FACULTY OF ENGINEERING
1970 HANDBOOK

THE UNIVERSITY OF NEW SOUTH WALES

80 CENTS
The University of New South Wales Library has catalogued this work as follows:

| UNIVERSITY OF NEW SOUTH WALES— | 378.94405 |
| Faculty of Engineering          | NEW       |

W. E. Smith Limited, Webb and Boundary Streets, Croydon, N.S.W.
FOREWORD

This handbook is primarily for undergraduate students in the Faculty of Engineering and aims to provide information concerning the requirements for admission, enrolment and re-enrolment, conditions for the award of the different Bachelor degrees in the Faculty and the subject matter of the courses offered, including text and reference books. It is important that each student in the Faculty becomes well acquainted with the information presented here. In addition to this Handbook, pamphlets and brochures issued in conjunction with the enrolment period and Orientation Week are available. These should be consulted, together with the University Calendar, for further information on problems associated with courses.

At the same time, it is appreciated that a student's choice in regard to course and other matters remains to be discussed with members of the academic staff. Many students will not make their final choice of degree course until well into their first year: some do not need to make their decision before the start of third year. Students should consult the Heads of School about this: where they cannot be available, they have nominated colleagues to deal with enquiries.

P. T. FINK,
Dean,
Faculty of Engineering

Department of Surveying . . . . . . . . . . . . B52
Non-Engineering Subjects . . . . . . . . . . . . B58
CALENDAR DATES FOR 1970

Term 1: March 2 to May 16
Term 2: June 1 to August 8
Term 3: August 31 to October 31

JANUARY—

Monday, 19
Last day for acceptance of applications to enrol by new students and students repeating First Year

Tuesday, 27
Deferred examinations begin

FEBRUARY—

Saturday, 7
Deferred examinations end

Monday, 16
Enrolment Week begins for new students and students repeating First Year

Monday, 23
Enrolment Week begins for students re-enrolling (second and later years)

MARCH—

Monday, 2
First term lectures begin

Friday, 13
Last day for acceptance of enrolments of new students (late fee payable)

Friday, 27 to Monday, 30
Easter

Tuesday, 31
Last day for acceptance of enrolments of students re-enrolling (late fee payable)

APRIL—

Saturday, 25
Anzac Day—Public Holiday

Wednesday, 29
Captain Cook Bi-Centenary Day—Public Holiday

MAY—

Saturday, 16
First term ends

JUNE—

Monday, 1
Second term begins

Monday, 15
Queen's Birthday—Public Holiday

Friday, 26
Last day for acceptance of applications for re-admission after exclusion under rules governing re-enrolment

JULY—

Tuesday, 7
Foundation Day

Friday, 17
Last day for acceptance of corrected enrolment details forms

FACULTY OF ENGINEERING

DEAN — Professor P. T. Fink
CHAIRMAN — Professor P. V. Angus-Leppan

Graduate Assistant to the Dean — D. G. Flynn, BCom N.S.W., MACE

SCHOOL OF CIVIL ENGINEERING

Professor of Civil Engineering, Head of School and of Department of Water Engineering
H. R. Vallentine, BE Syd., MS Iowa, ASTC, FIEAust, MASCE

Professor of Civil Engineering and Head of Department of Structural Mechanics
F. S. Shaw, BE W. Aust., BSc Oxon., DEng Melb., MIEAust, FASCE

Professor of Civil Engineering and Head of Department of Structural Engineering
A. S. Hall, BSc(Eng) Lond., DIC, MIEAust, MASCE

Professor of Civil Engineering
Vacant

Professor of Surveying and Head of Department of Surveying
P. V. Angus-Leppan, BSc(Eng) Rand, PhD DipTP Natal, FISAust, MILS (Natal), MAIC

Administrative Officer
F. K. Hughes, BA DipEd Liv.

Department of Water Engineering
(Including Civil Engineering Practice, Public Health Engineering, Soil Mechanics, Water Resources Engineering, and the Water Research Laboratory)

Associate Professors
R. T. Hattersley, ME N.S.W., ASTC, FIEAust, MASCE
E. M. Laurenson, BE PhD N.S.W., MIEAust
A. F. S. Nettleton, BSc BE Syd., ME N.S.W., DIC, MIEAust
K. K. Watson, BE Syd., ME PhD N.S.W., MIEAust

Senior Lecturers
A. G. Douglas, ME N.S.W., PhD Mich. State, MIEAust
C. R. Dudgeon, ME N.S.W., MIEAust
T. R. Fietz, ME N.S.W., MIEAust, MASCE
D. N. Foster, BE Syd., MIEAust
B. W. Gould, BE Tas., ME N.S.W., MIEAust
D. T. Howell, BE Syd., ME N.S.W., MIEAust, MASCE, MASAE, MAIAS
J. R. Learmonth, BE Syd., ME N.S.W.
L. V. O'Neill, BE Syd., MIEAust
D. H. Pilgrim, BE PhD N.S.W., MIEAust
C. J. Wiesner, BSc Adel., FRMetS
I. R. Wood, BE N.Z., ME PhD N.S.W., MIEAust, MASCE

Lecturers
J. B. Clampett, BE Syd., PhD N.S.W.
G. S. Harris, ME N.Z., PhD N.S.W., MNZIE, MASCE
V. J. Summersby, BE MEngSc N.S.W., MIEAust
H. Taylor, BSc(Eng) Birm., DipNA & AC Syd.

Teaching Fellow
S. N. Webb, BE Cant.

Research Consultant in Public Health Engineering
D. K. B. Thistlethwayte, BSc Syd., ASTC, MIEAust, ARACI

Professional Officers
F. C. Bell, BSc Syd., MSc N.S.W.
G. Siedel, DIC
F. A. J. Stein, BE N.S.W.

Engineers
J. W. Andrew, BE N.S.W., FRMIT
B. A. Cornish, BE Syd., GradIEAust
K. K. Lai, BCE Melb.
R. C. Nelson, BE N.S.W., ASTC, MIEAust
D. J. Potter, ARMIT
P. B. Stone, BE BSc Qld., DIC, MIEAust
K. C. Yong, BS Taiwan National Uni., MEngSc N.S.W., MIEAust, AMIWE

Research Officer
W. C. Boughton, ME N.S.W., MIEAust

Department of Structural Engineering
(Including Civil Engineering Materials and Concrete Technology)

Associate Professors
F. E. Archer, BSc BE Syd., MIEAust
H. J. Brettle, BE Syd., PhD N.S.W., DIC, ASTC, FIEAust
G. B. Welch, BE Syd., ME N.S.W., FICE, FIEAust

Senior Lecturers
P. S. Balint, DiplEng. Bud., ME N.S.W., MIEAust
K. A. Faulkes, ME N.S.W., MS Ill., MIEAust
R. A. Frisch-Fay, DiplEng. Bud., ME N.S.W., MIEAust
J. L. Jenkins, BE Syd., ME N.S.W., DIC, ASTC, MIEAust
A. P. Kabaila, MEngSc PhD N.S.W., FRMTC, MIEAust
E. M. Kitchen, BE Syd., MIEAust
B. J. F. Patten, BE Syd., PhD N.S.W., DIC, MIEAust
R. F. Warner, ME N.S.W., PhD Lehigh, MIEAust
FACULTY OF ENGINEERING

Lecturers
L. S. Edwards, BCE Melb., BSc Syd., MSc Lond., DIC, ARMTC, MIEAust
G. M. Folie, BE Melb., PhD Ston., DIC, MIEAust
D. J. Fraser, MEngSc N.S.W., ASTC

A. W. Manton-Hall, BE, MEngSc N.S.W., MIEAust
J. A. O'Brien, BCE City C.N.Y., ScD M.I.T.
J. J. Somervaille, BE N.S.W., ASTC
S. Valliappan, BE Annam., MS Northeastern, PhD Wales, AMIE (India), AMASCE
P. F. Walsh, BE PhD N.S.W.

Professional Officers
D. E. Hattersley, MSc N.S.W., ASTC
H. N. Lunsman, BE N.S.W., ASTC, GradIEAust
J. M. Taylor, ASTC, MIEAust

Department of Structural Mechanics

Associate Professor
R. W. Traill-Nash, BE W. Aust., PhD Brist., MIEAust, AFRAeS

Senior Lecturer
A. K. Noor, BSc Cairo, MSc PhD Ill.

Teaching Fellows
V. G. Karhan, DiplEng T. U. Prague
Hari Kishan, ME Roorkee

Department of Surveying

Senior Lecturers
J. S. Allman, BSurv PhD N.S.W., MAIC, MISAust
G. G. Bennett, MSurv Melb., LS (N.S.W.), FISAust
J. G. Freislich, BSc(Eng) Rand, MISAust, AMINS(SA)
R. S. Mather, BSc Ceylon, PhD N.S.W., MISAust

Lecturers
F. L. Clarke, BServ N.S.W., LS(N.S.W.), MISAust
G. J. F. Holden, ARICS, DipPhoto. Lond., FRGS, MISAust
D. W. Lambden, BSc NewBr., DipTCP Syd., DLS(Canada), LS(N.S.W.), RS(N.Z.), MISAust, MNZIS, MASCE, ARICS
A. J. Robinson, BServ N.S.W., LS(N.S.W.), MISAust, AMAIC
J. C. Trinder, BServ N.S.W., MSc T.H. Delft, LS(N.S.W.), MISAust, ITC
A. P. H. Werner, DiplIng Bonn, MISAust

Senior Tutors
A. H. W. Kearsley, BServ N.S.W., MAIC, AISMAust
M. Maughan, BSc Lond., ARICS

Instructor
B. Ostoja, MISAust

Teaching Fellow
B. T. Allo, BSc New Br.
SCHOOL OF ELECTRICAL ENGINEERING

Professor of Electrical Engineering and Head of School
C. B. Speedy, BE(Hons) N.Z., PhD Syd., CEng, FIEE, MIEEE, FIEAust

Professor of Electrical Engineering
R. E. Vowels, ME Adel., SMIEEE, MIEAust, CEng, FIEE

Professor of Electrical Engineering (Communications)
A. E. Karbowiak, DSc(Eng) Lond., CEng, FIEE

Professor of Electronic Computation and Director of Digital Computing Laboratory
M. W. Allen, BE Adel., PhD Syd., CEng, FIEE, MIEEE

Professor of Electrical Engineering (Solid State Electronics)
L. W. Davies, BSc Syd., DPhil Oxon., FInstP, FAIP, SMIREEAust

Executive Assistant to Head of School
A. P. Blake, BSc BE Syd., MIEAust

Senior Administrative Officer
H. G. Phillips

Department of Communications

Senior Lecturers
W. H. Holmes, BSc BE MEngSc Syd., PhD Cantab., MIEEE
G. J. Parker, BSc BE Syd., ME N.S.W., MIEAust, MIREEAust

Lecturers
P. T. Bason, ME N.S.W., MIEAust, MIEEE
E. H. Fooks, BSc PhD Lond.
T. L. Hooper, BSc Syd., MSc N.S.W., CEng, FIEE, MIEEE, AMIREEAust
H. L. Humphries, BSc BE BSc Syd., MIEAust

Teaching Fellows
P. L. Chu, ME N.S.W.
A. Watson, BSc(Eng) MSc Aberd.
G. N. Westley, BEng Liv.

Professional Officers
K. Poronnik, BE N.S.W., ASTC
J. Swift, BSc Melb.
Department of Control Engineering

Senior Lecturers
J. B. Hiller, BE PhD N.S.W., MIEEE
C. A. Stapleton, BSc BE Syd., CEng, MIEAust, FIEE

Lecturers
R. F. Brown, BE Liv., CEng, FIEE
F. Lewin, BSc BE Syd.
B. P. Molinari, BE W.Aust.
O. Pawloff, DiplIng Berl., MIEAust, MIREEAust
G. T. Poulton, BSc BE N.S.W.
K. E. Tait, BE(Hons) BSc N.Z., MIEAust

Teaching Fellows
O. L. Colombo, IngTel La Plata
D. K. Goodman, BS(EE) Mississippi, MS(EE) Stan., MIEEE

Professional Officers
R. D. Bell, BE N.S.W.
K. J. Flynn, BE N.S.W., ASTC
K. W. Ford, ASTC
J. H. Siewerts, BE N.S.W., ASTC

Department of Electronic Computation

Senior Lecturers
A. Dunworth, BSc PhD Manc., GradInstP, MIEAust
N. Solntsef, BSc PhD Syd., AAIinstP, AInstP

Lecturers
L. C. Hill, BE N.S.W., MIEAust
G. B. McMahon, BSc Syd.
A. A. Thompson, BE N.S.W., ASTC

Teaching Fellow
S. Poplavsky, DiplIng Bratislava

Professional Officer
K. W. Titmuss, BSc(Tech) N.S.W.

Manager, Computer Centre
P. E. Lambert, BE Syd., MS Case, GradIChemE

Professional Officers, Computing Centre
B. C. Ragg, BE N.S.W.
K. A. Robinson, BSc BE Syd.
R. A. Vowels, BE Syd.

Department of Electric Power Engineering

Associate Professors
G. C. Dewsnap, MEE Melb., CEng, FIEE, MIEAust
R. M. Huey, BSc BE Syd., FIEAust, FIREEAust
Senior Lecturers
A. P. Blake, BSc BE Syd., MIEAust
G. W. Donaldson, BE Qld., BSc MA Oxon., CEng, FIEE, MIEAust
H. Harrison, BSc BE Syd., ME N.S.W., MIEAust
G. J. Johnson, MSc Syd., CEng, FIEE, AInstP, SMIEEE
C. St. J. Lamb, BE N.S.W., MSc(Eng) Lond., ASTC, CEng, FIEE

Lecturer
I. F. Morrison, BSc BE PhD Syd.

Department of Solid-State Electronics
Senior Lecturer
H. S. Blanks, BSc ME Syd., MIEI, MIREEAust

Lecturers
M. W. Nield, BEng PhD Liv., AInstP
R. Vaughan, BSc BE PhD Syd.

Tutor
R. L. Willoughby, BSc Syd.

Teaching Fellows
P. B. Kosel, BSc Syd.
H. Morisaki, BSc Kobe, ME Osaka

SCHOOL OF HIGHWAY ENGINEERING

Professor of Highway Engineering and Head of School
D. F. Orchard, BSc PhD Lond., DIC, ACGI, FICE, FIEAust, MInstT, MIMunE, AMIStrucE

Senior Lecturers
W. H. Cogill, MSc Cape T. and Cantab., FICE

J. I. Tindall, BE Qld., ME N.S.W.
H. J. A. Turner, BSc Lond., ME N.S.W., MIEE, ARCS

Teaching Fellow
R. J. Cowan, BSc N.S.W.

Senior Project Scientist
R. J. Keith, ME N.S.W., ASTC

Project Scientists
M. C. Dunne, BSc PhD Adel.
A. J. Fisher, BSc Lond.

Professional Officers
F. Cahill, BSc(Tech) N.S.W.
A. B. Crouch, BA BSc Syd.
R. R. Hall, BSc A.N.U.
C. J. Wingrove, BSc N.S.W.
THE FACULTY

SCHOOL OF CIVIL ENGINEERING

The School of Civil Engineering consists of four departments, the Department of Water Engineering, the Department of Structural Engineering, the Department of Structural Mechanics and the Department of Surveying. The School conducts undergraduate courses in Civil Engineering and in Surveying, both part-time and full-time. In addition, the Departments conduct graduate courses in Structural Engineering, Water Engineering, Public Health Engineering and Engineering Construction. A vigorous graduate research programme is pursued in many fields.

The Department of Water Engineering encompasses the fields of Hydraulics, Hydrology, Public Health Engineering, Soil Mechanics and Engineering Construction. Public Health Engineering and Soil Mechanics Laboratories are located at Kensington. The Hydrology research centre is also at Kensington, but a substantial amount of investigation is carried out in the field. The Water Research Laboratory at Manly Vale is the centre for hydraulics laboratory instruction and investigations.

The Department of Structural Engineering covers the fields of Structural Engineering, Civil Engineering Materials, and Concrete Technology. The Materials and Concrete Technology laboratories, the Model Structures Laboratory, the Experimental Stress Analysis Laboratory and the Solid Mechanics Laboratory are at Kensington. The Structures Laboratory, which was formerly at Ultimo, is being re-established at King Street, Randwick in the vicinity of the Schools of Highway and Traffic Engineering.

The Department of Structural Mechanics is concerned with the analysis of the static and dynamic behaviour, both linear and non-linear, of structures and structural components.

The Department of Surveying has facilities for precise astronomical observation and for surveying computation, also a well-equipped Photogrammetrical Laboratory, all at Kensington. As well as the usual surveying equipment, it possesses modern electronic distance measuring equipment.

SCHOOL OF ELECTRICAL ENGINEERING

The School of Electrical Engineering comprises five departments — Communications, Control Engineering, Electric Power...
Engineering, Electronic Computation, and Solid State Electronics. Each department carries out research in its own field and offers lecture and laboratory courses at the undergraduate and postgraduate levels. Subjects of common interest are provided by the School as a whole.

Special laboratories are equipped for work in the areas of Microwaves, Plasmas, Computer Control, Machines and Acoustics. A Measurements Laboratory provides a calibrating service under certificate from the National Association of Testing Authorities, and an I.B.M. 360/50 computer is installed in the School.

SCHOOL OF HIGHWAY ENGINEERING

Postgraduate courses are offered, leading to the degree of Master of Engineering Science and to a Postgraduate Diploma, in which road location and geometries, properties of road materials, construction techniques, bridge design and traffic engineering are studied.

The School has well-equipped laboratories for studying the properties of soils, road aggregates, bitumen and cement concrete, and active studies on these subjects are in progress. Members of the school use a 1620 IBM computer as part of their course, and studies are being made of its utilization in all phases of highway engineering. They also have access to a 360/50 computer.

SCHOOL OF MECHANICAL AND INDUSTRIAL ENGINEERING

Full-time undergraduate courses leading to the degree of Bachelor of Engineering are offered in Mechanical, Industrial, and Aeronautical Engineering, and in Naval Architecture. Part-time courses leading to the degree of Bachelor of Science (Technology) are offered in the same four fields. Either degree may be taken out by a combination of full-time/part-time study, subject to approval by the Head of School.

The first two years of the full-time degree, and the first four stages of the part-time degree are common to all courses within the School. Thus a final decision on the discipline to be followed need not be made until the end of second year for full-time and fourth stage for part-time students.

Formal postgraduate courses of study are available, with a wide choice of subjects, leading to the degree of Master of Engineering Science in Mechanical Engineering. There are special Master of Engineering Science courses in Refrigeration and Air Condi-
tioning, and in Industrial Engineering. The Department of Industrial Engineering within the School offers a course leading to a Graduate Diploma.

Graduates with a good first degree may register for the higher degrees of Master of Engineering and Doctor of Philosophy. Current research fields are as follows—Aerodynamics, Agricultural Engineering, Applied Plasticity, Automatic Control, Bio-mechanics, Dynamics, Gas Dynamics, Heat Transfer, Fluid Mechanics, Metal Cutting, Naval Hydrodynamics, Refrigeration and Air Conditioning, and Two-phase Flow.

Undergraduates who are interested in working for a research degree should consult the Head of School towards the end of their final year. Advice will be given to all students during their third year so that each can select the best possible combination of final year elective subjects.

SCHOOL OF NUCLEAR ENGINEERING

The School of Nuclear Engineering offers a formal graduate course (MEngSc) and accepts candidates for the ME and PhD degrees. Nuclear Engineering covers neutron and gamma transport theory, the analysis of the nuclear aspects of reactor performance, heat and fluid flow, heat removal processes, thermal stress, steady state thermal performance and design, neutron kinetics, reactor and nuclear power system dynamics, and nuclear power system economics, selection and optimization. Digital computation is fundamental to the study of nuclear reactors, and particular attention is given to the efficiency of numerical techniques and the basic mathematical theory.

Research activities in the School include aspects of neutron transport theory, problems of heat flow and thermal stress associated with variable surface heat transfer, ball flow in a pebble bed reactor, reactor noise analysis and studies of nuclear and thermal random processes in nuclear power reactors.

SCHOOL OF TRAFFIC ENGINEERING

The School of Traffic Engineering is located at Randwick, and is associated with the School of Highway Engineering and the Institute of Highway and Traffic Research.

The establishment of the School followed the endowment of a Chair by the Australian Automobile Association, which had long been concerned with the need for a centre for training traffic engineers and specialists. The School is assisting this object by
conducting courses in traffic and transport planning and control, and offering opportunities for research into the technical problems created by the tremendous growth in the use of the motor vehicle on the street and highway system, and also into its impact on other forms of transport and on land use activity.

The research activities of the School cover a wide range of transport and traffic phenomena, viz.: traffic flow theory — queueing, traffic stream structure, saturation flow; transportation planning — land use and transport interaction, system parameters, synthetic models for growth, distribution and assignment of desire lines; public enterprise economics; and human factors and road safety. Research in these fields can be undertaken for the ME, MSc, and PhD degrees. Formal courses, one year full-time and two years part-time, leading to the degree of Master of Engineering Science are also offered in Transport and Traffic. A part-time Transport Graduate course offered over six terms leads to a Graduate Diploma.
REQUIREMENTS FOR ADMISSION

A person who seeks to become a candidate for any degree of Bachelor of the University must first have qualified for matriculation and have satisfied the requirements for admission to the particular Faculty, Course or Subject chosen.

It should be noted that compliance with these conditions does not in itself entitle a candidate to enter upon a course. While it is the policy of the University to endeavour to admit all properly qualified applicants who have lodged applications by the appropriate closing date, it may be necessary at times to restrict the entry to one or more faculties because of lack of facilities. Information concerning any such restrictions will be publicized as soon as practicable.

A candidate who has satisfied the conditions for matriculation and for admission to a course of study shall be classed as a "matriculated student" of the University, after enrolment.

A person who has satisfactorily met the conditions for admission may be provided with a statement to that effect on the payment of the prescribed fee.

MATRICULATION REQUIREMENTS

Section A

GENERAL MATRICULATION AND ADMISSION REQUIREMENTS

(for entry to the University in 1969 and until further notice)

1. A candidate may qualify for matriculation by attaining in recognised matriculation subjects at one New South Wales Higher School Certificate Examination or at one University of Sydney Matriculation Examination a level of performance determined by the Professorial Board from time to time.

2. The level of performance required to qualify for matriculation shall be
(a) passes in at least five recognised matriculation subjects, one of which shall be English and three of which shall be at Level 2 or higher; and

(b) the attainment of an aggregate of marks, as specified by the Professorial Board, in not more than five recognised matriculation subjects, such marks being co-ordinated in a manner approved by the Board.

3. The following subjects, and such other subjects as may be approved by the Professorial Board from time to time, shall be recognised matriculation subjects:—

4. A candidate who has qualified to matriculate in accordance with the provisions of Clauses 1, 2 and 3 may be admitted to a particular Faculty, Course or Subject provided that:—

(a) his qualification includes a pass at the level indicated in the subject or subjects specified in Schedule A as Faculty, Course or Subject Pre-Requisites; or

(b) the requirements regarding these particular Faculty, Course or Subject Pre-Requisites, as specified in Schedule A, have been met at a separate Higher School Certificate or University of Sydney Matriculation Examination.

5. Notwithstanding any of the provisions of Clauses 1 to 4, the Professorial Board may grant matriculation status to any candidate at the Higher School Certificate or University of Sydney Matriculation Examination who has reached an acceptable standard and may admit him to any Faculty, Course or Subject.

NOTE

1. For the purposes of clause 2(a), Mathematics and Science BOTH PASSED at First Level or Second Level Full Course shall together count as three subjects.

2. For the purposes of clause 2(b), Mathematics and Science, TAKEN either singly or together at First Level or Second Level Full Course shall each count as one and one half subjects.

Section B

SUPPLEMENTARY PROVISIONS FOR MATRICULATION

1. Notwithstanding the provisions of Section A above, candidates may be accepted as "matriculated students" of the University under the following conditions subject to the approval of the Professorial Board:

(a) Any person who holds a diploma from the New South Wales Department of Technical Education, or any other Technical College which may from time to time be recognised by the University, may be admitted to the University as a "matriculated student" with such status as the Board may determine, provided that, in the opinion of the Board, the applicant's qualifications are sufficient for matriculation to the Faculty nominated.

(b) The Board may admit as a "matriculated student" in any Faculty with such status as the Board may determine in the circumstances;

(i) A graduate of any approved University.

(ii) An applicant who presents a certificate from a University showing that he has a satisfactory record and is qualified for entrance to that University, provided that in the opinion of the Board there is an acceptable correspondence between the qualifying conditions relied upon by the applicant and conditions laid down for matriculation to the nominated Faculty of the University of New South Wales.

(c) (i) Any person who has completed the first year of the course at the Royal Military College of Australia and submits a certificate from the Commandant to that effect may be admitted as a "matriculated student" of the University.

(ii) Any person who has completed a full course of at least three years' prescribed study at the Royal Military College of Australia and produces a certificate from the Commandant to that effect may be admitted as a "matriculated student" of the University with such status as the Board may determine.

(d) Any person who had completed satisfactorily the passing out examination of the Royal Australian Naval College and submits a certificate from the Commanding Officer may be admitted as a "matriculated student" of the University.
(e) (i) Any person who has completed the first year of the course at the Royal Australian Air Force College and submits a certificate from the Commandant to that effect, may be admitted as a "matriculated student" of the University.

(ii) Any person who has completed two years of the course at the Royal Australian Air Force College and submits a certificate from the Commandant to that effect, may be admitted as a "matriculated student" of the University with such status as the Board may determine.

(f) An applicant who presents a certificate from another University showing that he is qualified for entrance to that University and setting out the grounds of such qualification, provided that in the opinion of the Professorial Board, there is an acceptable correspondence between the qualifying conditions relied upon by the applicant and the conditions laid down for matriculation to the nominated Faculty of the University of New South Wales.

2. (a) The Professorial Board may in special cases, including cases concerning persons of other than Australian education, declare any person qualified to enter a Faculty as a "provisionally matriculated student" although he has not complied with the requirements set out above, and in so doing may prescribe the completion of certain requirements before confirming the person's standing as a "matriculated student". Students who satisfactorily complete these requirements will be permitted to count the courses so passed as qualifying for degree purposes.*

(b) Persons over the age of twenty-five years may be admitted to provisional matriculation status provided that:

(i) they have satisfactorily completed an approved course of systematic study extending over at least three years after passing the School Certificate Examination or

(ii) they satisfy the Professorial Board that they have reached a standard of education sufficient to enable them profitably to pursue the first year of the proposed course.

*The Professorial Board has determined that normally confirmation of standing as a "matriculated student" will require the successful completion of not less than half the normal programme in the first year of enrolment.
(c) Any applicant for provisional status may be required to take such examination as the Professorial Board may prescribe before such status is granted.

3. The Professorial Board may at its discretion permit a person, who does not satisfy the requirements for admission, to attend lectures in a subject or subjects at the University, on payment of the prescribed fees provided that such person shall not necessarily have the privileges of "matriculated students" and shall not be eligible to proceed to a degree.
ADMISSIONS AND ENROLMENT PROCEDURE

ADMISSIONS PROCEDURE

Details of the procedure to be followed by students seeking entry to first year courses at the University may be obtained from the Admissions Office or the Metropolitan Universities Admissions Centre.

Persons seeking entry to first year courses in one or more of the three Universities in the Sydney Metropolitan Area (Macquarie University, the University of New South Wales and the University of Sydney) are required to lodge a single application form with the Metropolitan Universities Admissions Centre, Third Floor, 13-15 Wentworth Avenue, Sydney (near Liverpool Street). Postal address: Box 7049, G.P.O., Sydney, 2001. Telephone: 26-6301. On the application form provision is made for applicants to indicate preferences for courses available in any of the three Universities. Students are notified individually of the result of their applications and provided with information regarding the procedures to be followed in accepting the offer of a place at this University and completing their enrolment at the Enrolment Bureau, Unisearch House, 221 Anzac Parade, Kensington.

FACULTY OF ENGINEERING ENQUIRY CENTRE

The Faculty Enquiry Centre is situated in the undercroft of the School of Electrical Engineering Building, Kensington (the corner of Engineering and Library Roads). Members of Academic Staff will be available to advise students about careers in the various fields of engineering and about undertaking a course in engineering in this University. The Centre will be open from 10.00 a.m. to 4.30 p.m. (closed 1.00 p.m. to 2.00 p.m) from 5th to 19th January, 1970. Prospective students are advised to take advantage of this facility.

ADMISSIONS OFFICE

The Admissions Office which is located in the Chancellery on the upper campus provides intending students (both local and overseas) with information regarding courses, admission require-
ments, scholarships and enrolment. Office hours are from 9.00 a.m. to 1.00 p.m. and 2.00 p.m. to 5.00 p.m. Monday to Friday and an evening service is provided during the enrolment period.

Applications for special admission, admission with advanced standing and from persons relying for admission on overseas qualifications should be lodged with the Admissions Office. The Office also receives applications from students who wish to transfer from one course to another, resume their studies after an absence of twelve months or more, or seek any concession in relation to a course in which they are enrolled. It is essential that the closing dates for lodgment of applications are adhered to, and, for further details the sections on "Rules Relating to Students" and "Enrolment Procedure for Undergraduate Courses" should be consulted.

Applications for admission to undergraduate courses from students who do not satisfy the requirements for admission (see section on "requirements for admission"), from students seeking admission with advanced standing, and from students who have had a record of failure at another University, are referred by the Admissions Office to the Admissions Committee of the Professorial Board.

Students seeking to register as higher degree candidates should discuss their proposals initially with the Head of the School in which they wish to register. An application is then lodged on a standard form and the Admissions Office, after obtaining a recommendation from the Head of the School, refers the application to the appropriate Faculty or Board of Studies Higher Degree Committee.

ENROLMENT PROCEDURE FOR UNDERGRADUATE COURSES

It is the policy of the University to endeavour to admit all properly qualified applicants who have lodged applications by the appropriate closing date. In 1970, however, facilities available to the University will make it necessary to impose quotas in the faculties of Architecture, Arts, Commerce and Medicine, and in the School of Social Work.

The enrolment procedure for the different classes of undergraduate students is as follows:

First Enrolments

Students with Overseas Entry Qualifications

Overseas students and Australian Residents relying for admission on overseas qualifications must lodge an application for enrolment prior to 31st October of the year preceding that in which admission is sought.
Local and Interstate Residents

(a) Australian Residents including students transferring from one course to another or from another University who have undertaken qualifying examinations in 1969 must lodge an application for enrolment by 19th January, 1970.

(b) Australian Residents already qualified for admission and students wishing to resume University studies must apply for enrolment by 31st October, 1969.

First Year Repeat Students

First year students who fail all subjects at the annual examinations and who are not granted any deferred examinations must apply for re-enrolment to the Admissions Office by 19th January, 1970.

Application forms for enrolment and details of the application procedures may be obtained on application to the Registrar, P.O. Box 1, Kensington, 2033.

Students in the above categories whose applications for enrolment are accepted will be required to complete their enrolment at a specified appointment time before the start of first term. Fees must be paid on the day of the appointment. However, in special circumstances and provided class places are still available, students may be allowed to complete their enrolment after the prescribed week subject to the payment of a late fee.

Later Year Enrolments. All students enrolling other than for the first time and not included above should enrol through the appropriate School and bring with them their notification of examination results for the previous year. This enrolment must be effected before or during the week before the commencement of First Term in accordance with the special arrangements made by the individual Schools.

Miscellaneous Subject Enrolments. Students may be permitted to enrol for miscellaneous subjects (i.e. as students not proceeding to a degree or diploma) provided the Head of the School offering the subject considers it will be of benefit to the student and there is accommodation available. Only in exceptional cases will subjects taken in this way count towards a degree or diploma. Where a student is under exclusion he may not be enrolled in miscellaneous subjects unless given approval by the Professorial Board.

Students who have completed the final examinations but have a thesis still outstanding are required to enrol for the period necessary to complete the thesis and to pay the requisite fees.
A32 THE UNIVERSITY OF NEW SOUTH WALES

Course details must be completed during the prescribed Enrolment Week. For details of fee requirements, including late fee provisions, see under Fees.

**Final Dates for Completion of Enrolment.** No enrolments will be accepted from new students after the end of the second week of term (13th March, 1970) except with the express approval of the Registrar and the Head of the School concerned; no later year enrolments will be accepted after 31st March without the express approval of the Registrar which will be given in exceptional circumstances only.

**UNIVERSITY UNION CARD**

All students other than miscellaneous students are issued with a University Union membership card. This card must be carried during attendance at the University and shown on request.

The number appearing on the front of the card in the space at the top right-hand corner is the student registration number used in the University’s records. This number should be quoted in all correspondence.

The card must be presented when borrowing from the University libraries, when applying for travel concessions and when notifying a change of address. It must also be presented when paying fees on re-enrolment each year when it will be made valid for the year and returned. Failure to present the card could result in some inconvenience in completing re-enrolment.

A student who loses a Union card must notify the University Union as soon as possible.

New students will be issued with University Union cards by mail to their term address as soon as possible after fee payment. In the meantime, the fees receipt form should be carried during attendance at the University and shown on request. If the Union card is not received within three weeks of fee payment, the University Union should be notified.
FEES*

COURSE FEES

Where course fees are assessed on the basis of term hours of attendance the hours for each subject for purposes of fee assessment shall be those prescribed in the Calendar, irrespective of any variation from the prescribed hours which may be necessary in conducting the subject.

Fee determination for courses in the Faculty of Engineering is on a term basis. A full-time course fee will be charged for any term where more than 15 hours' per week instruction, etc., is involved.

(i) Full-time Course Fee (more than 15 hours' attendance per week)—$132 per term.
In courses in which the Third Term is limited to five weeks of formal studies the fee for this term is $66.
(ii) Part-time Course Fee—over 6 hours and up to 15 hours' attendance per week—$66 per term.
(iii) Part-time Course Fee—6 hours' or less attendance per week—$33 per term.
(iv) Course Continuation Fee—A fee of $28 per annum (no term payment) is payable by:
Category (a) students who have once been enrolled for a thesis and have only that requirement outstanding, or
Category (b) students given special permission to take annual examinations without attendance at the University.
(Students in this category are not required to pay the subscriptions to the University Union, the Students' Union, the Sports Association and the Library Fee.)

OTHER FEES

In addition to the course fees set out above all registered undergraduates will be required to pay:

Matriculation Fee — $8 — payable at the beginning of first year.
Library Fee — annual fee — $14.
University Union — $20 — entrance fee.

*Fees quoted are current at time of publication. The Council reserves the right to alter them at any time.
Student Activities Fees:

- University Union* — $20 — annual subscription.
- Sports Association* — $2 — annual subscription.
- Students’ Union* — $5 — annual subscription.
- Miscellaneous — $10 — annual fee.

Graduation or Diploma Fee — $8 — payable at the completion of the course.

Depending on the course being taken, students may also be required to pay:

- Applied Psychology Kit Hiring Charge — $2 per kit. Additional payment for breakages and losses in excess of $1.
- Biochemistry Kit Hiring Charge — $4 per kit. Additional charge for breakages and losses in excess of $1 may be required.
- Chemistry Kit Hiring Charge — $4 per kit. Additional charge for breakages and losses in excess of $1 may be required.
- Excursion Fee — $2 per subject (botany, zoology, entomology).†
- Anatomy Dissection Manual and Histology Slides deposit — $10 (refundable on return in satisfactory condition).
- Pathology Instrument Kit — $10 (refundable on return in satisfactory condition).

SPECIAL EXAMINATION FEES

Deferred examination — $6 for each subject.
Examinations conducted under special circumstances — $8 for each subject.
Review of examination result — $8 for each subject.

LATE FEES

First Enrolments

Fees paid at the late enrolment session and before the commencement of term .... .... $7
Fees paid during the 1st and 2nd weeks of term $14
Fees paid after the commencement of the 3rd week of term with the express approval of the Registrar and Head of the School concerned $28

* Life members of these bodies are exempt from the appropriate fee or fees.
† Students in the original Applied Biology degree course pay an excursion fee of $1 per subject for Botany, Zoology and Entomology.
Re-Enrolments

First Term

Failure to attend enrolment centre during enrolment week ... ... ... ... ... ... ... $7
Fees paid after the commencement of the 3rd week of term to 31st March ... ... ... $14
Fees paid after 31st March where accepted with the express approval of the Registrar ... ... $28

Second and Third Terms

Fees paid in 3rd and 4th weeks of term ... ... ... $14
Fees paid thereafter ... ... ... ... ... ... ... $28
Late lodgement of corrected enrolment details forms (late applications will be accepted for three weeks only after the prescribed dates) ... ... $6

WITHDRAWAL FROM COURSE

Students withdrawing from a course are required to notify the Registrar in writing. Fees for the course accrue until a written notification is received.

Where notice of withdrawal from a course is received by the Registrar before the first day of First Term a refund of all fees paid other than the matriculation fee will be made.

Where a student terminates for acceptable reasons a course of study before half a term has elapsed, one half of the term’s fee may be refunded. Where a student terminates a course of study after half a term has elapsed, no refund may be made in respect of that term’s fees.

The Library fee is an annual fee and is not refundable where notice of withdrawal is given after the commencement of First Term.

On notice of withdrawal a partial refund of the University Union Entrance Fee is made on the following basis; any person who has paid the entrance fee in any year and who withdraws from membership of the University Union after the commencement of first term in the same year, or who does not renew his membership in the immediately succeeding year may on written application to the Warden receive a refund of half the entrance fee paid.
On notice of withdrawal a partial refund of the Student Activities Fees is made on the following basis:

University Union — $3.33 in respect of each half term.

University of New South Wales Students' Union — where notice is given prior to the end of the fifth week of first term $2, thereafter no refund.

University of New South Wales Sports Association — where notice is given prior to 30th April a full refund is made, thereafter no refund.

Miscellaneous — where notice is given prior to 30th April $5, thereafter no refund.
PAYMENT OF FEES

Completion of Enrolment

All students are required to attend the appropriate enrolment centre during the prescribed enrolment period* for authorization of course programme. Failure to do so will incur a late fee of $7.

First year students (including students repeating first year) must complete enrolment (including fee payment) before they are issued with class timetables or permitted to attend classes. A first year student who has been offered a place in a course to which entry is restricted and fails to complete enrolment (including fee payment) at the appointed time may lose the place allocated.

Fees should be paid during the prescribed enrolment period but will be accepted during the first two weeks of First Term. (For late fees see earlier). No student is regarded as having completed an enrolment until fees have been paid. Fees will not be accepted (i.e., enrolment cannot be completed) from new students after the end of the second week of term (i.e., 13th March, 1970) and after 31st March from students who are re-enrolling, except with the express approval of the Registrar, which will be given in exceptional circumstances only.

Payment of Fees by Term

Students who are unable to pay their fees by the year may pay by the term, in which case they are required to pay first term course fees and other fees for the year, within the first two weeks of First Term. Students paying under this arrangement will receive accounts from the University for Second and Third Term fees. These fees must be paid within the first two weeks of each term.

Assisted Students

Scholarship holders or Sponsored Students who have not received an enrolment voucher or appropriate letter of authority from their sponsor at the time when they are enrolling should

*The enrolment periods for Sydney students are prescribed annually in the leaflets “Enrolment Procedure for New Students” and “Enrolment Procedure for Students Re-enrolling”.

A37
complete their enrolment paying their own fees. A refund of fees will be made when the enrolment voucher or letter of authority is subsequently lodged with the Cashier.

Extension of Time

Any student who is unable to pay fees by the due date may apply in writing to the Registrar for an extension of time. Such application must give year or stage, whether full-time or part-time, and the course in which the applicant wishes to enrol, state clearly and fully the reasons why payment cannot be made and the extension sought, and must be lodged before the date on which a late fee becomes payable. Normally the maximum extension of time for the payment of fees is until 31st March for fees due in First Term and for one month from the date on which a late fee becomes payable in Second and Third Terms.

Where an extension of time is granted to a first year student in First Term, such student may only attend classes on the written authority of the Registrar, but such authority will not normally be given in relation to any course where enrolments are restricted.

Failure to Pay Fees

Any student who is indebted to the University and who fails to make a satisfactory settlement of his indebtedness upon receipt of due notice ceases to be entitled to membership and privileges of the University. Such a student is not permitted to register for a further term, to attend classes or examinations, or to be granted any official credentials.

No student is eligible to attend the annual examinations in any subject where any portion of his course fees for the year is outstanding after the end of the fourth week of Third Term (25th September, 1970).

In very special cases the Registrar may grant exemption from the disqualification referred to in the two preceding paragraphs upon receipt of a written statement setting out all relevant circumstances.

Cashier's Hours

The cashier's office is open for the payment of fees from 9.30 a.m. to 1.00 p.m., and from 2.00 p.m. to 4.30 p.m. Monday to Friday. It is open for additional periods during the first three weeks of each term.
RULES RELATING TO STUDENTS

GENERAL CONDUCT

Acceptance as a member of the University implies an undertaking on the part of the student to observe the regulations, by-laws and other requirements of the University, in accordance with the declaration signed at the time of the enrolment.

In addition, students are expected to conduct themselves at all times in a seemly fashion. Smoking is not permitted during lectures, in examination rooms or in the University Library. Gambling is also forbidden.

ATTENDANCE AT CLASSES

Students are expected to be regular and punctual in attendance at all classes in the course or subject in which they are enrolled. All applications for exemption from attendance at lectures or practical classes must be made in writing to the Registrar.

Where a student has failed a subject at the annual examinations in any year and re-enrolls in the same course in the following year, he must include in his programme of studies for that year the subject in which he has failed. This requirement will not be applicable if the subject is not offered the following year; is not a compulsory component of a particular course; or if there is some other cause, which is acceptable to the Professorial Board, for not immediately repeating the failed subject.

Where a student has attended less than eighty per cent of the possible classes, he may be refused permission to sit for the examination in that subject.

COURSE TRANSFERS

Students wishing to transfer from one course to another (including transfer from full-time to part-time study or vice versa) must make application to the Admissions Office. Applications to transfer to courses where quotas apply will not be accepted after 19th January. The Admissions Office will give each applicant an acknowledgement of his application to transfer.

Having made application to the Admissions Office students
transferring are required to attend the School Enrolment Centre at the time set down for the year/stage of the new course in which they expect to enrol. They must present the letter granting approval of the transfer to the enrolling officer.

Students who have not received a letter granting approval to the transfer before the date on which they are required to enrol must present their acknowledgement to the enrolling officer who will decide whether to permit them to attend classes provisionally in the new course. Students who are permitted to attend classes provisionally should not pay fees until they have received their letter granting formal approval to transfer.

CHANGES IN COURSE PROGRAMMES AND WITHDRAWAL FROM SUBJECTS

Students seeking approval to substitute one subject for another or add one or more subjects to their programme must make application to the Head of the School responsible for the course on a form available from School offices. In the case of students wishing to withdraw from subjects or terminate their enrolment the application must be lodged at the Examinations and Student Records Section. The Registrar will inform students of the decision. Approval of withdrawal from subjects is not automatic, each application being determined after considering the circumstances advanced as justifying withdrawal. It is emphasised that withdrawal from subjects after Term I or failure to sit for the examinations in any subjects for which the student has enrolled is regarded as failure to pass the subjects unless written approval to withdraw has been obtained from the Registrar.

RESUMPTION OF COURSES

Students wishing to resume their studies after an absence of twelve months or more are required to apply to the Admissions Office for permission to re-enrol by 19th January, 1970. Students re-enrolling in this way will normally be required to satisfy conditions pertaining to the course at the time of re-enrolment. This condition applies also to students who have been re-admitted to a course after exclusion under the rules restricting students re-enrolling.

ANNUAL EXAMINATIONS

The annual examinations take place in November-December for students in thirty-week courses, and in September for students in twenty-one and twenty-four week courses. Timetables show-
ing time and place at which individual examinations will be held are posted on the central notice boards which are in the Bio-
Medical Building, Central Lecture Theatre Block, Chancellery,
Dalton Building, Main Building and Western Grounds Area. Misreading of the timetable is not an acceptable excuse for failure to attend an examination. Examination results are posted to the term addresses of students. No results will be given by telephone.

All students will receive an enrolment details form by 30th June. It is not necessary to return this form, unless any information recorded there is incorrect. Amended forms must be returned to the Examinations Branch by 17th July. Amendments notified after the closing date will not be accepted unless exceptional circumstances exist and approval is obtained from the Registrar. Where a late amendment is accepted, a late fee of $6 will be payable. Amended forms returned to the Registrar will be acknowledged in writing within fourteen days.

DEFERRED EXAMINATIONS

Deferred examinations may be granted in the following cases:

(i) When a student through illness or some other acceptable circumstance has been prevented from taking the annual examination or has been placed at a serious disadvantage during the annual examinations. Applications for deferred examinations in the first category must be lodged with the Registrar with appropriate evidence of the circumstances (e.g., medical certificate) not later than seven days after the examination concerned. All such applications shall be reported to the Head of the School responsible for the subject. Before a deferred examination is granted on medical grounds, regard shall be paid to the student's class and assignment work in the subject, to his general performance in the year, and to the significance of the annual examination in compiling the composite mark.

(ii) To help resolve a doubt as to whether a student has reached the required standard in a subject.

(iii) To allow a student by further study to reach the required standard in a subject. The granting of a deferred examination in such cases will be based on the general quality of the student's performance.

(iv) Where a student's standing at the annual examinations is such that his progression or graduation could depend on his failure in one subject only, then his position in that subject shall be again reviewed with a view to determining
whether a deferred examination may be granted notwithstanding his failure otherwise to qualify for such concession.

Deferred examinations must be taken at the centre in which the student is enrolled, unless he has been sent on compulsory industrial training to remote country centres or interstate. An application to take an examination away from the centre in which enrolled must be lodged with the Registrar immediately examination results are received. Normally, the student will be directed to the nearest University for the conduct of the deferred examination.

A student eligible to sit for a deferred examination must lodge with the Accountant an application, accompanied by the fee of $6 per subject, by the date indicated on the notification of results.

APPLICATION FOR ADMISSION TO DEGREE OR DIPLOMA

Applications for admission to a degree or diploma of the University must be made on the appropriate form by 14th January. Applicants should ensure that they have completed all requirements for the degree or diploma, including industrial training where necessary.

RESTRICTION UPON STUDENTS RE-ENROLLING

The University Council has adopted the following rules governing re-enrolment with the object of requiring students with a record of failure to show cause why they should be allowed to re-enrol and retain valuable class places. These rules will be applied retrospectively from January, 1971.

1. (i) A student shall show cause why he should be allowed to repeat a subject in which he has failed more than once. (Failure in a deferred examination as well as in the annual examination counts, for the purpose of this regulation, as one failure.) Where such subject is prescribed as a part of the student's course he shall be required to show cause why he should be allowed to continue the course.

Notwithstanding the provisions of Clause 1(i)

(ii) A student enrolled in the first year or first stage of any course, other than the medical course, who has failed in more than half the programme in which he is enrolled for that year or stage shall be required to show cause why he should be allowed to continue in the course.
(iii) A student enrolled in the first year of the Medical course who has failed in more than one subject of that year shall be required to show cause why he should be allowed to continue in the Medical course.

2. Notwithstanding the provisions of Clause 1, a student shall be required to show cause why he should be allowed to continue a course which he will not be able to complete in the time set down in the following schedule:

<table>
<thead>
<tr>
<th>Number of years in course</th>
<th>Total time allowed from first enrolment to completion (years)</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>5</td>
</tr>
<tr>
<td>4</td>
<td>6</td>
</tr>
<tr>
<td>5</td>
<td>8</td>
</tr>
<tr>
<td>6</td>
<td>9</td>
</tr>
<tr>
<td>7</td>
<td>11</td>
</tr>
<tr>
<td>8</td>
<td>12</td>
</tr>
</tbody>
</table>

3. No full-time student shall, without showing cause, be permitted to continue a course unless all subjects of the first year of his course are completed by the end of his second year of attendance. No student in the Faculty of Arts shall, without showing cause, be permitted to continue a course unless he completes four subjects by the end of his second year of attendance.

No part-time student shall, without showing cause, be permitted to continue a course unless all subjects of the first two stages of his course are completed by the end of his fourth year of attendance and all subjects of the third and fourth stages of his course by the end of his seventh year of attendance. No student in the Faculty of Medicine shall, without showing cause, be permitted to continue with the medical course unless he completes the second year of the course by the end of his third year of attendance, and the third year of the course by the end of his fourth year of attendance.

4. A student who has a record of failure in a course at another University shall be required to show cause why he should be admitted to this University. A student admitted to a course at this University following a record of failure at another University shall be required to show cause, notwithstanding any other provisions in these rules, why he should be per-
mitted to continue in that course if he is unsuccessful in the annual examinations in his first year of attendance at this University.

5. Any student excluded under any of the Clauses 1-3 may apply for re-admission after two academic years and such application shall be considered in the light of any evidence submitted by him.

6. A student wishing "to show cause" under these provisions shall do so in writing to the Registrar. Any such application shall be considered by the Professorial Board, which shall determine whether the cause shown is adequate to justify his being permitted to continue his course or re-enrol as the case may be.

7. The Vice-Chancellor may on the recommendation of the Professorial Board exclude from attendance in a course or courses any student who has been excluded from attendance in any other course under the rules governing re-enrolment and whose record at the University demonstrates, in the opinion of the Board and the Vice-Chancellor, the student's lack of fitness to pursue the course nominated.

8. A student who has failed, under the provisions of Clause 6 of these rules, to show cause acceptable to the Professorial Board why he should be permitted to continue in his course, and who has subsequently been permitted to re-enrol in that course or to transfer to another course, shall also be required to show cause, notwithstanding any other provisions in these rules, why he should be permitted to continue in that course if he is unsuccessful in the annual examinations immediately following the first year of resumption or transfer of enrolment as the case may be.

9. A student may appeal to an Appeals Committee, constituted by Council for this purpose, against his exclusion by the Professorial Board from any subject or course.

RE-ADMISSION AFTER EXCLUSION

Applications for re-admission must be made on the standard form and lodged with the Registrar not later than 30th June of the year prior to that for which re-admission is sought. An application should include evidence of appropriate study in the subjects (or equivalents) on account of which the applicant was excluded. In addition, evidence that the circumstances which were deemed
to operate against satisfactory performance at the time of exclusion are no longer operative or are reduced in intensity should be furnished. An applicant may be required to take the annual examinations in the relevant subjects as qualifying examinations in which case re-admission does not imply exemption from the subject.

Late applications cannot be considered where, in the opinion of the University, insufficient time will be available for the student to prepare himself for any qualifying examinations which may be required.

It should be noted that a person under exclusion may not be enrolled in miscellaneous subjects unless he has received the approval of the Professorial Board.

Persons who intend applying for re-admission to the University at a future date may seek advice as to ways in which they may enhance their prospects of qualifying for re-admission. Enquiries should be made on a form obtainable from the Examinations Branch, and lodged with the Registrar.

OWNERSHIP OF STUDENTS’ WORK

The University reserves the right to retain at its own discretion the original or one copy of any drawings, models, designs, plans and specifications, essays, thesis or other work executed by students as part of their courses, or submitted for any award or competition conducted by the University.

CHANGE OF ADDRESS

Students are requested to notify the Registrar in writing of any change in their address as soon as possible. Failure to do this could lead to important correspondence or course information not reaching the student. The University cannot accept responsibility if official communications fail to reach a student who has not notified the Registrar of a change of address.

NOTICES

Official University notices are displayed on the notice boards and students are expected to be acquainted with the contents of those announcements which concern them.

LOST PROPERTY

All enquiries concerning lost property should be made to the Chief Steward on Extension 2503 or to the Lost Property Office at the Union.
PARKING WITHIN THE UNIVERSITY GROUNDS

Because of the limited amount of parking space available, only postgraduate and senior undergraduate students (the latter who have completed three years of a full-time course or four years of a part-time course and up to 400 of those who have completed three years of a part-time course) and higher degree students may apply for parking permits. Applications should be made to the Property Section (Bursar's Division). It should be noted that increasing demand for parking space may require the imposition of further restrictions.

APPLICATION OF RULES

General

Any student who requires information on the application of these rules or any service which the University offers may make inquiries from the Admissions Office, the Student Counselling Centre or the Registrar.

Appeals

Section 5(c) of Chapter III of the By-laws provides that "Any person affected by a decision of any member of the Professorial Board (other than the Vice-Chancellor) in respect of breach of discipline or misconduct may appeal to the Vice-Chancellor, and in the case of disciplinary action by the Vice-Chancellor, whether on appeal or otherwise, to the Council".
STUDENT SERVICES

THE LIBRARY

The University Library is located on the Upper Campus adjacent to the Chancellery, the Commerce Building and the Arts Building.

The Library’s Undergraduate Collection covers the teaching and research interests of the Faculty, and students are expected to read widely and critically from it.

It is recommended that students attend the *Introduction to the Library* which is held at advertised times during Orientation Week and the first week of term. The *Introduction* uses audio-visual aids to describe the physical layout of the undergraduate library and the services available to readers.

Copies of the booklet *Guide to the Library* are available on request.

Students who are interested in a subject approach to information may attend a course which outlines methods of searching for information in libraries. This course runs for eight hours over a period of one week.

Individual assistance for readers with specific library problems is provided by the *Reader Assistance Unit* which is located in the foyer.

THE UNIVERSITY UNION

The University Union is a common meeting ground for all students. Eating and general recreational facilities are available as well as a shop for stationery and other student requisites, branches of several banks, a pharmacy, branch of David Jones’, and hairdressing facilities. Membership is compulsory for all registered students. The headquarters of the Union is located in the new Union Building, which is adjacent to the circular building near Anzac Parade.

STUDENT ACCOMMODATION

Residential Colleges

Accommodation for students is provided within the complex of the Residential Colleges of the University which comprises
Basser College, Goldstein College and Philip Baxter College. The College complex houses 450 men and women students, as well as staff members. Tutors in residence provide tutorial assistance in a wide range of subjects. Intending students should apply in writing to the Master, Box 24, Post Office, Kensington, N.S.W. 2033, from whom further information is available.

International House accommodates over 100 students of whom half are Australian; the remaining half is made up of students from some eighteen different countries. First-year students who have come to the University straight from school are not eligible for residence because preference is given to mature undergraduates and postgraduate students. Students should apply as soon as possible if they wish to reside at International House at a later date. They should write to the Warden, International House, P.O. Box 1, Kensington, N.S.W. 2033, for information.

New College, a Church of England College, is the first of the independent Colleges on the Campus of the University. There are no religious tests, and accommodation is available for 210 men in single study-bedrooms. Enquiries should be addressed to the Master, New College, Anzac Parade, Kensington, N.S.W. 2033.

Warrane College, an affiliated Roman Catholic residential college, is at present under construction. It is planned to open the eight-storey building, which will accommodate 200 students, in 1970. Enquiries should be addressed to the Master, Warrane College, Box 123, Kensington, N.S.W. 2033.

Fees are $20 per week for The Kensington Colleges, New College and Warrane, and $21 for International House.

Other Accommodation

Students requiring other than Residential College accommodation may make personal application to the Student Amenities Unit for assistance in obtaining suitable lodgings at recognised boarding houses, private homes, and in serviced and unserviced apartments. To accommodate the needs of the individual student it is essential that a personal interview be arranged with an officer of the Amenities Service.

STUDENT AMENITIES UNIT

The Student Amenities Unit was established to promote the physical, social and educational development of students through their leisure time activities.

The Amenities Unit, working in close liaison with the Sports Association and the University authorities, assists various re-
cognized clubs by arranging and providing facilities essential to their general development, and by handling on their behalf all inquiries and applications for membership.

**Concession Fares**

Application forms for travelling concessions may be obtained at the Inquiry Office in the Chancellery, or at the Amenities Unit Offices, Kensington.

**Omnibus:** Concessions are available to:

(a) students under 18 years of age irrespective of whether they are employed or receive income or remuneration,

(b) students between 18 and 30 years of age who are not in employment or in receipt of any income or remuneration. **NOTE:** Income or remuneration includes allowances paid to Colombo Plan students, Public Service trainees, etc., but does not include allowances paid to holders of Commonwealth Scholarships, Teachers’ College Scholarships or Scholarships granted by the State Bursary Endowment Board.

**Train:**

(a) Periodical tickets are available during term time to full-time students not in employment or in receipt of any remuneration.

(b) Vacation travel concessions are available to students qualifying under (a) above.

(c) As an alternative, a $6.00 concession certificate—unrestricted hours—may be purchased by eligible students under the same terms and conditions as above. This certificate will allow a student to travel at any time between home and university, Monday to Friday inclusive, and on Saturdays up to 6 p.m. It is available through the academic year until the end of third term, including the May and August vacations. Student concession rate of fare must be paid on each journey travelled, on production of the $6.00 certificate.

**Ferry:** Concession fares are available for travel on ferries controlled by the Port Jackson & Manly Steamship Co. Ltd. and Sydney Harbour Ferries Pty. Ltd. All applicants must be registered full-time students under the age of 21 years.

**Aircraft:** Concession fares for travel overseas, interstate and intrastate are available under the conditions ruling for the various operating companies.
(i) Airlines of N.S.W.  
  T.A.A.  
  Ansett A.N.A.  

Full-time students not in receipt of remuneration, under twenty-six years of age, are eligible for three quarters of the adult fare. An identification card is required before the student can travel and this is obtainable at the Students' Union Office, for 10c.

(ii) East West Airlines  

Full-time students not in receipt of remuneration, irrespective of age, can travel for two-thirds of the normal adult fare. No identification card is required.

Location  

The Student Amenities Unit at Kensington is located opposite the Basser College end of the new Electrical Engineering building ('Phone: 663-0351, Ext. 2235).

STUDENT EMPLOYMENT UNIT  

Assistance is offered in finding vacation employment, giving course-related experience, or industrial training where this is a course requirement. Casual employment and odd jobs, full-time employment for evening students, and permanent employment after graduation. This service is located in the Chancellery on the ground floor.

CHAPLAINCY SERVICE  

The Service is provided for the benefit of students and staff by five Christian Churches (Anglican, Roman Catholic, Methodist, Churches of Christ, Seventh-Day Adventist) and by the Jewish congregation. Chaplains are in attendance at the University at regular times.

STUDENT HEALTH UNIT  

Director: M. A. Napthali, MB BS, Syd.  

A student health and first aid centre is situated within the University, staffed by a qualified medical practitioner and a nursing sister.  

The centre is located in hut "E" on the northern side of the campus, adjacent to Basser College. The service is available to enrolled students, free of charge, between 9 a.m. and 5 p.m. Monday to Friday, and during term from 6 p.m. to 8 p.m. Tuesday and Thursday.
The medical service is in most instances therapeutic, but it is not intended to replace private or community health services. Thus, where chronic or continuing conditions are revealed or suspected, the student will be advised and may be referred to his own doctor or to an appropriate hospital for specialist opinion and treatment. The health service is not responsible for fees incurred in these instances.

The service is confidential and students are encouraged to attend the centre for advice on all matters pertaining to health.

Appointments may be arranged by calling at the centre or by telephoning 663-0351, extension 2679.

STUDENT COUNSELLING AND RESEARCH UNIT

Prospective students seeking advice or guidance regarding the selection and planning of courses (particularly in relation to a career), or advice regarding their suitability for a particular course, are invited to consult the University Student Counselling and Research Unit. Appointments may be made by telephone (663-0351, extensions 2600 to 2605).

In addition to its counselling service, the Unit provides a variety of study skills programmes throughout the year, on a group or individual basis. Programmes offered in the past have included Reading Improvement, Study Methods, Written Expression, Note Taking, Studying Mathematics, Improving Listening, Preparing for Statistics.

STUDENT LOAN FUND

The Students' Union and the University have co-operated to provide assistance to students who are in financial difficulties which are considered likely to prejudice their progress with their studies.

Three forms of assistance are available. In the first, the University considers, in certain circumstances, deferment of the payment of fees; this scheme is not intended to replace the established procedure for granting deferment for short periods but rather to supplement it by making deferment over longer periods possible. Secondly, students in need may receive a cash loan not exceeding $200 from the Student Loan Fund established from contributions made by the Students' Union and the University. Thirdly, a Students' Union donation of $1,000 has made possible urgent cash loans not exceeding $50 for a period of one month.

In all cases assistance is limited to students with reasonable academic records and whose financial circumstances warrant loans.
Students granted assistance of either kind are required to give an undertaking to repay the loan under the conditions agreed upon. Applications are made personally to the Deputy Registrar (Student Services).

UNIVERSITY CO-OPERATIVE BOOKSHOP LTD.

Membership is open to all students, on payment of a fee of $5, refundable when membership is terminated. Members receive an annual rebate on purchases of books.

LOCATION OF LABORATORIES OUTSIDE KENSINGTON CAMPUS

Randwick
The Schools of Highway and Traffic Engineering and the Structures Laboratory of the School of Civil Engineering occupy new buildings on the site of the old Tramway Depot at King Street, Randwick.

Manly Vale
The Water Research Laboratory of the School of Civil Engineering.
Students undertaking courses in the Faculty of Engineering are eligible to apply for the following scholarships.

Except where otherwise specified, applications on the forms obtainable from the Admissions Office ('phone: 663-0351, ext. 2485) must be lodged with the Registrar, the University of New South Wales, P.O. Box 1, Kensington, within seven days of the publication of the results of the Higher School Certificate Examination. A separate application must be lodged for each category of scholarship.

In addition to those scholarships made available by the University and other bodies as set out below, cadetships are offered by the Commonwealth Service, the New South Wales Public Service Board, the Department of Railways and a number of private industrial organizations. Cadets generally have their University fees paid by the employer, and are employed at cadet rates of pay during their course.

Commonwealth University Scholarships

There are three types, and all may be applied to full-time, part-time and external courses, and for pass and honours courses:—

Open Entrance Scholarships, which are granted on the results of the Higher School Certificate examination to students who are under thirty years of age on 1st January of the year in which they are first awarded the scholarship, and who with their parents are permanent residents of Australia; Second or Later Year Scholarships, which are awarded on the results obtained in approved university courses, are available to students who have completed at least one year of a full-time or two years of a part-time course (age and residential requirements are the same as for Open Entrance); and Mature Age Scholarships, which are available to students who are over thirty on 1st January of the year in which they are first awarded a scholarship. Applicants should be permanent residents of Australia.

Benefits include payment of all tuition fees and other compulsory fees and living allowances (these latter being subject to a means test) up to $620 per annum or $1,000 per annum if living away from home. The closing date for applications is 30th
September in the year immediately preceding that for which the scholarship is desired. Full particulars and application forms may be obtained from the Officer-in-Charge, Sydney Office, Department of Education and Science, La Salle Building, 70 Castlereagh Street, Sydney, 2000, (Telephone 20323).

University Scholarships

The University annually awards up to fifteen scholarships tenable in degree courses to students who have matriculated at the Higher School Certificate Examination; ten scholarships to students who have completed certificate courses (Department of Technical Education); ten scholarships to students who have completed Trade Courses (Department of Technical Education); and ten scholarships to part-time students who have taken the Diploma Entrance course of the Department of Technical Education. The scholarships exempt the holder from payment of course fees during the currency of the scholarship. Scholarships will be awarded in order of merit on Higher School Certificate Examination results. They may be held only by persons who do not hold another award. Applications must be lodged with the Registrar within seven days of the publication of Higher School Certificate Examination results.

Bursaries

A number of Bursaries tenable at the University are awarded to candidates of merit at the Higher School Certificate Examination whose family income falls within certain limits prescribed by the Bursary Endowment Board. Applications should be made to the Secretary, Bursary Endowment Board, C/- Department of Education, Bridge Street, Sydney.

The Fell Scholarship (University Residential Colleges)

The Fell Scholarship is available to any undergraduate who is or will be in residence at one of the Colleges under the administration of Kensington College Ltd. during 1970. The annual value of the Scholarship is $100. It may be held concurrently with Commonwealth and other scholarships.

In awarding the scholarship the academic merit and financial need of the applicant will be taken into consideration.

Applications must be made on the appropriate form and lodged with the Master, Kensington College Ltd., Box 24, P.O., Kensington 2033.
Joint Coal Board Scholarships

The Joint Coal Board is offering scholarships in full-time courses in Mining Engineering and Applied Geology. The value of these scholarships ranges from $700 to $1,200 per annum (including allowance for books and instruments). These scholarships are awarded on the understanding that students will normally hold a Commonwealth University Scholarship which covers the cost of University fees. However, applicants without Commonwealth University Scholarships may be given consideration. While scholarship holders are not under bond, it is expected that they will obtain employment in coal mining or a related industry on graduation. Applications on forms obtainable from principals or from the Secretary, Joint Coal Board, Box 3842, G.P.O., Sydney, must be lodged with the Board’s Secretary not later than seven days after the notification of Higher School Certificate results.

The A. E. Goodwin Memorial Scholarship

The Directors of A. E. Goodwin Ltd. provide a scholarship each year to students who are eligible to enrol in the second year of the Mechanical Engineering degree course. The total value of the scholarship is $360, payable in three equal amounts of $120 each at the beginning of the second, third and fourth years of the course. Applications should be lodged with the Registrar by 31st January each year.

The Tyree Electrical Company Scholarship in Electrical Engineering

The Tyree Electrical Company Pty. Ltd., has undertaken to provide two scholarships for students enrolling in the full-time courses in Electrical Engineering. The value of the scholarships is between $500 and $1,500 per annum, payable in fortnightly instalments as a living allowance to students. They will normally be tenable for four years but may be extended to a fifth year when the holder intends to qualify for the two degrees, Bachelor of Science and Bachelor of Engineering. They may be held concurrently with any other scholarship.

Mining and Metallurgical Bursaries Fund

Mining and Metallurgical Bursaries at the University of New South Wales, valued at $100 per annum, will be awarded by the Trustees of the Mining and Metallurgical Bursaries Fund, Melbourne. Candidates must be British subjects and have completed
the first year of the following courses at the University of New South Wales, or who have been awarded equivalent status in consideration of work done elsewhere: Degree of Bachelor of Engineering in Mining Engineering, Bachelor of Metallurgical Engineering, Bachelor of Engineering in Applied Geology, Bachelor of Mineral Engineering, Bachelor of Science in Metallurgy, Geology or Applied Geology, or Bachelor of Applied Science in Metallurgy or Geology.
The Faculty of Engineering consists of the Schools of Civil Engineering, including the Department of Surveying, of Electrical Engineering, and Mechanical and Industrial Engineering, and the Schools of Highway Engineering, Nuclear Engineering, and Traffic Engineering, the three last named Schools offering graduate courses only. The Schools of Civil, Electrical, and Mechanical and Industrial Engineering offer full-time courses leading to the degrees of Bachelor of Engineering or Bachelor of Surveying, and part-time courses leading to the degrees of Bachelor of Science (Technology) or Bachelor of Surveying.

All the postgraduate activities of the Faculty are co-ordinated under the Graduate School of Engineering. For full details of such activities please see the Graduate School of Engineering Handbook.

Common First Year

The Schools of Civil, and Mechanical and Industrial Engineering have the same first year course in physics, mathematics, chemistry and engineering, thus making it possible for students to transfer from one Bachelor of Engineering course to another within these schools at the end of their first year without loss of standing.

The first year in Electrical Engineering is similar to the first year of courses in Science and Applied Science and transfers to or from these Faculties can usually be arranged at the end of first year without loss of standing. Also notwithstanding the fact that first year courses in the three Engineering schools are not identical, sympathetic consideration will be given to requests by students who have completed first year to transfer to an allied course without loss of standing. When such transfer is desired an application must be made to the Registrar.

Progression

Progression in all undergraduate courses in the Faculty of Engineering is now permitted by subject. However, (1) course programmes will continue to be stated and timetabled by Year or Stage and it cannot be guaranteed that non-standard programmes can be completed in the minimum number of years;
(2) students must satisfy the rules governing re-enrolment: in particular, these require all subjects of the first year to be completed by the end of two years of full-time (or four years of part-time) study;

(3) before enrolling in any subject a student must have satisfied the relevant pre-requisite and co-requisite requirements. This will usually necessitate a student completing or attempting all subjects of a particular Year or Stage before proceeding to a subject in the next part of a course. Further details are available from the appropriate School;

(4) Only in exceptional circumstances will a student be permitted to enrol in subjects extending over more than two years of the course or for more than twenty-eight hours of course work per week if a full-time student or fourteen hours per week if a part-time student.

Students repeating subjects are required to choose a programme which limits their hours of course work to twenty-two per week if a full-time student, and to eleven per week if a part-time student, unless they have the express permission of the Head of School to exceed these hours.

(5) Notwithstanding the above, before a student can enrol in any non-standard programme, such programme must meet with the approval of the Head of School. A non-standard programme is one which involves enrolment in subjects from more than one Year or Stage, or comprises subjects which do not normally constitute a particular year's course work.

**FULL-TIME COURSES**

Full-time courses of four-years' duration are offered in Civil, Electrical, Mechanical, Industrial, and Aeronautical Engineering, and in Naval Architecture: all of these lead to the degree of Bachelor of Engineering. A four-year full-time course in Surveying is offered by the School of Civil Engineering leading to the degree of Bachelor of Surveying.

The award of the degree of Bachelor of Engineering is recognized by the Institution of Engineers, Australia, as giving complete exemption from the examinations required for admission to the grade of Associate Member. In nearly all cases substantial or complete recognition is accorded to these courses by overseas engineering institutions.

**General Studies Programme**

All undergraduates in Faculties other than Arts are required to complete a General Studies programme. The general pattern and course outlines in the Faculty of Engineering are listed in the
FACULTY OF ENGINEERING

Department of General Studies Handbook which is available, free of cost, to all students.

Industrial Training Requirements

All full-time engineering courses incorporate industrial training and reference should be made to the entries under each School heading for details of the arrangements applicable. All students are strongly recommended to gain further industrial experience in those long vacations where such training is not already prescribed.

The staff of the University will, where possible, assist students to obtain this employment, but it is emphasized that the primary responsibility for obtaining suitable industrial experience rests with each student. Progression to succeeding years of the course and the award of the degree are dependent on the completion of the requisite periods of industrial employment of a standard approved by the University.

PART-TIME COURSES

Since 1961 the Schools of the Faculty have offered six-year part-time courses in a variety of engineering fields leading to the degree of Bachelor of Science (Technology). Courses for this degree are offered in Civil, Electrical, Industrial and Mechanical Engineering and in Naval Architecture and Aeronautical Engineering (these last two being offered by the School of Mechanical and Industrial Engineering).

The General Studies programme is the same for part-time as for full-time students, except that part-time students do not do an Advanced Elective.

The award of the degree of B.Sc. (Tech.) is recognized by the Institution of Engineers, Australia, as giving complete exemption from the examinations required for admission to the grade of Associate Member.

Recognition by overseas engineering institutions varies in the different branches of engineering, and particular enquiries on this matter should be addressed to the head of the appropriate School.

A student completing the B.Sc. (Tech.) degree course and wishing to qualify for the corresponding B.E. degree may, on the recommendation of the Head of the School, transfer to the corresponding full-time B.E. course provided he does not take out the B.Sc. (Tech.) degree. Further, provided he continues as a registered student on transfer from one course to the other, he may retain any concession granted in the B.Sc. (Tech.) degree course.
Holders of the B.Sc (Tech.) award are eligible to proceed to the degree of Master of Engineering, Master of Engineering Science or Master of Surveying Science subject to the conditions for the award of these degrees set out in Section C of the University Calendar.

Courses leading to the B.Sc. (Tech.) award are basically part-time and the prescribed industrial experience should be gained concurrently with the course of study (a minimum of three years of suitable engineering experience is required). Students transferring from full-time courses must, therefore, also satisfy these industrial experience requirements before being admitted to the degree of B.Sc. (Tech.).

The programme towards the B.Sc (Tech.) may in some cases be accelerated by a student attending for one or more years full-time. For example, in all courses of the Faculty it is possible to take the equivalent of the first two part-time years in the full-time first year.

The School of Civil Engineering offers a part-time course in Surveying of seven years’ duration for the degree of Bachelor of Surveying.

**FACULTY OF APPLIED SCIENCE**

The Faculty of Applied Science offers courses to students desiring a career in a specialized technology with an engineering element. These courses are as follows:

<table>
<thead>
<tr>
<th>Full-time</th>
<th>Part-time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chemical Engineering</td>
<td>B.E.</td>
</tr>
<tr>
<td>Ceramic Engineering</td>
<td>B.Sc.</td>
</tr>
<tr>
<td>Fuel Engineering</td>
<td>B.E.</td>
</tr>
<tr>
<td>Metallurgy*</td>
<td>B.Sc.</td>
</tr>
<tr>
<td>Mining Engineering†</td>
<td>B.E.</td>
</tr>
<tr>
<td>Textile Engineering</td>
<td>B.Sc.</td>
</tr>
</tbody>
</table>

Entrance to these courses, which are of four years’ duration full-time (pass or honours) and six years’ duration part-time, is conditional upon completion of the full subject Chemistry I. Except in the case of Mining Engineering, transfer should be made at the end of first year to achieve maximum standing. Full-time Engineer-

* A part-time course is also available at Wollongong.
† Part-time courses leading to the award of the B.Sc.(Tech.) degree are available only at Wollongong and Broken Hill.
ing students may enter the Mining Engineering course after the second year of courses in Mechanical, Electrical or Civil Engineering without loss in standing of subjects completed.

Part-time engineering students may enter the courses offered by the Schools of Chemical Engineering, Chemical Technology and Metallurgy after the second stage part-time or the full-time first year. They may enter the Mining Engineering course after the fourth stage. In all cases the requirements for the degree of B.Sc. (Tech.) demand three years approved concurrent industrial training.

Holders of the degrees of B.E. (pass or honours) and B.Sc. (Tech.) in Chemical Engineering, Fuel Engineering, Fuel and in Mining Engineering are recognized by the Institution of Engineers of Australia as being eligible for Corporate Membership without further examination.

Ceramic Engineering

Ceramics are inorganic, non-metallic materials which usually require the use of high temperatures in their processing. Products of the industry include glass, refractories, bricks, tiles, pipes, abrasives, cement, plaster, nuclear ceramics, whitewares, enamels and electric insulators, dielectrics and magnetic materials. The ceramic engineer is concerned with the relationship between the atomic and crystal structure of materials and their chemical, physical and engineering properties, as well as the methods of their manufacture and fabrication into useful shapes.

Graduates in Ceramic Engineering take positions in the fields of research and development, production control, product evaluation and technical service.

Chemical Engineering

Chemical Engineering is the application of the principles of the physical sciences, together with principles of economics and human relations to fields in which matter undergoes a change in state, energy content or composition. The chemical engineer is generally responsible for the design, construction and operation of plant and equipment used in the chemical processing industries.

Fuel Engineering

The Department of Fuel Technology, the first of its kind in Australia, was established to meet the growing need of industrial and research establishments for personnel with specialized training in the science and technology of fuels and their utilization.

A degree in Fuel Engineering qualifies for exemption from the examinations for admission to corporate membership of the Institute of Fuel.
Metallurgy

Metallurgy deals with the nature, production, properties and uses of metals. Its importance today is associated with the demands for better materials for aircraft, rockets, and nuclear reactors, as well as the more conventional engineering structures, machines and appliances. Metallurgists are also closely involved with the development of new and more efficient processes for extracting metals from their ores and contributing to mineral production.

The School of Metallurgy is located at Kensington, and also has a department in Wollongong. It has excellent facilities for teaching and research. Emphasis in these courses is on the application of science to technological problems and in this respect there is a close relationship between metallurgy and engineering. Information on the Metallurgy courses and on opportunities for postgraduate work for engineering graduates in the School of Metallurgy may be obtained from the University Calendar, or from Professor Hugh Muir at the School of Metallurgy.

Mining Engineering

The aim of the training is to give students a thorough foundation in Mining Engineering and so permit them to enter coal mining, metalliferous mining or the petroleum industry, and to be employed in any of the phases of these industries ranging from exploration to production.

During the undergraduate course, students will spend portion of the long vacations obtaining practical experience in mining. Mining companies prepare programmes so that the students obtain a comprehensive experience in many aspects of the profession. This experience is important and it is related to the academic training received in the School. Practical experience in mining, gained as a student, can contribute to the experience record of mining engineers when making application for a statutory certificate of competency from one of the Australian State Government Departments of Mines.

The School of Mining Engineering offers a part-time course in Mining Engineering at both Wollongong and Broken Hill and a part-time course in Mineral Processing at Broken Hill, both courses leading to the Degree of Bachelor of Science (Technology).

Textile Engineering

The textile industry, being a manufacturing one, depends on many types of machinery and engineering services to produce its products. In order to cope with technological problems in production, quality control and research, a competent textile engineer
must have a good understanding of the fundamental sciences and extensive theoretical and practical knowledge of the applied textile and engineering sciences.

There are many challenging and lucrative positions for textile engineers in industry and research.

HIGHER DEGREES AND GRADUATE COURSES

Research Degrees

The higher degrees of Master of Engineering, Master of Surveying, and of Doctor of Philosophy are awarded on the presentation of a thesis, satisfactory to the examiners, which embodies the results of an original investigation or design. Candidates for these degrees must possess a bachelor's degree in an appropriate field and meet the conditions governing the award of these degrees. The full conditions are set out in the University Calendar and in the Handbook of the Graduate School of Engineering.

The degree of Doctor of Science is also awarded for a contribution of distinguished merit in the field of engineering.

Courses of Study for Graduate Awards

In addition to the research degrees listed above, the Faculty offers courses of instruction at the graduate level leading to the award of the degree of Master of Engineering Science, Master of Surveying Science or to a graduate diploma.

Courses for the Degree of Master of Engineering Science

Engineering Construction, Public Health Engineering, Structural Engineering, Water Engineering (School of Civil Engineering); Electrical Engineering (School of Electrical Engineering); Highway Engineering (School of Highway Engineering); Industrial Engineering (Operations Research), Mechanical Engineering, Refrigeration and Air Conditioning (School of Mechanical and Industrial Engineering); Nuclear Engineering (School of Nuclear Engineering); and Transport and Traffic (School of Traffic Engineering).

Course for the Degree of Master of Surveying Science

The Department of Surveying in the School of Civil Engineering offers courses leading to the degree of Master of Surveying Science.

Courses for Graduate Diplomas

Highway Engineering, Industrial Engineering and Transport.

Full details of all these courses are given in the section on postgraduate study in the University Calendar, in the Handbooks
of the appropriate Schools, and in the Handbook of the Graduate School of Engineering.

The Faculty of Engineering also supervises the Graduate Diploma course in Human Communications, offered by the Division of Postgraduate Extension Studies.

Special Courses

Short, intensive graduate and special courses are provided throughout each year designed to keep practising engineers in touch with the latest developments in their various fields. The programmes of such courses for this year are published separately.
Civil engineering is broad in its scope, utilizing other specialized branches of engineering in planning, co-ordinating and constructing national works such as water supply and conservation projects, hydro-electric development, roads, railways, bridges, tunnels, large buildings, and irrigation, sewerage, and harbour and river development. The civil engineer adapts the forces of nature for the use and convenience of mankind. His academic training must include a study of science and of engineering practice and he must bring to his work experience and judgment and the knowledge and personality necessary to control large organizations of workers. The Civil Engineering profession offers to a young man a considerable variety of types of work ranging from specialized research and investigations, through design and construction work to higher positions which are often largely managerial and organizational in their nature.

The School of Civil Engineering offers two courses in Civil Engineering; a four year full-time course leading to the degree of Bachelor of Engineering (B.E.) and a six year part-time course leading to the degree of Bachelor of Science (Technology) (B.Sc. (Tech.)). In the full-time B.E. course, a period of one hundred working days of industrial training must be completed between Years III and IV and it is strongly recommended that further industrial experience be gained in the long vacations between Years I and II and Years II and III. Part-time students in the B.Sc. (Tech.) course are required to gain a minimum of three years of suitable engineering experience concurrently with the University course. Students enrolled in the fourth year of the full-time B.E. course may be required to present a seminar and attend a prescribed number of seminar sessions as part of their final year programme.

The School of Civil Engineering through its Department of Surveying also offers a full-time and a part-time course each leading to the degree of Bachelor of Surveying at Pass or Honours level. Details of these courses are set out in the following pages under the heading “Department of Surveying”.
The courses in Civil Engineering are set out below. However, as a result of revisions in recent years, some students in Year IV of the B.E. course in 1970 may take a modified General Studies programme. Also, students entering Stage 6 of the B.Sc.(Tech.) course will normally undertake the programme shown in the 1968 Calendar and not that shown below. Such students, who are governed by the old course regulations, must complete the prescribed requirements by the end of the 1971 academic year. Because of these transitional arrangements these students should first consult the School before completing their formal enrolment.

The degree of Bachelor of Engineering may be conferred as a Pass degree or as an Honours degree. There are two classes of Honours, Class 1, and Class 2 in two divisions, and the award and grade of Honours are made in recognition of superior performance throughout the course. The degree of Bachelor of Science (Technology) may be awarded with Merit in recognition of superior performance throughout the course.

DEPARTMENT OF SURVEYING

The Department of Surveying offers a four-year full-time course and a seven-year part-time course, both leading to the degree of Bachelor of Surveying. The degree can also be attained through a combination of part-time and full-time study.

The course is designed to provide the appropriate academic training for a professional surveyor working in any of the many branches of surveying. Since these branches cover a wide range, the course is broad in its scope. First and second years are concerned mainly with the basic sciences. Basic surveying is also included and in the third year the major surveying subjects appear: geodesy, photogrammetry, astronomy and cadastral surveying. With the addition of some applied sciences, these are continued into fourth year. A feature of the course is the inclusion of General Studies in the later years and stages. The graduate can take up cadastral or property surveying, engineering surveying, geodetic surveying, photogrammetry, cartography or hydrographic surveying.

Throughout the course the theory is illustrated by means of practical applications in field or laboratory exercises. The field work enables the student to use modern optical and electronic instruments. Full-time students must attend a survey camp for
two weeks during each of years II and III of their course and part-time students must attend a two-week survey camp during each of Stages 4 and 6 of their course. In addition, all full-time students are required to engage in approved industrial training for a period of not less than forty days after the completion of year II and for a further period of not less than eighty days after the completion of year III. Part-time students are required to obtain a minimum of three years of approved practical experience concurrently with their course of study. The Bachelor of Surveying degree may be awarded as a Pass degree, Honours Class I, or Honours Class II in two divisions. The award and grade of Honours depend upon the degree of superior performance throughout the course.

Students wishing to become Registered Surveyors after graduation are also strongly advised to gain practical experience under a Registered Surveyor. Some reduction in the period of practical experience required before registration may be sought because of practical experience gained during a student’s course of study, provided the Board of Surveyors has given prior agreement to the recognition of this experience. Details are obtainable from the Registrar, Board of Surveyors, Department of Lands.

The degree of Bachelor of Surveying confers exemption from all written examinations of the Board of Surveyors.

### SCHOOL OF ELECTRICAL ENGINEERING

The School consists of the Departments of Electric Power Engineering, Communications, Control Engineering, Electronic Computation and Solid-State Electronics and is thus well-suited to offer undergraduate and postgraduate training in all branches of the profession of electrical engineering. The School's building and facilities are being expanded and its programmes are constantly under review to meet the ever changing challenges of present and future needs.

The School offers a full-time course of four years' duration leading to the degree of Bachelor of Engineering, and a six-year part-time course for the degree of Bachelor of Science (Technology). The courses may also be completed by a combination of part-time and full-time study. Graduate courses are described elsewhere.

The degrees of Bachelor of Engineering and Bachelor of Science (Technology) are recognized by the Institution of Engineers, Australia, the Institution of Radio and Electronics Engineers, Australia, and the Institution of Electrical Engineers, London, as giving complete exemption from the examinations required for admission to Graduate or Corporate membership.

Electrical engineering, perhaps more than most other branches of engineering, is closely linked with the pure sciences, and requires a scientific outlook and approach for a proper understanding of the problems in electrical engineering.

In the early years of the electrical engineering courses, students concentrate on acquiring knowledge of the basic sciences, i.e., mathematics, physics, and chemistry, but with some introduction to engineering.

In the final year students will elect, with the approval of the Head of the School, to study in the specialized fields of electrical engineer-
ing. At the same time they will take subjects common to all students in electrical engineering. A list of available electives (which may vary from year to year) is given in the course description. Students in doubt as to which programme patterns are desirable or permissible should consult the Head of the School.

Each student in the full-time course is required to work on an individual or group project under the guidance of members of the lecturing staff. Generally, the project will involve the design and construction of experimental apparatus together with laboratory tests. Where possible the projects will be related to the research programme of the School and chosen to develop the student's initiative. Each student will be required to deliver a seminar paper and to prepare a thesis or take part in the preparation of a group thesis based on the results of the project work.

In the Bachelor of Engineering course the identical formal programme will be offered to both pass students and to those aiming at honours. Honours will be awarded for meritorious performance over the course: special attention is paid to a candidate's performance in the final year thesis project. A student with a creditable performance in the Bachelor of Science (Technology) course may be awarded a degree with Merit.

ELECTRICAL ENGINEERING—FULL-TIME COURSE

The full-time course is of four years' duration and leads to the degree of Bachelor of Engineering (pass or honours). Each of the four years of the course requires full-time day attendance at the University for thirty weeks. All students are strongly recommended to complete two periods of industrial training, one of forty-five working days between Years II and III, and the other of forty-five working days between Years III and IV. They are also advised to obtain practical experience during the long vacation between Years I and II.

</tbody>
</table>

† Full-time in Third Term.

* Each student selects 12 lecture hours of courses from a list of electives; each programme must be approved by the Head of School and it is intended that approximately half of each programme will be common to all.

The electives will usually be each of two lecture hours per week for two terms; shorter subjects will be grouped for election purposes. A number of general topics will be offered and each Department will offer some specialized electives. It is not planned that all electives will be available every year nor will the compulsory subjects always remain the same. Students will be advised each year which electives are available and which subjects are compulsory.

For continuation, see footnote on next page.
FACULTY OF ENGINEERING

Third Term of Fourth Year

In the fourth year the formal lecture work extends over twenty-one weeks (the first two terms). This is followed by a study vacation of three weeks and examinations are held during the first three weeks of the third term. The balance of this term is mainly devoted to directed laboratory and research work on an approved subject, with special reading and study associated with the preparation of a thesis; seminar work is also carried out. The thesis must be submitted by the first Monday in December.

General Studies

The General Studies requirement in this course is four 45-hour subjects of which at least one must be an advanced elective.

Substitution of Subjects

To suit the special abilities or needs of individual students a limited amount of substitution is permitted within the B.E. pattern. Any such substitution must have prior approval of the Head of School who will ensure:

1. The replacement subject is at least of the same length and level as the prescribed subject it replaces; and

2. The resulting overall programme of study is suited to the award of B.E. in Electrical Engineering.

The list of subjects offered is:

<table>
<thead>
<tr>
<th>No.</th>
<th>Subject</th>
<th>lec. lab./tut.</th>
</tr>
</thead>
<tbody>
<tr>
<td>6.041S</td>
<td>Fields and Measurements</td>
<td>2 — 2</td>
</tr>
<tr>
<td>6.042S</td>
<td>Circuits, Signals and Information Theory</td>
<td>2 — 2</td>
</tr>
<tr>
<td>6.202S</td>
<td>Power Systems</td>
<td>2 — 2</td>
</tr>
<tr>
<td>6.212S</td>
<td>Machines</td>
<td>2 — 2</td>
</tr>
<tr>
<td>6.222S</td>
<td>Computer Applications and Software</td>
<td>2 — 2</td>
</tr>
<tr>
<td>6.303S</td>
<td>Communication Electronics</td>
<td>2 — 2</td>
</tr>
<tr>
<td>6.313S</td>
<td>Antennas Propagation and Guided Waves</td>
<td>2 — 2</td>
</tr>
<tr>
<td>6.322S</td>
<td>Electronics</td>
<td>2 — 2</td>
</tr>
<tr>
<td>6.333S</td>
<td>Communication Systems</td>
<td>2 — 2</td>
</tr>
<tr>
<td>6.383S</td>
<td>Bioengineering</td>
<td>2 — 2</td>
</tr>
<tr>
<td>6.412S</td>
<td>Automatic Control</td>
<td>2 — 2</td>
</tr>
<tr>
<td>6.422S</td>
<td>Computer Control</td>
<td>2 — 2</td>
</tr>
<tr>
<td>6.512S</td>
<td>Advanced Semi-conductor Device Theory</td>
<td>2 — 2</td>
</tr>
<tr>
<td>6.522S</td>
<td>Transistor and Integrated Circuit Design</td>
<td>2 — 2</td>
</tr>
<tr>
<td>6.612S</td>
<td>Computer Systems Engineering</td>
<td>2 — 2</td>
</tr>
</tbody>
</table>
It is not envisaged that such substitutions will be commonplace but examples would be:

(a) Replacement of two General Studies subjects by an approved Arts subject;

(b) Replacement of one or two General Studies subjects by an approved (by the Head of the Department of General Studies) subject from areas such as:
- Life Sciences;
- Earth Sciences;
- Accounting and Business Administration;
- Law;
- Economics;
- Industrial Management.

(c) In the case of students proposing to attempt the B.Sc., B.E. pattern, if they include additional Applied Mathematics in their Second Year Electrical Engineering Programme they open up a wider choice of subjects in their Science Third Year. This could be substituted for 8.111 or the General Studies courses. If the B.Sc. programme is completed these courses would be put back into the student’s Third Year of Electrical Engineering;

(d) The normal Fourth Year programme includes 12 lecture hours in Electrical Engineering IV much of which will be provided in two-hour strands. It is proposed that students may substitute for ONE of these strands, a subject of suitable level and difficulty from an area outside the School of Electrical Engineering.

DOUBLE DEGREE OF B.SC., B.E. IN ELECTRICAL ENGINEERING

Students in Electrical Engineering may qualify for this double degree in five years of full-time study. Having completed the first and second years of the Electrical Engineering course, students transfer to Science (this is subject to the recommendation of the Head of the School of Electrical Engineering and the approvals of the Deans of the Faculties of Engineering and Science) and do two Group III Science subjects (see the Science course and regulations) and two General Studies Electives. In their fourth year the students revert to the Faculty of Engineering. Depending on the programme followed in their year in Science they will have already completed parts of the normal third year programme of the Electrical Engineering course, and they will be required to omit these from their pro-
gramme and to include an equivalent amount of other courses chosen with the approval of the Head of School. In their fifth year they will complete the fourth year of the Electrical Engineering course.

**ELECTRICAL ENGINEERING—PART-TIME COURSE**

The six-year part-time course in Electrical Engineering leads to the degree of Bachelor of Science (Technology).

* Will be offered only in 1970 and 1971.
THE UNIVERSITY OF NEW SOUTH WALES

ELECTRICAL ENGINEERING—
COMBINED FULL-TIME/PART-TIME COURSES

The subjects of the revised B.Sc. (Tech.) course will each be identical with a subject of the B.E. programme and the requirements of these subjects could be completed by either day or evening study in most cases. Timetables will be arranged to suit the preferred yearly programmes given above. Provided prerequisites are met and the programme can be timetabled, a student in either course may, with the approval of the Head of the School, complete the requirements by a combination of full-time and part-time study.

SCHOOL OF MECHANICAL AND INDUSTRIAL ENGINEERING

The courses in this School are planned to provide the appropriate academic training for the professional engineer in the fields of aeronautical, industrial and mechanical engineering, and for the naval architect.

The study of the basic sciences—Mathematics, Physics and Chemistry—together with an introduction to Engineering, comprises the first year of study. In the second year further mathematical studies are undertaken together with a study of the Engineering Sciences—Thermodynamics, Fluid Mechanics, Engineering Mechanics, Mechanics of Solids and their application in the field of Design.

The full-time courses of Mechanical, Industrial and Aeronautical Engineering and of Naval Architecture have common subjects for the first two years. The third and fourth years contain a number of common core subjects together with specific departmental requirements. In the fourth and final year, in addition to core subjects and departmental requirements, provision is made for a limited degree of specialization in one or more elective subjects. General studies form a regular part of all courses.

Industrial experience is an integral part of the full-time courses. Industrial Engineering students must complete forty working days of approved industrial training between Years 2 and 3 and one-hundred working days between Years 3 and 4. Mechanical and Aeronautical Engineering and Naval Architecture students must complete one-hundred working days of approved industrial training between Years 3 and 4. All students irrespective of their
specialization are strongly recommended to gain as much industrial training as possible between Years 1 and 2 and between Years 2 and 3. Full-time students in Naval Architecture and Aeronautical Engineering are required to attend certain part-time classes during the third term of the 3rd Year and will therefore be required to obtain their industrial experience within the metropolitan area at least during third term.

Each student is required to prepare a short paper and deliver it in the Technical Communications period and each full-time student is also required to present a thesis at the end of his final year.

The full-time courses in Aeronautical, Industrial and Mechanical Engineering and in Naval Architecture are of four years' duration and lead to the degree of Bachelor of Engineering (B.E.).

All students will be considered for the award of Honours which will be granted for meritorious performance in the course with particular emphasis on the later years. With the approval of the Head of School, students may proceed to the B.E. degree via a combination of full-time and part-time study.

Part-time courses of six years' duration leading to the degree of Bachelor of Science (Technology) are offered in the same four fields as the full-time courses.

Part-time courses may also be completed by a combination of part-time and of full-time study.

A student who has successfully completed the first two stages of any of the Bachelor of Science (Technology) courses mentioned above may transfer to the second year of any of the full-time B.E. courses offered by the School. The Bachelor of Science (Technology) courses have been revised and it is highly probable that a part-time student will be able to transfer at the end of stage 4 of the revised course to the third year of the corresponding B.E. course. The B.Sc.(Tech.) degree may be awarded 'With Merit' to students whose performance in the course is superior.

The award of the degree B.E. or B.Sc. (Tech.) in Mechanical Engineering is recognized by the Institution of Mechanical Engineers, London, as giving exemption from Parts I and II of the examinations required for admission to the grade of Member.

The Institution of Engineers, Australia, grants full exemption from examinations for admission to the grade of Member to holders of the degree of B.E. or B.Sc.(Tech.) in any of the undergraduate courses offered by the School.

---

**DEPARTMENT OF INDUSTRIAL ENGINEERING**

The Department of Industrial Engineering offers a full-time and a part-time course in industrial engineering leading to the degree of Bachelor of Engineering and Bachelor of Science (Technology) respectively. These courses are designed for students with engineering ability whose interests lie in the planning, developing and control of manufacturing operations. Completion of either of these courses gives full exemption from membership examinations of the Institution of Engineers, Australia, and the Institution of Production Engineers. Completion of the full-time B.E. course is accepted by the Institution of Mechanical Engineers, London, as giving exemption from all examinations required for membership; completion of the part-time B.Sc. (Tech.) course is recognized as giving exemption from Parts I and II of the examinations required for membership.

The first two years of the full-time course and the first four years of the part-time course provide the student with a sound foundation in the basic science and engineering subjects, and this knowledge is used and extended in the later years in the study of the industrial subjects. Finally, the problems associated with the practical economics of manufacturing operations are studied. These three fields of study provide the student with the training necessary to carry out an industrial job and to examine it critically in the light of economic efficiency.

Traditional engineering courses do not embrace the problems which are characteristic of industrial engineering. These problems include the analysis of a product to ensure satisfactory functioning with regard to methods and sequence of manufacturing oper-
ations; the disposition of buildings and of equipment in relation to buildings to permit efficient handling of materials; the avoidance or elimination of bottlenecks; the related problems of quality and cost control, testing and inspection; labour and personnel relations; and, finally, the problem of distribution and sales.

The financial and economic aspects are studied as the problem in manufacturing has not been solved until the final translation of the product into money has been accomplished successfully. While it is not intended to develop an expert in accounting practice or economics, it is intended to produce an engineer with an appreciation of the problems of cost and one who can apply considerations of ultimate economy to all industrial problems.

All full-time students must obtain industrial training for two periods, one of forty working days between Years II and III and the other of one hundred working days between Years III and IV. They are also strongly advised to obtain further experience during the long vacation between Years I and II.

The Work of the Industrial Engineer

The industrial engineer may initially be employed in any of the following major areas of industrial activity:

(a) Industrial Economic Analysis

One of the principal functions of industrial engineering is to analyse a product, project or process from the economic point of view to ensure that an adequate profit can be obtained from it. A general working knowledge of economics and management skill has to be directed towards the making of decisions on how to operate an enterprise most efficiently. The basis for such decisions is furnished largely by the logical application of mathematics and statistics.

(b) Planning and Control of Production

Manufacturing processes and operations must be planned in detail throughout an enterprise to ensure that they proceed smoothly and economically. Functions in this field include the establishment of production standards, the setting of production targets and, finally, control of quality.

The ultimate responsibility of those in charge of the planning and control of production is to ensure that the goods, as originally specified, perform satisfactorily and are produced when required at an optimum cost. Modern electronic computers may be called upon to help achieve this.
(c) **Product and Process Design**

The design interest of the industrial engineer goes beyond normal mechanical design to develop a product that will not only function effectively but also have a pleasing appearance.

Further, the product has to be adapted to suit existing manufacturing equipment, or a manufacturing process has to be developed by means of which an existing product can be manufactured at the right price and of the right quality. The design work of the industrial engineer incorporates also problems of equipment selection and application for both economy and performance.

Fundamental scientific studies of manufacturing processes such as metal machining, forming and casting are continually being made to improve their efficiency.

(d) **Methods Engineering**

Methods engineering is particularly concerned with the coordination of men, materials and machines, so that an enterprise will run at maximum efficiency. A considerable knowledge of engineering in general, as well as an understanding of human factors and materials science, is necessary for methods engineering work. Time and motion study is part of methods engineering. In many cases the methods engineer works in close co-operation with the design department and executives engaged in industrial economic analysis.

(e) **Operations Research**

This is the attack of modern science on complex problems arising in the direction and management of large systems of men, machines, materials and money in industry, business, government, and defence. The distinctive approach is to develop a scientific model of the system, incorporating measurements of factors such as chance and risk, with which to predict and compare the outcomes of alternative decisions, strategies or controls. The purpose is to help management determine its policy and actions scientifically.

Employment in any of these fields may well lead to a position of responsibility in industrial management if the engineer is so inclined.

**INDUSTRIAL ENGINEERING—FULL-TIME COURSE**

**Bachelor of Engineering**

The first and second years of this course are identical with the first two years of the full-time course in Mechanical Engineering.
THIRD YEAR
(21 weeks day course)

DESCRIPTIONS OF SUBJECTS
TEXT AND REFERENCE BOOKS

(For General Studies subjects see the Department of General Studies Handbook.)

SCHOOL OF MECHANICAL AND INDUSTRIAL ENGINEERING

5.001 Engineering I

A. Introduction to Engineering

TEXTBOOK

REFERENCE BOOKS
Dennis, W. H. Extractive Metallurgy. Pitman, or,
Gilchrist, J. D. Extractive Metallurgy. Pergamon, or,
Newton, J. Extractive Metallurgy. Wiley.

(ii) Computers — Introduction and Concepts: Introduction to computers to follow the computer work in Mathematics I. To develop:—(a) familiarity with algorithms; (b) the use of procedure oriented languages; and (c) an introduction to computing equipment.

(iii) Introduction to Engineering Design: Engineering method, problem identification, creative thinking, mathematical modelling, materials and processes, communication of ideas, the place of engineering in society, or

TEXTBOOK
Karbowiak, A. E. & Huey, R. M. ed. Information Computers, Machines and Humans. N.S.W. U.P.
REFERENCE BOOKS

Krick, E. V. *Introduction to Engineering and Engineering Design*. Wiley.

Ryder, F. L. *Creative Engineering Analysis*. Prentice-Hall.

TEXTBOOK

Meriam, J. L. *Statics*. Wiley.

REFERENCE BOOKS

C. *Engineering Drawing*: Fundamental concepts of descriptive geometry, including reference systems, representation of point, line and plane; fundamental problems of position and of measurement. Application of descriptive geometry to certain problems arising in engineering practice. Special emphasis on ability to visualize problems and processes involved in their solution. Instruction in the correct use of drawing instruments and the application of drawing standards. Measurements and dimensioning. Orthographic and isometric projections.

TEXTBOOKS

Robertson, R. G. *Descriptive Geometry*. Pitman.

REFERENCE BOOK

5.001/1 Engineering I, Part I

For students in Year 2 of the Applied Geology course. It consists of Section B. I (Engineering Mechanics) and Section C (Engineering Drawing) of 5.001 Engineering I.

5.011 Engineering IA

A. *Introduction to Engineering*

As for 5.001 Engineering I.

**TEXTBOOKS**
- Meriam, J. L. *Dynamics*. Wiley.
- Meriam, J. L. *Statics*. Wiley.

**C. Engineering Drawing**
As for 5.001 Engineering I.

**5.023 Seminar**
For students in the B.Sc (Tech.) course in Mechanical Engineering.

**5.051 Thesis**
For students in the full-time course in Mechanical Engineering.

**5.061 Technical Orientation**
Designed to inform students of the art and technique of technical communication, the forms of engineering professional work and the nature of the courses of instruction. A major objective is to bring staff and students together in an atmosphere of discussion and enquiry. May include one or two visits to special establishments.

**TEXTBOOK**
Cooper, B. M. *Writing Technical Reports*. Pelican.

**REFERENCE BOOKS**
- Roget's *Thesaurus*.

**5.062 Communications**
The mathematical theory of communication, followed by the basic techniques of communication by various media, as required by the professional man. Drawings as a means of communication, pictorial sketches and drawings as illustrations, instructions and visual aids. Basic photographic techniques, the grammar of cine film and of television. Library searching, collation of information, preparation of a seminar and relevant visual aids. Techniques of public speaking and chairmanship. Preparation of a technical paper and its illustrations including graphs, charts and tables of data. The work of an editor. Methods of reproducing information. Copyright and fair copying. Computerized data storage.
Production of a short cine film, videotape and slide sequence; pictorial illustrations. Participation in a seminar and writing of a thesis.
5.071 Engineering Analysis

TEXTBOOKS
Freund, J. E. Mathematical Statistics. Prentice-Hall.
Statistical Tables.

REFERENCE BOOKS
Derman, C. & Klein, M. Probability and Statistical Inference for Engineers. O.U.P.
Freeman, H. Introduction to Statistical Inferences. Addison-Wesley.
Hald, A. Statistical Theory with Engineering Applications. Wiley.

5.102 Mechanical Engineering Design

Lectures — Advanced application of strength of materials with respect to the design of reciprocating machinery. Balancing of rotating and reciprocating masses. Flywheel determination. Governors.

Drawing Office — Design of elements encountered in reciprocating machinery. Crankshafts, connecting rods, pistons, cams, governors, etc.

Text and Reference Books as for 5.112, together with:

TEXTBOOKS

REFERENCE BOOKS
Hirschhorn, J. Dynamics of Machinery. Nelson.
5.111 Mechanical Engineering Design

Introductory lectures illustrating the interdependence of design and technology. Mechanical technology. Introduction to workshop metrology. Philosophy and technique of design. Simple creative design assignments. Basic engineering elements.

**TEXTBOOKS**

**REFERENCE BOOKS**

*Harrisberger, L. Engineersmanship*, Wadsworth.
*Krick, E. V. Introduction to Engineering & Engineering Design*, Wiley.
*Matousek, R. Engineering Design*, Blackie.
*Parker, S. Drawing and Dimensions*, Pitman.
*Ryder, F. L. Creative Engineering Analysis*, Prentice-Hall.

5.112 Mechanical Engineering Design

*Design for Production* — Principles of tolerance specification, standard procedures for gauging, dimensioning and surface finish specification.

*Design of Machine Elements* — Application of fundamental principles to the design of common machine elements, such as shafts, springs, bearings, power transmission devices.

Text and Reference Books as for 5.111, together with:

**TEXTBOOKS**

*Matousek, R. Engineering Design*, Blackie.

**REFERENCE BOOKS**

*Shigley, J. E. Mechanical Engineering Design*, McGraw-Hill.
5.113 Mechanical Engineering Design

**TEXTBOOKS**
As for 5.112, together with:
- Asimow, M. *Introduction to Design*. Prentice-Hall.

**REFERENCE BOOKS**
As for 5.112, together with:
- Spotts, M. F. *Mechanical Design Analysis*. Prentice-Hall.

5.301 Engineering Mechanics

Kinematics and kinetics of the plane motion of particles and rigid bodies. Rectilinear, curvilinear and angular motion; dynamic equilibrium; work and energy; impulse and momentum. Dynamics of mass flow.

**TEXTBOOK**
Meriam, J. L. *Dynamics*. Wiley.

**REFERENCE BOOK**

5.311 Engineering Mechanics

Kinematics and kinetics of the plane motion of rigid bodies including reference to particles and streams of particles. Absolute motion, relative translational motion and relative angular motion; dynamic equilibrium; work and energy; impulse and momentum.

**TEXTBOOK**
Meriam, J. L. *Dynamics*. Wiley.

**REFERENCE BOOK**
5.321 Automatic Control Engineering
Block diagrams and Laplace transform methods for system analysis. Transfer functions. Response functions. The general criterion for stability. Routh's criterion. Types of controller action and their effects on system response. Analysis of some pneumatic control system components including one or two types of pneumatic controller.

TEXTBOOK

REFERENCE BOOK

5.324 Automatic Control Engineering

TEXTBOOK

REFERENCE BOOKS

5.331 Dynamics of Machines I

TEXTBOOK
Hirschhorn, J. Dynamics of Machinery. Nelson.

REFERENCE BOOK
Church, A. H. Mechanical Vibrations. Wiley.

5.332 Dynamics of Machines II
Advanced Kinematics — Velocity and acceleration analysis of complex mechanisms, inflection circle, Euler-Savary equation. Dynamic Motion Analysis — Energy distribution, rate of change of energy methods. Disc

TEXTBOOKS
Church, A. H. Mechanical Vibrations. Wiley.
Hirschhorn, J. Dynamics of Machinery. Nelson.

REFERENCE BOOKS
Burton, R. Vibrations and Impact. Addison-Wesley.
Holowenko, A. R. Dynamics of Machinery. Wiley.

5.412 Mechanics of Solids

TEXTBOOK

REFERENCE BOOKS

5.413 Mechanics of Solids II
Together with a selection from:

TEXTBOOKS
5.502 Fluid Mechanics

TEXTBOOKS
Barna, P. S. *Fluid Mechanics for Engineers*. Butterworth, London,
or,
Shepherd, D. G. *Principles of Turbomachinery*. Macmillan.

REFERENCE BOOKS

5.611 Fluid Mechanics/Thermodynamics

TEXTBOOKS
Wark, K. *Thermodynamics*. McGraw-Hill, 1966, or,

5.613 Fluid Mechanics/Thermodynamics III

TEXTBOOKS

REFERENCE BOOK

5.661 Mechanical Engineering III

TEXTBOOKS

5.701 Thermodynamics
5.702 Thermodynamics

TEXTBOOK

REFERENCE BOOKS
Soo, S. L. Thermodynamics of Engineering Science. Prentice-Hall.

5.711 Thermodynamics

TEXTBOOKS
Lee, J. F. & Sears, F. W. Thermodynamics. 2nd ed. Addison-Wesley, or,

5.801 Aircraft Design

(b) Design of Aircraft Structures — Significance of design requirements: proof and ultimate load, load and safety factors, interpretation of V-b diagram, Stressing cases. Detailed structural and mechanical design of airframe, controls, joints; choice of materials; use of structures data sheets. Practical design of a simple aircraft structural component.
**5.811 Aerodynamics I**

Navier-Stokes equations; elementary boundary layer theory; turbulence, convection, friction and form drag; airfoil characteristics. Vorticity and circulation; Prandtl wing theory, induced drag, spanwise lift distribution, wing characteristics. Static longitudinal stability and control. Manoeuvrability. Standard atmosphere, performance calculations. One-dimensional gas dynamics, isentropic, adiabatic and nozzle flow; rocket equation.

**TEXTBOOK**

**REFERENCE BOOKS**

**5.812 Aerodynamics II**

**TEXTBOOK**

**REFERENCE BOOKS**
Rauscher, M. *Introduction to Aeronautical Dynamics*. Wiley.
5.822 Analysis of Aerospace Structures I

Equilibrium of forces, plane frames, space frames; inertia forces, load factors; beams: two-moment equation, shear and bending-stress distribution in various thin-webbed beams, tapered beams, beams with variable flange areas. Semi-monocoque structures. Deflection of structures: Maxwell's and Castigliano's theorems, Williot diagram. Statically indeterminate structures: beams, trusses, stiff-jointed frames; methods of superposition, energy, moment distribution, elastic centre; shear distribution in two-cell beam. Aircraft materials, physical properties and their measurement. Dimensionless stress-strain data.

TEXTBOOKS
Peery, D. J. *Aircraft Structures*. McGraw-Hill, or,

REFERENCE BOOK

5.823 Analysis of Aerospace Structures II

TEXTBOOKS
Peery, D. J. *Aircraft Structures*. McGraw-Hill.

REFERENCE BOOKS
Hendry, A. W. *Elements of Experimental Stress Analysis*. Pergamon.
Kuhn, P. *Stresses in Aircraft and Shell Structures*. McGraw-Hill.

5.831 Aircraft Propulsion

5.911 Naval Architecture

TEXTBOOK
Comstock, J. P. Principles of Naval Architecture. Soc. of Naval Architects & Marine Engineers.

REFERENCE BOOK

5.921 Ship Structures

TEXTBOOK
Comstock, J. P. Principles of Naval Architecture. Soc. of Naval Architects & Marine Engineers.

REFERENCE BOOKS

5.922 Ship Structures

5.931 Principles of Ship Design

TEXTBOOK
Munro-Smith, R. Merchant Ship Design. Hutchinson.

REFERENCE BOOKS
Arnott, D. Design and Construction of Steel Merchant Ships. Soc. of Naval Architects & Marine Engineers.
Board of Trade. Instructions as to the Survey of Passenger Steamships. Vols. I & II. H.M.S.O.
Board of Trade. Instructions as to the Tonnage Measurement of Ships. H.M.S.O.
Board of Trade. Measurements of Vessels for the Panama Canal. H.M.S.O.
Todd, F. H. Ship Hull Vibration. Arnold.

5.932 Ship Design Project

Design of a vessel to provide characteristics of hull form, preliminary general arrangement, lines plan, hydrostatic curves, investigation of stability and trim, structural profile and midship section, capacity, freeboard, tonnage, floodable length (if applicable), power requirements, propeller design and final general arrangement.

Text and reference books as for 5.931.

5.941 Ship Propulsion and Systems

TEXTBOOK
Comstock, J. P. Principles of Naval Architecture. Soc. of Naval Architects & Marine Engineers.

REFERENCE BOOKS
6.021 Electrical Engineering II

TEXTBOOK
Smith, R. J. Circuits, Devices and Systems. Wiley International.

REFERENCE BOOKS

TEXTBOOK
No set text.

REFERENCE BOOKS
To be selected.

B. Machines and Transformers: The principles of steady state operation and an introduction to the transient operation of transformers and rotating machines used for the conversion of energy. Single and three phase transformers, synchronous and asynchronous machines, direct current machines and metadynes.

TEXTBOOK

REFERENCE BOOKS
Say, M. G. Design and Performance of A.C. Machines. Pitman.

TEXTBOOK

REFERENCE BOOKS

Numerical analysis, errors, interpolation, quadrature linear and non-linear equation, differential equations. Logical organization of computers in functional units.

TEXTBOOK

REFERENCE BOOKS
Marcus, M. P. *Switching Circuits for Engineers*. Prentice-Hall.

TEXTBOOK

6.041S Fields and Measurements

*Fields*: Applications of field theory not elsewhere treated in the course, selected from: elements of incompressible fluid magnetohydrodynamics;
some engineering applications of magnetostatics; analogies between the telegraphist's equations and a variety of potential theory problems, particularly non-electrical.

TEXTBOOK

REFERENCE BOOKS

*Measurements*: Principles of electrical measurements of moderate precision using direct currents and alternating currents of frequency such that lumped circuit techniques are satisfactory.

TEXTBOOK
Stout, M. B. *Basic Electrical Measurements*. Prentice-Hall.

REFERENCE BOOKS
Harris, F. K. *Electrical Measurements*. Wiley.

6.042S  **Circuits, Signals and Information Theory**

*Circuit* theory and network synthesis. *Signal Analysis* and transmission through networks, including theory of noise and stochastic signals. Includes time frequency and mixed domain presentation; transients and other signals; correlation, convolution, etc.; statistical properties of signals; applications. *Information Theory* of discrete systems including coding and encoding of patterns. Information theory of continuous systems. Mathematical theory of signal detection, including an introduction to decision theory. Signal and system analysis in the light of information theory.

TEXTBOOK

REFERENCE BOOKS

6.052  **Electrical Engineering**

Measurement methods in electrical engineering.

TEXTBOOK
Stout, M. B. *Basic Electrical Measurements*. Prentice-Hall.

REFERENCE BOOKS
Harris, F. K. *Electrical Measurements*. Wiley.

6.065  **Computer Science**

Computer organization and programming, numerical analysis and information structures with electives from algorithmic languages and com-
pillers, numerical analysis, logical design, digital systems, programming systems, mathematical optimization techniques, simulation and heuristics, and data processing.

**6.202S Power Systems**

Transmission line parameters, symmetrical components, transformers, steady state system calculations for balanced and fault conductions. Lightning and switching voltage transients, circuit interruption. Load and
frequency control of a single machine, steady state and transient stability. Load and frequency control of a system, economic transmission line loading, introduction to digital computer system calculations. Protection.

TEXTBOOK

REFERENCE BOOKS

6.212S Electrical Machines

TEXTBOOK

REFERENCE BOOKS
Draper, A. *Electrical Machines*. Longmans.

6.251 Electric Power Engineering

TEXTBOOK
Hindmarsh, J. *Electrical Machines*. Pergamon.

REFERENCE BOOKS
6.262 Electrical Machines
Covers aspects of rotating machines as components of power and control systems.

TEXTBOOK
Hindmarsh, J. Electrical Machines. Pergamon.

REFERENCE BOOKS
Draper, A. Electrical Machines. Longmans.
Say, M. G. Design and Performance of A.C. Machines. Pitman.

6.303S Communication Electronics

TEXTBOOK
No set text.

REFERENCE BOOKS
Hancock, J. C. An Introduction to the Principles of Communication Theory. McGraw-Hill.
6.313S Antennas, Propagation and Guided Waves

Retarded potentials, the fields due to a current element, Poynting's vector, wave impedance of space. Linear antennas, current distribution, radiation resistance directional characteristics. Effects of ground. Antenna arrays, antenna network theorems, polar diagrams of arrays, gain, directivity and bandwidth. Aperture antennas. Radio wave propagation. Surface, ground, direct and reflected waves. Ionospheric propagation, tropospheric scatter propagation.

Guided Waves: Transmission line theory including losses, dispersion, matching and solution of problems. Types of transmission lines including coaxial lines, microstrip, triplate, surface wave lines, etc. Waveguides: Theory of rectangular and circular waveguides: attenuation, dispersion and discussion on waveguide practice. Microwave circuits including discussion on Irises, corners, tees, directional couplers, hybrids, transformers, etc., non-reciprocal devices; cavities and other resonant structures. Discussion of modern microwave sources.

TEXTBOOK

REFERENCE BOOKS

6.322S Electronics

Topics in this course include: An introduction to modern filter theory; pulse spectra. Amplifiers: wide band, compensation; direct coupled, operational amplifiers, regulators. Pulse and Digital circuits: semiconductor switches; emitter coupled multivibrators; blocking oscillators. Integrated Circuits: non-linear and linear; use in systems. Power Converters: polyphase rectifiers, controlled rectifiers; high voltage converters, inverters. Semiconductor controls: motor controls, firing circuits, etc. Reliability Engineering: calculation of MTBF; statistical and worst case design; environmental and operating stresses.

TEXTBOOK
No set text.
6.333S Communication Systems

TEXTBOOK
No set text.

REFERENCE BOOKS

6.352 Communications

Theory and practice of certain aspects of communications engineering. Topics include modulation theory, demodulation, calculation, use and measurement of noise factor, oscillators, tuned amplifiers, transmitters and receivers.

TEXTBOOK
REFERENCE BOOKS
Hancock, J. C. An Introduction to the Principles of Communication Theory. McGraw-Hill.

6.356 Electronics
An introduction to the physical basis of electronics and of electronic circuits. Topics include principles of operation of solid state, vacuum and gas-filled devices. Basic types of electronic amplifiers.

TEXTBOOK

REFERENCE BOOKS
Joyce, M. V. & Clarke, K. K. Transistor Circuit Analysis. Addison-Wesley.
Van der Ziel, A. Solid State Physical Electronics. 2nd ed. Prentice-Hall.

6.357 Electronics
An extension of 6.356 with topics including rectifiers, amplifiers, oscillators, modulation and demodulation and switching circuits.

TEXTBOOK

REFERENCE BOOKS
Joyce, M. V. & Clarke, K. K. Transistor Circuit Analysis. Addison-Wesley.

6.362 Communications
Topics generally include guided propagation, information theory and noise, transmission lines, telephone networks, line communication equipment.

TEXTBOOK
No set text.
REFERENCE BOOKS

Hancock, J. C. An Introduction to the Principles of Communication Theory. McGraw-Hill.

6.385S Biomedical Engineering

The practice of engineering techniques applied to the biological and medical fields. The lectures will be supplemented by demonstrations and experimental work, and will deal with the basic physiology of cells, tissues, organs and organisms, instrumentation and measurement techniques and modelling of various types of biological systems.

6.412S Automatic Control

Principles and techniques applicable to the analysis and design of feedback control systems encountered in industrial processes. Frequency transform and state space methods for compensation and stability analysis of single-input single-output linear systems. Extension to include some common nonlinearities. Optimum design including identification of process parameters by both on- and off-line methods.

TEXTBOOK

Class notes will be issued.

REFERENCE BOOKS

6.422S Computer Control

Class notes will be issued.

REFERENCE BOOKS

6.454 Power Systems and Control

*Power Systems* — Performance of transformers and power systems under steady load and fault conditions. *Control* — A study of the performance and analysis of automatic control systems.

TEXTBOOK

REFERENCE BOOKS

*Control Systems* — A study of the performance and analysis of automatic control systems.

TEXTBOOK

REFERENCE BOOKS

6.512S Advanced Semiconductor Device Theory

Characteristics and limitations of semiconductor devices as functions of operating point and environment. Devices include high-frequency and power transistors, FETs, thyristors and negative resistance devices.

TEXTBOOK

REFERENCE BOOKS
6.522S  Transistor and Integrated Circuit Design

Development of theory of transistor operation including high injection level effects and three dimensional geometry effects. Kinetics of epigrowth, diffusion and oxide growth as far as these are required to permit the student to specify process cycles. Design of transistor in terms of desired diffusion profiles, oxide growth thicknesses, and the specification of process cycles. Extension of the above to passive components as used in integrated circuits. Design aspects of integrated circuits, covering aspects peculiar to integrated circuits such as distributed parameters, parasitic couplings, correlated component tolerances and variations, special D.C. biasing methods.

TEXTBOOKS

6.612S  Computer Systems Engineering

Switching circuits, memory systems, control and sequencing methods, digital to analogue and analogue to digital converters, input output and display devices. Data representation in machines, system architecture, multiprocessor systems. Fundamentals of software systems and languages.

Analogue and hybrid computing; or advanced machine organization and construction.

TEXTBOOK
No set text.

REFERENCE BOOKS
Flores, I. *The Logic of Computer Arithmetic*. Prentice-Hall.
Marcus, M. P. *Switching Circuits for Engineers*. Prentice-Hall.

6.622S  Computer Application and Software

Simulation, heuristics, numerical analysis, mathematical optimization, languages, compilers and operating systems.
TEXTBOOK
No set text.

REFERENCE BOOKS (for 6.612S and 6.622S)
As for 6.065 Computer Science.

6.801 and 6.801S Electrical Engineering
A special course for metallurgists and engineers not intending to follow electrical engineering as a profession. Presentation of the fundamental principles of electric and magnetic circuits and vacuum tubes and the application of these principles to the theory, performance and control of electrical equipment.

TEXT AND REFERENCE BOOKS
As for 6.802 Electrical Engineering.

6.802 Electrical Engineering
More advanced work on circuits, electrical and electronic equipment following on 6.801 and applications. Electrical and electronic measurement techniques, with emphasis on the instrumentation required for the electrical measurement of non-electrical quantities.

TEXTBOOK (for 6.801, 6.801S, 6.802 and 6.802S)
Smith, R. J. Circuits, Devices and Systems. Wiley.

REFERENCE BOOKS (for 6.801, 6.801S, 6.802 and 6.802S)
Del Toro, V. Principles of Electrical Engineering. Prentice-Hall.
Sutcliffe, H. Electronics for Students of Mechanical Engineering. Longmans.

6.811 Electronic Instrumentation for Surveys
Measurement of time, frequency and distance, Propagation of electromagnetic waves affecting the accuracy of tellurometry, time measurement, position finding and navigational aids.

TEXTBOOK
No set text.

REFERENCE BOOKS
Del Toro, V. Principles of Electrical Engineering. Prentice-Hall.
Smith, R. J. Circuits, Devices and Systems. Wiley.

6.841 Electronic Instrumentation
Fundamentals of electronic instrumentation, in particular the operation and use of equipment at audio and sub-audio frequencies for the measurement and recording of small signals in the presence of noise. The laboratory course comprises mainly demonstration experiments. Up to four weeks of field instruction will be included in the course.
TEXTBOOK
No set text.

REFERENCE BOOKS
Harris, F. K. *Electrical Measurements*. Wiley.

6.901S  Seminar

6.911  Thesis
For pass degree students in the fourth year of the B.E. course.

6.931  Group Thesis
For students in the fourth year of the B.E. course.
8.012 Engineering Electives

The student must choose two elective studies which for examination purposes will be grouped into one subject. A supervised project or thesis may be substituted for one elective with the premission of the Head of Department.

8.111 Civil Engineering

TEXTBOOK

REFERENCE BOOKS

8.112 Materials and Structures

Properties of Materials — Mechanical behaviour of materials; response to static and dynamic loads. Laboratory techniques. Analysis and presentation of experimental results. Use of material properties in analysis and design.

REFERENCE BOOKS

8.131 Structures

REFERENCE BOOKS
Cassie, W. F. Structural Analysis. Longmans.
Ferguson, P. M. Reinforced Concrete Fundamentals. Wiley.
Lin, T. Y. Design of Prestressed Concrete Structures. Wiley.

8.141 Engineering Computations
Intercept charts for three or more variables. Nomograms. Solution of algebraic and transcendental equations by simple iteration methods. Introduction to finite differences. Solution of differential and partial differential equations by using finite differences. Application to instability problems. Relaxation methods applied to solution of problems involving differential equations such as Poisson's equation.

TEXTBOOK

REFERENCE BOOKS

8.151 Mechanics of Solids
TEXTBOOK

REFERENCE BOOKS

8.152S Structures

Introduction to structural design; design loads, safety factors and load factors; Codes of Practice. Design of metal structures; members in tension, compression and bending, connections; framed structures. Reinforced concrete design; beams and short columns; simple slabs. Structural analysis; principle of virtual work; force and displacement methods; deflections in structures; solution of statically indeterminate structures; introduction to moment distribution; influence lines; introduction to structural dynamics.

TEXTBOOKS
S.A.A. Code CA1 — 1968.

REFERENCE BOOKS
Bresler, B. & Lin, T. Y. *Design of Steel Structures*. Wiley.
Cowan, H. J. & Smith, P. R. *Design of Reinforced Concrete*. A. & R.
Ferguson, P. M. *Reinforced Concrete Fundamentals*. Wiley.
McGuire, W. *Steel Structures*. Prentice-Hall.

8.153 Structures

Extension of earlier work on steel design to include continuous structures; design of a single storey continuous gable-framed structure using permissible stress method, with emphasis on design of welded joints for continuity. Introduction to plastic method of design of steel structures. Load factor. Principle of redistribution of moments. Simple application such as design of continuous beams.

Timber design. Emphasis on special properties of timber affecting design of timber structures.

Earth retaining structures.

REFERENCE BOOKS
Beedle, L. S. Plastic Design of Steel Frames. Wiley.
Ferguson, P. M. Reinforced Concrete Fundamentals. Wiley.
Lin, T. Y. Design of Prestressed Concrete Structures. Wiley.

8.154 Structures
Analysis. Revision of force method of solving statically indeterminate pinjointed structures, and rigid framed structures. Further examples of the use of force method including rigid frames in which axial and shear deformations as well as flexural deformations are significant. Treatment of members of variable cross-section. Extension of earlier work on moment distribution method to include the problem of sidesway. Derivation of the slope-deflection equations — their use in solving simple frame problems. The matrix formulation of the stiffness method of analysis. Introduction to elastic stability of structures.

8.161 and 8.161S Engineering Mathematics

REFERENCE BOOKS
8.221 Engineering Materials

Concrete Technology — Physical and chemical properties of cements. Production, testing and selection of aggregates. Pozzolans, admixtures. Workability, strength and other properties of concrete. Target strengths and the design and proportioning of mixes.

Soil Mechanics — Physical and mechanical properties affecting capillarity and compressibility and their relevance to seepage, uplift and the settlement of buildings located above buried compressible soil strata. Shearing strength, bearing capacity and earth pressure. Soil identification and testing of physical properties.

REFERENCE BOOKS
Refer to subjects 8.252 and 8.252S.

8.222 Engineering Materials

Concrete Technology — Permeability, durability, elastic modulus, creep and other concrete properties; concrete volume changes. Design and proportioning of concrete mixes; lightweight concrete. Manufacture and field control of concrete.

Soil Mechanics — Studies of theoretical and applied sections of soil mechanics relating to foundations and earth dams. Treatments of modern soil technology studies and stabilization work.

TEXTBOOKS
Scott, R. F. Principles of Soil Mechanics. Addison-Wesley, 1963, or, 1956. or,

REFERENCE BOOKS
S.A.A. Specifications (current editions).

A130 Los Angeles Test for Coarse Aggregate. Stand. Assoc. of Aust.
Soil Mechanics for Road Engineers. H.M.S.O.
8.253 Civil Engineering Materials

Laboratory. Examination of concrete properties and concrete-making materials; proportioning methods; analysis, manufacture and testing of reinforced concrete members.

REFERENCE BOOKS

Murdock, L. J. Concrete Materials and Practice. 3rd ed. Arnold.
S.A.A. Specifications (current editions) A64 Ready Mixed Concrete; A77 Aggregates for Concrete; A100-A111 Methods of Testing Portland Cement Concrete. Stand. Assoc. of Aust.

Part II — Soil Engineering

Foundation engineering; bearing capacity theory; allowable settlement, shallow and deep foundations; rafts; pile groups; site investigation as applicable to foundation design. Earth and rockfill dams, types, materials, stability analysis and design, construction problems. True shear strength of saturated soils, modern failure theories, yield criteria and yield surface theories applied to soil behaviour. Non-saturation; mechanics of unsaturated flow, soil suction, shear strength of unsaturated soils, drainage process.

Laboratory. Consolidation and shear strength testing of cohesive and granular soils. Evaluation of simple earth pressure, foundation engineering and earth dam theory.
8.254 Civil Engineering Materials

Laboratory. Examination of concrete and concrete materials; aggregate testing, mix design, mechanical properties of concrete.

Part II — Soil Engineering

Foundation engineering; bearing capacity theory; allowable settlement, shallow and deep foundations; rafts; pile groups; site investigation as applicable to foundation design. Earth and rockfill dams, types, materials, stability analysis and design, construction problems.

Laboratory. Consolidation and shear strength testing of cohesive and granular soils. Evaluation of simple earth pressure, foundation engineering and earth dam theory.

8.259 Properties of Materials

8.251 — Properties of Materials plus the structure and properties of binary alloys; control of structure and properties, commercial alloys, materials selection.

8.261 Geotechnics

Introduction to aspects of engineering geology and rock and soil characteristics to provide a basis of subsequent work in Soil Mechanics, Concrete Technology and Road Materials. Main topics covered are structural geology; groundwater; petrology; clay mineralogy; soil properties; testing of coarse aggregates. Some previous study of geology is assumed.
TEXTBOOKS

REFERENCE BOOKS

8.301S Systems Engineering
Covers the following topics: Systems approach, Basic systems concepts including networks. Optimization techniques. Linear systems. Complex systems. Applications.

REFERENCE BOOKS

8.511 Hydraulics
*Part I: 5.711 Thermodynamics*

TEXTBOOKS

8.521 Hydraulics
REFERENCE BOOKS
Parmakian, J. Water Hammer Analysis. Prentice-Hall.

8.531 and 8.531S Water Engineering

Hydrology — The hydrologic cycle, the runoff cycle, water balance, energy balance, circulation of atmosphere, dynamic cooling, condensation and precipitation, probability analysis of precipitation and floods, infiltration, soil water and groundwater hydrology, streamgaging, hydrograph analysis, flood estimation, yield and storage determination, evaporation, evapotranspiration.

TEXTBOOKS

REFERENCE BOOKS
8.532 Water Engineering

Part II — Applied Water Engineering: water resources problems and solutions, the systems approach. General principles of regulation and utilisation of water; reservoirs and storage, distribution and transmission, treatment, collection and disposal. Examples of applied water engineering selected from the following fields: water supply, sewerage, irrigation, land drainage, urban drainage, flood control, hydro-electric generation, multi-purpose projects, river channel control, coastal engineering.

TEXTBOOK

REFERENCE BOOKS
Robertson, J. M. Hydrodynamics. Prentice-Hall.

8.611 Civil Engineering

Public Health Engineering — Processes of decomposition and decay; chemical and biochemical measurement of degree of pollution; basic principles of the treatment of polluted waters. Water supply schemes; principles and practice of water treatment; sewerage systems; construction of sewers; pumping stations; sewage treatment and disposal; swimming pools; refuse disposal.

Engineering Hydrology — A basic course dealing with principles and modern techniques. Topics covered are: meteorology, climatology, evaporation, analysis of hydrologic data, stream gauging, the runoff process, infiltration, design storm synthesis, unitgraphs, synthetic unitgraphs, flood frequency studies, rational method, water balance, water losses, rainfall runoff relationships, stream flow correlations, storage determination, groundwater.

TEXTBOOKS
REFERENCE BOOKS

8.612 Civil Engineering

*Road Engineering* — Road location and surveys, road design standards, road alignment, design of curves and intersections; types and functions of pavements. Pavement thickness. Road maintenance. Urban stormwater drainage. Economic analysis of routes and schemes.

*Irrigation Engineering* — Sources of water, water requirements, methods of application to land. Soil deterioration. Investigation and design. Maintenance and operation of irrigation systems; water metering.

TEXTBOOKS
Ryan, P. W. S. *Engineering Administration*. A. & R.

REFERENCE BOOKS
Du-Plat-Taylor, F. M. G. *Docks, Wharves and Piers*. Eyre & Spottiswoode.

8.621 Engineering Construction

Construction plant and equipment; compressed air services, drilling, earthmoving, tunnelling and blasting, hoisting and conveying, pile-driving, etc.; aggregate and concrete plant. Principles of construction administration; evolution of management; objectives of management; principles of organisation; motivation and communication; project management. The role of government and local government authorities. An introduction to construction planning and scheduling; cost control and cost accounting; tenders and the preparation of estimates; scheduling of operations; linear programming, critical path and PERT techniques; contracts and specifications.
TEXTBOOKS
Ryan, P. W. S. Engineering Administration. A. & R.

REFERENCE BOOKS
Refer to subject 8.612.

8.631 Civil Engineering

Part II: Transport Planning and Operations. Definition of a land use/transport system — land use potential, traffic generation, intensity of traffic generation, transport system capacity. Stability and steady state performance — output, specific output. Land use, generation, desire line and assignment models. The transport planning process — systems versus programming approach. Evaluation of operational performance of transport systems — travel time and flow relationships (the queueing model), level of service, network characteristics, transfer terminals. Economic evaluation of transport schemes and plans — criteria, benefits, costs, time streams, discounting, present worth, rates of return, benefit/cost and cost/effectiveness ratios.

Part III: Road Engineering. Route analysis and road location in the rural and urban environment including the location of bridges. Road geometries and design, its influence on the behaviour of drivers. Landscape aspects of road design. Some examples of road design policies and their application. Types of roads and expressways and their applications, advantages and disadvantages. Types of intersections and interchanges, and some problems in their design. Pavement requirements, thickness design, pavement materials, gravels, stabilisation, cement and bituminous concrete. Function of wearing courses. Road drainage requirements and examples of design, road construction methods and plant. Uses of electronic computation in Highway Engineering.

8.632 Civil Engineering

Comprises Parts I and III, being respectively Regional and Urban Planning and Road Engineering of 8.631 Civil Engineering.
8.711 Engineering for Surveyors

REFERENCE BOOKS

Australian Rainfall and Runoff. Institution of Engineers, Australia, 1958.
Elliot, A. & Dickson, J. H. Laboratory Instruments — Their Design and Application. Chapman & Hall.
Whitehead, T. N. Instruments and Accurate Mechanisms. Dover, N.Y.

8.712 and 8.712S Engineering for Surveyors

TEXTBOOKS

Policy for Geometric Design of Two Lane Rural Highways. Nat. Assoc. of Aust. State Road Authorities (avail. from D.M.R.).

REFERENCE BOOKS

DEPARTMENT OF INDUSTRIAL ENGINEERING

18.011 Industrial Engineering IA

Metrology — Principles of measurement and measuring systems. Basic design concepts, accuracy and precision, linear and angular measurements, screwthread measurements, gear measurement.

TEXTBOOKS
B.S. 1916, 1953. Limits and Fits. Parts I and II.

REFERENCE BOOKS

18.012 Industrial Engineering IIA

Technology of Manufacturing — Theories of deformation processes; extrusion, tube making, forming and deep drawing. Introduction to industrial experimentation; prediction of tool performance; design and analysis of shop trials.

Design for Production — Interchangeable manufacture; standardisation, selective assembly; design presentation. Design analysis, geometrical tolerancing; linear and non-linear loop equations.

Metrology — Measuring system — optical, pneumatic and electrical; straightness, flatness; surface texture and machine tool testing.
Theory of errors — quality control by variables.

TEXTBOOKS
B.S. 1916, 1953. Limits and Fits. Parts I and II.
REFERENCE BOOKS

18.021 Industrial Engineering IB

*Engineering Economics* — The structure of the Australian economy. The theory of the firm. The selection and replacement of processes and equipment. Construction and optimisation of particular economic models e.g. inventory. *Industrial Applications of Probability* — Tutorial problems from the fields of sampling inspection, quality control, control charts — simple economic models, e.g. newsboy problem, length of steel bars.

TEXTBOOKS

REFERENCE BOOKS

18.022 Industrial Engineering IIB

*Design of manufacturing facilities* — Product and objectives, equipment selection, plant location, factory layout.

*The use of human and physical resources* — Motion and time study, financial incentives, applications to machine controlled processes, work sampling and data collection.

*Production Control* — The detailed mechanics of control of jobbing production, and its extension to batch and continuous production. Manufacturing organisations, functions, inter-relationships and information flow. Application of data processing and control systems.

TEXTBOOKS

REFERENCE BOOKS
18.041 Thesis
For students in the full-time course in Industrial Engineering.

18.321 Methods Engineering
Planning and installation of manufacturing plants; location and site analysis; buildings and facilities; process and equipment selection; plant layout; maintenance problems; Ergonomics; work and effort; the dimensions of the workplace; workplace layout; the working environment and performance efficiency; fitting the job to the worker. Work measurement; motion and time study; recording and charting; work sampling; estimates for pre-determined motion times. Process analysis for production efficiency. Incentives: methods, improvement and work simplification.

Laboratory Work — Application of the laws of motion economy; workplace layout; the sequencing of manufacturing operations, time study; operation analysis and charting; the normal range of human movements and application to design of machine controls. Parameters and manifestations of physical fatigue.

REFERENCE BOOKS

REFERENCE BOOKS

18.422 Design for Production II (Interchangeable Manufacture)
Theory — Interchangeable manufacture: manufacturing, assembly and servicing costs; advantages and disadvantages of pursuing interchangeable principle. The use of standards. Tolerancing and the determination of accumulated tolerances. Design for interchangeable or unit assembly: design, dimensioning and tolerancing to fulfil functioning and manufacturing and inspection requirements. Metrology: basic principles of precision measurement, metrological practice in measurement, principles of construction, care and use of measuring equipment.

Laboratory — Metrology: assignments associated with gauging and tooling. Surface finish, inspection: non-destructive testing, quality control and sampling inspection.

TEXTBOOKS
B.S. 1916, 1953. Limits and Fits. Parts I and II.

REFERENCE BOOKS
18.431 Design for Production

Interchangeable manufacture; standardisation; unit and selective assembly; preferred sizes. Presentation and interpretation of geometric tolerances; grouping: analysis of non-linear loop equations, economic allocation of tolerances; application of probability theory to tolerance allocation. Gauge design: effect of gauge tolerances on interchangeability.

TEXTBOOKS
B.S. 1916, 1953. Limits and Fits. Parts I and II.

REFERENCE BOOK

18.521 Industrial Marketing

TEXTBOOK

REFERENCE BOOK

18.551 Operations Research

The formulating and optimisation of mathematical models. The development of decision rules. Some techniques of operations research such as mathematical programming, queueing theory, inventory models, replacement and reliability models, and simulation will be introduced. These techniques will be applied to situations drawn from industrial fields, e.g. production planning and inventory control. Practical problems of data collection, problem formulation and analysis will be included.

TEXTBOOK
REFERENCE BOOKS

18.621 Engineering Economics

TEXTBOOK

REFERENCE BOOKS
DEPARTMENT OF SURVEYING

29.081 Thesis

29.411 Surveying for Architects

REFERENCE BOOKS
Curtin, W. & Law, R. Concise Practical Surveying. 1st ed. E.U.P.

29.431 Surveying and Cartography

29.441 Engineering Surveying

Part B. Levelling (other methods). Linear measurement (electronic). Applications of survey techniques: control surveys, provision of information for design, setting out engineering works, etc. Outline of photogrammetry.

TEXTBOOKS
Seven Figure Mathematical Tables. Chambers, 1958.

REFERENCE BOOKS

B52

29.491 Survey Camp

29.801 Surveying I

Historical development of surveying methods and instruments, geodesy, cartography and astronomy. Introduction to modern aspects. Cartographic drawing and equipment. Surveying methods and instruments. Computations.

TEXTBOOKS

REFERENCE BOOKS

29.802 Surveying II

Part A: Introduction to errors of observation. Engineering surveys; investigation and setting out surveys, e.g. plane triangulation, traversing, contours, areas, volumes, horizontal and vertical curves, height determination by barometric, differential and trigonometric levelling. Hydrographic surveying.

Part B: Cartography, atlas map projections, map reproduction.

TEXTBOOKS
Seven Figure Mathematical Tables. Chambers, 1958.

REFERENCE BOOKS

29.803S Surveying III

TEXTBOOKS
REFERENCE BOOKS

29.805 Instruments and Cartography

Subject-matter same as Part A of 29.802.

29.806 Optics

Geometrical optics, lens systems and thick lenses, aberrations of optical systems, applications.

29.821 and 29.821S Geodesy I

Figure of the earth, geoid, ellipsoid. Differential geometry: Euler's Theorem, Clairaut's Theorem, properties of geodesics, curvatures on the spheroid. Legendre's Theorem, calculations for short and medium lines on the spheroid. Outline of surveyor's projections. Technique of observation, estimates and tests of internal precision of angle, direction and distance measurements. Adjustment of control surveys, precision of adjusted values, testing of results. Approximate adjustments, braced quadrilateral.

TEXTBOOKS

REFERENCE BOOKS

Peters, J. *Eight Place Table of Trigonometric Functions*. Edward Bros., 1943.
Vega, G. *Seven Figure Logarithmic Tables*. Hafner Pub. Co., N.Y.

29.822 Geodesy II

Calculations on the ellipsoid; longitude, latitude and reverse azimuth. Major horizontal control surveys, plumb line deviations and Laplace stations. Base lines, precise traversing, trilateration, high precision levelling.
TEXTBOOK

REFERENCE BOOKS

29.831 and 29.831S  Astronomy I

TEXTBOOKS
*Star Almanac for Land Surveyors for Current Year*. H.M.S.O.

29.832  Astronomy II
Precise time of observation. Geodetic methods for determination of precise latitude, longitude and azimuth. Astrolabes. Reduction of star-co-ordinates from Mean to Apparent Place.

TEXTBOOK
*Star Almanac for Land Surveyors for Current Year*. H.M.S.O.

REFERENCE BOOKS

NON-ENGINEERING SUBJECTS
(For General Studies subjects see the Department of General Studies Handbook.)

1.001 Physics I

1.011 Higher Physics I

Subject matter same as 1.001, but in greater depth.

Text and Reference Books for 1.001 and 1.011 (for students taking two full years of Physics):

TEXTBOOKS

REFERENCE BOOKS

(For 1.011 only)
1.041 Physics IC

For students in the Faculty of Science, Department of Surveying, and Industrial Arts course; also available as an elective in the Faculty of Arts. Consists of Units 1-9.

For Text and Reference Books see list after 1.051 Physics IE.

1.051 Physics IE

For students in the Aeronautical, Civil, Industrial and Mechanical Engineering and Naval Architecture courses. Consists of Units 1, 3-5, 7-11.

**UNITS**

13. **Biophysics**

14. **Geometrical Optics**
Reflection, refraction, image formation, aberrations. Optical instruments, microscope, spectroscope and the eye.

Text and Reference Books for 1.041 Physics IC and 1.051 Physics IC (for students taking one year of Physics only):

**TEXTBOOKS**

For 1.051 only:

**REFERENCE BOOKS**

**PHYSICS LEVEL II UNITS (Professional)**

The units are at two levels, an ordinary level, prefix 1.112, and a higher level, prefix 1.122:

**1.112A Electricity and Magnetism**
Electrostatics in vacuum and in dielectrics. Magnetostatics in vacuum and in dielectrics. Magnetostatics in vacuum and in magnetic materials. Maxwell's equations and simple applications.

**1.112B Modern Physics**
Special theory of relativity, Lorentz transformation, relativistic mass, momentum and energy; quantum theory, photoelectric effect, Compton effect; wave-particle duality, Schrodinger wave equation, infinitely deep square well, H atom; spectra, magnetic moment, exclusion principle; Rutherford scattering, nuclear properties, mass spectrograph, binding energy, radioactivity, alpha, beta and gamma radiation, nuclear reactions.

**TEXTBOOK**

**REFERENCE BOOKS**
1.112C Thermodynamics and Mechanics

1.122A Electromagnetism

TEXTBOOK
Corso, D. & Lorrain, P. Introduction to Electromagnetic Fields and Waves. Freeman, N.Y.

REFERENCE BOOK

1.122B Quantum Physics

TEXTBOOK

1.122C Thermodynamics and Mechanics

TEXTBOOKS
REFERENCE BOOKS
Goldstein, H. *Classical Mechanics*. Addison-Wesley.

1.212 Physics IIT

Two sections of this course are offered:

*Unit A*

**TEXTBOOK**
Fincham, W. *Optics*. Hatton Press.

**REFERENCE BOOKS**

*Unit B*

**Electronics:** Conduction in solids; electron emission, vacuum tubes and applications; solid state diodes, transistors, thyristors, unijunction transistors, amplifiers, feed back; block diagrams of complete systems.

**TEXTBOOK**

2.001 Chemistry I

Classification of matter and theories of the structure of matter. Atomic structure, the periodic table and chemical behaviour. Chemical bonds and molecular structure. Equilibrium and change in chemical systems. The structure, nomenclature and properties of organic compounds. Reactions of organic compounds.

2.011 Higher Chemistry I

Subject-matter same as 2.001, but treated in greater depth.

**TEXTBOOKS**
REFERENCE BOOKS

2.021 Chemistry IE
A terminating subject for students in the Aeronautical, Civil, Industrial and Mechanical Engineering, Naval Architecture, and Applied Geography courses.
Classification of matter and theories of the structure of matter. Atomic structure, the periodic table and chemical behaviour. Chemical bonding and the nature and properties of chemical substances. Equilibrium and change in chemical systems.

TEXTBOOKS

4.913 Materials Science
Polymer materials. The structure and properties of polymers. Mechanisms for the modification of properties.
Ceramic materials. The structure and properties of ceramics. Similarities and differences with other crystalline solids. Ceramic-metal composites.

4.921 Materials Science

TEXTBOOK

REFERENCE BOOK
10.001 Mathematics I

Calculus, analysis, analytic geometry, linear algebra, an introduction to abstract algebra, elementary computing.

TEXTBOOKS
Blatt, J. M. *Introduction to Fortran IV Programming*. Prentice-Hall.

It is expected that Professor G. M. Kelly's textbook will be available in its preliminary edition.

REFERENCE BOOKS
Birkhoff, G. & MacLane, S. *A Shorter Survey of Modern Algebra*. Collier-Macmillan.
Lange, I. H. *Elementary Linear Algebra*. Wiley.
Pedoe, D. *A Geometric Introduction to Linear Algebra*. Wiley.
Polya, G. *How to Solve It*, Doubleday Anchor.
Spivak, M. *Calculus*. Benjamin.

SUPPLEMENTARY READING LIST
Courant, R. & Robbins, H. *What is Mathematics?* O.U.P.

10.011 Higher Mathematics I

Calculus, analytic geometry, linear algebra, an introduction to abstract algebra, elementary computing.

TEXTBOOKS
Blatt, J. M. *Introduction to Fortran IV Programming*. Prentice-Hall.
Fagg, S. V. *Differential Equations*. E.U.P.
Spivak, M. *Calculus*. Benjamin.

It is expected that Professor G. M. Kelly's textbook will be available in its preliminary edition.

REFERENCE BOOKS
As for 10.001 Mathematics I plus:
Abraham, R. *Linear and Multilinear Algebra*. Benjamin.
Burkhill, J. C. *A First Course in Mathematical Analysis*. C.U.P.
Lang, S. *Linear Algebra*. Addison-Wesley.
Spivak, M. *Calculus on Manifolds*. Benjamin.

SUPPLEMENTARY READING LIST
As for 10.001 Mathematics I plus:
David, F. N. *Games, Gods and Gambling*. Griffin.
FACULTY OF ENGINEERING

10.021 Mathematics IT

Calculus, analysis, analytic geometry, algebra, probability theory, elementary computing.

**TEXTBOOKS**
Blatt, J. M. *Introduction to Fortran IV Programming*. Prentice-Hall.

**REFERENCE BOOKS**
Hoyt, J. P. *A Brief Introduction to Probability Theory*. International Text Book Co.

10.022 Mathematics

Differential equations, use of Laplace transforms, solutions by series; partial differential equations and their solution for selected physical problems, use of Fourier series; introduction to numerical methods; matrices and their application to theory of linear equations, eigen values and their numerical evaluation; vector algebra and solid geometry; multiple integrals; introduction to vector field theory.

**TEXTBOOK**

**REFERENCE BOOKS**

10.022/1 and 10.022/2 Mathematics, Parts 1 and 2

10.022 for part-time students in Engineering over two years. Text and Reference Books as for 10.022 Mathematics.

10.033 Mathematics

TEXTBOOKS

REFERENCE BOOKS
Hague, B. *An Introduction to Vector Analysis*. Methuen.
Tranter, C. J. *Integral Transforms*. Methuen.

10.111A Pure Mathematics II—Algebra

Vector Spaces: inner products, linear operators, spectral theory, quadratic forms. Linear Programming: convex sets and polyhedra, feasible solutions, optimality, duality.

TEXTBOOKS

10.111B Pure Mathematics II—Analysis

Complex variables: analytic functions, elementary functions, Taylor and Laurent series, integrals, Cauchy's theorem, residues, evaluation of certain real integrals, maximum modulus principles. Linear differential equations of the second order: equations with constant coefficients, power series solutions, Laplace transforms, Bessel functions.

TEXTBOOKS

REFERENCE BOOK

10.111C Pure Mathematics II—Abstract Algebra

Abstract Algebra: Euclidean algorithm, unique factorization theorem, mathematical systems, groups, determination of small groups, homomorphisms and normal subgroups. Geometry: elementary concepts of Euclidean, projective and affine geometries.

TEXTBOOKS

REFERENCE BOOKS
Birkhoff, G. & MacLane, S. *A Survey of Modern Algebra*. Macmillan.
10.341 and 10.341S Statistics

An introduction to probability theory. Random variables and distribution functions; the binomial, Poisson and normal distributions in particular. Standard sampling distributions, including those of $\chi^2$, t and F. Estimation by moments and maximum likelihood; confidence interval estimation. The standard tests of significance based on the above distributions, with a discussion of power where appropriate. An introduction to linear regression. Least squares adjustment of data.

10.351 Statistics

An introduction to probability theory, with finite, discrete and continuous sample spaces. Random variables: the standard elementary distributions including the binomial, Poisson and normal distributions. Sampling distributions, with emphasis on those derived from the normal distribution: t, $\chi^2$ and F. Estimation of parameters: the methods of moments and maximum likelihood, and confidence interval estimation. The standard tests of statistical hypotheses, and, where appropriate, the powers of such tests. An introduction to regression and the bivariate normal distribution.

10.371S Statistics

Subject matter same as 10.341.

10.381 Statistics

Subject matter same as 10.351.

TEXTBOOKS (for 10.341, 10.341S, 10.351, 10.371S and 10.381.)
Freund, J. E. Mathematical Statistics. Prentice-Hall.
Statistical Tables.

REFERENCE BOOKS
Derman, C. & Klein, M. Probability and Statistics Inference for Engineers. O.U.P.
Freeman, H. Introduction to Statistical Inference. Addison-Wesley.
Hald, A. Statistical Theory with Engineering Applications. Wiley.

11.411 Town Planning

The study of factors influencing the direction of the development and use of land in the public interest. Objectives of town and regional planning; historical background; contemporary planning techniques; New South Wales planning law and administration; parks and playing fields; housing and neighbourhood planning; traffic and transport; the central area; elements of civic design; the city of the future. Studio work in the design and layout of residential areas.

REFERENCE BOOKS

14.062 Accounting for Engineers

Problems related to industrial situations will be examined and consideration given to their relevance in decision making. This will involve a broad study of such matters as manufacturing and cost accounts, budgeting and budgetary control, cost analysis and control and profit planning.

TEXTBOOKS

REFERENCE BOOKS

25.101 Geology for Engineers

An introduction to geology with emphasis on the mechanical properties of rock and soil. Rock-forming minerals, clay minerals and the classification of rocks. The properties of rock. An introduction to the processes of orogenesis, epeirogenesis, denudation and weathering of rocks, vulcanicity, intrusion of plutonic rocks, sedimentation and metamorphism. Ground-water, the formation of soils, landforms and the stability of slopes. Review of the application of geology and geophysics in engineering practice. Laboratory work consists of the examination and the identification of common rock-forming minerals and rock types, and the preparation and interpretation of simple geological maps and sections. Two geological field tutorials of one day duration are a compulsory part of the course, and satisfactory field tutorial reports are to be submitted.

TEXTBOOK
25.303 Geophysics for Surveyors

Physics, shape, structure and constitution of the earth; geotectonics, seismology, gravity, geodesy, geothermy, geomagnetism, palaeomagnetism, geoelectricity, aeronomy and geochronology. Practical work includes a one day field tutorial.
