited Scholarships

The Joint Coal Board and the Australian Coal Association (Research) Limited each offer scholarships in full-time courses in Mechanical Engineering, Electrical Engineering, Mining Engineering, Fuel Engineering and Applied Geology. The value of these scholarships ranges from $700 to $1,200 (£350 to £600) per annum (including allowance for books and instruments). These scholarships are awarded on the understanding that students will normally hold a Commonwealth Scholarship which covers the cost of University fees. However, applicants without Commonwealth Scholarships may be given consideration. While scholarship holders are not under bond, it is expected that they will obtain employment in coal mining or a related industry on graduation. Applications on forms obtainable from headmasters or from the Secretary, Joint Coal Board, Box 3842, G.P.O., Sydney, must be lodged with the Board’s Secretary not later than seven days after the publication of Leaving Certificate results.

The John Heine Memorial Scholarship

This scholarship is designed to assist students to undertake the final two years of the degree course in Mechanical, Electrical or Chemical Engineering, Applied Chemistry, Metallurgy, or Physics. Applicants must have qualified for admission to the third year of the course (fourth year for Chemical Engineering). The scholarship has a maximum total value of $700 (£350). Applications should be made not later than 31st January each year to the Secretary, The John Heine Memorial Foundation, C/- the Metal Trades Employers’ Association, 101 Walker Street, North Sydney.

The A. E. Goodwin Memorial Scholarship

The Directors of A. E. Goodwin Ltd. provide a scholarship each year to students who are eligible to enrol in the second year of the
Mechanical Engineering degree course. The total value of the scholarship is $360 (£180), payable in three equal amounts of $120 (£60) each at the beginning of the second, third and fourth years of the course. Applications should be lodged with the Registrar by 31st January each year.

The Tyree Electrical Company Scholarship in Electrical Engineering

The Tyree Electrical Company Pty. Ltd., has undertaken to provide in 1966 two scholarships for students enrolling in the full-time courses in Electrical Engineering. The value of the scholarships is $500 (£250) per annum, payable in fortnightly instalments as a living allowance to students. They will normally be tenable for four years but may be extended to a fifth year when the holder intends to qualify for the two degrees, Bachelor of Science and Bachelor of Engineering. They may be held concurrently with any other scholarship.

Mining and Metallurgical Bursaries Fund

Mining and Metallurgical Bursaries at the University of New South Wales, valued at $100 (£50) per annum, will be awarded by the Trustees of the Mining and Metallurgical Bursaries Fund, Melbourne. Candidates must be British subjects and have completed the first year of the course for the degree of Bachelor of Engineering in Mining Engineering, Bachelor of Science in Applied Geology, or Bachelor of Science in Metallurgy, or have been awarded corresponding status in consideration of work done elsewhere.
The Faculty of Engineering consists of the Schools of Civil Engineering, including the Department of Surveying, of Electrical Engineering, and Mechanical Engineering with its associated Department of Industrial Engineering, and the Schools of Highway Engineering, Nuclear Engineering, and Traffic Engineering, the three last named Schools offering graduate courses only. The Schools of Civil, Electrical and Mechanical Engineering offer full-time courses leading to the degrees of Bachelor of Engineering or Bachelor of Surveying, and part-time courses leading to the degrees of Bachelor of Science (Technology) or Bachelor of Surveying.

All the post-graduate activities of the Faculty are co-ordinated under the Graduate School of Engineering. For full details of such activities please see the Graduate School of Engineering Handbook.

Full-time courses of four-years’ duration are offered in Civil, Electrical, Mechanical and Industrial Engineering leading to the degree of Bachelor of Engineering (pass or honours). Candidates for honours take additional work in the third and fourth years. A four-year full-time course in Surveying is offered by the School of Civil Engineering leading to the degree of Bachelor of Surveying at pass and honours levels. Candidates for honours in Surveying take additional work in fourth year.

The award of the degree of Bachelor of Engineering is recognized by the Institution of Engineers, Australia, as giving complete exemption from the examinations required for admission to the grade of Associate Member. Exemptions given by other Engineering Institutions are shown under the headings of the various Schools.

Common first year

There is a common first year syllabus in Physics, Mathematics, Chemistry and Engineering for all courses in the Faculty, except Surveying, where Surveying I is substituted for Chemistry. This arrangement allows for a high degree of transferability. This first year is also equivalent to the first two stages of the part-time Engineering courses which lead to the degree of Bachelor of Science (Technology). Transfer to certain courses in the Faculties of Science and Applied Science without loss of standing is also possible at the end of the first year.
Rules relating to the operation of these common first year subjects in the Faculties of Engineering, Science, Medicine and Applied Science are set out later in this handbook.

General Studies Programme

All undergraduates in Faculties other than Arts are required to complete a General Studies programme. In this way the University hopes to give its students a general understanding of the different aspects of the world in which they live. Full-time students will do an initial 60-hour course in 50.011H English or 57.011H An Introduction to Modern Drama, two 30-hour electives and an advanced elective to be chosen from the following groups.

30-hour Electives

- 11.011H History of Fine Arts
- 11.021H History of Architecture
- 12.191H Psychology
- 15.011H Economics
- 26.301H Music
- 26.601H History of Technology
- 51.011H History
- 52.011H Philosophy
- 53.011H Sociology
- 54.011H Political Science

Advanced Electives

- 12.591H Psychology
- 15.012H Economics
- 50.012H English
- 50.031H English Language
- 51.012H History
- 52.012H Philosophy
- 53.012H Sociology
- 54.012H Political Science

Conditions for award of degrees of B.Sc. and B.E.: Subject to their being recommended by the Dean of the Faculty of Engineering and accepted by the Dean of the Faculty of Science, students in the Civil, Electrical, Mechanical and Industrial Engineering full-time courses may qualify for the two degrees of B.Sc. and B.E. by completing a course of five years of full-time study in accordance with the following provisions:

A student shall have attended the prescribed course of study and satisfied the examiners in

(i) the first year of the course of the Faculty of Engineering;
(ii) the second year of the courses for the degree of Bachelor of Engineering in Civil, Electrical, Mechanical or Industrial Engineering, provided that students in Civil, Mechanical or Industrial Engineering shall have taken the Mathematics and Physics subjects prescribed for second year of the Electrical Engineering course;

(iii) two Group III Science subjects, together with the appropriate Humanities (see Science Course Regulations set out in the University Calendar);

(iv) the third and fourth years of the courses for the degree of Bachelor of Engineering in Civil, Electrical, Mechanical or Industrial Engineering.

The degree of B.Sc. may be awarded on the completion of the requirements of (i), (ii) and (iii) above.

**Industrial training requirements**

All full-time engineering courses incorporate periods of industrial training. In all of these courses, except Electrical Engineering, the periods occupy the latter half of the third term and the long vacations between second and third years, and between third and fourth years. In the second and third years of these courses, students finish lectures at the end of the third week of the third term, take their examinations in the fourth and fifth weeks, attend the survey camp (where required) in the sixth week and then commence their industrial training. In Electrical Engineering students must complete up to twenty weeks of industrial training during the long vacations, preferably by completing ten weeks at the end of second year and ten weeks at the end of third year. Surveying students attend survey camp for two weeks in their second and third years. Students are strongly recommended to gain further industrial experience in those long vacations where such training is not already prescribed.

The staff of the University will assist students to obtain this employment either as sponsored students or as trainees employed on a temporary basis. Private students (i.e., those not already committed to an employer under the terms of a scholarship or bond) may make their own arrangements for industrial training, but the employment and training must be of a standard approved by the University.

**PART-TIME COURSES**

Since 1961 the Schools of the Faculty have offered six-year part-time courses in a variety of engineering fields leading to the degree of Bachelor of Science (Technology). Courses for this degree are
offered in Civil, Electrical, Industrial and Mechanical Engineering and in Naval Architecture and Aeronautical Engineering (these last two being offered by the School of Mechanical Engineering).

The General Studies programme is the same for part-time as for full-time students, except that part-time students do not do the Advanced Elective.

The award of the degree of B.Sc. (Tech.) is recognised by the Institution of Engineers, Australia, as giving complete exemption from the examinations required for admission to the grade of Associate Member.

Recognition by other Engineering Institutions is shown under the headings of the various Schools.

These courses replace the courses which the University offered from 1951 to 1965 on behalf of the Department of Technical Education leading to its A.S.T.C. diploma award. They also replace the associated part-time degree courses in Engineering which have led to the degree of Bachelor of Engineering.

A student completing the B.Sc. (Tech.) degree course and wishing to qualify for the corresponding B.E. degree may, on the recommendation of the Head of the School, transfer to the corresponding full-time B.E. course provided he does not take out the B.Sc. (Tech.) degree. Further, provided he continues as a registered student on transfer from one course to the other, he may retain any concession granted in the B.Sc. (Tech.) degree course.

Holders of the B.Sc. (Tech.) degree are eligible to proceed to the degree of Master of Engineering or Master of Technology subject to the conditions for the award of these degrees set out in Section III of the University Calendar.

Courses leading to the B.Sc. (Tech.) award are basically part-time and require the prescribed industrial experience to be gained concurrently with the course of study (a minimum of three years of suitable engineering experience is required). Students transferring from full-time courses must, therefore, also satisfy these industrial experience requirements before being admitted to the degree of B.Sc. (Tech.).

For students who are able to combine some full-time attendance with part-time attendance, the B.Sc. (Tech.) courses are offered over five years, requiring full-time attendance in the third and fourth years.

The School of Civil Engineering offers a part-time course in Surveying of seven years' duration for the degree of Bachelor of Surveying.
The Faculty of Applied Science offers courses to students desiring a career in a specialised technology with an engineering element. These courses are as follows:

<table>
<thead>
<tr>
<th>Course</th>
<th>Full-time</th>
<th>Part-time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chemical Engineering</td>
<td>B.E.</td>
<td>B.Sc. (Tech.)</td>
</tr>
<tr>
<td>Ceramic Engineering</td>
<td>B.Sc.</td>
<td>&quot;</td>
</tr>
<tr>
<td>Fuel Engineering</td>
<td>B.E.</td>
<td>&quot;</td>
</tr>
<tr>
<td>Metallurgy</td>
<td>B.Sc.</td>
<td>&quot;</td>
</tr>
<tr>
<td>Mining Engineering</td>
<td>B.E.</td>
<td>&quot;</td>
</tr>
<tr>
<td>Textile Engineering</td>
<td>B.Sc.</td>
<td>&quot;</td>
</tr>
</tbody>
</table>

Entrance to these courses, which are of four years' duration full-time (pass or honours) and six years' duration part-time, is conditional upon Engineering I being taken as the elective subject in the common first year and on transference to the Faculty of Applied Science before second year. Full-time Engineering students may enter the Mining Engineering course after the second year of courses in Mechanical, Electrical or Civil Engineering without loss in standing of subjects completed.

Part-time engineering students may enter the courses offered by the Schools of Chemical Engineering, Chemical Technology and Metallurgy after the second stage part-time or the common full-time first year. They may enter the Mining Engineering course after the fourth stage. In all cases the requirements for the degree of B.Sc. (Tech.) demand three years approved concurrent industrial training.

The degrees of B.E. (pass or honours) in Chemical Engineering and Mining Engineering are recognised by the Institution of Engineers of Australia for exemption from the Associate Membership examinations.

**Ceramic Engineering**

Ceramics are inorganic, non-metallic materials which usually require the use of high temperatures in their processing. Products of the industry include glass, refractories, bricks, tiles, pipes, abrasives, cement, plaster, nuclear ceramics, whitewares, enamels and electric insulators, dielectrics and magnetic materials. The ceramic engineer is concerned with the relationship between the atomic and crystal structure of materials and their chemical, physical and engineering properties, as well as the methods of their manufacture and fabrication into useful shapes.

Graduates in Ceramic Engineering take positions in the fields of research and development, production control, product evaluation and technical service.
Chemical Engineering

Chemical Engineering is the application of the principles of the physical sciences, together with the principles of economics and human relations to fields in which matter undergoes a change in state, energy content or composition. The chemical engineer is generally responsible for the design, construction and operation of plant and equipment used in the chemical processing industries.

Fuel Engineering

The Department of Fuel Technology, the first of its kind in Australia, was established to meet the growing need of industrial and research establishments for personnel with specialized training in the science and technology of fuels and their utilisation.

A degree in Fuel Engineering qualifies for exemption from the examinations for admission to corporate membership of the Institute of Fuel.

Metallurgy

Metallurgy deals with the nature, production, properties and uses of metals. Its special importance today is associated with the demands for better materials for aircraft, rockets, nuclear reactors and the like.

The School of Metallurgy is located at Kensington and has departments both in Newcastle and Wollongong. It has excellent facilities for teaching and research. Emphasis in these courses is on the application of science to technological problems and in this respect there is a close relationship between metallurgy and engineering.

Information on the Metallurgy courses and on opportunities for post-graduate work for engineering graduates in the School of Metallurgy may be obtained from the University Calendar, or from Professor Hugh Muir at the School of Metallurgy.

Mining Engineering

The aim of the training is to give students a thorough foundation in Mining Engineering and so permit them to enter coal mining, metalliferous mining or the petroleum industry, and to be employed in any of the phases of these industries ranging from exploration to production.

During the undergraduate course, students will spend portion of the long vacations obtaining practical experience in mining. Mining companies prepare programmes so that the students obtain a comprehensive experience in many aspects of the profession. This experience is important and it is related to the academic training received in the School. Practical experience in mining, gained as a student, can con-
tribute to the experience record of mining engineers when making application for a statutory certificate of competency from one of the Australian State Government Departments of Mines.

The School of Mining Engineering offers, at Broken Hill and Wollongong, a part-time course in Mining Engineering leading to the Degree of Bachelor of Science (Technology).

Textile Engineering

The textile industry, being a manufacturing one, depends on many types of machinery and engineering services to produce its products. In order to cope with technological problems in production, quality control and research, a competent textile engineer must have a good understanding of the fundamental sciences and extensive theoretical and practical knowledge of the applied textile and engineering sciences.

There are many challenging and lucrative positions for textile engineers in industry and research.

HIGHER DEGREES AND GRADUATE COURSES

Research Degrees

The higher degrees of Master of Engineering, Master of Surveying, and of Doctor of Philosophy are awarded on the presentation of a thesis, satisfactory to the examiners, which embodies the results of an original investigation or design. Candidates for these degrees must possess a bachelor's degree in an appropriate field and meet the conditions governing the award of these degrees. The full conditions are set out in the University Calendar and in the Handbook of the Graduate School of Engineering.

The degree of Doctor of Science is also awarded for a contribution of distinguished merit in the field of engineering.

Courses of Study for Graduate Awards

In addition to the research degrees listed above, the Faculty offers courses of instruction at the graduate level leading to the award of the degree of Master of Technology or a graduate diploma.

Courses for the Degree of Master of Technology

Structural Engineering, Water Engineering, Public Health Engineering, Engineering Construction, Surveying (offered by the School of Civil Engineering); Electrical Engineering; Transportation and Traffic Engineering; Highway Engineering; Nuclear Engineering; Refrigeration and Air Conditioning, and Industrial Engineering (offered by the School of Mechanical Engineering).
Courses for Graduate Diplomas

Highway Engineering and Industrial Engineering.

Full details of all these courses are given in the section on postgraduate study in the University Calendar, in the Handbooks of the appropriate Schools, and in the Handbook of the Graduate School of Engineering.

Special Courses

Short, intensive graduate and special courses are provided throughout each year designed to keep practising engineers in touch with the latest developments in their various fields. The programmes of such courses for 1966 are published separately.
Civil engineering is broad in its scope, utilizing other specialized branches of engineering in planning, co-ordinating and constructing national works such as water supply and conservation projects, hydro-electric development, roads, railways, bridges, tunnels, large buildings, and irrigation, sewerage and harbour and river development. The civil engineer adapts the forces of nature for the use and convenience of mankind. His academic training must include a study of science and of engineering practice. He must combine this with experience and judgment and the knowledge and personality necessary to control large organisations of workers. This profession offers to a young man a considerable variety of types of work, ranging from specialized research and investigations, through routine design and construction work to higher positions which are often largely managerial and organizational in their nature.

The School of Civil Engineering offers two courses in civil engineering; a four-year full-time course leading to the degree of Bachelor of Engineering (pass or honours), and a six-year part-time course leading to the degree of Bachelor of Science (Technology) — B.Sc. (Tech.). This course may also be completed in three years of part-time study and two years of full-time study. Details of courses leading to the Bachelor of Surveying degree are set out below under the heading "Department of Surveying".

#### DOUBLE DEGREE OF B.SC., B.E. IN CIVIL ENGINEERING

Full-time students in Civil Engineering may qualify for the double degree of Bachelor of Science, Bachelor of Engineering by completing the following course of study over five years.

**First Year** — Normal first year programme for full-time Civil Engineering as set out above.

**Second Year** — As set out below.

<table>
<thead>
<tr>
<th>Term 3</th>

Terms: 29 | 26 | 20

---

* In the last 6 weeks of third term 18 hours per week will be devoted to work on the thesis. In addition, students will be required to attend for nine hours per week such course work as may be prescribed.

† Terms 1 and 2 only.

‡ 10.211 Applied Mathematics II may be substituted (7 hours per week for three terms).

** Two one-day Geology excursions are an essential part of the course.
Third Year — Two appropriate third year Science subjects (see Science course regulations in the University Calendar) plus two 30-hour General Studies Electives. In the long vacation following this year students are required to undertake a nine-week period of industrial training.

Fourth Year — Normal third year of the Civil Engineering course (less the Humanities taken in the special third year).

Fifth Year — Normal fourth year of the Civil Engineering course.

**CIVIL ENGINEERING—PART-TIME COURSE**

CIVIL ENGINEERING — COMBINED FULL-TIME/PART-TIME COURSE

The Civil Engineering course leading to the degree of Bachelor of Science (Technology) may be completed in three years of part-time study and two years of full-time study as follows:

Stage 1 — Part-time (as for Stage 1 of the B.Sc. Tech. course in Civil Engineering).

Stage 2 — Part-time (as for Stage 2 of the B.Sc. (Tech.) course in Civil Engineering).

Stage 3A — Full-time (as for Second Year of the full-time course in Civil Engineering).

Stage 4A — Full-time (as for Third Year of the full-time course in Civil Engineering).

Stage 5A — Part-time (as set out below).

CIVIL ENGINEERING — CONVERSION COURSE
(A.S.T.C. Diploma to B.Sc. (Tech.) Degree)

Recent A.S.T.C. diploma holders in Civil Engineering may qualify for the degree of Bachelor of Science (Technology) by completing the following course of study. The programme outlined is what will be required of recent diplomates. Diplomates of many years standing may be required to take additional subjects.

A.S.T.C. diplomates who completed their course in Civil Engineering in 1961 or later years and who wish to qualify for the degree of Bachelor of Engineering by full-time study may do so by completing the subjects of Stages 6 and 7 of the existing part-time Bachelor of Engineering degree course, or their equivalent, in one year.

Department of Surveying

The Department of Surveying offers a four-year full-time course leading to the degree of Bachelor of Surveying (pass or honours) and a seven-year part-time course leading to the degree of Bachelor of Surveying (pass).

Surveying is broad in its scope. The academic training is first in the basic sciences of mathematics, physics and geology; a number of engineering subjects are studied; then surveying and its various branches, geodesy, astronomy and photogrammetry; and their application in trigonometric, engineering, cartographic and cadastral work. There is a correspondingly wide choice of types of surveying open to the graduate in surveying.

* First term only.
Surveying involves taking measurements in the field, and the course includes practical classes in which the theory studied in lectures is applied to actual surveys and acquaintance is made with surveying instruments. Survey camp must be attended for two weeks at the end of the second and third years of the course. In addition, students must gain practical experience under a surveyor for at least thirty weeks during vacations, preferably for ten weeks after the second year and for twenty weeks after the third year.

For those wishing to become Registered Surveyors after graduation the degree confers exemption from all written examinations of the Board of Surveyors. Additional time must, however, be served under a Registered Surveyor, some exemption from this time being obtainable in respect of vacation experience, provided the Board gives prior recognition. For further information consult the Registrar of the Board.

Part-time students are eligible only for the pass degree. To qualify for honours a part-time student must transfer to the full-time course and complete, at his first attempt, the fourth year of the full-time honours course.

SURVEYING—FULL-TIME COURSE

Bachelor of Surveying

The Surveying full-time course has been revised, and the new course described below will be introduced in 1966 for students in First, Second and Third Year. Students in Fourth Year will follow the curriculum of the old course, which is set out in the 1965 Calendar. For transition arrangements see p. 63.

</tbody>
</table>

**TRANSITION ARRANGEMENTS**

**Full-Time**

1st Year: Students enrolling for the first time in 1966 will take the new First Year Course.

2nd Year: Those students who completed First Year in 1965 will take the new Second Year Course, which will include a transition course, Surveying (8.801 + 8.802) of 5½ hours per week.

3rd Year: Those students who completed Second Year in 1965 will take the new Third Year Course less the Land Utilization portion (1½ hours per week) of 8.881 Land Law, Utilization and Valuation, plus 8.711 Engineering for Surveyors (2½ hours per week).

4th Year: Those students who completed Third Year in 1965 will take the old Fourth Year Course.

**Note:** (i) Land Valuation in the new syllabus is to be taken by both 3rd and 4th year students; (ii) Survey Law in the new syllabus (1 hour per week) is to be taken by 3rd year students; and (iii) Survey Laws and Regulations in the old syllabus (1½ hours per week) is to be taken by 4th year students.

**Part-Time**

1st Stage: Students enrolling for the first time in 1966 will take the new First Stage.

2nd Stage: Those students who completed the First Stage in 1965 will take the new Second Stage, which will include a transition course, Surveying (8.801 and 8.802) with no increase in time.

* 20 weeks only. Lectures cease at end of Term II.
3rd Stage: Those students who completed the Second Stage in 1965 will take the new Third Stage. In the following year these students must take the transition course Surveying (8.801 + 8.802) of 5½ hours per week.

4th Stage: Those students who completed the Third Stage in 1965 will take the new Fourth Stage less 8.802 (b) Surveying (3 hours per week) plus 8.711 Engineering for Surveyors (3 hours per week).

5th Stage: Those students who completed the Fourth Stage in 1965 will take the new Fifth Stage less the Land Utilization portion (1½ hours per week) of 8.881 Land Utilization, Valuation and Law, plus 8.711 Engineering for Surveyors excluding the Hydraulics section of this course (2 hours per week).

6th and 7th Stages: Those students who completed the Fifth Stage in 1965 will continue under the old course, taking equivalent subjects as listed below:

<table>
<thead>
<tr>
<th>Old Course</th>
<th>New Course</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.821 Geodesy</td>
<td>8.821 Geodesy</td>
</tr>
<tr>
<td>8.862 Cartography</td>
<td>8.872 Land Utilization, Valuation and Law</td>
</tr>
<tr>
<td>8.872 Land Valuation</td>
<td></td>
</tr>
<tr>
<td>8.613 Civil Engineer</td>
<td>8.712 Engineering for Surveyors.</td>
</tr>
</tbody>
</table>

Note: (i) Students beginning the Sixth Stage in 1966 will take Survey Law in the new syllabus (1 hour per week) and in 1967 will take 8.882 Cadastral Surveying (2 hours per week). (ii) Students beginning the Seventh Stage in 1966 will take 8.881 Survey Law and Regulations in the old syllabus (1½ hours per week).

For details of the old syllabus, see the 1965 Calendar.

SCHOOL OF ELECTRICAL ENGINEERING

In preparation for a career in any branch of electrical engineering students must acquire a knowledge of the basic sciences of mathematics and physics. Students should realize that electrical engineering, perhaps more than most other branches of engineering, is closely linked with the pure sciences, and requires a scientific outlook and approach for a proper understanding of its problems.
The School offers a full-time course of four years' duration leading to the degree of Bachelor of Engineering (pass or honours), and a six-year part-time course for the degree of Bachelor of Science (Technology). This course may also be completed in three years of part-time and two years of full-time study. Special conversion courses are provided for holders of the A.S.T.C. diploma in Electrical or Radio Engineering.

The degrees of Bachelor of Engineering and Bachelor of Science (Technology) are recognized by the Institution of Electrical Engineers, England, as giving complete exemption from the examinations required for admission to the grade of Associate Member.

In the early years of the electrical engineering courses students will concentrate on the basic sciences, mathematics, physics and chemistry, and, as well, will receive an introduction to engineering. In the final year students will elect, with the approval of the Head of the School, to study in one of the specialized fields of electrical engineering (referred to as options), at the same time taking the common subjects in electrical engineering.

The elective electrical options are the following:
(a) Power and control systems and apparatus — concerned with the generation, distribution and control of electrical energy, and
(b) Communications — concerned with radio line communications, radar and other navigational aids, and television.

Each student in the full-time course is required to work on a project under the guidance of members of the lecturing staff. Generally, the project will involve the design and construction of experimental apparatus together with laboratory tests. Where possible the projects will be related to the research programme of the School and will be designed to develop the student's initiative. Each student will be required to deliver a seminar paper and to prepare a thesis based on the results of the project work.

Provision is made in the full-time course for students to undertake additional work in their third and fourth years towards the award of an honours degree.

**ELECTRICAL ENGINEERING—FULL-TIME COURSE**

The full-time course is of four years' duration and leads to the degree of Bachelor of Engineering (pass or honours). The four years of the course each require full-time day attendance at the University for thirty weeks. Practical experience in industry is to be obtained up to a total of 20 weeks, preferably at the end of the second and third years for a period of 10 weeks per year.

Optional Subjects

Students in doubt concerning optional subjects in the third and fourth years should consult the Head of the School.

Third Term of Fourth Year

In the fourth year the formal lecture work extends over twenty-one weeks (the first two terms). This is followed by a study vacation of three weeks and examinations are held during the first three weeks of the third term. The balance of this term is mainly devoted to directed laboratory and research work on an approved subject, with special reading and study associated with the preparation of a thesis; seminar work is also carried out. The thesis must be submitted by 30th November.

Additional for Honours

A full-time honours course in electrical engineering is offered, involving additional work in third and fourth years. Candidates for honours must obtain the permission of the Head of the School to enter the course.

Candidates for honours will complete the syllabus for the third

* Lectures cease at the end of second term.
† Full-time in third term.
and fourth years of the pass course as outlined above with the addition of:

**Third Year**

6.501 Electrical Engineering Honours—two hours of lectures per week for thirty weeks.

**Fourth Year**

6.502S Electrical Engineering Honours—three hours of lectures per week for twenty-one weeks.

6.921 Honours Thesis—two hours per week for twenty-one weeks; then full-time in third term.

**DOUBLE DEGREE OF B.SC., B.E. IN ELECTRICAL ENGINEERING**

Full-time students in Electrical Engineering may qualify for the double degree of Bachelor of Science, Bachelor of Engineering in five years of full-time study. Having completed first and second years of the Electrical Engineering course students will take a special third year consisting of two Group III Science subjects (see the Science course regulations in the University Calendar) plus two 30-hour General Studies Electives. In their fourth year students in the combined course will take the normal third year of the Electrical Engineering course, less the Humanities subjects taken in the special third year. In their fifth year they will complete the normal fourth year of the Electrical Engineering course.

Approval to enrol in the double degree course is granted on the recommendation of the Head of the School and requires the approval of the Dean of the Faculty of Engineering and the Dean of the Faculty of Science.

**ELECTRICAL ENGINEERING—PART-TIME COURSE**

The six-year part-time course in Electrical Engineering leads to the degree of Bachelor of Science (Technology).

Total: 8 - 4

ELECTRICAL ENGINEERING—
COMBINED FULL-TIME/PART-TIME COURSE

The Electrical Engineering course leading to the degree of Bachelor of Science (Technology) may be completed in three years of part-time study and two years of full-time study as follows:

Stage 1 — Part-time (as for the Stage 1 of the B.Sc. (Tech.) course in Electrical Engineering).

Stage 2 — Part-time (as for Stage 2 of the B.Sc. (Tech.) course in Electrical Engineering).

Stage 3A—Full-time (as for Second Year of the full-time course in Electrical Engineering).

Stage 4A—Full-time (as for Third Year of the full-time course in Electrical Engineering).

Stage 5A—Part-time (as set out below).

*8.112 Materials and Structures does not appear in the programme for 1966 which is a transition period.

5/4—4/5

CONVERSION COURSES — ELECTRICAL ENGINEERING
(From A.S.T.C. Diploma to B.E. or B.Sc. (Technology) Degrees)

The programmes of study to be followed by A.S.T.C. diplomates from the School of Electrical Engineering who wish to qualify for the degree of Bachelor of Engineering or Bachelor of Science (Technology) depend on the content of the courses which have been completed for the diploma.

The subjects required to complete the degree may be obtained on application in writing to the Head of the School of Electrical Engineering.

Additional for Honours

Conversion students who wish to be considered for the degree of Bachelor of Engineering with honours will be required to do additional work as outlined for full-time students. A credit or honours diploma is the normal pre-requisite for entrance to the honours course and students who wish to study for honours should apply to the Head of the School at least two years before they expect to complete the course.
SCHOOL OF MECHANICAL ENGINEERING

The courses in this School are planned to provide the appropriate academic training for the professional engineer in the fields of aeronautical, industrial and mechanical engineering, and for the naval architect.

In the early years of all these courses the emphasis is placed on the study of the basic sciences — mathematics, physics and chemistry. This is followed by the study of the engineering sciences — thermodynamics, fluid mechanics, theory of machines, materials and structures, and their application in the field of design. In the courses in industrial engineering, the more advanced sections of thermodynamics and fluid mechanics are replaced by industrial engineering subjects. Humanities subjects form a regular part of all courses, four being included in full-time and three in part-time courses.

Industrial experience is an integral part of the full-time course. Students must complete two five-month periods of approved industrial training, one period in an engineering workshop between the second and third years and the other, between third and fourth years, in a drawing office or assisting a professional engineer.

Each student is required to prepare a short paper and deliver it in the seminar period, and each full-time student is also required to present a thesis at the end of his final year.

The full-time courses in mechanical and industrial engineering of four years’ duration lead to the degree of Bachelor of Engineering (pass or honours), with additional work being taken in the third and fourth years for the honours degree.

Part-time courses of six years’ duration leading to the degree of Bachelor of Science (Technology) are offered in mechanical engineering, aeronautical engineering, industrial engineering and naval architecture. The Department of Industrial Engineering also offers a full-time and a part-time course, details of which are given below. The part-time courses may also be completed by a combination of three years of part-time and two years of full-time study.

Within the School of Mechanical Engineering a student who has successfully completed the first two stages of any of the Bachelor of Science (Technology) courses mentioned above may transfer to second year of the full-time mechanical or industrial engineering B.E. courses.

A student who has successfully completed the first four stages of the part-time B.Sc. (Tech.) courses in industrial or mechanical engineering may transfer to third year of the corresponding full-time B.E. courses.
Recent A.S.T.C. diplomates may convert to the degrees of Bachelor of Engineering or Bachelor of Science (Technology) by courses of full-time or part-time study respectively.

The award of the degree B.E. or B.Sc. (Tech.) in Mechanical Engineering is recognized by the Institution of Mechanical Engineers, London, as giving exemption from Parts I and II of the examinations required for admission to the grade of Associate Member.

The Institution of Engineers, Australia, grants full exemption from examinations for admission to the grade of Associate Member to holders of the degree of B.E. or B.Sc. (Tech.) in any of the undergraduate courses offered by the School.

MECHANICAL ENGINEERING — COMBINED FULL-TIME/PART-TIME COURSE

The Mechanical Engineering course leading to the degree of Bachelor of Science (Technology) may be completed in three years of part-time study and two years of full-time study as follows:

Stage 1 — Part-time (as for the Stage 1 of the B.Sc. (Tech) course in Mechanical Engineering).

Stage 2 — Part-time (as for Stage 2 of the B.Sc. (Tech.) course in Mechanical Engineering).

Stage 3A — Full-time (as for Second Year of the full-time course in Mechanical Engineering).

Stage 4A — Full-time (as for Third Year of the full-time course in Mechanical Engineering).

Stage 5A — Part-time (as set out below).

DEPARTMENT OF INDUSTRIAL ENGINEERING

The Department of Industrial Engineering offers a full-time and a part-time course in industrial engineering leading to the degree of Bachelor of Engineering and Bachelor of Science (Technology) respectively. These courses are designed for students with engineering ability whose interests lie in the planning, developing and control of manufacturing operations. Completion of either of these courses gives full exemption from associate membership examinations of the Institution of Engineers, Australia, and the Institution of Production Engineers. Completion of the full-time B.E. course is accepted by the Institution of Mechanical Engineers, London, as giving exemption from all examinations required for associate membership; completion of the part-time B.Sc. (Tech.) course is recognized as giving exemption from Parts I and II of the examinations required for associate membership.

The first two years of the full-time course and the first four years of the part-time course provide the student with a sound foundation in the basic science and engineering subjects, and this knowledge is used and extended in the later years in the study of the industrial subjects. Finally, the problems associated with the practical economics of manufacturing operations are studied. These three fields of study provide the student with the training necessary to carry out an industrial job and to examine it critically in the light of economic efficiency.

Traditional engineering courses do not embrace the problems which are characteristic of industrial engineering. These problems include the analysis of a product to ensure satisfactory functioning with regard to methods and sequence of manufacturing operations; the disposition of buildings and of equipment in relation to buildings to permit efficient handling of materials; the avoidance or
elimination of bottlenecks; the related problems of quality and cost control, testing and inspection; labour and personnel relations; and, finally, the problem of distribution and sales.

The financial and economic aspects are studied as the problem in manufacturing has not been solved until the final translation of the product into money has been accomplished successfully. While it is not intended to develop an expert in accounting practice or economics, it is intended to produce an engineer with an appreciation of the problems of cost and one who can apply considerations of ultimate economy to all industrial problems.

The full-time student gains practical experience in industry during the recess periods in the first, second and third years of the course.

Two-year courses leading to the degree of Master of Technology and a graduate diploma are also offered to graduates in engineering and related sciences. Details of these courses can be found in Section III of the University Calendar.

The Work of the Industrial Engineer

The industrial engineer may initially be employed in any of the four major areas of industrial activity:

a) Industrial Economic Analysis

One of the principal functions of industrial engineering is to analyse a product, project or process from the economic point of view to ensure that an adequate profit can be obtained from it. A general working knowledge of economics and management skill has to be directed towards the making of decisions on how to operate an enterprise most efficiently. The basis for such decisions is furnished largely by the application of mathematics and statistics to operations research, industrial marketing and other fields affecting all phases of operation of industry.

b) Planning and Control of Production

Manufacturing processes and operations must be planned in detail throughout an enterprise to ensure that they proceed smoothly and economically. Functions in this field include the establishment of production standards, the setting of production targets and, finally, control of quality.

The ultimate responsibility of those in charge of the planning and control of production is to ensure that the goods, as originally specified, perform satisfactorily and are produced when required at an optimum cost.
c) Product and Process Design

The design interest of the industrial engineer goes beyond normal mechanical design to develop a product that will not only function effectively but also have a pleasing appearance.

Further, the product has to be adapted to suit existing manufacturing equipment, or a manufacturing process has to be developed by means of which an existing product can be manufactured at the right price and at the right quality. The design work of the industrial engineer incorporates also problems of equipment selection and application for both economy and performance.

d) Methods Engineering

Methods engineering is particularly concerned with the co-ordination of men, materials and machines, so that an enterprise will run at maximum efficiency. A considerable knowledge of engineering in general, as well as an understanding of human factors and materials science, is necessary for methods engineering work. Time and motion study is part of methods engineering. In many cases the methods engineer works in close co-operation with the design department and executives engaged in industrial economic analysis.

Employment in any of the fields mentioned may lead to specialization in the more mathematical aspects of industrial engineering, such as operations research and systems engineering, or it may lead, according to the preference of the student, to a position of responsibility in industrial management.

**DOUBLE DEGREE OF B.SC., B.E. IN**

**INDUSTRIAL ENGINEERING**

Full-time students in industrial engineering may qualify for the double degree of Bachelor of Science, Bachelor of Engineering by completing the following course of study over five years.

* Lectures cease at end of 3rd week of third term.
† Terms 1 and 2 only.
‡ 28 hours per week for the final 6 weeks of third term are occupied in work on a thesis and a project.
**First Year** — Normal first year programme for full-time Industrial Engineering as set out above.

**Second Year** — As set out below.

**Third Year** — Two appropriate third year Science subjects (see Science course regulations in the University Calendar) plus two 30-hour General Studies Electives. In the long vacation following this year students are required to undertake a nine-week period of industrial training.

**Fourth Year** — Normal third year of the Industrial Engineering course less the Humanities taken in the special third year.

**Fifth Year** — Normal fourth year of the Industrial Engineering course.

**INDUSTRIAL ENGINEERING — PART-TIME COURSE**

This course is of six years' duration and leads to the degree of Bachelor of Science (Technology).

**FIRST STAGE**

## INDUSTRIAL ENGINEERING — COMBINED FULL-TIME/PART-TIME COURSE

The Industrial Engineering course leading to the degree of Bachelor of Science (Technology) may be completed in three years of part-time study and two years of full-time study as follows:

**Stage 1** — Part-time (as for Stage 1 of the B.Sc. (Tech.) course in Industrial Engineering).

**Stage 2** — Part-time (as for Stage 2 of the B.Sc. (Tech.) course in Industrial Engineering).

**Stage 3A** — Full-time (as for Second Year of the full-time course in Industrial Engineering).

**Stage 4A** — Full-time (as for Third Year of the full-time course in Industrial Engineering).

**Stage 5A** — Part-time (as set out below).

DESCRIPTIONS OF SUBJECTS

SCHOOL OF CIVIL ENGINEERING

8.011S Minor Thesis
For pass students in the full-time courses in Civil Engineering and Surveying.

8.021 Major Thesis
For honours students in the full-time courses in Civil Engineering and Surveying.

8.112 and 8.112S Materials and Structures
96 hours, comprising 48 hours' lectures, 48 hours' tutorial and laboratory

Theory of Structures
Moduli of elasticity, simple stress and strain. Stresses in non-uniform bars, compound bars, temperature stresses. Thin shells.
Stresses due to axial force, bending moment (brief treatment of non-uniplanar bending), shear force, and torsion (circular sections only).
Deformation due to axial force, shear force (brief mention), bending moment and torsion. Relationship between bending moment, slope and deflection. Differential equations of simple beam theory. Area moment theorems. Fixed ended beams.
Strain energy due to axial force, shear force, bending moment and torsion. Deflections at a single load. Shock loads, helical and flat leaf springs.
Theory of centrally loaded column (Euler's formula) and eccentrically loaded columns (recent formula).

Properties of Materials
Laboratory work including tension, compression, hardness and impact tests with metals, experiments in flexure and torsion.
8.121 Structures

90 hours, comprising 45 hours' lectures, 45 hours' tutorials

Relation between design, analysis and proportioning. Brief review of design principles — dead and live loads; equivalent uniform loads, factors of safety; load factors. Structural hazards — excessive deflection, instability, fire resistance, corrosion, decay.

Factors affecting design — erection and transport, availability of materials and plant.

8.122S Structures

144 hours, comprising 72 hours' lectures, 72 hours' tutorials

Relation between design, analysis and proportioning. Brief review of design principles — dead and live loads, equivalent uniform loads, factors of safety; load factors.

Design of columns and struts, plated I-section columns. Brief mention of Perry-Robertson and straight line formulae.

Reinforced concrete design applied to statically determinate structures. Simple beams and slabs, tee-beams, doubly reinforced beams, concentrically and eccentrically loaded columns. Column footings.

Introduction to three-dimensional statics. Composition and resolution of forces, moment of an oblique force about any axis, equations of equilibrium.

Strain energy methods for the solution of one-fold statically indeterminate rigid frame and pin-jointed truss problems. Determination of deflections using unit load method; Castigliano's theorems. Williot-Mohr diagrams.

8.131 Structures

120 hours, comprising 60 hours of lectures, 60 hours of tutorials

Influence lines for statically determinate structures. Strain energy theory, application to solution of statically indeterminate structures, rigid frames
and pin-jointed truss problems. Deflections by unit load method. Williot-Mohr diagrams for deflections of trusses. Solution of rigid frames by slope deflection and moment distribution, including the problem of sidesway.

Analysis of arches, three pinned, two pinned and fixed ended arches.

Retaining walls and small dams.

Introduction to prestressed concrete. Pre-tensioning and post-tensioning. Designs of simple beams and columns.

8.132S Structures

120 hours, comprising 48 hours of lectures, 72 hours of tutorials

Analysis of rigid frames by slope deflection and moment distribution.

Treatment of sidesway.

Analysis of arches.

Space frames, analysis by tension coefficients. Non-uniplanar bending.

Shear centre. Torsion of non-circular sections.

Retaining walls and small dams.

Design of continuous structures in reinforced concrete.

Continuous beams and slabs, simple continuous frame.

Introduction to ultimate load method in reinforced concrete design.

Plastic analysis of simple steel structures.

Introduction to model analysis. Müller-Breslau principle, spline models.

Begg's apparatus.

8.134 Structures

(An elective course for honours students in Civil Engineering)

8.141 Engineering Computations

30 hours, comprising 20 hours of lectures, 10 hours of tutorials

Construction of intercept charts for three or more variables.

Construction of nomograms.

Solution of algebraic and transcendental equations by simple iteration methods — horizontal iteration, Newton Raphson method.

Introduction to finite differences. Theorems and proofs in difference calculus to be given only if essential for application. Solution of differential and partial differential equations by using differences. Application to instability problems.

Relaxation methods applied to solution of problems involving differential equations such as Poisson's equation, using the previous work.
8.142S Engineering Computations

48 hours, comprising 24 hours of lectures, 24 hours of tutorials

Construction of intercept charts for three or more variables.
Construction of nomographic charts by use of determinants.
Solution of algebraic and transcendental equations by simple iteration methods — horizontal iteration, Newton Raphson method.

Brief introduction to matrices — multiplication, inversion. Solution of linear simultaneous equations — (a) by Cholesky (Crout) method, and (b) by relaxation.

Introduction to finite differences. Theorems and proofs in difference calculus to be given only if essential for application. The difference equation. Solution of differential and partial differential equations by using differences. Application to instability problems.

Relaxation methods applied to solution of problems involving differential equations such as Poisson's equation, using the previous work.

8.211 Materials for Architects

(A materials technology course for students in Architecture comprising the syllabus for Building Science IIB)

Section 1. General Materials Technology

A course comprising 15 hours' lectures, 15 hours' laboratory work

An introductory course on the mechanics of materials. The load-deformations behaviour of engineering materials is considered with reference to the use of materials in structures, and to materials laboratory practice. Special emphasis is made of the need for efficient utilisation of materials with reference to strength, durability, appearance and economy.

Section 2. Concrete Technology

This section consists of 10 hours of lectures and 20 hours of laboratory work serving as an introduction to Concrete Technology, as follows:

Principal types of cements, their properties and simple testing; cement handling and storage. Concrete aggregates, characteristics, grading and testing. Admixtures. Factors affecting concrete properties. Basic concrete mix requirements and mix design methods. The manufacture of concrete and job control.

Laboratory work includes the testing of cement, aggregate and concrete, and the examination of concrete mix design techniques, workability, yield, and air entrainment.

8.221 and 8.221S Engineering Materials

Total hours: 132 (approximately)

(a) Concrete Technology (48 hours, comprising 24 hours' lectures, 24 hours' laboratory). Materials used in modern concretes, physical and chemical properties of cements; production, testing and selection of
aggregates; pozzolans, admixtures. Workability, strength and other properties of concrete and factors affecting these. Target strengths and the design and proportioning of mixes.

Laboratory work — Cement and aggregate tests; examination of factors influencing workability and strength properties of concrete; mix design procedure.

(b) Soil Mechanics (48 hours, comprising 24 hours’ lectures, 24 hours’ laboratory). Physical and mechanical properties affecting capillarity and compressibility and their application in practical problems relative to seepage, uplift and the settlement of buildings located above buried compressible soil strata; shearing strength, bearing capacity and earth pressure, and their application to engineering problems, including retaining walls.

Laboratory work — Soil identification and testing of physical properties.

(c) Metallurgy (36 hours, comprising 30 hours’ lectures, 6 hours’ demonstrations). The atomic structure of metals. The grain structure of metals; origin; effects of manufacturing processes. Structure of alloys — theory. Structure, properties and heat treatment of commercially important alloys, based on aluminium, copper and iron in particular. The selection and properties of structural steels. Corrosion.

Laboratory work — Experiments and demonstrations illustrating the lecture course.

8.222 Engineering Materials

Total hours: 60

(a) Concrete Technology (30 hours, comprising 20 hours’ lectures, 10 hours’ laboratory). Significance and measurement of permeability, durability, elastic modulus, creep and other concrete properties; factors affecting these and concrete volume changes. Design and proportioning of concrete mixes by different basic approaches; design and characteristics of special lightweight concrete. Manufacture and field control.

Laboratory work — Design of special concretes and examination of properties.

(b) Soil Mechanics (30 hours of lectures). Studies of theoretical and applied sections of soil mechanics relating to foundations and earth dams. Treatment of modern soil technology studies and stabilisation work.

8.223S Engineering Materials

Total hours: 132

(a) Concrete Technology, etc. (44 hours, comprising 24 hours’ lectures, 20 hours’ laboratory). Significance and measurement of permeability, durability, elastic modulus, creep and other concrete properties; factors affecting these and concrete volume change. Effect of creep and drying shrinkage on stress distribution of structural concrete; thermal effects. Design and proportioning of concrete mixes by different basic approaches. Design and characteristics of special concretes for high strength, mass and lightweight. Manufacture and field control.
Laboratory work—Design of special concretes and examination of properties. Design, manufacture and testing of reinforced concrete beams to meet particular requirements.

(b) Soil Mechanics (44 hours, comprising 24 hours' lectures, 20 hours' laboratory). Advanced studies of theoretical and applied sections of soil mechanics, including foundations, mass soil behaviour, tunnels and arching, stability of slopes, earth dams, soil technology and stabilisation work.

Laboratory and design office work—Shear testing and other advanced soil investigations; stability of earth dams and other soil retaining structures.

(c) Properties of Materials (44 hours, comprising 24 hours' lectures, 20 hours' laboratory). Elastic and inelastic behaviour of materials; theories of failure; design factors. Non-destructive test procedures. Experimental stress analysis methods.

Laboratory work includes tests on timbers and wires, creep experiments and work with wire resistance strain gauges.

8.241 and 8.241S Soil Mechanics

8.242S Soil Mechanics for Building

Laboratory Work

8.243 Soil Mechanics

(A course for students in Applied Geology)

Laboratory work—Testing of physical soil properties.

8.411 Surveying
(A course of 30 hours' lectures and field work for Architecture students)

8.421 Engineering Surveying
(A course for part-time students in Civil Engineering)

8.421S Engineering Surveying
72 hours, comprising 36 hours of lectures and 36 hours of field work

History and development of surveying; types of survey; introduction to errors. Linear measurement, chaining and chainage corrections; accuracy. Chain surveys. Surveying instruments. The level, differential levelling; errors. Grading; volumes of earthworks; prismoidal and mean end area formulae. Contouring; use of mass diagram. Traversing; the compass; the theodolite. Misclose, adjustment of traverses. Calculation of areas. Setting out; horizontal circular curves. Tacheometry; stadia theory and formulae. The plane table. Nature, causes and classes of errors of measurement, linear and angular.

A survey camp of one week in Third Term is part of this course.

8.422 Engineering Surveying
30 hours of lectures and 15 hours of field work

A survey camp of one week in Third Term is part of this course.

8.423S Engineering Surveying
72 hours, comprising 36 hours of lectures and 36 hours of field work

Geodetic surveying; implications and instruments used. Adjustments. Control surveys, horizontal control by triangulation, by baseline measurement or by traversing. Vertical control by differential levelling; trigonometric or barometric levelling. Spherical trigonometry. Elementary astronomy; solar and stellar observations; latitude, time and azimuth. Setting out of engineering works; curves; transition curves. Introduction of the theory of map projection.
Elements of photogrammetry; photo-interpretation.
Engineering computations; centre point quadrilateral, strength of figures, adjustment of network, baselines.
Outline of survey laws and regulations.
A survey camp of one week in Third Term is part of this course.

8.424 Engineering Surveying
(An elective course for honours students in Civil Engineering or Surveying)

8.431 Surveying and Cartography
(A course for Town Planning Students)

8.521 Hydraulics
60 hours, comprising 30 hours' lectures, 30 hours' tutorial and laboratory

Dimensional analysis, hydraulic model theory, surface resistance in flow in pipes and channels.
Pipe networks, waterhammer. Channel flow, steady non-uniform flow.
Flow measurement.
Hydraulic machinery, characteristic curves.
Graphical flow nets, percolation.

8.522S Hydraulics
72 hours, comprising 36 hours' lectures, 36 hours' tutorial and laboratory

Dimensional analysis, hydraulic model theory, scale effect, distorted models. Fluid turbulence, velocity distribution, surface resistance, in flow past plane boundaries and in pipes and channels.
Hydraulic machinery, radial and axial flow, characteristic curves, cavitation.
Potential flow, flow nets, percolation.

8.524 Hydraulics
(An elective course for honours students in Civil Engineering)
8.611 and 8.611S Civil Engineering

Total hours: 60

(a) Public Health Engineering (24 hours of lectures). Processes of decomposition and decay; chemical and biochemical measurement of degree of pollution; B.O.D.; rates of biochemical oxidation; basic principles of the treatment of polluted waters.

Water supply schemes: collection and distribution of water; principles and practice of water treatment; sewerage systems; construction of sewers; pumping stations; sewage treatment and disposal; swimming pools; refuse disposal.

(b) Engineering Hydrology (36 hours of lectures). A basic course in Engineering Hydrology dealing with principles and modern techniques. Topics covered are: Meteorology, climatology, evaporation, analysis of hydrologic data, stream gauging, the runoff process, infiltration, design storm synthesis, unitgraphs, synthetic unitgraphs, flood frequency studies, rational method, urban drainage design, streamflow routing, water balance, water losses, rainfall runoff relationships, streamflow correlations, storage determination, groundwater.

8.612 Civil Engineering

Total hours: 60

(a) Road Engineering (20 hours of lectures). Road location and surveys under urban and rural conditions, road design standards, geometrical design, road alignment, design of curves and intersections: types and functions of pavements. Concrete, bituminous and stabilised construction: culverts, road plant. Pavement thickness. Road maintenance. Urban stormwater drainage. Economic analysis of routes and schemes.

(b) Engineering Construction and Administration (35 hours of lectures). Construction plant and equipment; compressed air, drilling and tunnel equipment; earthmoving plant, hoisting and conveying equipment, pumping and pile-driving, plant, work-shop plant. Construction methods; earthworks foundations, cofferdams, caissons, piling, steel, timber, and concrete construction. Prestressed concrete, bridges, wharves, dams, pipelines and multi-storeyed buildings.

Engineering administration; contracts, tenders, contract documents, estimates, quantities, specifications, costing, financial comparison of projects, personnel, management and organisation.

(c) Irrigation Engineering (5 hours of lectures). Natural and artificial irrigation; sources of water, water requirements, methods of application to land. Soil deterioration. Investigation and design or irrigation systems, water metering. Maintenance and operation of irrigation systems.

8.613 and 8.613S Civil Engineering

Total hours: 108

(a) Roads and Railway Engineering (30 hours of lectures). Road location and surveys under urban and rural conditions. Road design standards, geometrical design, road alignment, design of curves and inter-
sections; types and functions of pavements. Concrete, bituminous and stabilised construction; culverts, road plant. Pavement thickness. Road maintenance. Urban stormwater drainage. Economic analysis of routes and schemes

Railway engineering: Permanent way. Track ballasting, points and crossings. Signalling, special structures, rolling stock, general.

(b) Irrigation, Hydro-electric, and Harbours and Rivers Engineering (20 hours of lectures. Natural and artificial irrigation; sources of water, water requirements, methods of application to land. Soil deterioration. Investigation and design of irrigation systems, water metering. Maintenance and operation of irrigation systems.

Hydro-electric power schemes, combined thermal and hydro systems. Hydro-electric potential determination of storage requirements and plant capacity.

Natural and artificial harbours, training of river estuaries, tides and wave action, docks, wharves, slipways; sea-bed exploration, hydrographic surveying.

(c) Engineering Construction and Administration (58 hours of lectures). Construction plant and equipment; compressed air drilling and tunnel equipment, earthmoving plant, hoisting and conveying equipment, pumping and pile-driving plant. Construction methods; earthworks, foundations, coffer dams, caissons, piling, steel, timber and concrete construction. Bridges, wharves, dams, pipelines and multi-storeyed buildings.

Engineering administration; contracts, tenders, contract documents, estimates, quantities, specifications, costing financial comparison of projects, management and organisation.

8.711 Engineering for Surveyors
70 hours' lectures, 20 hours' tutorial

Materials, structures and design of instruments, aspects of hydraulics, hydrology, and soil mechanics.

8.712S Engineering for Surveyors
42 hours' lectures

Highways; location and design. Railways; design and construction. Aerodrome design. Harbours; seabed exploration, natural and artificial harbours;

Municipal engineering; water and sewage reticulation, drainage, reservoirs, dam sites, irrigation, tunnel construction.

SURVEYING UNDERGRADUATE SUBJECTS

8.801 Surveying I
60 hours' lectures, 120 hours' tutorial, field work and drawing office

Historical development of surveying methods and instruments, geodesy, cartography and astronomy. Introduction to modern aspects. Cartographic drawing and equipment. Surveying methods and instruments. Computations.
8.802 Surveying II
75 hours' lectures, 90 hours' field work and tutorial

Introduction to errors of observation. Engineering surveys; investigation and setting out surveys, including height determination by barometric, trigonometric and differential levelling. Plane triangulation, traversing, contours, areas, volumes. Horizontal and vertical curves, hydrographic surveying, Cartography; topographical surveys, atlas map projections, map reproduction.

Geometrical optics; lens systems and thick lenses, aberrations of optical systems, applications.

8.803S Surveying III
31½ hours' lectures, 42 hours' field work and tutorial

8.804 Surveying
(An elective course for honours students in Surveying)

8.821S Geodesy I
52½ hours' lectures, 42 hours' field work and tutorial

Figure of the earth, geoid, ellipsoid. Differential geometry. Angle, direction and distance measurement, estimates and tests of precision. Surveyors' projections, transformations from plane to spheroid. Adjustment of control surveys, triangulation, trilateration. Approximate adjustments.

8.822 Geodesy II
60 hours' lectures, 45 hours' field work and tutorial

Calculations on the ellipsoid; longitude, latitude and reverse azimuth. Major horizontal control surveys, plumb line deviations and Laplace stations. Base lines, precise traversing, trilateration, high precision levelling. Reconnaissance, methods of estimating precision.

8.831S Astronomy I
42 hours' lectures, 21 hours' field work and tutorial

8.832 Astronomy II
45 hours' lectures, 30 hours' field work and tutorial

Precise time of observation. Geodetic methods for determination of precise latitude, longitude and azimuth. Astrolabes. Reduction of star co-ordinates from Mean to Apparent Place.
8.841 Surveying Computations
30 hours' lectures, 15 hours' tutorial

Plane trigonometry formulae, use of tables, calculation of triangles, areas, roadways, sub-divisions, curves. Co-ordinate and traverse computations.

8.842S Surveying Computations
31½ hours' lectures, 21 hours' tutorial

8.843 Surveying Computations
(An elective course for honours students in Surveying)

8.851S Photogrammetry I
42 hours' lectures, 31½ hours' laboratory and tutorial

8.852 Photogrammetry II
30 hours' lectures, 105 hours' laboratory and tutorial

8.853 Photogrammetry
(An elective course for honours students in Surveying)

8.871S Land Law. Utilisation and Valuation
73½ hours' lectures

Land Utilisation. Climate, vegetation, soils including erosion and conservation. Land types; classification and use. Tree identification.

8.882 Cadastral Surveying
45 hours' lectures, 15 hours' field work

Land tenure, registration and cadastral surveys in selected countries of the world. Survey practice law, professional ethics, surveyors' rights, powers and duties. Cadastral surveys in New South Wales; searches, Torrens and Old System title surveys, identification surveys, field records and plans.
6.001S Electrical Engineering
80 hours' lectures
(A course of lectures for both pass and honours Electrical Engineering students)

A course of lectures together with appropriate laboratory work covering advanced circuit theory, analysis and synthesis, electrical measurements, and electric and magnetic field theory.

The laboratory work in Electrical Measurements is part of the co-ordinated laboratory/tutorial course arranged to serve this subject and the subject 6.322S Electronics.

6.052 Electrical Engineering
30 hours' lectures

A course of lectures for students in the B.Sc.(Tech.) course on methods in Electrical Engineering.

6.101 Electric Circuit Theory
30 hours' lectures and 60 hours' laboratory

The first course of lectures and laboratory work in the basic principles in electrical engineering and their application to the solution of circuits.

6.102 Circuit Theory
90 hours' lectures and 90 hours' laboratory/tutorial
(A course for full-time Electrical Engineering students)

6.152 Electric Circuit Theory
60 hours' lectures and 60 hours' laboratory
A course for B.Sc.(Tech.) students in Electrical Engineering. Syllabus for 6.102 above.

6.201 Electric Power Engineering
60 hours' lectures and 90 hours' laboratory
(A course for students in full-time Electrical Engineering)

This subject is an introduction to the principles of operation of transformer and rotating machines used for the conversion of mechanical to electrical energy and vice versa.
The emphasis will be on the principles involved in the steady state operation of the equipment.

6.202S Power Systems

40 hours' lectures, 40 hours' laboratory/tutorial

(A course of lectures for both pass and honours students in the Power and Control Option of the Electrical Engineering Course)

The laboratory work in Power Systems is part of the co-ordinated laboratory/tutorial course arranged to serve this subject and the subjects 6.401S Control Systems and 6.212S Machines.

6.212S Machines

40 hours' lectures, 40 hours' laboratory/tutorial

(A course of lectures for both pass and honours students in the Power and Control Option of the Electrical Engineering Course)

Aspects of machine operation will be developed from the basic treatment of 6.201 (which is limited to individual operation under steady state conditions), to include cross-field machines, parallel operations of synchronous machines, developments on induction machines, both individually and in combination with a.c. commutator machines for power factor and speed control. Transient operation, saturation, harmonics, saliency, and unbalanced conditions will be considered.

The laboratory work in Machines is part of the co-ordinated laboratory/tutorial course arranged to serve this subject and the subjects 6.401S Control Systems and 6.202S Power Systems.

6.251 Electric Power Engineering

45 hours' lectures and 60 hours' laboratory

A course for B.Sc.(Tech.) students in Electrical Engineering. The subject-matter is the same as 6.201.

6.262 Electrical Machines

60 hours' lectures and 60 hours' laboratory and tutorial

A course for B.Sc.(Tech.) students in Electrical Engineering. The subject-matter covers the aspects of rotating machines necessary for the study of such equipment as components of Power and Control Systems.
8.301 Electronics

90 hours' lectures and 90 hours' laboratory
(A course for students in full-time Electrical Engineering)

An introduction to the physical basis of electronics and electronic circuits for all electrical engineering students. Topics include solid state, vacuum and gas filled devices, rectifiers, amplifiers, oscillators and an introduction to radio communication.

6.302S Communications A

40 hours' lectures, with tutorial and laboratory
(A course of lectures for both pass and honours students in the Communications Option of the Electrical Engineering Course)

A course in the theory and practice of certain aspects of communications engineering. Topics generally include modulation theory, demodulation, calculation, use and measurement of noise factor, oscillators, tuned amplifiers, transmitters and receivers.

An integrated laboratory and tutorial course of 126 hours' duration is provided to serve the three subjects 6.302S Communications A, 6.312S Communications B and 6.332S Communications C.

6.312S Communications B

40 hours' lectures, with tutorial and laboratory
(A course of lectures for both pass and honours students in the Communications Option of the Electrical Engineering Course)

A course in the theory and practice of certain aspects of communications engineering. Topics generally include guided propagation, information theory and noise, lines for communications, telephone networks, line communication equipment.

An integrated laboratory and tutorial course of 126 hours' duration is provided to serve the three subjects 6.302S Communications A, 6.312S Communications B and 6.332S Communications C.

6.322S Electronics

40 hours' lectures and 60 hours' laboratory/tutorial
(A course of lectures for both pass and honours Electrical Engineering students)

A course in electronics for all fourth year full-time students in electrical engineering giving a co-ordinated presentation of the theory and practice of semi-conductors and thermionic devices. Topics include rectification and inversion, amplification, modulation, demodulation, switching circuits and square loop magnetics.

6.332S Communications C

40 hours' lectures, with tutorial and laboratory
(A course of lectures for both pass and honours students in the Communications Option of the Electrical Engineering Course)

A course in the theory and practice of certain aspects of com-
communication engineering. Topics generally include propagation, radiation, aerals, radar, navigational aids, radio astronomy, acoustics, sound transducers, vision, TV systems and equipment.

An integrated laboratory and tutorial course of 126 hours' duration is provided to serve the three subjects 6.302S Communications A, 6.312S Communications B, and 6.332S Communications C.

6.352 Communications

45 hours' lectures and 75 hours' laboratory

A course for B.Sc.(Tech.) students in Electrical Engineering. Syllabus as for 6.302S above.

6.356 Electronics

45 hours' lectures and 15 hours' laboratory and tutorial

A course for B.Sc.(Tech.) students in Electrical Engineering.

An introduction to the physical basis of electronics and of electronic circuits. Principles of operation of solid state, vacuum and gas filled devices and basic types of electronic amplifiers.

6.357 Electronics

45 hours' lectures and 60 hours' laboratory and tutorial

A course for B.Sc.(Tech.) students in Electrical Engineering, giving a co-ordinated presentation of the theory and practice of semi-conductors and thermonic devices. Topics include rectifiers, amplifiers, oscillators, modulation and demodulation and switching circuits.

6.362 Communications

45 hours' lectures and 75 hours' laboratory

A course for B.Sc.(Tech.) students in Electrical Engineering. Syllabus as for 6.312S above.

6.401S Control

40 hours' lectures and 40 hours' laboratory/tutorial

(A course of lectures for both pass and honours students in the Power and Control Option of the Electrical Engineering Course)

The laboratory work in Control Systems is part of the co-ordinated laboratory/tutorial course arranged to serve this subject and the subjects 6.202S Power Systems and 6.212S Machines.
6.454 Power Systems and Control
60 hours' lectures and 60 hours' laboratory/tutorial
(A course for B.Sc.(Tech.) students in Electrical Engineering)

*Control.* A study of the performance and analysis of automatic control systems.

6.501 Electrical Engineering (Honours)
60 hours' lectures

Material will be selected from the following topics:—

Engineering differential equations; Laplace and Fourier transforms; complex variable; generalised feedback theory; stability criteria; statistical methods of analysis; analogous system simulation; signal flow and matrix methods in electrical engineering.

6.502S Electrical Engineering (Honours)
63 hours' lectures

Material will be selected from the following topics:—

Machine matrix equations; the primitive electrical machine; root locus applications; pulse techniques; sampled data; analysis of linear and non-linear systems containing noise; information theory; circuit synthesis; applications of electro-magnetic theory; combinational and sequential switching theory.

6.801S Electrical Engineering
36 hours' lectures and 60 hours' laboratory

(A course for full-time students in courses other than Electrical Engineering)

A special course for metallurgists and for engineers not intending to follow electrical engineering as a profession. Presentation of the fundamental principles of electric and magnetic circuits and vacuum tubes and the application of these principles to the theory, performance of and control of electrical equipment.

6.801 Electrical Engineering
30 hours' lectures and 60 hours' laboratory

A course for B.Sc.(Tech.) students in metallurgy and engineering who do not intend to follow Electrical Engineering as a profession. The subject-matter is the same as for 6.801S.

6.802S Electrical Engineering
36 hours' lectures and 36 hours' laboratory

(A course for full-time students in courses other than Electrical Engineering)

More advanced work following on 6.801 with emphasis on applications of electronic equipment and the theory of control systems.
6.802 Electrical Engineering

30 hours' lectures and 30 hours' laboratory

A course for B.Sc.(Tech.) students in metallurgy and engineering who do not intend to follow Electrical Engineering as a profession. The subject-matter is the same as for 6.802S.

6.811 Electronic Instrumentation for Surveyors

30 hours' lectures

Measurement of time, frequency and distance. Propagation of E. M. waves affecting the accuracy of tellurometry, time measurement, position finding and navigational aids.

6.841 Electronic Instrumentation

A brief course on the fundamentals of electronic instrumentation with particular attention to the operation and use of instruments for operation at audio and sub-audio frequencies for the measurement and recording of extremely small signals in the presence of noise. The laboratory course comprises mainly demonstration experiments.

Up to four weeks of field instruction will be included in the course.

6.901S Seminar

(For students in the fourth year of the full-time course in Electrical Engineering)

6.911 Thesis

(Full-time students in Electrical Engineering — pass degree)

6.921 Thesis

(Full-time students in Electrical Engineering — honours degree)

SCHOOL OF MECHANICAL ENGINEERING

5.001 Engineering I

For courses in the Faculties of Engineering, Applied Science and Science.

(A) Descriptive Geometry (20 hours' lectures, 40 hours' tutorials over 2 terms)

Fundamental concepts of descriptive geometry, including reference systems, representation of point, line and plane; fundamental problems of position and of measurement.

Construction of the ellipse. Various surfaces and solids, their sections, developments and intersections in solid geometry.

Application of descriptive geometry to certain problems arising in engineering practice. Special emphasis on ability to visualise problems and processes involved in their solution.
(B) **Engineering Drawing** (30 hours' drawing office over 1 term)

Instruction in the correct use of drawing instruments and the application of drawing standards. Measurements and dimensioning.

Orthographic and isometric projections.

In the drawing office the student will be required to sketch and to make accurate detail drawings and/or assembly drawings of a number of machine parts and elements.

(C) **Engineering Mechanics** (30 hours' lectures, 30 hours' tutorials over 3 terms)

**Graphs:** Construction of graphs, line charts. Linearisation, logarithmic graphs. Graphical differentiation and integration.

(D) **Mechanical Technology** (30 hours' lectures over 3 terms)

**5.001/1 and 5.001/2 Engineering I — Parts 1 and 2**

Part-time students in the Faculty of Engineering will take 5.001 Engineering I in two parts over two years.

Part 1 consists of the sections on Descriptive Geometry and Engineering Drawing.

Part 2 consists of the section on Engineering Mechanics and Workshop Technology.

**5.011 Engineering I**

For students in Applied Geology.

This subject consists of the Descriptive Geometry and the Engineering Mechanics sections of 5.001.

**5.021S Seminar**

For students in the full-time course in Mechanical Engineering.

**5.023 Seminar**

For students in the B.Sc.(Tech.) course in Mechanical Engineering.

**5.031S Minor Thesis**

For pass students in the full-time course in Mechanical Engineering.

**5.041 Major Thesis**

For honours students in the full-time course in Mechanical Engineering.
5.101S Mechanical Engineering Design
120 hours' drawing office work
(A course for full-time students in Mechanical Engineering)

(A) — Design procedures, loadings and factors of safety standards. Stresses in bolts. Discussion of problems involving simple stresses. Design of shafts and bearings, belt drives, friction clutches, springs and screws for power applications.

(B) — Design of spur gear drives in accordance with BSS 436, introduction of worm gear design in accordance with BSS 721. Design of band brakes and shoe brakes. Crane design.

5.101/1 and 5.101/2 Mechanical Engineering Design — Parts 1 and 2
Each of 60 hours' drawing office work

Students in the Bachelor of Science (Technology) course in Mechanical Engineering will take 5.101S in two parts. 5.101/1 consists of the work set out under A and 5.101/2 consists of the work set out under B.

5.101A Mechanical Engineering Design
This subject is taken by full-time Industrial Engineering students, and consists of the subject-matter of 5.101/1. The course extends over 23 weeks and the examination is held in the September period.

5.102 Mechanical Engineering Design
20 hours' lectures, 70 hours' drawing office
(A course for B.Sc.(Tech.) students in Mechanical Engineering)

(a) Lectures
Advanced application of strength of materials with respect to the design of reciprocating machinery.

(b) Drawing Office
Design of elements encountered in reciprocating machinery. Crankshafts, connecting rods, pistons, cams, governors, etc.

5.103S Mechanical Engineering Design
36 hours' lectures, 36 hours' drawing office
(A course for full-time students in Mechanical Engineering)

(a) Lectures
Advanced application of strength of materials with respect to various design problems.

(b) Drawing Office
Major design project and relevant engineering investigations.
5.201 Mechanical Technology

1 hour per week for 30 weeks

(A course for B.Sc.(Tech.) students in Mechanical Engineering)

General principles. Geometry of machine parts. Kinematics of
machine tools. Action of metal-cutting tools. Mechanisms used in machine
Drilling and tapping. Milling. Lathes retaining tool settings. Semi and

5.202S Mechanical Technology

2 hours per week for 24 weeks

(A course for full-time students in Mechanical Engineering and
Industrial Engineering)

Part 1

General principles. Geometry of machine parts. Kinematics of
machine tools. Action of metal-cutting tools. Mechanisms used in
machine tools. Machine tool components. Actual machine tools. Centre

Part 2

A brief analysis of the principles and practices used in the develop­
ment of an organisation so that it can attain an industrial objective.

5.203 Mechanical Technology

1 hour per week for 30 weeks

(A course for B.Sc.(Tech.) students in Mechanical Engineering)

Gear cutting. Grinding. Complex surfaces, profiling, automated
machines. Dimensional accuracy, surface finish. Finishing processes,
lapping, honing, superfinishing, gear-shaving. Plastic yielding of metals.
Welding.

5.204S Mechanical Technology

2 hours per week for 24 weeks

(A course for full-time students in Mechanical Engineering)

Lathes retaining tool settings. Semi and fully automatic lathes.
Boring, boring mills. Horizontal boring machines. Jig-boring, fine-boring.
Dimensional accuracy, surface finish. Finishing processes, lapping, honing.
superfinishing, gear-shaving. Plastic yielding of metals. Blanking and

5.301S and 5.301 Engineering Mechanics

40 hours' lectures, 20 hours' tutorials

Fundamentals of vector algebra. Kinematics of the plane motion
of a particle. Dynamics of the plane motion of a particle; artificial

5.302S and 5.302 Theory of Machines

42 hours' lectures, 30 hours' tutorials

5.303 Mechanical Vibrations

15 hours' lectures, including some demonstrations

Periodic motions; Fourier analysis; simple harmonic motion. One-degree-of-freedom system (free undamped, free damped, forced undamped, forced damped). Some vibration-measuring instruments. Vibration isolation. Whirling speeds of shafts (Rayleigh's method, Dunkerley's formula). Free torsional vibrations of shafts (two and three rotors only).

5.304S Theory of Machines

24 hours' lectures, 24 hours tutorials

Balancing of rotating and reciprocating masses. Flywheels (presses, engines).

Mechanical vibrations — as for 5.303 plus the following: — Two-degree-of-freedom system (undamped-vibration absorbers). Free torsional vibrations of multi-rotor systems.

5.305S Theory of Machines

42 hours' lectures, 30 hours' tutorials

5.321S and 5.321 Automatic Control Engineering

5.321S 36 hours' lectures and demonstrations
5.321 30 hours' lectures and demonstrations

Block diagrams and Laplace transform methods for system analysis. Transfer functions. Response functions. The general criterion for stability. Routh's criterion. Types of controller action and their effects on system
response. Analysis of some pneumatic control system components including one or two types of pneumatic controller.

5.322S **Automatic Control Engineering**

72 hours' lectures, tutorial and laboratory

5.401S **Numerical Analysis**

24 hours' lectures, 12 hours' tutorials

*Calculus of Finite Differences* — Difference tables, interpolation; numerical differentiation and integration.

*Solution of Equation* — Ordinary equations; successive approximation; iteration; simultaneous equations. Differential equations: numerical methods for ordinary differential equations; difference equations for partial differential equations; relaxation methods.

*Empirical Equations* — Rectification of curves; method of least squares; polynomial approximations; harmonic analysis.

*Computers* — Programming. Application to numerical analysis. Basic principles of high speed digital computers.

5.402S and 5.402 **Mechanics of Solids**

5.402S 36 hours' lectures, 36 hours' tutorial
5.402 30 hours' lectures, 30 hours' tutorial

Torsion — membrane analogy. Torsion of thin-walled sections, open sections, closed sections. Torsion of solid non-circular sections.

Energy methods — Castigliano's Theorem, dummy load method. Application to beams, frames, and circular rings; statically indeterminate cases. Theorem of virtual work.
Buckling of columns. Axial load and bending interaction. Tangent modulus; inelastic column curves; empirical formulas. Local buckling. Strength of members under combined loadings — analysis of various modes of failure (buckling, yield, etc.). Interaction method.

5.501S and 5.501 Fluid Mechanics
24 hours’ lectures, 36 hours’ laboratory/tutorial

Fluid properties: statics of liquids and gases; statics of moving systems; forces on surfaces.

One-dimensional flow of inviscid incompressible fluid: streamlines: continuity, Euler and Bernouilli equations: energy equation.

5.502S and 5.502 Fluid Mechanics
5.502S 30 hours’ lectures, 42 hours’ laboratory/tutorial
5.502 30 hours’ lectures, 45 hours’ laboratory/tutorial

5.503S and 5.503 Fluid Mechanics
24 hours’ lectures, 24 hours’ laboratory/tutorial

(Course to consist of three of the above six topics plus experimental projects.)

5.601S Mechanical Engineering
(An integrated course in thermodynamics and fluid mechanics for honours candidates in Mechanical Engineering)

5.701S and 5.701 Thermodynamics
24 hours’ lectures, 36 hours’ laboratory/tutorial

5.702S and 5.702 Thermodynamics

5.702S 30 hours' lectures, 42 hours' laboratory/tutorial
5.702 30 hours' lectures, 45 hours' laboratory/tutorial

Heat pump and refrigeration cycles.

5.703S and 5.703 Thermodynamics

24 hours' lectures, 24 hours' laboratory/tutorial

Binary vapour and super-critical power plants. Nuclear power systems. Air conditioning and air distribution systems.

5.811 Aerodynamics

60 hours' lectures, 30 hours' tutorials

Wings of finite span. Lifting line theory. Drag in three-dimensional flow. Wing characteristics.

One dimensional gas dynamics; isentropic, adiabatic flows; nozzle flow.

5.812 Aerodynamics
75 hours' lectures, 75 hours' laboratory/tutorial

5.822 Aircraft Strength of Materials
37½ hours' lectures, 22½ hours' tutorials

5.823 Aircraft Materials and Structures
60 hours' lectures, 30 hours' tutorials

5.831 Aircraft Propulsion
60 hours' lectures

Internal aerodynamics: Compressors and turbines, sub-sonic and supersonic intake diffusers, nozzles.

Design and performance of aircraft reciprocating internal combustion engine and gas turbine systems.

Ramjets. Rockets.

5.901 Naval Architecture

60 hours' lectures, 60 hours' tutorial and drawing office

5.902 Naval Architecture

75 hours' lectures, 75 hours' tutorials and drawing office

5.903 Naval Architecture

90 hours' lectures, 90 hours' tutorials

5.904 Naval Architecture

90 hours' lectures, 150 hours' tutorials and drawing office

Design of a vessel from a brief specification — to determine dimensions, lines, hydrostatic curves, midship section and structural profile. Estimate of stability and trim, freeboard, tonnage power of prime mover, propeller design and general arrangement.
18.031S  Minor Thesis
(For pass students in the full-time course in Industrial Engineering)

18.041  Major Thesis
(For honours students in the full-time course in Industrial Engineering)

18.111S  Industrial Administration
A course for full-time students in Industrial Engineering to follow on and to complement section (b) of 5.202S Mechanical Technology.

The completion of the organisation with job specifications. The use of operation instructions.

Further analysis of the subsidiary functions to general management; their location in the organisation and the use of common industrial techniques in their performance.

Plant location, building design, equipment selection and design, production design, layout, materials handling, stores and inventory control, purchasing quality control, maintenance, marketing, development, systems of production, work simplification, production control, engineering economics.

Problem cases relating to the subsidiary functions are analysed and solved.

18.111/1 and 18.111/2  Industrial Administration, Parts 1 and 2
A course for students in the B.Sc.(Tech.) course in Industrial Engineering.

An examination of the principles and practices used in the development of an organisation so that it can attain an industrial objective. The completion of the organisation with job specifications. The use of operation instructions.

An analysis of the principal functions of general management, production, engineering, sales, finance and personnel, followed by that of the subsidiary functions, their location in the organisation and the use of common industrial techniques in the performance.

Plant location, building design, equipment selection and design, production design, layout, materials handling, production planning and control, stores and inventory control, costing and accounting, purchasing, quality control, maintenance, salvage, methods, marketing, development, personnel.

Problem cases relating to the subsidiary functions are analysed and solved.

18.121S  Engineering Administration
Introduction to scientific management.
Economic efficiency in the use of resources and facilities in manufacturing operations.
Value engineering.

Organisation and the control function. Introduction to the use of mathematical techniques in the planning of production, in quality control, and batch control.

The control of men in production and distribution. Fitting the workplace of the man. The use of incentives.

18.211S Production Control

A course for full-time students in the Bachelor of Engineering course.

The first part of the course covers the detailed mechanics of production control systems applied firstly to order control of job lot production in a metal working factory, with variations in this basic system to cover repetitive batch production, and then continuous line production with flow control. These systems are then extended to manufacturing activity of other types.

The treatment covers in detail the basic functions of each section of the manufacturing organisation, and the information flow and relationships between these sections, and also information flow to costing. Cost considerations are highlighted, and the implications of different policies are stressed.

The application of fluid duplicator and punched card systems to production and inventory control is discussed.

The requirements of automation are considered.

The second part of this course covers the setting up, analysis and manipulation of mathematical models of industrial and production situations to give decision rules, including the following:

Linear programming applications with the simplex method of solution (including a demonstration of a solution using the University digital computer, UTECOM). The transportation method of solution.

Total value and incremental analysis, and inventory models under conditions of certainty and uncertainty.

Some applied statistical procedures; sampling and control charts.

18.221 Production Control

A course for students in the B.Sc.(Tech.) course in Industrial Engineering. The subject-matter is similar to that of 18.211S Production Control.

18.291S Production Control

(A course for honours students in Industrial Engineering)

18.311S Methods Engineering

(A course for full-time students in Industrial Engineering)

Commencing with an analysis of the physical requirements for manufacture, this course will progress through the study of problems
arising from the need for skilful co-ordination of manufacturing facilities to a final stage dealing with the integration of machinery, materials and men for the efficient operation of industry.

Planning and installation of manufacturing plants; location and site analysis; buildings and facilities; process and equipment selection; plant layout; maintenance problems.

Ergonomics; work and effort; the dimensions of the workplace; workplace layout; the working environment and performance efficiency; fitting the job to the worker.

Work measurement; motion and time study; recording and charting; work sampling; estimates for pre-determined motion times.

Process analysis for production efficiency; characteristics of efficient and inefficient processes.

Incentives: Characteristics and design of basic incentive systems, preservation of quality; psychological and economic effects of incentives.

Developments and installation of better methods; work simplification; the improvement of individual operations raising the performance level of a running plant as a whole, application of select operations research techniques.

Laboratory Work — Application of the laws of motion economy; workplace layout; the sequencing of manufacturing operations, time study; operation analysis and charting; the normal range of human movements and application to design of machine controls. Parameters and manifestations of physical fatigue.

18.321 Methods Engineering

A course for B.Sc.(Tech.) students in Industrial Engineering. The subject-matter is similar to that of 18.311S Methods Engineering.

18.411S Design for Production I (Materials and Processes)

(A course for full-time students in Industrial Engineering)

This course is divided into two sections:—

(i) Theory — A study of those economic and manufacturing factors which influence product design.

(ii) Laboratory — Practical work associated with (i).

Laboratory — Model making, product evaluation. A study of some of the fundamentals of metal removal, tool life, chip formation, and press tool design and its application.
18.421 Design for Production I

A course for students in the B.Sc.(Tech.) course in Industrial Engineering. The subject-matter is similar to 18.411S Design for Production I.

18.412S Design for Production II (Interchangeable Manufacture)
(A course for full-time students in Industrial Engineering)

Theory — The economics of interchangeable manufacture; manufacturing, assembly and servicing costs; advantages and disadvantages of pursuing interchangeable principle. The function of the prototype and development and uses of the production model. The use of standards: factors to be considered when using national basic standards. Tolerancing and the determination of accumulated tolerances: probability theory and its application. Design for interchangeable or unit assembly: design, dimensioning and tolerancing to fulfil functioning and manufacturing and inspection requirements. Gauges and gauge wear: gauging principles, effect of gauge tolerance and wear, gauge design. Design of jigs, fixtures and tools. Functional, manufacturing and inspection requirements: methods of inspection, process inspection, finished parts inspection, quality control and sampling inspection. Metrology: basic principles of precision measurement, metrological practice in measurement, principles of construction, care and use of measuring equipment.

Drawing Office — Analysis of a design to fulfil functioning requirements, preparation of component drawings, preparation of operation drawings, design of associated gauges, tools and fixtures.

Laboratory — Metrology: assignments associated with gauging and tooling. Surface finish, inspection: non-destructive testing, quality control and sampling inspection.

18.422 Design for Production II (Interchangeable Manufacture)

A course for students in the B.Sc.(Tech.) course in Industrial Engineering. The subject-matter is similar to that of 18.412S Design for Production II.

18.511S Industrial Marketing
(A course for full-time students in Industrial Engineering)

Marketing in the Economy — The basic tasks of marketing. The economic environment of the market. Considerations of demand and supply.

Nature and Organisation of Buying and Selling — Buying and selling processes. The sales practices and problems of manufacturers and distributors. Standardisation, differentiation and non-price competition.

Specialisation and Integration in Marketing — Channels of distribution. Collection, sorting and distribution. Transfer of ownership between manufacturers, wholesalers, and retailers. Agents and distributors. Stability and change in marketing channels.

18.521 Industrial Marketing
A course for students in the B.Sc.(Tech.) course in Industrial Engineering. The subject-matter is similar to that of 18.511S Industrial Marketing.

18.611S Engineering Economic Analysis
(A course for full-time students in Industrial Engineering)

The Australian Economic Structure
The National Income — Definition, variations, real and money terms. Distribution of national income.

The Australian Labour Structure — Conciliation and arbitration, industrial disputes, the Commonwealth basic wage, margins.

The Role of Government — The planned, semi-planned and free economies. Taxation and subsidies.

Economics of Industrial Organisations

Demand and Cost Analysis — The theory of demand, price and income relations. Alternative cost. Cost and rate of output; cost and the size of plant; costs of multiple products. Marginal costing.

The Theory of Investment
Interest — Time value of capital. Simple interest, compound interest, present worth, annuities, sinking funds.

Choice between Alternatives — The determination of the relative worth of several competitive items of capital equipment. Economic lot size.

18.621 Engineering Economics
(A course for students in the B.Sc.(Tech.) course in Industrial Engineering)

The course will consist of a study of the applications of economics to industrial operations and engineering projects. An introduction to accounting and accounting controls will also be given.
TEXT AND REFERENCE BOOKS FOR 1966

SCHOOL OF CIVIL ENGINEERING

5.001/2A  Engineering Mechanics

TEXT BOOKS
Hall. Construction of Graphs and Charts.

REFERENCE BOOKS
Timoshenko and Young. Engineering Mechanics.

8.112  Materials & Structures

REFERENCE BOOKS

8.121  Structures and 8.122  Structures

TEXT BOOKS

REFERENCE BOOKS
Bresler and Lin. Design of Steel Structures.
Stewart. Practical Design of Simple Steel Structures, Vols. I & II.
Grinter. Design of Modern Steel Structures.
Grinter. Elementary Structural Analysis & Design.
Wilbur and Norris. Elementary Structural Analysis.
Pippard and Baker. Analysis of Engineering Structures.
Sutherland and Rees. Introduction to Reinforced Concrete Design.
Peabody. The Design of Reinforced Concrete Structures.
Fisher-Cassie. Structural Analysis.
Ferguson. Reinforced Concrete Fundamentals.
8.131 Structures and 8.132 Structures

REFERENCE BOOKS
Hoff. The Analysis of Structures.
Lin. Design of Pre-Stressed Concrete Structures.
Timoshenko and Young. Theory of Structures.
Farce and Norman. Analysis of Statically Indeterminate Structures.
Ferguson. Reinforced Concrete Fundamentals.

8.141 and 8.142 Engineering Computations

REFERENCE BOOKS
Hall. Construction of Graphs and Charts.

8.211 Materials for Architects

REFERENCE BOOKS
A.C.I. Manual of Concrete Inspection.
Withey and Washa. Materials of Construction.
British Standard Handbook No. 2846. Reduction Presentation of Experimental Results.
Murdock. Concrete Materials and Practice.

8.221 Engineering Materials

TEXT BOOKS
Troxell and Davis. Composition and Properties of Concrete.
Terzaghi and Peck. Soil Mechanics in Engineering Practice.

REFERENCE BOOKS
Murdock. Concrete Materials and Practice.
Terzaghi. Theoretical Soil Mechanics.
H.M.S.O. Publication. Soil Mechanics for Road Engineers.
Bishop and Henkel. Triaxial Testing of Soils.
Ackroyd. Concrete Properties and Manufacture.
Fulton. Concrete Technology.
S.A.A. Specifications A2, A77, A100-110, CAZ.

8.222 and 8.223 Engineering Materials

TEXT BOOKS
Troxell and Davis. Composition & Properties of Concrete.
Terzaghi and Peck. Soil Mechanics in Engineering Practice.

REFERENCE BOOKS
Murdoch. Concrete Materials and Practice.
Terzaghi. Theoretical Soil Mechanics.
H.M.S.O. Publication. Soil Mechanics for Road Engineers.
Bishop and Henkel. Triaxial Testing of Soils.
Hetenyi. Handbook of Experimental Stress Analysis.
Jessop and Harris. Photo-Elaticity—Principles and Practice.
Charlton. Model Analysis of Structures.
Houwink. Elasticity, Plasticity and Structure of Matter.
Mills, Hayward and Radar. Materials of Construction.
Ackroyd. Concrete Properties and Manufacture.
Fulton. Concrete Technology.
S.A.A. Specifications CA2, A64.

8.224 Materials — Honours

Hill. Mathematical Theory of Plasticity.

8.241 Soil Mechanics and 8.242 Soil Mechanics

TEXT BOOKS
Taylor. Fundamentals of Soil Mechanics or
Terzaghi and Peck. Soil Mechanics in Engineering Practice.

REFERENCE BOOKS
Terzaghi. Theoretical Soil Mechanics.
H.M.S.O. Publication. Soil Mechanics for Road Engineers.
Bishop and Henkel. Triaxial Testing of Soils.
8.521 and 8.522  Hydraulics

TEXT BOOKS

REFERENCE BOOKS
Rouse. Engineering Hydraulics.
Addison. Hydraulic Measurements.
Streeter. Handbook of Fluid Dynamics.
Barna. Fluid Mechanics for Engineers.
Vallentine. Applied Hydro-Dynamics.
Streeter. Fluid Dynamics.
Davis. Handbook of Applied Hydraulics.

8.611  Civil Engineering

TEXT BOOKS

REFERENCE BOOKS
Imhoff and Fair. Sewage Treatment. Wiley.
Camp. Water and Its Impurities. Rheinhall.
Phelps. Stream Sanitation.
Timm. An Introduction to Chemistry.
Patterson. Meteorology.
Haurwitz. Meteorology.

8.611  Civil Engineering

Butler. Engineering Hydrology.
Commonwealth Dept. of Civil Aviation. Manual of Meteorology.
8.612 and 8.613 Civil Engineering

TEXT BOOKS
Antill and Ryan. Civil Engineering Construction. A. & R.
Ryan. Engineering Administration. A. & R.

REFERENCE BOOKS
Creager, Justin and Hynes. Engineering for Dams. Wiley.
Houk. Irrigation Engineering. Wiley.

8.613S Civil Engineering

TEXT BOOKS
Antill and Ryan. Civil Engineering Construction. A. & R.
Ryan. Engineering Administration. A. & R.

REFERENCE BOOKS
Houk. Irrigation Engineering. Wiley.
Creager, Justin and Hynes. Engineering for Dams. Wiley.

8.66A Engineering Construction

TEXT BOOK
Antill and Ryan. Civil Engineering Construction. A. & R.

REFERENCE BOOKS
Ryan. Engineering Administration. A. & R.
Creager, Justin and Hynes. Engineering for Dams. Wiley.

8.66B Engineering Administration

TEXT BOOK
Ryan. Engineering Administration. A. & R.

REFERENCE BOOKS
Antill and Ryan. Civil Engineering Construction. A. & R.
8.411 Surveying

TEXT BOOK

REFERENCE BOOKS

8.421 Surveying for Engineers

TEXT BOOKS
Chambers. *7 Figure Natural and Logarithmic Tables*.

REFERENCE BOOKS

8.422 and 8.423 Surveying for Engineers

TEXT BOOKS

REFERENCE BOOKS

8.801 Surveying I

TEXT BOOKS

8.801 Surveying I

REFERENCE BOOKS
8.802 Surveying II

TEXT BOOKS

REFERENCE BOOKS

8.803 Surveying III

TEXT BOOKS

8.821 and 8.822 Geodesy

TEXT BOOKS

REFERENCE BOOKS

8.831 Astronomy

TEXT BOOKS

REFERENCE BOOKS
Clark, revised Clendenning. *Plane and Geodetic Surveying*, Vol. II.
8.832 Astronomy

TEXT BOOKS

REFERENCE BOOKS

8.841 and 8.842 Surveying Computations

TEXT BOOKS

REFERENCE BOOK

8.851 Photogrammetry

TEXT BOOK

REFERENCE BOOK

8.852 Photogrammetry

TEXT BOOK

REFERENCE BOOKS

8.881 Land Law Utilisation and Valuation

TEXT BOOKS

REFERENCE BOOKS
Murray. Problems and Answers Involving Valuation Practice.

8.882  Cadastral Surveying

TEXT BOOKS

REFERENCE BOOK

8.711  Engineering for Surveyors

TEXT BOOKS
Vennard. Elementary Mechanics of Fluids. 4th Ed.
Terzaghi and Peck. Soil Mechanics in Engineering Practice.

REFERENCE BOOKS
Chow. Open Channel Hydraulics.
Elliott and Dickson. Laboratory Instruments—Their Design and Application.
Whitehead. Instruments and Accurate Mechanisms.
Cooper. Scientific Instruments.

8.712  Engineering for Surveyors

TEXT BOOKS
Leeming. Road Engineering.

REFERENCE BOOKS
Collins and Hart. Principles of Road Engineering.
Criswell. Highway Spirals, Banking and Vertical Curves.
Soil Mechanics for Road Engineers. H.M.S.O., London
Sherrard. Australian Road Practice.

Electrical Engineering

TEXT BOOK
SCHOOL OF MECHANICAL ENGINEERING

5.001 Engineering I

(A) Descriptive Geometry
TEXT BOOK

REFERENCE BOOK

(B) Engineering Drawing
TEXT BOOK
Institution of Engineers, Australia. Australian Standard Engineering Drawing Practice. (c.z.1.)

(C) Mechanical Technology
TEXT BOOK

(D) Engineering Mechanics
See School of Civil Engineering.

MECHANICAL ENGINEERING DESIGN

5.101/1 Mechanical Engineering Design

TEXT BOOKS
Matousek. Engineering Design.
Shigley. Mechanical Engineering Design.

REFERENCE BOOKS
Dobrovolsky et al. Machine Elements
Marks. Mechanical Engineer's Handbook.
Phelan. Fundamentals of Mechanical Design.
Oberg and Jones. Machinery Handbook.
5.101/1 Mechanical Engineering Design

For revision and additional information students may consult:
Timoshenko and Young. *Strength of Materials.* 4th Ed.
Laughner and Hargan, Editors. *Handbook of Fastening and Joining of Metal Parts.*

5.101/2 Mechanical Engineering Design

TEXT BOOKS

B.S. 436, 1940. Machine Cut Helical and Spur Gears.

REFERENCE BOOKS

Merritt. *Gears.*
Phelan. *Fundamentals of Mechanical Design.*
Regulations under Scaffolding and Lifts Act, 1912-1958.

5.101S Mechanical Engineering Design

The text and reference books are the same as for 5.101/1 and 5.101/2.

5.102 Mechanical Engineering Design

TEXT BOOKS

Purday. *Diesel Engine Designing.*

REFERENCE BOOKS

Oberg and Jones. Machinery's Handbook.

5.103S Mechanical Engineering Design

TEXT BOOKS
Shigley. Mechanical Engineering Design.
Matousek. Engineering Design.

REFERENCE BOOKS
These are the same as those shown for 5.101/1, with the following additions:
Spotts. Mechanical Design Analysis.

MECHANICAL TECHNOLOGY

5.201 and 5.202S Mechanical Technology

TEXT BOOKS
De Garmo. Materials and Processes in Manufacturing.

REFERENCE BOOKS

5.203 and 5.204S Mechanical Technology

TEXT BOOK
De Garmo. Materials and Processes in Manufacturing.

REFERENCE BOOKS
Crane. Plastic Working in Metals.

5.203 Mechanical Technology (Old Course)

TEXT BOOK

REFERENCE BOOK
APPLIED MECHANICS AND THEORY OF MACHINES

5.301 and 5.301S  Engineering Mechanics

TEXT BOOK

REFERENCE BOOKS
Timoshenko and Young. Engineering Mechanics.

5.302 and 5.302S  Theory of Machines

TEXT BOOK
Hirschhorn. Kinematics and Dynamics of Plane Mechanisms.

REFERENCE BOOKS
Mabie and Ocvirk. Mechanisms and Dynamics of Machinery.
Holowenko. Dynamics of Machinery.
Rothbart. Cams.

5.303  Mechanical Vibrations

TEXT BOOK
Church. Mechanical Vibrations.

REFERENCE BOOKS
Den Hartog. Mechanical Vibrations.
Burton. Vibration and Impact.

5.304S  Theory of Machines

TEXT BOOK
Church. Mechanical Vibrations.

REFERENCE BOOKS
Den Hartog. Mechanical Vibrations.
Burton. Vibration and Impact.
Holowenko. Dynamics of Machinery.
Mabie and Ocvirk. Mechanisms and Dynamics of Machinery.
Tse, Morse and Henkel. Mechanical Vibrations.
5.305S Theory of Machines

TEXT BOOKS
Church. Mechanical Vibrations.
Holowenko. Dynamics of Machinery.
Hirschhorn. Kinematics and Dynamics of Plane Mechanisms.

REFERENCE BOOKS
Den Hartog. Mechanical Vibrations.
Burton. Vibration and Impact.
Mabie and Ocvirk. Mechanisms and Dynamics of Machinery.
Tse, Morse and Hinkle. Mechanical Vibrations.

AUTOMATIC CONTROL ENGINEERING

5.321 and 5.321S Automatic Control Engineering

REFERENCE BOOKS
Eckman. Automatic Process Control.
Raven. Automatic Control Engineering.
Young. An Introduction to Process Control System Design.

5.322S Automation Control Engineering Honours

TEXT BOOK
Raven. Automatic Control Engineering.

REFERENCE BOOKS
Buckley. Techniques of Process Control.
Clark. Introduction to Automatic Control Systems.
Eckman. Automatic Process Control.
Young. An Introduction to Process Control System Design.

5.391S Automatic Control Engineering Professional Elective

REFERENCE BOOKS
Ahrendt and Taplin. Automatic Feedback Control.
Eckman. Automatic Process Control.
Young. An Introduction to Process Control System Design.
NUMERICAL ANALYSIS

5.401S Numerical Analysis

REFERENCE BOOKS

MECHANICS OF SOLIDS

5.402 and 5.402S Mechanics of Solids

TEXT BOOK

REFERENCE BOOKS

FLUID MECHANICS

5.501 and 5.501S Fluid Mechanics

TEXT BOOKS
Barna. *Fluid Mechanics for Engineers*, or
Streeter. *Fluid Mechanics*. 3rd Ed., or

REFERENCE BOOK

5.502 and 5.502S Fluid Mechanics

TEXT BOOKS
Barna. *Fluid Mechanics for Engineers*, or
Shepherd. *Principles of Turbomachinery*.

REFERENCE BOOKS
Addison. *Centrifugal and Axial Flow Pumps*.
Francis. *Fluid Mechanics*.
5.503 Fluid Mechanics

REFERENCE BOOKS
Barna. Fluid Mechanics for Engineers.
Davis. Handbook of Applied Hydraulics.
Rouse. Engineering Hydraulics.
Vol. I, Parts 1 and 2.
Shepherd. Introduction to the Gas Turbine.
Cambel and Jennings. Gas Dynamics.
Nechleba. Hydraulic Turbines.

5.601S Mechanical Engineering

REFERENCE BOOKS
To be prescribed by the Lecturers.

THERMODYNAMICS

5.701 and 5.701S Thermodynamics

TEXT BOOKS
Rogers and Mayhew. Engineering Thermodynamics, Work and Heat Transfer, or
Van Wylen. Thermodynamics.

REFERENCE BOOKS
Jones and Hawkins. Engineering Thermodynamics.
Mooney. Introduction to Thermodynamics and Heat Transfer.
Lee and Sears. Thermodynamics.
Beckwith and Buck. Mechanical Measurements.

5.702 and 5.702S Thermodynamics

TEXT BOOK
REFERENCE BOOKS
Lee and Sears. *Thermodynamics.*
Soo. *Thermodynamics of Engineering Science.*
Shepherd. *Introduction to the Gas Turbine.*
Kearton. *Steam Turbine Theory and Practice.*

5.703 and 5.703S  Thermodynamics

REFERENCE BOOKS
Stoecker. *Refrigeration and Air Conditioning.*
Cohen and Rogers. *Gas Turbine Theory.*
Threlkeld. *Thermal Environmental Engineering.*
Openshaw Taylor. *Nuclear Reactors for Power Generation.*

AERONAUTICAL ENGINEERING

5.811  Aerodynamics

TEXT BOOKS
Houghton and Brock. *Aerodynamics for Engineering Students,* or
Streeter. *Fluid Dynamics,* or
Kuethe and Schetzer. *Foundations of Aerodynamics.* 2nd Ed.

REFERENCE BOOKS
Air Registration Board. *British Civil Airworthiness Requirements.*
Royal Aeronautical Society. *Aerodynamics and Performance Data Sheets.*

5.812  Aerodynamics

TEXT BOOKS

REFERENCE BOOKS
Air Registration Board. *British Civil Airworthiness Requirements.*
Royal Aeronautical Society. *Aerodynamics and Performance Data Sheets.*
Vallentine. *Applied Hydraulics.*
Kaufmann. *Fluid Mechanics.*
5.821 Aircraft Materials and Structures
TEXT BOOKS
Peery. Aircraft Structures, or
REFERENCE BOOK

5.822 Aircraft Materials and Structures
TEXT BOOK
Peery. Aircraft Structures.
REFERENCE BOOK

5.823 Aircraft Materials and Structures
TEXT BOOKS
Peery. Aircraft Structures.
Timoshenko and Goodier. Theory of Elasticity.
REFERENCE BOOKS
Kuhn. Stress in Aircraft and Shell Structures.
Royal Aeronautical Society. Structures Data Sheets.

5.831 Aircraft Propulsion
REFERENCE BOOKS
Shepherd. Introduction to the Gas Turbine.
Hesse. Jet Propulsion.
Judge. Aircraft Engines.
Liston. Aircraft Engine Design.
Zucrow. Gas Turbines and Jet Propulsion.
Schmidt. The Internal Combustion Engine.

NAVAL ARCHITECTURE

5.901 Naval Architecture
TEXT BOOK
REFERENCE BOOKS
De Rooij. *Practical Shipbuilding.*

5.902 Naval Architecture

TEXT BOOKS

REFERENCE BOOKS
De Rooij. *Practical Shipbuilding.*
Lloyd's Register of Shipping. *Rules and Regulations for the Construction and Classification of Steel Ships.*

5.903 Naval Architecture

TEXT BOOK

REFERENCE BOOKS
Bullen. *The Ventilation of Ships.*
Schokker, Neuerburg and Vossnack. *The Design of Merchant Ships.*

5.904 Naval Architecture

TEXT BOOK

REFERENCE BOOKS
Schokker, Neuerburg and Vossnack. *The Design of Merchant Ships.*
Ministry of Transport. *Instruction as to the Survey of Passenger Steamships.* Vols. I and II.
Ministry of Transport. *Instructions as to the Tonnage Measurement of Ships.*
Ministry of Transport. *Measurements of Vessels for the Panama Canal.*
DEPARTMENT OF INDUSTRIAL ENGINEERING

18.111S and 18.111 Industrial Administration

TEXT BOOKS

REFERENCE BOOK

18.211S and 18.221 Production Control

TEXT BOOKS

18.311S and 18.321 Methods Engineering

TEXT BOOKS

Barnes. Motion and Time Study. 5th ed. Wiley, or
Niebel. Motion and Time Study. 3rd ed. Irwin.

REFERENCE BOOKS

18.411S and 18.421 Design for Production I

TEXT BOOKS

B.S. 308. Engineering Drawing Practice.
B.S. 1609. 1949 Press Tool Sets.

REFERENCE BOOK

18.412S and 18.422 Design for Production II

TEXT BOOKS

B.S. 1916 Parts 1 and 2. Limits and Fits for Engineering.
B.S. 308. 1964 Engineering Drawing Practice.
REFERENCE BOOK

18.511S and 18.521 Industrial Marketing

TEXT BOOK

REFERENCE BOOKS

18.611S Engineering Economic Analysis

TEXT BOOK

REFERENCE BOOKS
Sasieni, Yaspan and Friedman. *Introduction to Operations Research.* Wiley.

18.621 Engineering Economics

TEXT BOOK

REFERENCE BOOKS
