The University of New South Wales

Engineering

1989 Faculty Handbook
Subjects, courses and any arrangements for courses including staff allocated, as stated in the Calendar or any Handbook or any other publication, announcement or advice of the University, are an expression of Intent only and are not to be taken as a firm offer or undertaking. The University reserves the right to discontinue or vary such subjects, courses, arrangements or staff allocations at any time without notice.

Information in this Handbook has been brought up to date as at 12 September 1988, but may be amended without notice by the University Council.

## School of Electrical Engineering and Computer Science

- **3640 Electrical Engineering (BE)** 23
- **3645 Computer Engineering (BE)** 25
- **3650 Electrical Engineering (BSc(Eng))** 26
- **Combined Courses** 28

### Studies in Computer Science other than in BE Course 3640, BE BA 3720 and BE BSc 3725

Computer Science Electives offered by the School 31

## School of Mechanical and Industrial Engineering

- **3660 Mechanical Engineering (BE) Full-time Course** 33
- **3661 Mechanical Engineering Combined Course (BE BSc)** 34
- **3610 Aeronautical Engineering (BE)** 36
- **3611 Aeronautical Engineering Combined Course (BE BSc)** 37
- **3700 Naval Architecture (BE)** 37
- **3701 Naval Architecture Combined Course (BE BSc)** 38

## Combined Courses

- **3612 BE BA in Aeronautical Engineering** 38
- **3662 BE BA in Industrial Engineering** 38
- **3682 BE BA in Mechanical Engineering** 38
- **3702 BE BA in Naval Architecture** 38

## Department of Industrial Engineering

- **3660 Industrial Engineering (BE)** 40

## Combined Courses

- **3661 BE BSc in Industrial Engineering** 40
- **3662 BE BA in Industrial Engineering** 40

## School of Surveying

- **3740 Surveying (BSurv)** 41

### Vacation Weeks
- Common to Australian Universities
  - 27 March to 2 April
  - 3 July to 9 July
  - 25 September to 1 October

### Important Dates for 1989

**January**
- **M 2** New year’s Day - Public Holiday
- **F 6** Last day for acceptance of applications by the Admissions Section for transfer to another undergraduate course within the University.
- **W 18** Last day for applications for review of results of assessment.
- **Th 26** Australia Day - Public Holiday
- **T 31** Enrolment period begins for new undergraduate students and undergraduate students repeating first year.

**February**
- **M 6** Re-enrolment period begins for second and later year undergraduate and graduate students enrolled in formal courses. Students should consult the 1989 Re-enrolment Procedures booklet for details.
- **F 24** Last day for students to discontinue 1989 enrolment.
- **M 27** Last day for acceptance of enrolment by new and re-enrolling students. Late fee payable thereafter if enrolment approved.

**March**
- **F 10** Session 1 begins - all courses except Medicine III, IV and V.
- **F 24** Good Friday - Public Holiday
- **M 27** Easter Monday - Public Holiday

Staff

Comprises Schools of Civil Engineering, Electrical Engineering and Computer Science, Mechanical and Industrial Engineering (incorporating Aeronautical Engineering, Naval Architecture and Nuclear Engineering), and Surveying; and Centres for Biomedical Engineering, Manufacturing and Automation, and Safety Science. The Faculty also associated with the Joint Microelectronics Research Centre and the Centres for Groundwater Management and Hydrogeology, Remote Sensing, and Waste Management.

Dean
Professor Christopher Joseph Dalzell Fell, BSc N.S.W., PhD Camb., CEng, FIChemE, FIChemE, MAmeriChE (Chemical Engineering)

Chairman
Associate Professor K. K. Watson

Administrative Assistant
Patricia M. Rooney

Honorary Visiting Fellow
Emeritus Professor Peter Thomas Fink, AO, CB, CBE, BE Sydney, CEng, RTS, HonFIChemE, FIMechE, FRAE, FRINA, MAIAA, MSNAME

School of Civil Engineering

Professor of Engineering and Head of School
Hilary Max Irvine, ME Cant., CE Caltech., PhD Auck., MIPENZ, FIEAust

Professor of Civil Engineering and Head of Department of Engineering Construction and Management
David Gordon Carmichael, BE MEngSc Sydney, PhD Cant., MIEAust

Professor of Civil Engineering and Head of Department of Geotechnical Engineering
Robin Fell, BE MEngSc Old, FIEAust

Associate Professor and Head of Department of Structural Engineering
B. V. Jaya Rangan, BE Madr., PhD I.I.S. B'tore., FIEAust, FACI

Professor of Transport Engineering and Head of Department of Transport Engineering
John Andrew Black, BA Manc., M TCP Sydney, PhD Bradford, MIEAust

Professor and Head of Department of Water Engineering
David Herbert Pilgrim, AM, BE PhD DSc N.S.W., FIEAust

Executive Assistant to Head of School
Dr R. I. Gilbert

Senior Administrative Officer
Robert William Prior

Administrative Assistant
George John Harris, BA N.S.W.

Analyst Programmer
Robert Peter Hegedus, BSc N.S.W., MACS, MACM

Department of Geotechnical Engineering

Includes Foundation Engineering Soil Mechanics, Rock Mechanics, Concrete Technology, Pavement Engineering.

Associate Professor
Somasundaram Valliappan, BE Annamalai, MS Northeastern, PhD DSc Wales, FIEAust, FASCE
Senior Lecturers.
Arthur William Manton-Hall, BE MEngSc PhD N.S.W., MIEAust, LGE
Garry Robert Mostyn, BE MEngSc N.S.W., BA Macq., MIEAust
Bruce John Francis Patten, BE Syd., PhD N.S.W., DIC Lond.
Brian Shackel, BE Sheff., MEngSc PhD N.S.W., MIEAust
William Otho Yandell, ME PhD N.S.W., MIEAust

Lecturers
Viriyawan Murti, BSc BE PhD N.S.W., MACS
Harry Taylor, BScEng Birm., DipNAAC Syd., MIEAust

Professional Officers
Peter Kenneth Maguire BSc N.E., FIESAust
Ghodratollah Tamaddoni, BEng Ag Tehran, DrAgSc Gembloux
Calistus Vasantha Wijeyakulasuriya, BScEng Ceyl., MEngAIT

Department of Engineering Construction and Management
Includes Structural Analysis, Structural Design, Stress Analysis and Solid Mechanics

Associate Professor
Victor Andrada Pulmano, BSCE Philippines, MEng A.I.T., PhD Northwestern

Senior Lecturers
Donald John Fraser, MEngSc PhD N.S.W., ASTC
Raymond Ian Gilbert, BE PhD N.S.W., MIEAust
Alexander Cuthbert Heaney, BE MEngSc Melb., PhD Wat., MIEAust, MASCE, AMICE
Peter Walder Kneen, BE Melb., PhD Wat., MIEAust, IASS
Raymond Eric Lawther, BE PhD N.S.W.

Department of Structural Engineering
Includes Structural Analysis, Structural Design, Stress Analysis and Solid Mechanics

Associate Professor
Victor Andrada Pulmano, BSCE Philippines, MEng A.I.T., PhD Northwestern

Senior Lecturers
Donald John Fraser, MEngSc PhD N.S.W., ASTC
Raymond Ian Gilbert, BE PhD N.S.W., MIEAust
Alexander Cuthbert Heaney, BE MEngSc Melb., PhD Wat., MIEAust, MASCE, AMICE
Peter Walder Kneen, BE Melb., PhD Wat., MIEAust, IASS
Raymond Eric Lawther, BE PhD N.S.W.

Department of Transport Engineering
Senior Lecturers
Alec James Fisher, BSc Lond., PhD N.S.W., FIESAust
Theo ten Brummelaar, BE MEngSc N.S.W., MIEAust

Lecturers
Michael Clarence Dunne, BSc PhD Adel.
Uppali Vandebona, BSc (Eng) Ceylon, MEng Asian I.T. PhD Monash

Professional Officers
Tu That Ton, BE Saigon Polytech., BE C.I.T.
Colin John Wingrove, BSc MEngSc N.S.W., AIArB A

Department of Water Engineering

Associate Professor and Director, Water Research Laboratory
Colin Raymond Dudgeon, ME PhD N.S.W., MIEAust, MASCE

Associate Professors
Ian Corderoy, ME PhD N.S.W., MIEAust
David Trewella Howell, BE Syd., ME N.S.W., MIEAust, MAJAS
Keith Kingsford Watson, BE Syd., ME PhD DSc N.S.W., FIEAust
David Lyon Wilkinson, BE Syd., MIEAust

Senior Lecturers
Peter John Bliss, BE N.S.W., MSc DIC Lond., ASTC, MIEAust
Trevor Regis Fez, ME N.S.W., MIEAust
Brian Selby Jenkins, BE PhD N.S.W., ASTC, MIEAust, LGE
David Keith Robinson, BSc BE PhD N.S.W. MIEAust, MASCE

Lecturer
Penelope Anne FitzGerald, BSc Syd., MIWES, ARACI, MASM, MAWWA
Teaching Fellow
Brian Clive Wallace, BE ME N.S.W. MIEAust

Professional Officers
David George Doran, BE DipCompSc Qld, MEngSc N.S.W., MIEAust, MACS
Kenneth Brian Higgs, MSc Aston, MAIP
Vir Abhimanyu Sardana, BScEng Rour., MTech IITD, PhD N.S.W. MIEAust

School of Electrical Engineering and Computer Science

Head of School
Vacant

Professor of Electrical Engineering — Systems and Control
Neville Waller Rees, BSc PhD Wales, FIEAust

Professor of Electrical Engineering — Communications
Vacant

Professor of Computer Science
Vacant

Professor of Computer Science
Vacant

Tyree Professor of Electrical Engineering — Electric Power Engineering
Ian Francis Morrison, BSc BE PhD Syd., FIAE, MIEAust, MIEE, MIEEE

Professor of Electrical Engineering — Electronics
Graham Austin Rigby, MSc Syd., PhD Calif., CEng, FTS, FIEEE, MIEEE

Professor of Electrical Engineering
Martin Andrew Green, BE MEngSc Qld., PhD McM., SMIEEE, SMIES

Executive Assistant to Head of School
Dr C.J.E. Philips

Senior Administrative Officer
Kevin John Flynn, BE MEngSc N.S.W., ASTC

Administrative Assistant
Ann Gabrielle Mary Johnson

Manager, School Computing Facility
Peter Ivanov, BSc MEngSc N.S.W.

Senior Tutor
Boshra Dawoud Farah, BSc(Eng) Alexandria, Dring K.M. Stadt., MIEAust

Half-time Tutors
Lucinda Jane Chubb, BSc N.S.W. ACM
Massoud Mohammadi Nasrabadi, BSc Cardiff
Tanya Maria Warnehenoven, BSc N.S.W.

Professional Officers
Peiyan Chen, BE XIBEL Telecom, Eng. Univ., China
Jeffrey Stanley Skebe, BS Case W.R., MEngSc N.S.W.

Analyst/Programmer
Neil Francis Brown, BSc N.S.W.
Geoffrey Morris Oakley, BSc N.S.W.

Programmer
Zain Rahmat, BSc N.S.W.
Cameron Alexander Simpson

Honorary Visiting Professor
Louis Walter Davies, AO, BSc Syd., DPhil Oxf., FinstP, FAIP, FIEEE, FTS, FAA

Department of Communications

Associate Professors
Pak Lim Chu, ME PhD N.S.W., SMIEEE, MIEEE, MOSA
Warwick Harvey Holmes, BSc BE MEngSc Syd., PhD Camb., SMIEEE, SMIEEE, MAES, EtaKappaNu
Israel Korn, MSc BSc Technion, Haifa, SMIEEE
The Bao Vu, BE PhD Adel., SMIEEE

Senior Lecturers
Edward Henry Fooks, BSc PhD Lond., CEng, MIEEE, MIEEE
Robin William King, BEng Shelf., PhD DIC Lond., CEng, MIEEE, SMIEEE
Christopher John Elliott Phillips, BSc BE PhD Syd., CEng, MIEEE, MIEEE, SMIEEE
Robert Radzyner, BE Melb., MEngSc PhD N.S.W., SMIEEE, SMIEEE
Ramutis Anthony Zakarevicius, BSc BE MEngSc PhD Syd., MIEAust., SMIEEE, SMIEEE

Lecturers
Ralph Alexander Betts, BSc PhD Lond.
William John Dewar, MSc(Eng) Qu., PhD N.S.W., MIEEE
Douglas Hamilton Irving, BE PhD N.S.W.
Frank Friedrich Ruhl, BSc PhD A.N.U.

Professional Officers
Philip Mark Allen, BE N.S.W.
Thomas Millett, BAppSc N.S.W.I.T.
Trevor Wayne Whitbread, BE BSc N.S.W., MIEEE

Department of Computer Science

Associate Professors
David Athol Carrington, BSc PhD N.S.W.
Graham Reginald Hellestrand, BSc PhD N.S.W., MIEEE, MACS
Graham Barry McMahon, BSc Syd., PhD N.S.W., MACS, MACM, MASOR
William Stephen Matheson, BE MEngSc Melb., PhD Br.Col., MIEEE, AMIEEE
Kenneth Arthur Robinson, BSc BE Syd.
Claude Anthony Sammut, BSc PhD N.S.W.

Lecturers
Paul William Baker, BE PhD N.S.W.
Anthony Keith Burston, MSc PhD Manch., MBCS
Man-Chung Chan, BA Chinese H.K.
Timothy David Lambert, BMath N’cle (N.S.W.), MSc Manch.
Jacek Oliszewski, MSc OSc Warsaw, PhD Wroclaw, MACS
Geoffrey Robert Whale, BE N.S.W., MIEEE

Professional Officers
Serge Poplavsky, Dipl Ing Bratislava, ME N.S.W.
Keith William Tirmuss, BSc(Tech) MEngSc N.S.W.

Department of Electric Power Engineering

Senior Lecturer
Trevor Robert Blackburn, BSc Aedel., PhD Fin., CEng, GAIP, MIEEE
Kevan Charles Daly, BSc BE PhD N.S.W., CEng, MIEEE, MIEEE
Colin Grantham, BSc PhD N’cle (U.K.), CEng, MIE
Ronald Edward James, BSc(Eng) PhD Lond., CEng, FIEAust, MIEEE, MIEEE, MIEEE, MIEEE, SigmaXi
Hugh Ronald Outhred, BSc BE PhD Syd., AMIEEE MIEEE
Darmawan Sutanto, BE PhD W.Aust., MIEEE, MIEEE

Lecturers
Roland John Kaye, BE MEngSc Meb., PhD Calif., MIEEE
Fazlur Muhammed Rahman, MSc PhD Manch. Inst. Sci. & Tech., MIEEE, MIEEE
Edward Douglas Spooner, ME N.S.W.

Department of Electronics

Senior Lecturer
Christopher Max Horwitz, MSc PhD Syd.

Lecturers
Ruey Shing Star Huang, BS Natl. Cheng Kung, MS Natl. Chiao Tung, PhD N.S.W.
Chee Yee Kwok, BSc PhD N.S.W.
John Kelvin Potlard, MA Oxf., PhD S’ton
Stuart Ross Wenham, BE BSc PhD N.S.W.

Professional Officer
Eric Gauja, BSc BE PhD N.S.W., MIEEE

Department of Systems and Control

Associate Professors
John Hiller, BE PhD N.S.W., FIEAust, FIEEE
Keith Eugene Tait, BE BSc N.Z., PhD N.S.W.

Senior Lecturers
Peter Thomas Bason, ME PhD N.S.W., SMIEEE, MIBME, MAPP, MIEEE
Branik George Celler, BSc BE PhD N.S.W., MIEEE
David James Clements, BSc Old., ME PhD N’cle (N.S.W.), MIEEE, MIEEE, MIEEE, SigmaXi
Timothy Hesketh, BSc MSc Capet., PhD Massey
Khadij Wee Lim, BE Malaysia, PhD Oxf., MIEEE
David Harold Mee, BSc BE Syd., PhD Dic Lond., SMIEEE
Peter Douglas Neilson, BSc(Eng) PhD N.S.W.

Professional Officers
Carl Frederick Bonkowski, BE N.S.W., MIEEE
Kong Been Lee, BE MEngSc ME N.S.W., MIEEE, AMIEEE

School of Mechanical and Industrial Engineering

Incorporates Aeronautical Engineering, Naval Architecture and Nuclear Engineering.

Head of School
Vacant

Nuffield Professor of Mechanical Engineering, Head of Department of Fluid Mechanics/Thermodynamics
Raymond Alfred Arthur Bryant, ME N.S.W., ASTC, CEng, FIMechE, FIEAust, MRAeS

Professor of Operations Research and Head, Department of Industrial Engineering
George Bennett, BA Syd., PhD N.S.W., ASTC, CEng, FIProdE

Sir James Kirby Professor of Production Engineering
Peter Louis Brennan Oxley, BSc PhD Leeds, CEng, FTS, FIProdE, FIEAust, FI MechE

Professor of Mechanical Engineering (Engineering Design) and Head of Department of Applied Mechanics
Clifford Patterson, MA PhD Camb., FIEAust, CEng, FI MechE, CPhys, FInstP, FIMA, MIERE

Professor of Mechanical Engineering
Noel Levin Svensson, MIMechE PhD Melb., aceng, FIEAust, MIMechE, MACPSM

Executive Assistant to Head of School
Associate Professor J. E. Baker
Department of Fluid Mechanics and Thermodynamics

Includes Aeronautical Engineering, Naval Architecture and Nuclear Engineering.

Associate Professors
*Richard Douglas Archer, BSc Melb., BE Syd., MS PhD Minn., FBIS, FRAeS, MIEAust, MAIAA
†Paul Robert Barrett, MSc PhD Birm., CPhys, FAIP, MInstP
Graham de Vahl Davis, BE Syd., PhD Camb., CEng, FIMechE, FIEAust, MASME
‡Lawrence Julian Doctors, BE MEngSc Syd., PhD Mich., MRSNAME
Brian Edward Milton, BE PhD N.S.W., MSc Birm., CEng, MIEAust,
MRAeS
Graham Lindsay Morrison, BE PhD Melb.

Senior Lecturers
Masud Behnia, BSME, MSME PhD Purdue, MASME, MAIAA, MIEAust
* Donald Wainwright Kelly, BE Syd., PhD Lond.
†Leslie George Kenny, BE Syd., MIEAust, FAIE, MACS
Eleonora Maria Kopalinsky, BE PhD N.S.W.
Eddie Leonardi, BSc(Eng) PhD N.S.W., MIEAust, MAIRAH,
MASHRAE
John Randall Page, BSc Hat., MSc Cran I.T., CEng, MRAeS, FBIS,
MAIAA
†Prabhat Kumar Pal, BME N.C.E., Bengal, BTech PhD Kharagpur,
FRINA, FIEAust, MIINA, MSTG(Hamburg)
John Arthur Reizes, ME PhD N.S.W., MIEAust

Lecturer
Ian Lachlan Maclaine-cross, BE Melb., PhD Monash, MIEAust
‡Nuclear Engineering.
* Aeronautical Engineering

†Naval Architecture

Department of Industrial Engineering

Comprises Operations Research and Production Engineering.

Associate Professor
Bruce Albert Murtagh, ME Cant., PhD DIC Lond., CEng, MChemE,
MIEAust

Senior Lecturers
Leonard Edward Farmer, Be MengSc PhD N.S.W., MIEAust
Roger Malcolm Kerr, BSc Lond., MSc Bath, DPhil Oxf.
Grier Cheng I Lin, DipMechEng Natn. Taiwan I.T., PhD N.S.W.,
MIEAust
Philip Mathew, BE PhD N.S.W., MIEAust
Graham Smith, BE MEngSc PhD N.S.W., ASTC, MIEAust, MACS

Lecturers
Peter Robin Gibson, BSc PhD Lough., CEng, MInstP
Daniel Goodridge, Dipl IngChim L'Aurore, Shanghai,
DiplEng N.S.W.
Centre for Manufacturing and Automation

Director
Dr. G. C. I. Lin

Lecturer

Eric Matthew Claus, BSc Loyola Marymount, MSc Utah State, MIEAust
Foreword

This handbook provides information on courses of study offered by the Faculty of Engineering, at both undergraduate and graduate levels, together with descriptions of subjects available and areas in which research may be undertaken.

The Faculty consists of the Schools of Civil Engineering, Electrical Engineering and Computer Science, Mechanical and Industrial Engineering, Surveying and the Centres for Biomedical Engineering, Manufacturing and Automation, and Safety Science. The Faculty is also closely associated with the Joint Microelectronics Research Centre and the Centres for Groundwater Management and Hydrogeology, Remote Sensing, and Waste Management. The three latter Centres are joint enterprises of the Faculties of Engineering and Applied Science.

The Faculty is dedicated to the achievement of excellence in scholarship, teaching and research in technology and its application for the benefit of the community. The goals of the Faculty are:

1. provide undergraduate, graduate and continuing education programs, and to undertake research, in the professional fields of engineering and surveying;
2. provide formal and continuing education programs, and to undertake research, in interdisciplinary fields in which engineering science and practice play a prominent role;
3. aid the advancement, development and practical application of science and technology to satisfy the needs of industry, commerce, the infrastructure of society and the efficient management of resources.

Achievement of these goals will develop the attitudes and skills required of professional engineers operating into the twenty-first century.

Through its schools and centres, the Faculty offers an active graduate program. Formal graduate courses are available which lead to the award of the degrees of Master of Biomedical Engineering (MBiomedE), Master of Engineering Science (MEngSc), Master of Safety Science (MSafetySc), Master of Surveying Science (MSurvSc) and to the award of Graduate Diplomas. Supervision is also available for candidates undertaking research degrees leading to the awards of Master of Engineering (ME), Master of Science (MSc) and Doctor of Philosophy (PhD).

The basic objectives which are incorporated in the various engineering and surveying courses are as follows:

1. Technical and scientific and creative skills required to solve all aspects of engineering problems.
2. An understanding of human interaction with the environment so that the impact of engineering activity can be assessed.
3. The ability to direct and manage engineering activities.
4. The ability to communicate with other members of the profession, with industrial personnel, administrators and with members of the public.
5. The desire and ability for continuing self-education and reappraisal of current practice including the ability to innovate.
6. The ability to evaluate independently and to criticise constructively their own work and the work of other engineers.

As part of their training for the profession, students are required to write reports and make verbal presentations. Therefore a high level of competence in written and spoken English expression is expected.

It is also important for students to join in the development of themselves as professional engineers. Engineering is a co-operative profession where teamwork is very important. Whilst at university, students should take as many opportunities as possible to join in the activities which help to develop the whole person. Student clubs and professional institutions provide many opportunities for gaining knowledge and experience which will be valuable in later years.

Dean
Faculty of Engineering
Faculty Information

Some People Who Can Help You

If you require advice about enrolment, degree requirements, progression within courses, subject content and requirements, contact the appropriate school representative listed below:

School of Civil Engineering: Mr. R. W. Prior, Room 406, Civil Engineering Building.

School of Electrical Engineering and Computer Science: Dr. C. J. E. Phillips, Room G6, or Ms A. G. M. Johnson, School Office, Electrical Engineering and Computer Science Building.

School of Mechanical and Industrial Engineering: Associate Professor J. E. Baker, Room 105B, or Mr G. Dusan, Room 107, Mechanical and Industrial Engineering Building.

School of Surveying: Mr L. Daras, School Office, Room 529, Geography and Surveying Building.

Centre for Biomedical Engineering: Dr K. Schindhelm, 34-36 Botany Street, Randwick, NSW 2031.

Centre for Groundwater Management and Hydrogeology: Dr. M. J. Knight, Room 810, Applied Science Building.

Centre for Manufacturing and Automation: Dr G.C.I. Lin, Room 423, Geography and Surveying Building.

Centre for Remote Sensing: Associate Professor B.C. Forster Room 247, Geography and Surveying Building.

Centre for Safety Science: Associate Professor M.G. Stevenson, Room G07, Mechanical and Industrial Engineering Building.

Centre for Waste Management: Mr E. Claus, Room 112, Civil Engineering Building.

Important: As changes may be made to information provided in this handbook, students should frequently consult the noticeboards of the schools and the official noticeboards of the University.

Entrance Requirements

Students are selected for courses offered by the Faculty according to the scaled aggregate mark obtained in the New South Wales High School Certificate (NSW HSC). Other students are admitted on the basis of their previous academic mark. In addition, students are expected to have reached the following standards (or equivalent) in the NSW HSC subjects:

<table>
<thead>
<tr>
<th>Course</th>
<th>NSW HSC Prerequisites</th>
<th>NSW HSC Score Range Required</th>
</tr>
</thead>

* English is not a prescribed prerequisite for courses in Electrical Engineering or Computer Engineering.

Students are advised that the lack of specified subject prerequisite(s) do not preclude their selection to any course but the required standard must be achieved before enrolment in the University subject is permitted.

The University conducts Bridging Courses to assist in remedying deficiencies in subject levels. Further details are available from the Students' Information Guide published annually by the Universities and Colleges Admissions Centre (UCAC).

Introductory subjects are also available to students who do not have the New South Wales Higher School Certificate prerequisite(s) in Mathematics or Physics. It should be noted that inclusion of these subjects in first-year programs could extend the duration of a course.
Faculty of Engineering Enrolment Procedures

All students re-enrolling in 1989 or enrolling in graduate courses should obtain a copy of the free booklet *Enrolment Procedures 1989* available from School Offices and the Admissions Office. This booklet provides detailed information on enrolment procedures and fees, enrolment timetables by Faculty and course, enrolment in miscellaneous subjects, locations and hours of Cashiers and late enrolments.

Faculty of Engineering Library Facilities

Although any of the university libraries may meet specific needs, the staff and students of the Faculty of Engineering are served mainly by the Physical Sciences Library and the Undergraduate Services.

The Physical Sciences Library

This library, situated on Levels 6 and 7 of the Library tower, caters for the information needs of staff, graduate and undergraduate students in the pure and applied sciences, engineering and architecture. Details of the books, serials and microforms in the Physical Sciences Library are included in the microfiche monograph and serial catalogues and the items themselves are identified by the prefix 'P'.

Serial with the prefix 'PJ' are not loan, but self-service photocopying facilities are available on Level 7.

This library provides reference, reader assistance and reader education services and also, where appropriate, inter-library loan and literature-searching services. Trained staff are always available on Level 7 to assist readers with their enquiries.

Physical Sciences Librarian Marian Bate

Undergraduate Services

- The undergraduate collection caters for the needs of students in Years 1 and 2 and other groups where large numbers require mass teaching. Levels 3 and 4.

- The Open Reserve Section houses books and other materials which are required reading. Level 2.

- The Audio Visual Section contains cassette tapes, mainly of lectures and other spoken word material. The section has wired study carrels and cassette players for student use. Level 3.

- The Reader Education program provides orientation tours and introductory library research method lectures to students.

Student Clubs and Societies

Students have the opportunity of joining a wide range of clubs and societies. Many of these are affiliated with the Students' Union. There are numerous religious, social and cultural clubs and also many sporting clubs which are affiliated with the Sports Association.

Clubs and societies seeking to use the name of the University in their title, or seeking University recognition, must submit their constitutions either to the Students' Union or the Sports Association if they wish to be affiliated with either of these bodies, or to the Academic Registrar for approval by the University Council.

The following societies serve the interests of students in the various courses in the Faculty of Engineering: Biomedical Engineering Society (BioEngSoc); Civil Engineering Society (CIVSOC); Computing Science Association (CSA); Electrical Engineering Society (ELSOC); Mechanical Engineering Society (MECHSOC); Naval Architecture Students' Association (NASA); Surveying Society (SURVSOC).

Students are encouraged to participate in the activities of their societies. Enquiries should be directed initially to the general offices of the respective Schools.

International Association for the Exchange of Students for Technical Experience — IAESTE

IAESTE is an organization to facilitate overseas work in technical areas in 53 different countries throughout the world for students or recent graduates. It organizes visas, work periods for as little as 6 weeks or up to 12 months, lodging and an initial welcome.

In Australia IAESTE has a National Committee in Melbourne and local committees in the capital cities including Sydney. The UNSW local committee is made up of interested students and is run in association with the Careers and Appointments Service at Sydney University.

For more information write to the local committee President, IAESTE (UNSW), Union Box 43, UNSW, PO Box 1, Kensington 2033, or contact the local committee through the Students' Union.

The Institution of Engineers, Australia

The professional body for engineering in Australia is the Institution of Engineers, Australia, which has as its first objective 'to promote the science and practice of engineering in all its branches'.
Engineering

The Institution functions through a series of divisions, the local one being the Sydney Division. Within each division are branches representing the main interests within the profession, eg civil, mechanical, electrical and transportation.

Students of an approved school of engineering may join the Institution as a student member (StudIAust).

Student members receive the fortnightly publication Engineers, Australia advising of site tours, conferences, technical meetings of all branches, harbour cruises, film nights, etc. For a small fee they also receive The Transactions which contains articles on a particular branch of engineering.

Student members are also free to use the comprehensive library and reference facilities maintained by the Institution. The library is a handy place to obtain a rare book or periodical.

For more information and membership application forms, write to The Secretary, The Institution of Engineers, Australia, Sydney Division, PO Box 138, Milsons Point NSW 2061.

The Institution of Surveyors, Australia

During their years as undergraduates, students in the surveying course are encouraged to take the first steps in joining in the activities of the professional body which represents surveyors, The Institution of Surveyors. The aims of the Institution are to promote scientific, technical and educational aspects of surveying and to maintain high professional standards of practice and conduct. Student members receive the quarterly journal of the Institution of Surveyors, The Australian Surveyor and Azimuth which is published by the New South Wales Division of the Institution. Membership also entitles the student to attend all meetings of the Institution and to attend the annual Congress at a special concessional rate. Membership application forms are available at the office of the School of Surveying and from the Institution Office, Third Floor, Guild House, 363 Pitt Street, Sydney.
Undergraduate Study

The Faculty of Engineering offers courses leading to the award of the degrees of Bachelor of Engineering (BE) in Aeronautical, Civil, Computer, Electrical, Industrial and Mechanical Engineering and in Naval Architecture. A course is also offered leading to the award of the degree of Bachelor of Surveying (BSurv). The BE courses are available on a full-time or part-time basis or in sandwich form after first-year (with the exception of courses offered by the School of Mechanical and Industrial Engineering). The BSurv course is available for full-time study and in a sandwich form. The full-time courses are designed to be taken over a period of four years, whereas part-time study usually involves a combination of day-time and evening attendance over a period of six or seven years. It may not be possible to offer evening classes in the later year subjects. The sandwich pattern provides for alternate periods of full-time study and full-time employment with part-time study.

The three major subject areas in engineering and surveying courses are basic sciences, engineering sciences and engineering applications. The basic sciences area is emphasised in Year 1 since it forms the foundation for the remainder of the course. Engineering sciences form the link between the basic sciences and engineering applications. The engineering applications area provides the opportunity for applying knowledge to the solution of problems and is consequently emphasised later in the course. A feature of the courses at the University of New South Wales is the inclusion of a program of General Education, the requirements for which are set out below.

Basic Sciences consist of Mathematics, Physics and some Chemistry. Engineering Science subjects are those which provide the theoretical basis for engineering applications. These include Applied Mechanics, Fluid Mechanics, Electronics, Electricity, Thermodynamics, Structural Mechanics, Materials Science. Engineering Applications involve Innovation and Design, Systems and Control, Production, Technical Communication, Energy Conversion, Management. General Education subjects serve to provide both an introduction to the environments in which humans function physical, biological, socio-economic, and technological; and an introduction to the cultural bases of knowledge and belief.

Combined Courses

Full-time courses of five years' duration are available for the award of two degrees: Bachelor of Engineer/Bachelor of Science (BE BSc); Bachelor of Engineering/Bachelor of Arts (BE BA). Courses for the award of the degree of BE BSc are available in Aeronautical, Civil Electrical, Mechanical and Industrial Engineering and Naval Architecture. Courses are also available for the award of the degree of BE BA in Aeronautical, Electrical, Mechanical and Industrial Engineering and Naval Architecture.

General Education Requirement

The University requires that undergraduate students undertake a structured program in General Education as an integral part of studies for their degree.

Among its objectives, the General Education program provides the opportunity for students to address some of the key questions they will face as persons, citizens and professionals.

A new General Education program, administered by the Centre for Liberal and General Studies, was introduced in 1988.

Students are required to participate in three categories of the General Education Program:

1. In Category A they are introduced to an environment, and the mode of thought appropriate for considering that environment, which they do not usually study in the major or professional sequence of studies they have chosen. Thus students in the Faculty of Engineering are encouraged to study some aspects of the social or symbolic environments.
2. In Category B they are exposed to subjects which require them to reflect upon their inherited assumptions about knowledge, belief, values, identity, language and so on. In Category B subjects, the emphasis shifts from the more public aspects of the environments in which we live to the conceptual and emotional equipment we bring to a consideration of them.

3. In Category C students are expected to consider in a formal and systematic way the connected issues of professional ethics and social responsibility.

Subjects in categories 1 and 2 are in preparation. The exact form of category 3 is still being decided and should be clearly defined by the end of 1988. This could involve, however, a slight subsequent change to the structure of the later years of degree programs.

There are differing requirements for students commencing before and from 1988.

Students who commenced their undergraduate program before 1988.

Students must complete a program of General Studies in accordance with the requirements in effect when they commenced their degree program. Students yet to complete their General Studies requirement may select subjects from any of the three categories of the new program.

Students commencing their undergraduate program in 1988 and following:

Students must complete a program of subjects selected from each of the three categories of study in accordance with the rules defined in the General Education Handbook and in sequences specified in the requirements for individual courses.

Further information may be obtained from the office of the Centre for Liberal and General Studies Room G58, Morven Brown Building, and the General Education Handbook.

Course Transfers

Student who have completed the first year of an undergraduate course in one school may apply for a transfer to a course in another school of the Faculty with credit for relevant subjects completed. However, as there are considerable differences in the various Year 1 programs, students are not granted complete exemption from Year 1 of the course to which the transfer is made.

Students completing the BSc(Eng) degree course and wishing to qualify for the corresponding BE degree may, on the recommendation of the Head of the School, transfer to the corresponding full-time BE course provided they do not take out the BSc(Eng) degree. Further, provided they continue as registered students on transfer from one course to the other, they may retain any concession granted in the BSc(Eng) degree course.

General Rules for Progression

Progression in all undergraduate courses in the Faculty of Engineering is permitted by subject. However:

1. Course programs will continue to be stated and timetabled by year or stage and it cannot be guaranteed that non-standard programs can be completed in the minimum number of years.

2. Students must satisfy the rules governing re-enrolment: in particular, these require students enrolled in the first year of a degree program to pass in at least half that program. Students are also required to show cause why they should be allowed to repeat a subject which has been failed more than once. Students are also required to show cause why they should be allowed to continue with their course if their average mark in a year of study falls below 50%.

3. Students must satisfy the relevant prerequisite and co-requisite requirements. This will usually necessitate students completing or attempting all subjects of a particular year or stage before proceeding to a subject in the next part of a course. Further details are available from the appropriate school.

4. Only in exceptional circumstances will students be permitted to enrol in subjects extending over more than two years of the course or for more than twenty-eight hours of course work per week if a full-time student or fourteen hours per week if a part-time student. Students repeating subjects are required to choose a program which limits their hours of course work to twenty-two per week if a full-time student, and to eleven per week if a part-time student; unless they have the express permission of the Head of School to exceed these hours.

5. Notwithstanding the above, before students can enrol in any non-standard program such program must meet with the approval of the Head of School. A non-standard program is one which involves enrolment in subjects from more than one year or stage, or comprises subjects which do not normally constitute a particular year's course work.

Prerequisites and Co-requisites

- A prerequisite unit is one which must be completed prior to enrolment in the unit for which it is prescribed.

- A co-requisite unit is one which must either be completed successfully before or be studied concurrently with the unit for which it is prescribed.

Industrial Training Requirements

All full-time engineering courses incorporate industrial training and reference should be made to the entries under each School heading for details of the arrangements applicable. All students are strongly recommended to gain further industrial experience in those long vacations where such training is not already prescribed.
The staff of the University will, where possible, assist students to obtain this employment, but it is emphasized that the primary responsibility for obtaining suitable industrial experience rests which each student. Progression to succeeding years of the course and the award of the degree are dependent on the completion of the requisite periods of industrial employment at a standard approved by the University.

Conditions for the Award of the Degree of Bachelor of Science (Engineering)

The course leading to the award of the degree of Bachelor of Science (Engineering) is normally programmed over six years of part-time study in the University whilst the student is employed in industry. The regulations governing the award of this degree are as follows:

1. A candidate for the award of the degree of BSc(Eng) shall:
   (1) comply with the requirements for admission;
   (2) follow the prescribed course of study in the appropriate school and pass the necessary examinations;
   (3) complete an approved program of industrial training over such period as is prescribed concurrently with attendance in the course. In general, this training must be completed before 31 January in the year in which the degree is to be awarded.

2. During each year a student shall perform laboratory, drawing office and field work, attend demonstrations and excursions to such an extent and in such a manner as is prescribed from time to time by the Academic Board on the recommendation of the Faculty. Those students who are required to undertake field work for any subject must be prepared to pay the appropriate costs and be in attendance at all scheduled examinations except in abnormal circumstances.

3. A student may be granted advanced standing by the Academic Board on the recommendation of the appropriate Faculty, but in each case must complete an adequate period of approved industrial training before being eligible for the degree. In addition to the above requirements a student coming from another institution must comply with the conditions laid down by the Academic Board for admission with advanced standing.

4. The degree shall be awarded in the pass or honours grade. Honours may be awarded in the following categories:
   - Honours Class I
   - Honours Class II, Division I
   - Honours Class II, Division II

5. In special cases the Faculty may approve the variation of any of the preceding conditions.

Conditions for the Award of the Degrees of Bachelor of Surveying and Bachelor of Surveying Science

1. A candidate for the award of the degree of Bachelor of Surveying or Bachelor of Surveying Science shall:
   (1) comply with the requirements for admission;
   (2) follow the prescribed course of study in the appropriate school, and satisfy the examiners in the necessary subjects;
   (3) complete an approved program of industrial training for such periods as are prescribed. In general, this training must be completed before 31 January in the year in which the degree is to be awarded.

2. During each year a student shall perform laboratory, drawing office and field work, attend demonstrations and excursions to such an extent and in such a manner as is prescribed from time to time by the Academic Board on the recommendation of the Faculty. Those students who are required to undertake field work for any subject must be prepared to pay the appropriate costs and be in attendance at all scheduled examinations except in abnormal circumstances.

3. A student may be granted advanced standing by the Academic Board on the recommendation of the appropriate Faculty, but in each case must complete an adequate period of approved industrial training before being eligible for the degree. In addition to the above requirements a student coming from another institution must comply with the conditions laid down by the Academic Board for admission with advanced standing.

4. The degree shall be awarded in the pass grade only but in the case of superior performance throughout the course the degree shall be conferred "with merit".

5. Students shall be required to conform with the general rules relating to progressing in University courses.

6. In special cases the Faculty may approve the variation of any of the preceding conditions.

Note: No new enrolments are being accepted into this course.
Engineering

1. (1) comply with the requirements for admission;
(2) follow the prescribed course of study in the School of Surveying and satisfy the examiners in the necessary subjects;

2. During each year a student shall perform laboratory, drawing office and field work, attend demonstrations, excursions and field camps to such an extent and in such a manner as is prescribed from time to time by the Academic Board on the recommendation of the Faculty. Those students who are required to undertake field work for any subject must be prepared to pay the appropriate costs and be in attendance at all scheduled examinations except in abnormal circumstances.

3. A student may be granted advanced standing by the Academic Board on the recommendation of the Faculty of Engineering. In addition to the above requirements a student coming from another institution must comply with the conditions laid down by the Academic Board for admission with advanced standing.

4. The degree shall be awarded in the pass or honours grade. Honours may be awarded in the following categories:

   Honours Class I
   Honours Class II, Division I
   Honours Class II, Division II

5. In special cases the Faculty may approve the variation of any of the preceding conditions.
Course Outlines

School of Civil Engineering

Head of School
Professor H. M. Irvine

Executive Assistant to Head of School
Dr R. I. Gilbert

Senior Administrative Officer
Mr R. W. Prior

The School consists of five departments: Geotechnical Engineering (foundation engineering, soil mechanics, rock mechanics, concrete technology, and pavement engineering); Engineering Construction and Management (civil engineering systems, engineering economy, project planning and management and civil engineering construction); Structural Engineering (structural analysis and structural design); Transport Engineering (planning, design, operation of transport systems, statistical analysis, land use and transport modelling, economic evaluations and environmental impact studies); Water Engineering (hydraulics, hydrology, water resources and public health engineering).

In addition to extensive laboratory facilities on the Kensington campus, the School operates laboratories at Govett Street and King Street, Randwick and King Street, Manly Vale. The latter complex houses the School's Water Research Laboratory and the associated Water Reference Library. The School also uses the Fowlers Gap Arid Zone Research Station for construction camps and data collection for arid zone hydrology.

The School offers a course (3620) leading to the degree of Bachelor of Engineering (BE), at pass or honours level, which can be taken on a four-year full-time basis, on a part-time basis or on a combined full-time/part-time basis subject to the approval of the Head of School. Intending part-time students are advised that many subjects are offered only in the daytime. Part-time students will normally take two years for each equivalent full-time year.

Alternatively, the course may be taken in a sandwich form in which a student, after completing the first year of the course on a full-time basis, gains industrial experience during one or more periods of employment by taking leave of absence for two consecutive sessions.

The BE syllabus has been revised and will apply to Year 1 in 1989. It is planned that the revised syllabus for later years will be introduced in 1990.

A five year full-time course (3730) leading to the award of the degrees of Bachelor of Engineering and Bachelor of Science (BE BSc) is offered. Students enrol initially in Course 3620 and apply for transfer to Course 3730 on completion of Year 1.

The University requires that undergraduate students undertake a structured program in General Education as an integral part of their degree. For details of the requirements, please locate General Education in the Contents.

The requirements for the award of the BE degree include a period of at least sixty working days of approved industrial training prior to enrolment in the final year.

The degree of Bachelor of Engineering may be conferred as a Pass degree or as an Honours degree. There are two classes of Honours, Class I, and Class II in two divisions, and the award and grade of Honours are made in recognition of superior performance throughout the course with a greater weighting on subjects in the later years.

The award of the degree of Bachelor of Engineering (BE) is recognized by the Institution of Engineers, Australia, as meeting the examination requirements for admission to graduate and corporate membership. Substantial or complete recognition is accorded to BE courses by overseas engineering institutions.

<tbody>
<tr>
<td>3730</td>
<td>Combined Course for BE BSc in Civil Engineering</td>
<td></td>
</tr>
</tbody>
</table>

Students may seek permission to undertake a five-year full-time combined course leading to the award of the degrees of Bachelor of Engineering and Bachelor of Science (BE BSc). The course is administered by the Faculty of Engineering.

Normally, students enrolled in the BE BSc course may be awarded their degrees at the conclusion of five years' study. However, students who commence the course and do not complete the Civil Engineering component may take out a BSc degree on completion of one of the approved programs of the Science and Mathematics Course.

Similarly, students not wishing to complete the BSc degree course may revert to the Civil Engineering program (3620) with appropriate credit for subjects satisfactorily completed.

The combined course consists of the Civil Engineering program (3620), and at least fourteen units of the Science and Mathematics Course (3970) within an approved program.

There are three approved programs but additional ones may be approved if they are relevant. Approval may be given to change the programs listed below to allow for timetabling and the student's academic interests.

Although transfer from Course 3620 to Course 3730 is normally made at the end of Year 1, first year students who are considering to apply for transfer should note the requirements for 2.121 Chemistry 1A in the first program, and for 1.001 Physics 1 in the second program.

Choose three units, at least one of which is a Computer Science Unit, from 6.613, 6.632, 6.633 or Level II or Level III Mathematics units from Table 1 in the Sciences Handbook.

Year 5
8.4110, 8.4220, 8.4320, 8.4330, 8.4420, 8.4430, 8.4440, 8.4520, 8.4620
Two of the following subjects:
8.4210, 8.4310, 8.4410, 8.4510, 8.4610
1 General Education elective
Choose 1 unit from Table 1 in the Sciences Handbook at Level II or higher.

For Notes see overleaf
School of Electrical Engineering and Computer Science

Head of School
Professor N. W. Rees

Executive Assistant to Head of School
Dr C. J. E. Phillips

Senior Administrative Officer
Mr K. J. Flynn

Administrative Assistant
Miss A. G. M. Johnson

The School comprises five departments: Communications (all aspects of theory, applied electronics and engineering relating to communication systems such as telephones, broadcasting and television); Electric Power (electrical machines and generation, distribution and utilization of electric energy); Electronics (electronic circuits, devices, micro-electronics and application of electronics to such areas as solar power generation); Computer Science (design of computer devices and the handling of information in all forms, e.g. numeric, alphabetic, pictorial, verbal); Systems and Control (development of theories for the control of complex systems and the application of these theories including computer simulation). The School also houses the Joint Microelectronics Research Centre.

Electrical Engineering has close links with the pure sciences and mathematics. Its technology is changing rapidly, and the School’s teaching and research programs are constantly under review to meet the ever-changing challenges of present and future needs.

The School offers undergraduate and graduate training in all branches of the profession of electrical engineering. A number of inter-departmental and specialized groups (such as Digital Systems, Biomedical Engineering, Measurements, Microelectronics, etc.) are also active.

Note 1 Course 3640 Full-time/Part-time Sandwich
A student in course 3640 may with the approval of the Head of School complete the requirements by a combination of full-time and part-time study after having completed the first year full-time. To ensure that prerequisites are met and the program can be time-tabled, students should consult with the School as early as possible when a change in attendance pattern is envisaged. A part-time student must be able to attend classes at least one afternoon per week as not all subjects are available in the evenings. Students commencing the part-time course after 1984 may be required to attend up to two half-days per week. After Year 1 of the BE, a form of sandwich pattern is possible by arrangement with the Head of School, comprising alternate periods of full-time study and full-time employment with part-time study.

Note 2 Course 3650
No new enrolments are being accepted into course 3650. A student already enrolled in this course may complete it and graduate with a BSc (Eng) degree or may request to transfer to course 3640 and graduate with a BE degree.

Note 3 Course 3970
This course is operated by the Board of Studies in Science and Mathematics and is for students wishing to major in Computer Science in a Science and Mathematics context. For more details see the Sciences Handbook. Most of the course is available in evening classes but some day attendance is essential in Year 3.

Note 4 Course 3645
This new course, which commences in 1989, is to be phased in over four years. Only Year 1 of the course will be offered in 1989.

The undergraduate curriculums are being progressively revised to provide a flexible training to suit the needs of today and tomorrow. Individual student needs can be further met by quite extensive substitution provisions within the course programs.

Recognition

The degrees of Bachelor of Engineering and Bachelor of Science (Engineering) are recognized by the Institution of Engineers, Australia and the Institution of Radio and Electronics Engineers, Australia, as meeting the examination requirements for admission to graduate and corporate membership. Substantial or complete recognition is also accorded to these courses by overseas engineering institutions.

Honours

In the Bachelor of Engineering Course the same formal program is offered to both pass students and to those aiming at honours. Honours will be awarded for meritorious performance over the course; special attention is paid to a candidate’s performance in the final year subjects and thesis project. A student with a creditable performance in the Bachelor of Science (Engineering) course may be awarded a degree with Merit.

The award of the BA or BSc degree at honours level requires two additional sessions of study. See the Arts and Sciences Handbooks for details.

Substitution of Subjects

To suit the special abilities or needs of individual students a limited amount of substitution is permitted within each course. Any such substitution must have prior approval of the Head of School who will ensure that:
1. The replacement subject is at least the same length and level as the prescribed subject it replaced; and,
2. The resulting overall program of study is suited to the award of the degree as applicable.

Substitution is not permitted in Year 1.

Examples

(i) Replacement of General Education subjects by subjects approved (by the Director of the Centre for Liberal and General Studies) selected from areas such as Arts, Life Sciences, Earth Sciences, Accounting and Business Administration, Law, Economics, Industrial Management.

(ii) The normal Year 4 of the BE degree program includes 5 units of Electrical Engineering IV. Students may substitute for one of these units, a subject of suitable level and difficulty from an area
Undergraduate Study: Course Outlines

3640

Electrical Engineering—Sandwich Course

Bachelor of Engineering

BE

After the successful completion of Year 1 of the full-time Course 3640, the following sandwich pattern is available, comprising alternate periods of full-time study and full-time employment with part-time study.

Year 5††
5 Professional Electives* 15 10
6.911 Thesis** 3 21
6.903 Industrial Training
10.0331 Transform Methods One Technical Elective or Industrial Elective*** 2 0

††Students who have achieved a certain standard may attempt similar material at a higher level.

‡‡See list of Technical Electives later this section.

££Students are required to complete 168 hours of General Studies electives for the BE degree. If these have not been completed by the end of Year 4, then General Studies must be included in the Year 5 program.

*Three electives are taken in Session 1 and two in Session 2. See list of Professional Electives later this section.

**6.911 Thesis is done in the last two sessions of a student's course. See subject description.

***See 6.931 Industrial Elective subject description.

3645

Computer Engineering — Full-time course

Bachelor of Engineering

BE

This is a new course, commencing in 1989. The course is to be phased in over four years and only Year 1 will be offered in 1989. As a consequence subject description for computing subjects appearing in later years are not given in this handbook.

Year 4

6.0314 Systems and Control 1 0 4
6.0315 Electrical Energy 0 4
6.0316 Electronics 3 0 4
6.0317 Communication Systems 1 0 4
6.0318 Microprocessor Systems and Applications 0 4
10.0332 E.E. Mathematics 3—Numerical Methods 0 2
10.361 Statistics S.E. One General Studies Elective 4 0

Year 2

Proposed subjects include:

- Data Organization
- Computer Organization
- Concurrent Computing
- Circuit Theory
- Analog Electronics
- Digital Circuits
- Linear Algebra
- Complex Analysis
- Finite Mathematics A
- Statistics SE
Engineering

Year 3
Proposed subjects include:
- Parsing and Translation
- Microprocessors and Interfacing
- Programming Techniques
- Systems Theory
- Integrated Electronics
- Signal Processing
- Transform Methods
- Numerical Analysis
- Management and Economics

Year 4
To consist of Electrical Engineering and Computer Engineering Electives.
Students intending to do honours will complete a thesis.

3650 Electrical Engineering
Bachelor of Science (Engineering) BSc(Eng)

Please note that from 1983, no new enrolments are being accepted into the BSc(Eng) degree course.

Stage 5 and 6 of Course 3650 are identical to those of the 3640 part-time Course except for the deletion of Industrial Elective from Stage 5, the replacement of 6.911 Thesis by 6.921 Project in Stage 6 and the replacement of 6.903 Industrial Training by 6.902 Industrial Experience. 6.902 comprises 3 years of appropriate industrial experience concurrent with the course. The formal enrolment in 6.902 is in Stage 6.

Technical Electives — all courses

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
<th>Hours per week</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.992</td>
<td>Mechanics and Thermal Physics</td>
<td>S1: 2, S2: 2</td>
</tr>
<tr>
<td>4.964</td>
<td>Materials Science and Engineering for Engineers</td>
<td>S1: 0, S2: 4</td>
</tr>
<tr>
<td>5.065</td>

<td>S1: 4, S2: 0</td>
</tr>
<tr>
<td>6.046</td>
<td>Project Evaluation</td>
<td>S1: 2, S2: 0</td>
</tr>
<tr>
<td>6.047</td>
<td>Reliability Engineering in Design and Development*</td>
<td>S1: 0, S2: 4</td>
</tr>
</tbody>
</table>

A free choice may not be possible.

*One Technical Elective may be made up of the following alternative combinations.

1. 6.046 Project Evaluation
   18.1211 Production Management A
2. 6.046 Project Evaluation
   6.047 Reliability Engineering in Design and Development (Part A)
3. 6.047 Reliability Engineering in Design and Development (Parts A&B)

Electrical Engineering Professional Electives — all courses

Each elective is 5 hours per week for one session.

6.042 Digital and Analogue Signals
6.202 Power Engineering 1
6.203 Power Engineering 2
6.212 Power Engineering — Utilization
6.215 Industrial Electrical Systems
6.222 High Voltage Technology
6.303 Transmission Lines for Microwave and Optical Communication
6.313 Signal Propagation at Microwave and Optical Frequencies
6.322 Electronics 4
6.323 Communication Systems 2A
6.333 Communication Systems 2B
6.412 Systems and Control 2
6.413 Digital Control
6.432 Computer Control and Instrumentation
6.483 Biomedical Engineering
6.512 Semiconductor Devices
6.522 Transistor and Integrated Circuit Design
6.532 Integrated Digital Systems
6.612 Computer Organization and Digital Systems Design
6.622 Computer Applications
6.652 Data Communication and Computer Networks
6.672 Operating Systems and Compilers

Because of timetable clashes a free choice from all these electives is not possible.

The program selected by each student must be approved by the Head of School. Not all electives are offered each session, nor is the full range available to part-time students. Students are advised each year of the timetable of available electives. Substitution is not permitted if it unduly restricts the range of subjects studied to only one area of electrical engineering and computer science.

$\text{Pass Terminated result (PT) does not satisfy prerequisite requirements.}$

**Two of 10.1113, 10.2111, or 10.2112 may be taken as co-requisites.**

**One of 6.021B or 6.021C may be taken as a co-requisite.**

††The first session of 10.361 is a prerequisite and the second session of 10.361 is a co-requisite.

§10.1213 may be taken as a co-requisite.

---

**Combined Courses**

Students in Electrical Engineering who maintain a creditable performance may qualify for the award of two degrees in five years of combined full-time study in which the requirements of the degrees have been merged. (The two degrees referred to here are the Bachelor of Engineering/Bachelor of Science BE BSc and the Bachelor of Engineering/Bachelor of Arts BE BA.) Students wishing to enrol in a combined course may do so only on the recommendation of the Head of School of Electrical Engineering and Computer Science and with the approval of the Faculty of Engineering and either the Faculty of Arts or the Board of Studies in Science and Mathematics, as appropriate. Students wishing to enrol in, transfer into, or continue in a combined course shall have complied with all the requirements for prerequisite study, sequencing and academic attainment (a creditable performance, ie 65% average) of both the Course Authorities concerned.

Students who commence a course but subsequently do not wish to proceed with both areas of study, or who fail to maintain a creditable performance, revert to a single degree program with appropriate credit for subjects completed. AUSTUDY support is available for the five years of the combined degree courses.

Students may transfer into a combined course after partially completing the requirements for either degree provided suitable subjects have been studied. However, the choice of subjects and the time taken to complete the program can be seriously affected by this. Thus, students considering course 3725 or course 3720 should contact the Electrical Engineering School before completing their Year 2 enrolment. Application for transfer to a combined course must be made in writing to the Head of School by the end of the first week of January in the year following their completion of Year 2 of the BE course.

Students wishing to gain a degree at honours level in Arts or Science as part of their combined degree program shall meet all the relevant requirements of the Faculty concerned and of the appropriate Schools. Such students may enrol for the Honours year only on the recommendation of the Head of School of Electrical Engineering and Computer Science and with the approval of the Faculty of Engineering and either the Faculty of Arts or the Board of Studies in Science and Mathematics, as appropriate.

Re-enrolment of students in Courses 3720 and 3725 each year is arranged by the School of Electrical Engineering and Computer Science.

---

**3725 BE BSc in Electrical Engineering**

Changes may be made to the double degree program in 1989 due to the introduction of revisions to the BE course 3640. Students who commenced course 3640 in 1988 or later, and who wish to do the double degree, should consult with the School of Electrical Engineering and Computer Science.

Having completed Years 1 and 2 of course 3640 prior to 1989 students in their third year complete a specific course of study consisting of four Level III Science units chosen from related disciplines, the appropriate General Education electives and at least four other Level II or Level III units, and otherwise accord with the rules of course 3970 leading to a major in Computer Science, Mathematics or Physics.
Students may open up a wider choice of subjects in their Science Year by including additional Computer Science (viz 6.641), Physics (viz 1.992) or Mathematics in their Year 2 Electrical Engineering program. Any subject omitted may be required to be taken later in the course. The extra subject in Year 2 may be credited towards either the BE or BSc requirements, but not both.

Students wishing to gain a degree at honours level in Science as part of their combined degree program shall meet all the relevant requirements of the Board of Studies in Science and Mathematics and of the School concerned. Such students may enrol for the honours year only on the recommendation of the Head of the School of Electrical Engineering and Computer Science and with the approval of the Head of the appropriate Science School, the Faculty of Engineering and the Board of Studies in Science and Mathematics. AUSTUDY support is available for the six years of the combined degree programs including honours level Science.

In their fourth and fifth years students do Year 3 and Year 4 of course 3640. Depending on the program followed in their third and fourth year programs of the Electrical Engineering course, and they will be required to omit these from their program and to include an equivalent amount of other courses chosen with the approval of the Head of School.

**Year 1**
- 1.961
- 2.121
- 5.0011
- 5.0016
- 6.010
- 6.611
- 10.001
1 General Education elective

**Year 2**
- 1.972, 1.982
- 10.111A, 10.1113, 10.1114, 10.2111, 10.2112
1 General Education elective

**Year 3**
- Either
- Computer Science
1 General Education elective

Choose at least 8 Level II or Level III units including at least 4 Computer Science units at Level III, the balance to be chosen from Level III Computer Science units and other Level II or Level III units in Table 1 or Tables 2 for program 0600** or Mathematics

1 General Education elective

Choose at least 5 Mathematics units, 4 of which are Level III
Choose at least 3 Level II or Level III units from Table 1 or Table 2 for program 1000

1 Students intending to major in Computer Science should include 6.541 in their Year 2 enrolment. Students intending to major in Physics are required to take unit 1.992 in Year 2.

2 For Year 3 refer to course 3970 and the Science Handbook.

3 For this strand only the Level I unit, 14.501 Accounting and Financial Management I may be taken in place of one of the other Level II or Level III units. Students should note that this subject is a prerequisite for the level III unit, 6.647 Business Information Systems.

---

**3720**

**BE BA in Electrical Engineering**

The combined course should include

- the requirements of a normal BE program in Electrical Engineering less the General Education subjects and one other subject approved by the Head of the School;

- subjects equivalent to 108 credit points in accordance with the regulations of the Faculty of Arts provided that this includes a major sequence of subjects available within the Faculty of Arts in addition to the studies in the School of Mathematics and the Department of Computer Science. These include the subjects in Table A or their equivalents.

**Table A**

Guidance should be sought from the School of Electrical Engineering and Computer Science, the relevant schools in the Faculty of Arts and the Arts Faculty office. After four years of study a student will normally have completed the BA requirements of study, together with subjects selected from course 3640 (in accordance with an acceptable program loading) and in the fifth year will complete requirements for a BE.

It is necessary for each individual student entering the course to lodge for approval a complete program of study. Changes in detail are usual from year to year. Students should choose their Arts Major early so as to start the sequence in Year 1 if possible.
Studies in Computer Science other than in BE Courses 3640 and 3645, BE BA 3720 and BE BSc 3725

Minor Study in BA Course 3400 or BSc course 3970

Some students will wish to include a small number of Computer Science units in courses leading to major studies in other disciplines. Level I unit 6.711, Level 1/11 unit 6.712 and Level II units 6.721, 6.722, 6.723 are freely available to such students.

Students majoring in other disciplines may also seek entry, on a competitive merit basis, to a limited range of Level III units.

Major Study in BA Course 3400 or BSc course 3970

For studies in Computer Science to be regarded as being major studies, at least four Level III units of Computer Science must be included after completing Level I unit 6.711, Level 1/11 unit 6.712 and the three Level II units, 6.721, 6.722, 6.723.

Course 3400

For further details of major studies in Computer Science within the Bachelor of Arts degree course, please see the Arts Handbook.

Course 3970

Entry to a Computer Science major in course 3970 is normally by direct selection at University entry.

Year 1 students in course 3970 who are not selected for direct entry into a Computer Science major may enrol in program 6806. For such students enrolment in Year 2 of a Computer Science program is based on academic performance in Year 1; a credit average (65%) is normally required.

A total of 23 units is required for graduation at the pass level.

Year 1
6.711, 6.712
10.001, 10.081
3 other Level 1 units

Year 2
6.721
6.722
6.723
5 other Level II units
1 General Education elective

Year 3
4 Computer Science Level III units
3 other Level II or Level III units
1 General Education elective

Students intending to proceed to Honours should choose 7 Level III units.

Year 4
6.606

For further details see the Sciences Handbook.

### School of Mechanical and Industrial Engineering

**Incorporating Aeronautical Engineering, Naval Architecture and Nuclear Engineering**

Head of School  
Vacant  

Executive Assistant to Head of School  
Associate Professor J. E. Baker  

Senior Administrative Officer  
Mr. G. Dusan  

The School consists of three departments. **Applied Mechanics** (agricultural engineering, automatic control, biomechanics, engineering design, engineering mechanics and mechanics of solids), **Fluid Mechanics and Thermodynamics** (energy utilisation and power generation, nuclear engineering, refrigeration and air conditioning, gas and liquid handling, aeronautical engineering and naval architecture), **Industrial Engineering** (economic analysis, production planning and control, product and process design, methods engineering and operations research). The Centre for Manufacturing and Automation is also located within the School.

The School offers courses in Aeronautical Engineering, Industrial Engineering, Mechanical Engineering and Naval Architecture, either singly or in combination with Science or Arts courses.

The courses are planned to provide the appropriate academic training for the professional engineer in the fields of aeronautical, industrial and mechanical engineering, and for the naval architect. They may be taken on a full-time basis, normally over four years, or on a combined full-time/part-time basis. Part-time students will normally take two years for each equivalent full-time year and will be required to attend day classes for the equivalent of at least 1 ½ days per week. Students intending to enter part-time study are advised that most subjects in the course are only offered in the day-time.

The courses lead to the award of the degree of Bachelor of Engineering (BE).
The School also offers combined courses in conjunction with other faculties of the University, leading to the award of the two degrees of Bachelor of Engineering and Bachelor of Science (BE BSc) or Bachelor of Engineering and Bachelor of Arts (BE BA). These combined courses enable students to major in the area of computer science, materials science, mathematics, physics, statistics or another relevant field, in addition to studying their chosen engineering specialty.

For the four BE courses, the study of the basic sciences — mathematics, physics and chemistry — together with an introduction to engineering, comprise Year 1. In Year 2 further mathematical studies are undertaken, together with a study of the engineering sciences — thermodynamics, fluid mechanics, engineering mechanics, mechanics of solids — and their application in the field of design.

The first halves of the courses of Mechanical, Industrial and Aeronautical Engineering and of Naval Architecture are identical, and students attend classes together. The latter halves of these four courses contain a number of common core subjects together with specific disciplinary requirements. In the final years, in addition to core subjects and disciplinary requirements, provision is made for a limited degree of specialization in one or more elective subjects. Students with a distinguished academic record may take, subject to the approval of the Head of School, a limited number of graduate subjects offered by the School in lieu of an equivalent quantity of final year undergraduate electives. Each student is required to submit a thesis at the end of the final year and to deliver a short paper on the subject of the thesis. The University requires that undergraduate students undertake a structured program in General Studies as an integral part of their degree. For further details, please locate General Education in the Contents. In certain instances and with permission from the Head of School and the Standing Committee on General Education, students may substitute an Arts subject in lieu of two General Studies subjects.

Industrial experience is an integral part of the courses. Full-time students must complete forty working days of approved industrial training between both Years 2 and 3 and Years 3 and 4. Students are strongly recommended to gain as much industrial training as possible between Years 1 and 2.

Students taking the course on a full-time/part-time basis must complete an equivalent amount of industrial training.

Students who have had suitable industrial experience may qualify for exemption from certain subjects. The Head of School should be contacted for details.

All BE degree course students are considered for the award of Honours which is granted for meritorious performance in the course with particular emphasis on the later years. Honours in Science or Arts in the BE BSc or BE BA combined degree course require an extra year of study.

The Institution of Engineers, Australia, recognizes the degree of BE in any of the undergraduate courses offered by the School as meeting the examination requirements for admission to graduate and corporate membership. Substantial or complete recognition is accorded to the BE courses by overseas engineering institutions.

The award of the degree BE in Aeronautical Engineering is recognized by the Royal Aeronautical Society as giving exemption from the formal examination requirements for corporate membership. Advancement from graduate membership to associate membership grade is awarded on a case by case basis after a further period of some years of professional experience.

The award of the degree BE in Naval Architecture is recognized by the Royal Institution of Naval Architects (RINA), London, as the academic qualification for corporate membership of that body.

Course Progression Guidelines

It is the responsibility of each student to have met the course requirements by the date of application for the degree. In this context, the student's attention is directed to the Faculty's General Rules for Progression contained in the preceding chapter of this Handbook. As well, the following points should be noted.

- Progression in the School's courses is by subject, although programs and timetables are arranged by year.
- In addition to the specific subject prerequisites for a particular year of a course, a general understanding of the material in the preceding year is assumed.
- Previously failed subjects must be included in a student's current program, except that a failed elective may be replaced by another elective.
- A student who is faced with compiling a mixed year's program must give preference to subjects from the lower year of the course.
- In the event of a student dropping one or more subjects from a mixed year's program, the discarded subject(s) must be chosen from the higher year's selection.
- The subjects 5.051 Thesis and 5.062 Communications can be taken only in the final year of a student's program.

Revision of Courses

An extensive review of all the courses in the School has taken place over the last few years and the revised courses are to be progressively introduced from 1989. Changes have been made to the Year 1 subjects, some new ones appearing this year, and there will be a continuous introduction of new or altered subjects in the later years until 1992. Thus, students commencing now will complete the new programs, while those who commenced in 1988 or earlier will continue with the existing ones.

The object of the revision has been to modernise the courses, so that a greater emphasis will be placed on electronics, microprocessors, instrumentation, robotics and computing, all of which are now important to Mechanical and Industrial Engineering. In first year this has resulted in a revised Physics course, emphasising in part the fundamentals of the above areas, and a new, more extensive Computing subject. Subject areas are to be streamed throughout the courses so that discontinuities in the teaching of material will be minimised.

In addition, owing to the increased emphasis in Australia on Manufacturing, a final-year stream in that area has been introduced. Students taking the Industrial Engineering program will henceforth have two options at the end of third year — either to continue in the more general area of Industrial Engineering or to concentrate specifically on Manufacturing.
Mechanical Engineering — Full-time Course

Bachelor of Engineering BE

Note: The program as presented is for full-time study. Alternative programs are available for a combination of full-time and part-time study. Students wishing to commence studies on a part-time basis must, in Year 1, study the subjects: 1.911, 2.951, 5.0010, 5.0011, 10.001.

Year 1

Total: 22 hours

Note 1: At least six hours per week of Technical Electives must be taken from the Mechanical Engineering Technical Elective List. The remaining Technical Electives may be taken from the Industrial Engineering Technical Elective List or from Years 3 or 4 of other courses in the School or suitable subjects outside the School. Students with good academic records may include some graduate subjects. A counselling service is provided to assist students to choose electives. The selection of certain subjects or combinations of subjects may require the approval of the Head of School.
Note 2: Only a limited number of Technical Electives is offered each year. The actual Technical Electives offered each year are decided on the basis of staff availability and student demand. Students are advised in September of each year which Technical Electives will be offered in the following year.

*Report to be submitted in Week 1 of Session 1 detailing involvement and experience gained between Years 3 and 4. Students may not enrol in 5.044 without submitting the relevant report.

Note: The graduate subjects listed should be examined by undergraduate students; with approval, graduate subjects from this and other Schools may be taken by students with a distinguished academic record.

### 3681 Mechanical Engineering — Combined Course

**Bachelor of Engineering/Bachelor of Science BE BSc**

The combined degree course of five years full-time study enables a student in the School to qualify for the award of the two degrees of Bachelor of Engineering and Bachelor of Science (BE BSc). The course enables such combined degree students to major in the areas of computer science, materials science, mathematics, physics or statistics. It is administered by the Faculty of Engineering.

All students who are accepted into the Year 1 'Science/Arts compatible' course in the School may enrol directly into this course. Continued enrolment in Year 2 requires a pass at first attempt in all subjects of Year 1 and students who fail to achieve this will automatically be transferred to the normal Engineering program. Alternatively, students may transfer into the Year 2 of this course, provided they have obtained a pass at first attempt in the Year 1 'Science/Arts compatible' course.

Normally, students enrolled in this BE BSc degree course are awarded their degrees at the conclusion of five years study. However, it is possible for students to take out the Science degree prior to the Engineering degree provided they have: 1. completed the requirements for Years 1, 2 and 3, 2. completed the General Studies requirements for the Science degree, and 3. obtained approval from the Board of Studies in Science and Mathematics.

Students may also undertake an additional honours year in Science and Mathematics and automatically re-enter this course without having to re-apply for admission. To undertake such an honours year in Science and Mathematics, permission is to be obtained at the end of Year 3 both from the Head of the School in which the honours year is to be undertaken and from the Head of the School of Mathematical and Industrial Engineering.

Students who commence the course and do not complete the Engineering component may take out a BSc degree on completion of one of the approved programs in the Science and Mathematics course. Similarly, students not wishing to complete the BSc degree course may revert to the normal Engineering program with appropriate credit for subjects satisfactorily completed.
Year 1 of the combined course is equivalent to the Year 1 ‘Science/Arts compatible’ course in the School of Mechanical and Industrial Engineering. Having completed Years 2 and 3, as outlined below, students in Years 4 and 5 do Year 3 and Year 4 of their selected Engineering course except that significant repetition of subject material is not allowed. Instead, students are required to substitute either an appropriate Technical Elective or an appropriate Level II or III subject from Table 1* or Table 2*, or in exceptional circumstances, some other equivalent subject with the permission of the Head of the School of Mechanical and Industrial.

Note: In order to limit the combined degree courses to five years, the workload in the first three years is higher than in the single degree course. Students who have barely satisfied the minimum entrance requirements are therefore advised against enrolling in the combined degree course. Those who do enrol and whose average mark at the end of Session 1 of Year 1 is less than 65% are advised to contact the School to see whether or not they should continue in the combined course in Session 2 of Year 1, as the workload in Session 2 is higher than in Session 1.

3702
BE BA in Naval Architecture

Introduction

The Bachelor of Engineering and Bachelor of Arts combined degree course provides the opportunity of taking one of the normal accredited Engineering courses offered by the School together with a normal Arts course. Common content between the two courses makes it possible to complete the combined degree course in 5 years, although the minimum time required could be longer, depending upon the choice of Arts subjects. The course is administered by the Faculty of Engineering.

The Engineering content follows that of the standard courses offered by the School. It includes the Science/Arts compatible first year program which provides a wide range of course options at the end of Year 1. The options include, in addition to the BE BA combined program, a BE BSc combined program and a normal BA program, a normal BSc program and a normal BA program. (The Science/Arts compatible first year provides up to 30 Arts credit points towards a BA program.)

The Arts content is to be chosen from the Faculty of Arts offerings in the usual way and would depend upon the interests of each individual student. Refer to the Faculty of Arts handbook for further details.

Requirements

The broad requirements of the BE BA course are given below. The details of a particular student's program will depend upon the student's interests and the Arts content which is chosen. Sample programs are available on request to show typical arrangements.

Engineering

The program is to contain the Science/Arts compatible first year segment followed by the full program for one of the strands offered by the School of Mechanical and Industrial Engineering. Course variations may be permitted in some cases on application to the Head of School.

Arts

The Arts component of the program is to contain at least 60 Arts credit points in addition to Arts credit points allocated to components of the Engineering strand. (A session-length Arts subject normally carries 6 credit points.) The 60 must include:

- no more than 30 First Level credit points (typically 5 one-session subjects)
- at least 24 Upper Level credit points forming a major sequence (typically 4 one-session subjects)
- at least 6 Upper Level credit points in a school other than that in which the major is taken.

Computing and mathematics majors are not permitted. The combined BE BSc program would be more appropriate in these cases.

Honours

In the Engineering component, Honours are awarded for superior performance in the standard program.

In the Arts components, the award of Honours requires at least one further year of study devoted exclusively to the Honours subject(s). Consult the Faculty of Arts for further details.

General

A BE BA proposal should be discussed with representatives of the School and the Faculty of Arts as early as possible. In many cases this will be at (or preferably before) first year enrolment, but a student who has satisfactorily completed the Science/Arts compatible first year will normally be able to transfer to the second year of a combined BE BA program, and the discussions could then take place at any time before second year enrolment. Enquiries should be directed to the Executive Assistant to the Head of the School and the Executive Assistant to the Dean of Faculty of Arts.

Department of Industrial Engineering

The Department of Industrial Engineering offers a course in Industrial Engineering leading to the award of the degree of Bachelor of Engineering. This course is designed for students with engineering ability whose interests lie in the planning, developing and control of manufacturing or service operations. It may be taken either on a full-time basis, normally over four years or on a part-time basis, or on a combined full-time/part-
The Work of the Industrial Engineer

The industrial engineer may initially be employed in any of the following major areas of industrial activity:

1. Industrial Economic Analysis

One of the principal functions of industrial engineering is to analyse a product, project or process from the economic point of view to ensure that an adequate profit can be obtained. A general working knowledge of economics and management skill has to be directed towards the making of decisions on how to operate an enterprise most efficiently. The basis for such decisions is furnished largely by the logical application of mathematics and statistics.

2. Planning and Control of Production

Manufacturing processes and operations must be planned in detail throughout an enterprise to ensure that they proceed smoothly and economically. Functions in this field include the establishment of production standards, the setting of production targets, and the control of quality.

The ultimate responsibility of those in charge of the planning and control of production is to ensure that the goods, as originally specified, perform satisfactorily and are produced when required at an optimum cost. Computer systems are increasingly being used to achieve this.

3. Product and Process Design

The design interest of the industrial engineer goes beyond normal mechanical design to develop a product that will not only function effectively but also have a pleasing appearance.

Further, the product has to be adapted to suit existing manufacturing equipment, or a manufacturing process has to be developed by means of which an existing product can be manufactured at the right price and of the right quality. The design work of the industrial engineer also incorporates problems of process selection and application for both economy and performance. Fundamental scientific studies of manufacturing processes such as metal machining, forming and casting are continually being made to improve their efficiency.

The introduction of computers has led to the automation of some aspects of product and process design. For example, developments in CAD-CAM (computer aided design and computer aided manufacturing) have resulted in improvements in the competitiveness of companies in the marketplace and these techniques are becoming increasingly important.

The principles for minimizing product cost can also be effectively applied to the provision of services.

4. Methods Engineering

Methods engineering is concerned with the design of systems to properly utilize and coordinate personnel, materials and machines so that an enterprise will run efficiently. A sound knowledge of engineering in general, together with an understanding of human factors and economics is necessary for this work. It includes the design of plant layouts and materials handling systems, job design and the setting of standard times for work.

5. Operations Research

This is the attack of modern science on complex problems arising in the direction and management of large systems of people, machines, materials and money in industry, business, government and defence. The distinctive approach is to develop a scientific model of the system, incorporating measurements of factors such as chance and risk, with which to predict and compare the outcomes of alternative decisions, strategies or controls. The purpose is to help management determine its policy and actions scientifically.

Employment in any of these fields may well lead to a position of responsibility in industrial management if the engineer is so inclined.

3661
Industrial Engineering — Combined Course

Bachelor of Engineering/Bachelor of Science
BE BSC

The description of this course is identical with that for course 3681 in Mechanical Engineering.

3662
Industrial Engineering — Combined Course

Bachelor of Engineering/Bachelor of Arts
BE BA

See description under Combined Courses: Bachelor of Engineering/Bachelor of Arts, immediately preceding the heading Department of Industrial Engineering.

School of Surveying

Head of School
Professor F.K. Brunner
Administrative Assistant
Mr. L. Daras
The School offers a full-time course of four years duration leading to the award of the degree of Bachelor of Surveying. Alternatively, the course may be taken in a sandwich form in which a student may, after completing the first year of the course on a full-time basis, alternate his or her studies with one or more periods of employment by taking leaves of absence of two consecutive sessions.

Specialised areas of study include the following: Geodetic Surveying (determining the mathematical model of the earth, and its gravity field, and the practice of surveying on the Earth's surface); Satellite Surveying (position determination techniques using satellite signals); Hydrographic Surveying (mapping the seabed and waterways for navigation and off-shore resource management); Engineering Surveying (the precise surveying for engineering projects); Cadastral Surveying (knowledge of the laws and practices for survey of property boundaries); Land Management and Development (environmental assessment for resource management and change of land use); Land Information Management (the use of computer-based information systems of spatially related data for planning purposes); Photogrammetry and Remote Sensing (the use of photographs and remotely sensed images for mapping and resource surveys). The course recognises the diversity of roles of graduates in government, private and academic sectors as practitioner, consultant, manager, teacher or researcher.

Recognition

The degree of Bachelor of Surveying is recognised by the New South Wales Surveyors' Board as meeting all examination requirements for registration as a Registered Surveyor in New South Wales, and is recognised by the Institution of Surveyors for admission as corporate members.

Students wishing to become Registered Surveyors with the New South Wales Surveyors' Board after graduation are advised to gain practical experience under a Registered Surveyor during their course. Some reduction in the period of practical experience required before registration may be granted because of practical experience gained during the University course, provided the New South Wales Surveyors' Board is informed in the prescribed manner. Details are obtainable from the Registrar, Surveyors' Board, Department of Lands, Bridge Street, Sydney 2000.

Honours

In the BSurv course the same formal program is offered to both pass students and to those aiming for an honours grading. Honours will be awarded for meritorious performance throughout the course, with greater emphasis placed on subjects in Year 3 and 4.

Professional Practice

All students in the BSurv course must gain at least 60 days of recognised professional practice after the completion of Session 1 in Year 2 as part of the requirements for subject 29.8711. Special instructions will be given before commencement of professional practice.

Field Excursions

Students must complete all necessary fieldwork for any subject and be prepared to pay all the appropriate costs, and must be in attendance at all scheduled examinations except in exceptional circumstances.

Course Rules

- Programs and timetables are arranged for each year. Progression is however, by subject.

---

**Course Revision**

Following each course revision, students are assessed on the basis of the new program but retain credit for any subjects already completed and are not liable for the increased requirements if progression is normal.

It is the responsibility of students to enrol in a program consistent with the rules governing re-enrolment and admission to the degree.

The BSurv course is currently being revised. Years 1 and 2 of the new course are being introduced in 1989, Year 3 in 1990 and Year 4 in 1991.

Students with broken programs will have their status in the new course determined according to a table of equivalent subjects in the new and old courses.

**Re-enrolment**

Students must collect enrolment information from the School Office before the end of Session 2 for re-enrolment in the following February. Students not intending to re-enrol should advise the School. Leave of absence for up to one year is usually granted to students in good standing.

*Students are required to attend a one-week survey camp, which is equivalent to 3 class contact hours per week.*

Students enrolling in 1989 please note that:

(a) 29.3011 Surveying Instruments will be replaced in Session 1 by 29.2221 Introduction to Geodetic Science,

(b) 29.4051 Survey Camp 1 will be deleted from the Session 2 program,

(c) exemption will be given from a General Education Elective Category A on the basis of completion of a General Studies subject in 1988 of the old course.

**General Education Program**

Students undertaking the new course will be required to study subjects in the General Education Program as specified, whereas students completing the requirements for the degree under the old course will be required to take 168 hours of General Studies electives. General Education and General Studies electives comprise 56 hours and a half elective 28 hours.

#### Year 4 Electives

Every student is required to take two Technical Electives (of three hours per week each) which are chosen from:

</table>

Not all electives are offered in any one year. Subjects from other Schools and Faculties may be substituted with the approval of the Head of School.
A subject is defined by the Academic Board as 'a unit of instruction approved by the University as being a discrete part of the requirements for a course offered by the University'.

Each approved subject of the University is identifiable both by number and by name as this is a check against nomination of subject other than the one intended.

Subject numbers are allocated by the Academic Registrar and the system of allocation is based on the following guidelines:

1. The authority offering the subject, normally a School of the University, is indicated by the number before the decimal point.
2. Each subject number is unique and is not used for more than one subject title.
3. Subject numbers may not be re-used with a new subject title within ten years of previous use.
4. Graduate subjects are indicated by a suffix 'G' to a number with three digits after the decimal point. In other subjects three or four digits are used after the decimal point.

Subjects taught are listed in full in the handbook of the faculty or board of studies responsible for the particular course within which the subjects are taken. Subject descriptions are contained in the appropriate section in the handbooks.

The identifying numerical prefixes for each subject authority are set out on the following page.

Servicing Subjects are those taught by a school or department outside its own faculty. Their subject descriptions are published in the handbook of the faculty which originates the subject and are also published in the handbook of the faculty in which the subject is taught.

The following pages contain descriptions for most of the subjects offered for the courses described in this book, the exception being the General Education subjects. For General Education subjects see the General Education Handbook which is available free of charge.

HSC Exam Prerequisites

Subjects which require prerequisites for enrolment in terms of the HSC Examination percentile range, refer to the 1978 and subsequent Examinations.

Candidates for enrolment who obtained the HSC in previous years or hold other high school matriculation should check with the appropriate school on what matriculation status is required for admission to a subject.

Physics

The School of Physics has introduced the specialized units 1.911, 1.961, 1.971, 1.981, 1.962 and 1.982 for students in the Faculty of Engineering. The first-year units 1.911, 1.961, 1.971 and 1.981 are not available at night. Part-time students will be catered for by the Science Course unit 1.001.

All first year full-time students, including repeat students, should enrol in 1.911, 1.961, 1.971, 1.981 according to their schools. However, full time Electrical Engineering students may substitute 1.011 for 1.961, subject to the approval of the School of Physics.

All first year part-time students, including repeats, should enrol in 1.001.

Physics Level I Units

1.001 Physics 1

F L3T3

Prerequisites: 

HSC Exam Score Range

Required

67.100

1-50

1.100 or

(for 1.001 only) 10.021B

2 unit Mathematics or

3 unit Mathematics or

4 unit Mathematics

and

2 unit Science (Physics) or

2 unit Science (Chemistry) or

3 unit Science or

4 unit Science or

1.021

Co-requisite: 10.021C or 10.001 or 10.011.

*This refers to the 2 Unit Mathematics subject which is related to the 3 Unit Mathematics subject. It does not refer to the subject 2 Unit Mathematics (Mathematics in Society).

Aims and nature of physics and the study of motion of particles under the influence of mechanical, electrical, magnetic and gravitational forces. Concepts of force, inertial mass, energy, momentum, charge, potential, fields. Application of the conservation principles to solution of problems involving charge, energy and momentum. Electrical circuit theory, application of Kirchoff's laws to AC and DC circuits. Uniform circular motion, Kepler's laws and rotational mechanics. Properties of matter: solids, liquids, gases. The wave theories of physics, transfer of energy by waves, properties of waves. Application of wave theories to optical and acoustical phenomena such as interference, diffraction and polarization.

1.911 Physics 1 (Mechanical Engineering)

F L2T2

Prerequisites: As for 1.001 Physics 1. Co-requisites: 10.001 or 10.021C. Excluded: 1.951

For students in the School of Mechanical and Industrial Engineering.

1.961 Physics 1 (Electrical Engineering)

F L3T3

Prerequisite: As for 1.001 Physics 1.

For students in the School of Electrical Engineering.

Electrostatics in vacuum, electrostatics in dielectrics, steady state currents, magnetostatics in vacuum, ferromagnetism, electromagnetic induction, transient currents. Vectors motion in one dimension, motion in a plane, particle dynamics, work and energy, the conservation of energy, conservation of linear momentum, collisions, rotational kinematics, rotational dynamics, simple harmonic motion, gravitation. Temperature, heat and the first law of thermodynamics, kinetic theory of gases. Waves in elastic media, sound waves, geometrical optics, interference, diffraction, gratings and spectra, polarisation.

1.921 Physics 1 (Surveying)

F L2T2

Prerequisite: As for 1.001 Physics 1.

For students in the School of Surveying.

1.981 Physics 1 (Civil Engineering)

S1 L2T2 and S2 L2T1

Prerequisite: As for 1.001 Physics 1.

For students in the School of Civil Engineering.

Physics Level II Units

1.002 Mechanics, Waves and Optics

S1 L3T1
Harmonic motion, systems of particles, central force problems, Lagrange’s equations, coupled oscillations, travelling waves, pulses, energy and momentum transfer, polarization, birefringence, interference, thin films, gratings, lasers, holography, fibre optics, Faraday effect, photoelasticity.

1.012 Electromagnetism and Thermal Physics  S2 L3T1
Prerequisites: 1.001 or 1.011, 10.001 or 10.011. Co-requisite: 10.2111. Excluded: 1.972, 1.992.
Electric field strength and potential, Gauss’ law, Poisson’s and Laplace’s equations, capacitance, dielectrics and polarization, magnetism, electro-magnetic induction, Maxwell’s equations, electromagnetic waves. Laws of thermodynamics, kinetic theory, microscopic processes, entropy, solid state defects, Helmholtz and Gibbs functions, Maxwell’s relations, phase diagrams, chemical and electrochemical potential.

1.022 Modern Physics  FL1½T½
Prerequisites: 1.001 or 1.011, 10.001 or 10.011. Co-requisite: 10.2112. Excluded: 1.9322, 1.982.
Special theory of relativity: time dilation, length contraction, simultaneity, Lorentz transformations, energy and mass. Photon properties, de Broglie relations, Uncertainty principle, operators in quantum mechanics, postulates of quantum mechanics, potential wells, steps and barriers, harmonic oscillator, H atom, angular momentum, magnetic moment, electron spin, nuclear spin. Atomic and molecular spectra, lasers, quantum statistics, free electron model of a metal, band theory; nuclear size, density, mass; nuclear models, fission and fusion, nuclear forces.

1.032 Laboratory  F T3
Prerequisites: 1.001 or 1.011, 10.001. Excluded: 1.9222.
Alternating current circuits, complex impedance, resonance, mutual inductance, introductory electronics, diode and characteristics and circuits, power supplies, transistor characteristics, single stage and coupled amplifiers, experiments using AC circuits. Experimental investigations in a choice of areas including radioactivity, spectroscopy, properties of materials, Hall effect, nuclear magnetic resonance, photography, vacuum systems.

1.9222 Electronics  S1 L1T2
Prerequisites: 1.001 or 1.002 or 1.021. Excluded: 1.032.
The application of electronics to other disciplines. Includes: principles of circuit theory and analogue computing; amplifiers, their specification and application, transducers; electronic instrumentation; industrial data acquisition.

1.962 Physics of Measurement  S1 L1T2
(Surveying)
Prerequisite: 1.971.
For students in the School of Surveying.
Resolution, accuracy and sensitivity of instruments. Errors of observation and their treatment. Experimental design. Displace-
1.023 Statistical Mechanics and Solid State Physics
Prerequisites: 1.012, 1.022, 10.2112.
Canonical distribution, paramagnetism, Einstein solid, ideal gas, equipartition, grand canonical ensemble, chemical potential, phase equilibria, Fermi and Bose statistics, Bose condensation, blackbody radiation. Crystal structure, bonding, lattice dynamics, phonons, free-electron models of metals, band theory, point defects, dislocations.

1.0333 Electromagnetism
Prerequisites: 1.012, 10.2111, 10.2112. Excluded: 10.222C.
Electromagnetic fields; Maxwell's equations, Poynting theorem, electromagnetic potentials, electromagnetic waves. Reflection and transmission, Fresnel equations, waveguides, radiation fields, dipoles and antenna theory.

1.043 Experimental Physics A
Prerequisite: 1.032.
Basic experimental techniques and analysis of results in the following areas: electricity, magnetism, diffraction optics (including X-ray and electron diffraction, solid state physics, nuclear physics, atomic physics and spectroscopy, vacuum systems).

1.0133 Quantum Mechanics
Prerequisites: 1.022, 10.2112. Excluded: 2.023A, 10.222F.
Revision of basic concepts, harmonic oscillator systems, spherically symmetric systems, angular momentum, H atom, first-order perturbation theory, identical particles, Exclusion Principle, atomic structure, spin-orbit coupling, Helium atom, introductory quantum theory of molecules.

1.0533 Experimental Physics B1
Prerequisite: 1.032.
Selected experiments and projects. Advanced experimental techniques and open ended projects in the areas covered in 1.043 Experimental Physics A together with projects involving electron and nuclear magnetic resonances, low temperature physics and super-conductivity. Fourier optics, holography.

1.133 Electronics
Prerequisites: 1.9222 or 1.032.

Chemistry

Level I Units

2.121 Chemistry 1A
Prerequisites:
- 2 unit Mathematics* or
- 3 unit Mathematics or
- 4 unit Mathematics

2 unit Science (Physics) or
2 unit Science (Chemistry) or
4 unit Science or
3 unit Science or
2.111

*This refers to the 2 Unit Mathematics subject which is related to the 3 Unit Mathematics subject. It does not refer to the subject 2 Unit Mathematics (Mathematics in Society).

Note: Students who have passed 2.121 or 2.131 may not enrol in 2.111 or 2.141. Students meeting the 2.121 or 2.141 prerequisites are not permitted to enrol in 2.111 without the permission of the Head of the School of Chemistry. Students who enrol in 2.111 must pass 2.111 before they can proceed to 2.121 or 2.131 or 2.141.

2.131 Chemistry 1B
Prerequisite: 2.121.
Chemical equilibrium, equilibrium constants, quantitative calculations applied to acid-base and solubility equilibria; buffers, titrations, chemical analysis. Oxidation and reduction reactions, electrode potentials. Chemical thermodynamics, entropy, free energy. Chemistry of carbon compounds, stereoisomerism; alkanes, alkenes, alkynes, aromatic compounds, alcohols, ethers, aldehydes, ketones, carboxylic acids and derivatives, amines.

Note: Students who have passed 2.111 may be permitted to enrol in 2.131 on application to the Head of the School of Chemistry.

2.951 Chemistry 1ME
Prerequisites: As for 2.121.
A treatment of chemistry which illustrates the application of the principles of chemistry to problems of concern to mechanical engineers. Topics: chemistry of materials, thermochemistry, chemical kinetics and equilibrium, radioactivity and nuclear
power, electrochemistry and corrosion of metals. Introduction to organic chemistry, structure and properties of polymers, fuels and lubricants. Surface chemistry.

### Level II Units

#### 2.102A Physical Chemistry  
**S1 or S2 L3T3**

Prerequisites: 2.121 and 2.131, or 2.141, and 10.011 or 10.001 or 10.021B and 10.021C. Excluded: 2.002A.

Thermodynamics: first, second and third laws of thermodynamics; statistical mechanical treatment of thermodynamic properties; applications of thermodynamics: chemical equilibria, phase equilibria, solutions of nonelectrolytes and electrolytes, electrochemical cells. Kinetics: order and molecularity; effect of temperature on reaction rates; elementary reaction rate theory. Surface chemistry and colloids: adsorption, properties of dispersions; macromolecules and association colloids.

#### 2.102B Organic Chemistry  
**F or S2 L3T3**

Prerequisite: 2.131 or 2.141. Excluded: 2.002B

Discussion of the major types of organic reaction mechanisms (eg addition, substitution, elimination, free-radical, molecular rearrangement) within context of important functional groups (eg aliphatic hydrocarbons, monocyclic aromatic hydrocarbons, halides, organometallic compounds, alcohols, phenols, aldehydes, ketones, ethers, carboxylic acids and their derivatives, nitro compounds, amines and sulfonic acids). Introduction to application of spectroscopic methods to structure determination.

#### 2.102C Inorganic Chemistry and Structure  
**S1 or S2 L3T3**

Prerequisites: 2.121 and 2.131, or 2.141. Excluded: 2.042C.

### 2.102D Chemical and Spectroscopic Analysis  
**S1 or S2 L3T3**

Prerequisites: 2.121 and 2.131, or 2.141; and 10.011 or 10.001 or 10.021B and 10.021C. Excluded: 2.002D and 2.003H.

### Level III Units

#### 2.043 A

**Servicing Subject**

<table>
<thead>
<tr>
<th>Material Science and Engineering</th>
</tr>
</thead>
</table>

#### 4.412A Physical Metallurgy 1A  
**S1 L3**

Co-requisite: 2.102A, 4.732.

Elements of crystallography. The crystal structure of metallic phases. Defect structures, dislocations, grain boundaries, plasticity, deformation and recrystallization. Phase equilibrium in alloy system. Genes of microstructure. Mechanisms of phase transformations, departure from equilibrium, metastable transition phases. Use of free energy principles to determine nature of phase equilibrium, common tangent construction. Application of Hume-Rothery principles to determine liquids and solidus boundaries, electron compounds. Introduction to nucleation theory.

#### 4.422B Physical Metallurgy IB  
**S2 L1T1**

4.432 Physical Metallurgy 1C
Prerequisite: 4.412A

4.634 Metallurgical Engineering 3C
Prerequisite: 4.453.

4.642 Metallurgical Engineering 1D
Prerequisite: 4.732.

4.713 X-Ray Diffraction and Electron Microscopy
Prerequisite: 4.412A or 4.212

4.742 Physics of Materials
Prerequisite: 1.001 or 1.011.
Interatomic bonding in solid materials. Types of interatomic bonds, metallic, covalent, ionic. Introductory quantum mechanics in one dimension, free electron theory; effects of periodic potential, density of states curves. Effect of electron to atom ratio on conductivity and crystal structure; semiconductors; intrinsic, extrinsic. Exchange energy; ferromagnetism, antiferromagnetism. Elementary perturbation theory, covalent bond; crystal structures, properties. Ionic bond, crystal structure, force models, properties.

4.913 Materials Science
Prerequisite: 4.412A or 4.212

4.964 Materials Science and Engineering for Electrical Engineers
Prerequisite: 1.982 Solid State Physics.
Metallic, ceramic, organic, polymeric and composite materials and their technology for electrical engineering applications. Structures and structure property relations, phase equilibria and their effect on mechanical, electrical, magnetic, thermal and chemical properties. The shaping, treating and joining of materials. Aqueous and gaseous corrosion. Metallic glasses, superconductors, fastion conductors. The role of materials science in the development of electrical energy systems.
Note: Students who wish to enrol in this subject in courses other than the full-time courses in Aeronautical Engineering, Electrical Engineering, Industrial Engineering, Mechanical Engineering and Naval Architecture can make up for the lack of the prerequisite by work taken in Physics in the first half of the first year.

5.0012 Introductory Engineering Design and Materials Science S1 or S2 L2
Excluded: 5.0016, 5.010.
Introduction to engineering design: Engineering method, problem identification, creative thinking, mathematical modelling; computer-aided design; materials and processes; communication of ideas; the place of engineering in society.
Introduction to materials science: Structure and properties of main types of engineering materials, with emphasis on the way in which properties may be controlled by controlling structure.

5.0016 Introductory Engineering Design and Drawing Practice S1 L/T2
Excluded: 5.0012, 5.030, 5.0302, 5.010.
This subject is intended specifically for Electrical Engineering students, and is to be taken in conjunction with 5.0011.
Introduction to engineering design: Engineering method, problem identification, creative thinking, mathematical modelling; computer-aided design; materials and processes; communication of ideas; the place of engineering in society.

5.0300 Graphical Analysis and Communication S2 L1T2
Excluded: 5.0016, 5.030, 5.0302.
Descriptive geometry as the basis of analysis and synthesis of spatial relationships: points, lines, planes, solids, intersections. Orthographic and other projection systems. Engineering drawing as a means of definition and communication, selection of views, construction of drawings, conventions, dimensions and tolerancing. Introduction to computer-based drafting systems.

5.0302 Engineering Drawing and Descriptive Geometry S1 or S2 L1T3
Excluded: 5.0016, 5.030.

5.0303 Workshop Technology SS L1T2
The implementation of design and its interaction with manufacturing equipment and processes. Manufacturing capabilities and tolerancing. Approximately 30 hours of practical training including casting, welding, fitting and machining. Students who have done Industrial Arts for the HSC, have an appropriate trade or certificate course qualification, or are suitably employed, may qualify for exemption from this subject.

5.0305 Manufacturing Technology S2 L/T3
Description of the processes classified as: forming from liquid or solid, material removal, material joining. Elementary mechanics of forming and cutting processes. Analysis of the primary functions of machine tool structures and their operation. Relationship between product design and manufacture processes. Elementary functional analysis of product designs, including linear loop equations, limits and fits, dimensional accuracy of processes and alternate design and manufacturing strategies.

5.034 Engineering Experimentation S1 L1 T1 S2 L½T1
Prerequisites: 5.3021, 5.4220, 5.620, 5.626, 10.351. Co-requisites: 5.343, 6.856.
Analog and digital instrumentation. Transducers, computer communication interfaces, computer control of experiments. Scientific method, engineering method, report writing, errors in experiments. Nineteen experiments and demonstrations.

5.043 Industrial Training 1 SS
Practical work in industry at the process or shop floor level to gain experience of people, industrial problems and relations, and process equipment. (Report submitted in Week 1 of session detailing involvement and experience gained prior to Year 3.)
For details contact Mr. G. Crawford, Industrial Training Officer.

5.044 Industrial Training 2 SS
Practical work in industry at the professional level to gain experience in design, development, investigation or management control systems areas in collaboration with professional engineers. (Report submitted in Week 1 of session detailing responsibilities and experience gained in vacation period between Years 3 and 4.)
For details contact Mr. G. Crawford, Industrial Training Officer.
5.051 Thesis  
Co-requisite: 5.062.  
To be taken in year of completion of course.  
For students in the BE degree courses in the School of Mechanical and Industrial Engineering.

5.062 Communications  
Co-requisite: 5.051.  

5.065 Mechanical Engineering  
Prerequisites: 1.961, 10.2111, 10.2112 or equivalent.  

5.070 Optimal Engineering Strategies  
Prerequisites: 5.3021, 10.022. Co-requisite: 5.122. Excluded: 5.073.  
Optimization: introduction to the calculus of variations; Euler-Lagrange equations and Hamilton’s principle; introduction to geometric programming and network analysis. Strategies for design and analysis: system structure; variable classification; procedure generation; recycle optimization; the adjacency matrix.

5.074 Computing Science for Mechanical Engineers  
Prerequisite: 5.0721.  

5.079 Numerical Methods  
Prerequisites: 5.0721, 10.022. Excluded: 5.073.  

5.1010 Mechanical Engineering Design 1  
Co-requisite: 5.0010. Excluded: 5.0012, 5.061.  
Introduction to hardware. Studies of a range of engineering components, considering: what they do, how they do it, how they were made, the range of possible forms for each item, why each item has its particular form. Design philosophy. Design as the formulation and implementation of practical ways of fulfilling needs, including: recognising the need, generalising the question, considering a range of solutions, selecting a short-list, analysing the selected range, making a final choice. Commercial philosophy. Impetus for design, market competition, significance of innovation, intellectual property, financing, manufacturing, marketing, etc.

5.122 Mechanical Engineering Design 2  
Prerequisites: 5.0012, 5.0300, 5.0305. Co-requisites: 5.061, 5.3021, 5.4220, 5.4222, 5.620, 5.626.  
Design of basic engineering elements and simple systems. Selection and specification of materials and manufacturing processes for engineering items. Communication by means of engineering drawings (including tolerances) of manufacturing information for simple structures and assemblies. Application of standards and trade literature to design. Simple design-and-make project to meet a published specification and to demonstrate the product’s performance.

5.123 Mechanical Engineering Design 3  
Prerequisite: 5.122.  
Mathematical modelling and decision making in design with applications. More advanced design analyses, component design and drawing with individual and group projects of an interdisciplinary nature.

5.1240 Design Project  
Prerequisite: 5.123.  
Creative design and development leading to the detail design, building and testing of systems and devices to satisfy specified objectives of set projects.

5.1242 Design Technology  
Prerequisite: 5.122.  

5.1243 Machinery Design Project  
Prerequisite: 5.123.  
Development of a final design to satisfy objectives involving design analysis, component selection and preparation of working drawings.

5.1244 Project Management  
Prerequisite: 5.122.  
Studies of aspects of implementation of design work to ensure that design objectives are achieved. Project scheduling and control, preparation of contracts and specifications, use of standards and codes, quality assurance, product liability, patent law, marketing.
5.1245 Computer-Aided Engineering Design  SS L2T1
Prerequisite: 5.123 or 5.901. Excluded: 18.803, 18.870G.
Mathematical modelling and analysis of component and system designs using the computer as a tool to optimize and investigate design solutions. Use of available algorithms and computer packages.

5.235 Nuclear Power Technology  S1 L2T1
Prerequisites: 5.630, 5.636. Excluded: 23.051.
Atoms, nuclei, radioactivity, radiation detection and radiation safety, nuclear fission, neutron reactions, neutron diffusion and criticality. Design, operation and safety features of thermal fission, fast fission and fusion power reactor types. Nuclear fuel cycles from mining to waste disposal. The costs of nuclear power.

5.3021 Engineering Mechanics 2A  S1 or S2 L2T1
Prerequisites: 1.001 or 1.951, 5.001 or 5.020, 10.001 or 10.011. Excluded: 5.300.
Kinetics of systems of particles; plane steady mass flow. Plane kinematics and kinetics of rigid bodies: moment of inertia; motion relative to translating and rotating frames of reference; equations of motion; work and energy, impulse and momentum. Virtual work for static and dynamic systems. Kinematics and kinetics of simple mechanisms.

5.3022 Engineering Mechanics 2B  S1 or S2 L/T2
Prerequisites: 1.001 or 1.951, 5.001 or 5.020, 10.001 or 10.011. Excluded: 5.303.

5.3030 Engineering Mechanics 3  S2 L/T2
Prerequisites: 5.3021, 10.022. Excluded: 5.301, 5.333.
Kinematics of gear tooth profiles; standard and non-standard gear proportions. Gear trains; epicyclic gears. Static and dynamic balancing of rotating and reciprocating mass systems. Three-dimensional kinematics and kinetics of a rigid body: angular momentum, inertia tensor, kinetic energy, Euler's equations of motion. Gyroscope.

5.3040 Plane Mechanism Kinematics  S1 or S2 L2T1
Prerequisites: 5.301 or 5.302 or 5.333. Excluded: 5.318G.
Algebraic displacement, velocity and acceleration analyses of simple and complex planar mechanisms. Instantaneous kinematics: centroids; inflection and Bresse circles; acceleration centre; Euler-Savary equation; cubic of stationary curvature; centring point curve. Coupler curves and their properties; curve cognates. Constraint and freedom; mobility; velocity closure of a loop; special configurations; singularities. Various methods of synthesis.

5.3130 Vibration Analysis  S2 L/T2
Prerequisites: 5.3022, 10.022. Excluded: 5.303, 5.333.
Lagrange's equations of motion. Linear vibrations of multi-degree-of-freedom systems; normal modes; simple applications. Finite elements for structural dynamics; mass matrix; natural frequency and normal mode determinations; convergence; engineering applications.

5.343 Linear Systems Analysis  S1 L2T1
Prerequisites: 5.301 or 5.0201, 10.022.
Models of physical systems: differential equations for physical systems including mechanical, electrical, hydraulic, thermal and pneumatic systems; linearization. System analysis techniques: solution by Laplace transform method. Transfer functions and block diagrams. System response: response of first and second order systems to impulse step, ramp, sinusoidal and periodic inputs; higher order system response; system stability, applications.

5.348 Mechanical Vibrations 2  SS L2T1
Prerequisites: 5.303, 5.423. Excluded: 5.334, 5.338G.
Means of controlling inertia-induced vibration in machinery. Frequency response functions of damped and undamped systems; laboratory demonstrations. Eigenvalues and eigenvectors for multi-degree of freedom systems, including geared shaft systems. Beam and plate vibration via finite element analysis and laboratory demonstrations.

5.350 Principles of Control of Mechanical Systems  S1 L2T1
Prerequisite: 5.343. Excluded: 5.344.
Introduction to modern systems analysis. Review of modelling; nonlinear systems. Digital and analogue representations. Stability; regulation; control and optimal control. Instrumentation; actuators; interfaces; control computers; programmable logic controllers. Implementation; various case studies, including microprocessor applications.

5.3541 Engineering Noise 1  SS L2T1
Excluded: 5.653G.

5.3542 Engineering Noise 2  S2 L2T1
Prerequisite: 5.3541. Excluded: 5.654G.

5.419 Engineering Applications of Finite Elements  SS L2 T1
Prerequisite: 5.423.
Excluded: 5.414G, 5.823.
Introduction to finite element and associated graphics packages.

5.421 Mechanics of Solids 1
Co-requisite: 5.0011.

5.4220 Mechanics of Solids 2
Prerequisites: 5.421, 10.001 or 10.011. Excluded: 5.422, 5.4221.

5.4221 Mechanics of Solids 2
Intended for Materials Science Majors in combined BE BSc degree course.
Prerequisites: 5.421, 10.001 or 10.011. Excluded: 5.422, 5.4220, 5.4222.

5.4222 Mechanical Engineering Materials
Prerequisite: 5.0011. Excluded: 5.422, 5.4221.
Mechanical properties of materials: tensile and compressive behaviour; hardness; testing machines. Solidification. Mechanical processing of metals. Phase equilibrium and its application to engineering materials. Fracture; creep; corrosion.

5.423 Mechanics of Solids 3
Prerequisites: 5.422 or 5.4220, 5.4222 or 5.4221, 10.022.
Deflections of beams and structures. Statically indeterminate beams and structures. Introduction to theory of elasticity; stress, strain, torsion. Membrane analogy. Finite element stress analysis. Basic concepts; structural stiffness method; bar, triangular, rectangular and brick finite elements; force and displacement methods; development and use of computer programs.

5.424 General Mechanics of Solids
Prerequisite: 5.423. Excluded: 5.417G.
Inelastic behaviour of bars, beams, shafts and columns. Thick cylinders and composite cylinders loaded by internal and external pressures; rotating discs; contact stresses. Elementary concepts of fracture mechanics; stress intensity factor; fracture toughness; crack propagation.

5.434 Plates and Shells
Prerequisite: 5.423. Excluded: 5.415G.
Bending of rectangular and circular plates under normal loading; thermal stresses. Shells; membrane stresses, bending stresses, discontinuities at junction of ends; design of pressure vessels.

5.444 Theory of Elasticity
Prerequisites: 5.3021, 5.423, 5.622.
Mathematical foundations; analysis of stress; deformation and strain; equilibrium, motion and flow; fundamental laws of continuum mechanics; linear elasticity; viscoelasticity; applications.

5.454 Theory of Plasticity
Prerequisite: 5.423 or 18.413.
Analysis of stress, strain, strain rate; plastic stress/strain relations with description of experimental verification. Application of plasticity theory to a selection of problems including metal working processes such as extrusion and rolling and metallic friction and wear.

5.464 Structural Instability
Prerequisite: 5.423.
Buckling of perfect and imperfect columns; bending and buckling of thin flat plates; local instability and crippling of thin-walled columns. Buckling of monocoque cylinders and curved panels. Stiffened panels. Tension field beams.

5.5010 Computing 1 M
Excluded: 5.0721.
Introduction: history, applications, hardware, software, a model of a computer system, editors, operating systems. Program design and development: programming objectives, data structures, algorithms, symbolic names, translation of algorithms, steps in debugging. Data: data types, declarations, input/output, file control. Programming constructs: arithmetic expressions, assignment, relational and logical expressions, selection, iteration, intrinsic functions, statement functions, subprograms, common, communication. Applications using existing programs: sorting, word processing, graphics and plotting, simultaneous linear algebraic equations.

5.620 Fluid Mechanics 1
Prerequisites: 1.001 or 1.951, 5.0011, 10.001 or 10.011. Co-requisite: 5.3021. Excluded: 5.622.
dimensionless numbers; methods of analysis. Steady one dimensional flow in ducts; laminar and turbulent; pressure loss; friction factor; losses in bends and fittings. Elementary boundary layer flow; skin friction and drag. Pumps and turbines.

5.626 Thermodynamics 1 FL1T1
Prerequisites: 1.001 or 1.951, 5.0011, 10.001 or 10.011. Excluded: 5.622.

5.630 Fluid Mechanics 2 FL1T½
Prerequisites: 5.3021, 5.620, 5.626, 10.022. Excluded: 5.653, 5.663.
Dimensional analysis; similitude and modelling. Characteristics of pumps, fans and compressors; non-dimensional characteristics of turbomachines; specific speed; cavitation. Fields; dilatation vorticity; mass and momentum conservation; the Bernoulli equation; stream and potential functions; superposition. Velocity of sound; compressible flow in nozzles; Fanno and Rayleigh lines; applications to duct flows; normal shocks.

5.633 Turbomachines SS L2T1
Prerequisites: 5.630, 5.663, 10.022.
Dimensional analysis and experience charts, cavitation, thermodynamics of a stage, blade element theory of axial machines, thin wing theory, cascade data and design procedures, aerodynamic design of an axial machine, theory of centrifugal machines, design of a centrifugal machine.

5.6341 Viscous Flow Theory F L/T1½
Prerequisites: 5.620, 5.626, 10.022.

5.6342 Lubrication SS L/T3
Prerequisites: 5.620, 10.022. Excluded: 5.631G.
History of lubrication, types of bearings and bearing operation, nature of surfaces and their contact, modes of lubrication, properties of lubricants, viscous flow in pipes and channels, measurement of viscosity, infinitely long and short bearing approximations, one-dimensional analysis of short bearing, other slider bearing geometries, the effect of end leakage, hydrostatic or externally pressurized bearings, squeeze films.

5.635 Convection Heat Transfer SS L2T1
Prerequisite: 5.636. Excluded: 5.717G, 5.602G.

5.636 Thermodynamics 2 FL1T½
Prerequisites: 5.3021, 5.620, 5.626. Excluded: 5.623, 5.624.
Steady and unsteady conduction heat transfer; convection heat transfer; radiation heat transfer; combined modes of heat transfer; heat exchangers. Non-reactive gas mixtures; psychrometrics; refrigeration and air conditioning.

5.641 Thermal Power Plants SS L2T1
Prerequisites: 5.620, 5.626. Excluded: 5.732G.

5.643 Energy, Combustion and Engines SS L2T1
Prerequisites: 5.636, 10.022. Excluded: 5.616G.
General thermodynamic relations, ideal and non-ideal gases, statistical thermodynamic derivations of internal energy and entropy, ideal gas mixtures. Combustible fuels, combustion equations, internal energy and enthalpy of reaction. First law analysis of combustion, adiabatic flame temperatures. Second law analysis of combustion, chemical equilibrium, chemical kinetics and rate controlled reactions. Application of chemical equilibrium and reaction rate methods to combustion and emission problems. Deflagration, detonation and diffusion flames, mixing controlled reactions.

5.644 Solar Energy SS L2T1
Prerequisites: 5.630, 5.636, 10.022. Excluded: 5.722G.

5.654 Hydraulic Transients SS L2T1
Prerequisites: 5.630, 10.022.
Mass oscillations in surge systems with various types of surge tanks. Stability of surge systems, comparison with experiment. Allievi's theory of water hammer, fast and slow closures, waterhammer in pumping systems, circle diagrams.
5.664 Multiphase Flow  SS L2T1
Prerequisites: 5.630, 5.636, 10.022.

5.800 Aircraft Design 1  F L2T1
Prerequisites: 5.122, 5.300 or 5.3021, 5.422. Co-requisite: 5.423.

5.801 Aircraft Design 2  F L2T1
Aerodynamics, structures and operations leading to detailed design, calculation and drawing of an original aircraft configuration.

5.811 Aerodynamics 1  F L2T1
Prerequisites: 5.300 or 5.3021, 5.620, 10.022. Excluded: 5.653, 5.663.
One dimensional compressible flow. Low speed aerodynamics; boundary layers, drag; industrial aerodynamics, wind tunnels, airfoils for wings, cascades, propellers, fans; potential flow for airfoils; Prandtl lifting lines, vortex induced drag. Flight mechanics; performance, static stability.

5.812 Aerodynamics 2  F L2T1
Prerequisites: 5.811, 5.303, 5.343.
Compressible flow: subsonic, transonic and supersonic two-dimensional flows; viscous boundary layers and heat transfer. Dynamic stability and control: characteristic solutions for rigid aircraft. Hypersonic, high enthalpy flows.

5.822 Analysis of Aerospace Structures 1  F L1½T½
Prerequisites: 5.300 or 5.3021, 5.4220, 10.022. Co-requisite: 5.423.
Equilibrium of forces: aerospace applications of plane frames and space structures. Beams; shear and bending stress distribution in thin-webbed beams, close-section thin-wall beams, tapered beams, beams with variable flange areas. Semi-monocoque structures; ribs and bulkheads. Deflection of structures: stresses due to torsion and shear in multicell tubes. Statically indeterminate structures; beams, trusses and frames. Structural instability; buckling of perfect and imperfect columns; bending and buckling of thin flat plates.

5.823 Analysis of Aerospace Structures 2  F L1½T½
Prerequisites: 5.423, 5.822. Excluded: 5.414G, 5.419.
Structural instability; local instability and crippling of thin-walled columns; buckling of stiffened panels, curved panels and monocoque cylinders; tension field beams. Stress functions. Shear lag. Warping of thin-walled open and closed section tubes. Torsional buckling. Advanced applications of finite elements; introduction to commercial finite element systems. Thermal stresses. Vibrations and aeroelasticity. Fatigue.

5.831 Aerospace Propulsion  F L1½T½
Prerequisites: 5.620, 5.626, 5.631 or 5.811.

5.901 Introduction to Mathematical Modelling and Decision Making  S1 L2T1
Prerequisite: 5.122.
This subject is identical with Session 1 of 5.123. Models and modelling: types, criteria, parameters, constraints; mathematical formulation and validation of models; fundamentals of solution algorithms; post-solution analysis. Decision making: scales and ratings; subjective decision making; mixed rating comparisons; sensitivity; pitfalls. Introduction to project control. Applications from the marine field.

5.902 Ship Management Economics  S2 L1½T½
Prerequisite: 10.022.

5.911 Ship Hydrostatics  F L2T½
Prerequisites: 5.0011, 10.001 or 10.011.
Basic concepts and integration methods. Hydrostatic particulars and approximate formulae. Intact stability, cross curves and righting arm, stability at small angles and free surface effects, the wall-sided formula, flooding and water tight subdivision. Damaged stability. Launching calculations and docking.

5.921 Ship Structures 1  F L1½T½
Prerequisites: 5.4220, 5.4222, 10.022.
5.922 Ship Structures 2  
**Prerequisites:** 5.423, 5.921.

**5.9311 Principles of Ship Design 1**  
**S2 L2T1**

**5.9321 Principles of Ship Design 2**  
**S1 L3T1 S2 L1½T½**

**Prerequisite:** 5.9311.

**5.937 Ship Design Project**  
**S1 T3 S2 T4**

**Prerequisites:** 5.901, 5.911, 5.953. **Co-requisites:** 5.902, 5.9311, 5.9321.

Each student is required to perform the following design tasks and submit the results: 1. Rationale, specifications, weights, inboard profile. 2. Power, capacities, freeboard, trim, stability, stern gear. 3. Sectional area curve, lines drawing, preliminary midship section. 4. Hydrostatics, floodable length and stability curves. 5. Powering, propeller, systems-schematic drawing, detailed capacity. 6. Section modulus calculation, bulkhead, midship section, module concept. 7. Final weights, capacity drawing, operational data, and evaluation.

**5.941 Ship Propulsion and Systems**  
**F L/T4**

**Prerequisites:** 5.911, 5.953.

**5.953 Ship Hydrodynamics**  
**S1 L2T1 S2 L1½T½**

**Prerequisites:** 5.300 or 5.3021, 5.620, 10.022.

---

**Electrical Engineering and Computer Science**

**6.010 Electrical Engineering 1**  
**S2 L3T3**

**Prerequisite:** Electricity and magnetism section of 1.961.

**6.011 Introduction to Electrical Engineering**  
**F L1 T½**

**6.021A Circuit Theory 1**  
**S1 or S2 L2T2**

**Prerequisites:** 1.961 or equivalent, 6.010, 10.001.

**6.021B Power**  
**S1 or S2 L2T2**

**Prerequisite:** 6.021A attempted at an acceptable level.

Topics in electric power engineering including analysis of AC power circuits (single phase, three phase, steady state and
transient), magnetic circuits, transformers, fundamentals of electro-mechanical energy conversion and electrical safety.

6.021C Electronics 1
Prerequisite: 6.021A, 6.021B (one of these to be passed, the other to be attempted at an acceptable level and to be repeated concurrently).
Principles of operation and low-frequency characteristics of PN diodes, bipolar and field effect transistors, thyristors and various optoelectronic devices. Transistor low-frequency small-signal equivalent circuits. Design and analysis of low frequency Class A transistor amplifiers. Temperature effects. Device ratings and use of data sheets.

6.021D Computing
Assembler programming and simple machine architecture. The Unix operating system: file system, processes, pipes, programming in the shell command language. Data structures: lists, trees, recursion. Sorting: some basic algorithms for sorting arrays. Engineering applications of computers.

6.021E Digital Logic and Systems
Prerequisite: 10.001.

6.0311 Circuit Theory 2
Prerequisites: 6.021A, 6.021B (one of these may be taken as a co-requisite). 10.111A, 10.111B, 10.211A, 10.211B (two of these may be taken as co-requisites). 6.021B, 6.021C (one of 6.021B or 6.021C may be taken as a co-requisite).
Basic circuit concepts followed by basic system ideas such as order, state, linearity and typical system waveforms. Typical linear time invariant systems modelled and described by differential equations leading to use of Laplace transforms. Partial fractions, poles, zeros and stability. Transfer functions and circuit responses both in time and frequency domain. Basic signal analysis. Fourier series. Fourier Transform. Modern filter design, Butterworth and Chebyshev filters. Transformation of low pass filter to high pass, bandpass and band stop filters.

6.0312 Utilization of Electric Energy
A continuation of study in the utilization of electrical energy commenced in 6.021B Power. Topics include: DC machines, synchronous machines, single- and three-phase induction motors, fractional horsepower motors, motor speed control, performance characteristics and applications, the thermal behaviour and rating of machines, harmonics in three-phase transformers.

6.0313 Electronics 2

6.0314 Systems and Control 1
Prerequisite: 6.0311.
Basic concepts of systems and automatic control with a general overview. Includes dynamic systems modelling, block diagrams, signal flow graphs, frequency and time domain relationships, stability criteria, Nyquist diagrams and root locus methods. Also includes introductory state space analysis.

6.0315 Electrical Energy
Prerequisite: 1.972; 6.0312 attempted at an acceptable level.
Basic concepts of power equipment. Protection considerations for medium voltage (up to 600V) systems — circuit breakers, fuses, relays, earthing, surge suppression. Electrical methods of industrial heating: direct, induction, dielectric, etc. Light sources, their operation and efficacy. AC-DC conversion, power switching devices, their characteristics and uses. Energy management.

6.0316 Electronics 3
Prerequisite: 6.0313. Co-requisites: 6.0311, 6.021E.
Large-signal and nonlinear circuits and devices. Models of diodes and transistors for large-signal analysis. Basic nonlinear circuits: wave-shapers, multipliers and gain-control circuits. Asstables and monostables, sinewave oscillators (RC, LC, crystal), tuned amplifiers and power amplifiers. Both discrete component and integrated circuit realizations are treated. The laboratory program involves the design and study of several large-signal functional circuits.

6.0317 Communication Systems 1
Overview of information acquisition, transmission and processing. Aims to enable students not specialising in this field to understand the communication problems they are likely to meet in their career, and to provide a background if they intend to specialize in communications. Topics: analogue to digital conversion (sampling, quantizing, aliasing, pulse code modulation, delta modulation, time and frequency division multi-plexing). Modulation and demodulation (amplitude, frequency and phase modulation, signal to noise ratio, noise figure, error probability, bandwidth, spectrum, intersymbol interference). Communication systems (radio wave propagation, antennas and arrays, modems, repeaters, equalizers, line and error coding).

6.0318 Microprocessor Systems and Applications
Basic computer architecture: fetching and executing instructions; Motorola 6809 registers and instructions; assemblers,
addressing modes; bus waveforms; interfacing to a bus; parallel interfacing — the PIA; handshaking; interrupts; critical regions; buffered I/O; stack data frames; recursion; serial interfacing — the ACIA; direct memory access (DMA); dynamic memory; Microprocessor examples.

6.042 Digital and Analogue Signals
Prerequisites: 6.0311, 10.0331, 10.361.
Analysis and processing of continuous-time and discrete-time (digital) signals: Generalized Fourier analysis; convolution, correlation, energy and power density spectra. Signal distortion (linear and nonlinear) Hilbert transforms; analytic signals, signals in systems. Sampling and digital processing of analogue signals; the discrete Fourier transform (DFT), the fast Fourier transform (FFT) algorithm. Design of finite and infinite impulse response (FIR and IIR) digital filters. Analysis of random signals and noise; transmission through linear systems and nonlinear devices, signal-to-noise ratios, matched filters. Estimation and measurement of power density spectra.

6.046 Project Evaluation
Exclusion: 18.1212.
Material to be covered will be drawn from: opportunity costs, time flow of funds (including discounted cash flows, 

6.047 Reliability Engineering for Design and Development

6.202 Power Engineering — Systems 1
Prerequisites: 6.0312, 6.0315.
An elective emphasizing parameters and performance of power system components; transmission lines and cables, transformers, synchronous machines; power system overvoltages; fault calculations; circuit interruption; protection; distribution systems; power system economics.

6.203 Power Engineering — Systems 2

6.212 Power Engineering — Harmonics
Prerequisites: 6.0312, 6.0315.
Topics include: Power electronics; scope of power electronics, commutation, filtering and harmonics, thyristor protection, AC phase control, integral cycle control, rectification, inversion, bridge converters, converter control, dual converter, cyclo-converter, DC switching and regulation. Electrical machines; application and control; unified machine theory; application of symmetrical component theory to the operation of induction motors. Electrical equipment for hazardous atmospheres. A program of experimental projects and design applications accompanies the lectures.

6.215 Industrial Electrical Systems
Prerequisite: 6.0315.
The design, operation, maintenance and efficiency of large industrial electric power systems. Protection and detailed fault calculations. Choice and use of protective equipment, including circuit interrupters, surge diverters and personnel protection. Testing of equipment and relevance of Standards (including loading specifications, safety and general wiring procedures). Power factor correction, lighting system harmonics, rectifier harmonics, protection of electronic equipment. Uninterruptible power supply systems. Economic considerations of industrial electrical systems' including present and future energy use and its effect on the design of efficient power systems.

6.222 High Voltage Technology
Prerequisite: 6.0315.
An elective concerned with the high voltage design and testing of electrical equipment used in the power industry. The practical applications of relevant materials, with emphasis on properties of insulation systems (gases, liquids and solids) and the interaction of the materials in non-uniform fields. Methods of testing under steady state — AC and DC — and surge conditions are incorporated in the laboratory work. Design examples are taken from insulator, bushing, cable, power capacitor, transformer, rotating machine and switchgear technologies.

6.303 Transmission Lines for Microwave and Optical Communication
Prerequisite: 6.0317.
6.322 Electronics 4
Prerequisites: 6.0313, 6.0316.
Theory and applications of electronic devices, circuits and systems employing microelectronics technology. Active filters, voltage-controlled oscillators, phase-locked loops, multipliers. Modulation and demodulation techniques. Additional topics chosen from: ICs using MOS devices, controlled-gain amplifiers, charge-coupled devices, voltage references, switching regulators. Laboratory: a series of projects to design, construct and study circuits based on the above topics.

6.323 Communication Systems 2A
Prerequisites: 6.0317, 10.0331, 10.361.
Theory and practice of modern analogue and digital communication techniques. Topics selected from: digital communications: bandlimited signaling, Nyquist and partial response shaping, non-binary transmission, receiver optimization and matched filters, line coding, spectrum with line coding, adaptive equalization, error control coding and automatic theory (entropy, discrete and continuous channel capacity); linear and nonlinear analogue modulation (AM, SSB, FM etc., signal to noise ratios, characterization and effect of nonlinearities on transmitters and receivers, comparison); aspects of transmission media relevant to telecommunication systems.

6.333 Communication System 2B
Prerequisites: 6.0316, 6.0317.
Modern digital and analogue communications systems from a systems point of view. Topics selected from: television, teletext and viewdata; acoustic systems; broadcast systems covering AM, FM, stereo, radar, sonar, electronic navigation aids; satellite communication systems; point-to-point and mobile terrestrial communication systems.

6.402 Introductory Physiology for Engineers
An introduction to biophysics and physiology for engineers. Cells, tissues and organ systems with emphasis on their functional and regulatory characteristics and their interaction. An introduction to computer models of physiological control systems demonstrating their value in understanding the dynamics of complex neural, hormonal and circulatory responses to changes in homeostasis.

6.412 Systems and Control 2
Prerequisites: 6.0311, 6.0314.
The design of feedback controllers for single and multivariable systems typically encountered in electrical engineering. Emphasis is on satisfying steady-state, transient and sensitivity specifications by both frequency domain and time domain techniques. Treatment of identification methods and nonlinearities via the describing function. Extensive use of interactive computer-aided design programs.

6.413 Digital Control
Prerequisites: 6.0314, 10.0331, 10.0332, 10.361.
The design and analysis of digital control systems. Sampling, aliasing, pulse transfer function, discrete state-space, z-transform, transform methods of control design, digital PID, analog redesign. On-line digital identification and adaptive control techniques as illustrated by the self-tuning regulator, minimum variance and dead beat control structures. Linear quadratic regulator and observers.
ologies, structured chip design, custom and semi-custom approaches, system architecture, computer aided design, layout considerations, timing estimates, circuit failures, faults, fault modelling, testing, design for testability.

6.606 Computing Science Honours

6.612 Computer Organization and Digital Systems Design SS L3T2
Prerequisite: 6.0318 or 6.613. Excluded: 6.654G

The structured organization and hardware design of digital computer systems, basic computer organization, control and microprogramming, arithmetic algorithms and processor design, memory management and organization, input-output systems, parallel processing and multiprocessor systems, use of algorithmic state machines for digital system description, specification and design.

6.613 Computer Organization and Design SS L3T2
Prerequisites: 6.631 or 6.021E, 6.021E, 6.021D or 6.620 or 6.621 (Pass Conceded (PC) awarded prior to Session 2, 1983, is not acceptable for these subjects). Excluded: 6.0318.

Bussing structures (asynchronous and synchronous); input/output organization; polling, interrupt and DMA control; parallel and serial device and processor communication and interfacing. Memory organization; CPU and control unit design. Microprocessor case studies.

6.621 Computing 2A S1 L3T2
Prerequisites: 6.611, 10.001 or 10.011. Excluded: 6.620, 6.021D.

For those students who intend to take further subjects in computer science.

Expansion and development of material introduced in 6.611 Computing 1. Systematic program development: introduction to programming language semantics, reasoning about programs, program derivation, abstract programs, realization of abstract programs (conversion from abstract to concrete). Practice in programming in a high-level programming language. Data-structures arrays, lists, sets, trees; recursive programming. Introduction to computer organization: a simple machine architecture. Introduction to operating systems.

6.622 Computer Applications SS L3T2

6.631 Computing 2B S1 or S2 L3T2
Prerequisite: 6.620 or 6.621 or 6.021D, Excluded: 6.021E.

Assembler programming: programming in a low level machine oriented language in order to illustrate the mapping of higher level language constructs onto a typical machine and the interaction between operating systems and devices. Digital Logic Design: Boolean algebra and logic gates, simplification of Boolean functions, combinational logic, medium scale integration building blocks, clocked sequential circuits, registers and memory, computer arithmetic.

6.632 Operating Systems SS L2T3

Introduction to operating systems via a case study of a particular system, namely the UNIX Time-sharing systems. Includes system initialization, memory management, process management, handling of interrupts, basic input/output and file systems. A comparison of UNIX with other operating systems. General principles for operating systems design.

6.633 Data Bases and Networks SS L3T2

Data base management systems: data models; relational and network structures; data description languages; data manipulation languages; multi-schema structures. Data distribution integrity and security, recovery, privacy. Computer networks: economic and technological considerations; digital data transmission, error detection and recovery, network configurations; circuit switching, packet switching; communication protocols, current international standards; data compression; encryption and decryption.

6.641 Computing 2C S1 or S2 L3T2
Prerequisites: 6.620 or 6.021D or 6.621.

Design of data structures: abstraction, representation, manipulation and axiomatization. Key transformations (hashing), balanced and multiway trees, introduction to graphs. Files: sequential access, random access, merging, sorting and updating. File organizations and introduction to data base systems. Programming in logic: descriptive programming languages, symbolic manipulation, pattern matching and associative programming. Software engineering: a survey of some current techniques in problem specification and program design.

6.642 Design and Analysis of Algorithms SS L3T2
Prerequisite: 6.641.

Techniques for the design and performance analysis of algorithms for a number of classes of problems. Analysis of algorithms: order notation, recurrence equations, worst case and expected order statistics: Design of efficient algorithms: recursion, divide and conquer, balancing; backtracking algorithms, branch and bound; dynamic programming: set manipulation problems; fast search algorithms, balance optimal and multitype trees; graph representations and algorithms: pattern matching algorithms. NP-complete problems. Design and specification of programs: modularization, interface design, introduction to formal specification techniques.

6.643 Compiling Techniques and Programming Languages SS L3T2

1. Language description: phrase structure grammars, Chrom-
sky classification, context-free grammars, finite state grammars, Backus Naur Form, syntax graphs LL(k), LR(k), LAL(k). 2. Lexical analysis: translation of an input (source) string into a (machine independent) quasi-terminal symbol string. Finite state recognizers. 3. Syntax analysis: top-down compilation for LL(1) grammars using syntax graph driven analysers or recursive descent. Bottom-up compilation for simple- and weak-precedence and LR(k) grammars. 4. Semantic analysis: program translation and code generation; attributed grammars. 5. Compilers generators: automatic generation of compilers for LALR(1) grammars. 6. Code optimization by systematic program transformation. 7. Runtime organization: activation record stacks, heap management.

6.646 Computer Applications  SS L3T2
Prerequisites: 6.021D or 6.621, 10.311 or both of 10.311A and 10.311B, 10.331, or equivalent. Excluded. 6.622.
The use of computers for solving problems with a substantial mathematical and operational research content; includes use of some standard software packages. Topic selected from: discrete event simulation; a simulation language; pseudo random number generation; simple queueing theory, applications of mathematical programming; dynamic programming; statistical calculations; critical path methods; computer graphics, artificial intelligence.

6.647 Business Information Systems  SS L3T2
Prerequisites: 6.641, 14.001 or 14.501.
Introduction to accounting systems: general ledger, debitors and creditors; models of business information systems; integrated business systems. System specification, analysis, system design and implementation; testing and debugging. Managing a project team, project control. The COBOL programming language. File organization and design; sequential, indexed sequential, random, inverted, B-tree file organizations; data dictionaries, program generators, automatic system generators. A major project, written in COBOL, is undertaken as a team exercise.

6.652 Data Communication and Computer Networks  SS L2T3
Prerequisites: 6.0318 or 6.613, 6.0317, 6.632 or 6.672.

6.672 Operating Systems and Compilers  SS L3T2
Operating systems: principles of operating systems; multiprocessing, resource sharing and deadlock; interprocess communication; CPU scheduling; memory management including segmentation and virtual memory; file systems. Laboratory component covers C programming, polled input/output, interrupt driven input/output, multiprocessing, and real-time control of a simple system. Compilers: language description; Backus-Naur form, lexical analysis, semantic analysis, code generation. There is a project which involves modification of a simple compiler.

6.710 Introduction to Computer Engineering  F L1T½
Prerequisite: HSC Exam Score Range Required
2 unit English (General) or 53-100
2 unit English or 49-100
3 unit English 1-50
Introduction to the nature, history and scope of computer engineering (including computer architecture, digital systems, software engineering, information processing, electronics, and communications). The roles of computer engineering in industry, government and public utilities. Development of organisation, communication and research skills in engineering.

6.711 Computing 1A  S1 or S2 L3T3
Prerequisite: as for 10.001. Co-requisite: 10.001 Excluded: 6.600, 6.611, 6.620, 6.021D

6.712 Computing 1B  S1 or S2 L3T3
Prerequisite: 6.711 Excluded: 6.620, 6.621, 6.021D
Expansion of the functional approach to computing in 6.711. Introduction to procedural and logic programming styles. Data structure implementation. Control structures: recursion and iteration. The software development process. Program efficiency and complexity — time and space analysis. Practical experience in using a procedural language. The basic structure of a computer, the layered model of a computer, instruction execution, assembly language, computer building blocks, the function of the operation system.

6.821 Circuit Theory  S1 L2 T½
Prerequisites: 1.961, 6.010, 10.001. Co-requisite: 10.1214 or 10.1114.
Dynamic response of linear circuits: 1st and 2nd order circuits with DC sources, introduction to higher order circuits. Sinusoidal steady state operation: phasors, impedance and admittance; dynamic response of circuits driven by sinusoidal sources, concepts of power electronics; linearity, network theorems; resonance, bandwidth, and quality factor. Two-port networks: parameters, circuits as filters. Power in steady-state circuits; average and reactive power, power factor, power factor correction. Three-phase circuits: balanced and unbalanced steady-state operation; real and reactive power in balanced circuits, transient analysis.
6.822 Systems Theory  
Prerequisites: 6.821, 10.1213 or 10.1113, 10.1214 or 10.1114. Co-requisites: 10.0331.
Continuous and discrete signals and their transformations. Properties of continuous and discrete systems. Linear time-invariant systems. Low order differential and difference equations. Diagrammatic representations of systems. Fourier analysis, filtering, Laplace transforms, z-transforms. Examples of systems will be taken from areas of circuits, analog and digital electronics, power and mechanical engineering.

6.823 Analog Electronics  
Prerequisites: 6.821, 1.982
Operating principles and terminal characteristics of PN diodes, bipolar and field effect transistors, and thyristors. Small signal models of devices, including h-parameter model. Analysis and design of low-frequency Class-A amplifiers, including choice of biasing method.

6.824 Digital Circuits  
Prerequisite: 6.010

6.825 Electromagnetic Theory and Applications  
Prerequisites: 6.010, 1.961. Co-requisites: 10.2111, 6.821

6.827 Electrical Engineering Laboratory 2A  
Prerequisite: 1.961, 6.010. Co-requisites: 6.821, 6.825
Experiments in electric circuits and electromagnetic fields and applications. Laboratory technique.

6.828 Electrical Engineering Laboratory 2B  
Experimental work on digital and analog devices and circuits, electromagnetic fields and electrical systems.

6.829 Electrical Design  
Prerequisites: 5.0016, 6.010, 6.011, 6.821. Co-requisites: 6.823, 6.824
Concepts of product design: specification, design methodology, project management, costing for prototype production, testing. Electronic circuit design — device specifications, thermal dissipation, passive component choices, tolerances. Electronic circuit analysis and design using computer aids. Electronic circuit prototyping techniques: wire-wrapping, PCB layouts (using computer aids), interconnection technologies, earthing. Group Project Work: including initial design, PCB production and testing, and preparation of a report on an electrical project.

6.854 Electrical Power Engineering  
Prerequisite: 1.001 or equivalent (1.9222 or 6.851 for students in Course 3140)
Extensive introduction to the theory and application of heavy current electrical engineering. Commences with the requisite circuit theory and then proceeds to consideration of the distribution of electrical power and the characteristics and selection of electrical machinery. DC power supplies, single-phase AC supply, voltage regulation, transformers, AC and DC machines and their rating; a project illustrating the application of electrical engineering to various aspects of industry. Consists of one 2-hour tutorial or laboratory sessions per week each commencing with a structured mini-lecture. Detailed lecture notes are provided.

6.856 Electronics for Measurement and Control  
The use of electronics in mechanical systems and the processing of signals by analog and digital techniques. Revision of basic circuit theory, operational amplifier circuits and filtering. Digital logic using integrated circuits. Microcomputers and Microprocessors. Techniques for A/D and D/A conversion, measurement system interfacing to microprocessors.

6.902 Industrial Experience  
A minimum of three years of appropriate industrial experience must be obtained concurrently with attendance in Course 3650. Students are required to submit to the School evidence from their employers confirming completion of the prescribed period of industrial training.

6.903 Industrial Training  
Students enrolled in courses 3640, 3725 and 3720 must complete a minimum of 60 days' industrial training. At least some of this must be obtained in Australia. Overseas employment must have prior approval. Students are required to submit to the School evidence from their employers confirming completion of the prescribed training and a report, typically 500 words long, summarising the work done and training received. Experience claimed as an industrial elective covers requirements for this subject.
6.911 Thesis
This is done in the last two sessions of the BE degree course. For full-time students, three hours per week in the first session, and twenty one hours per week in the second session are devoted to directed laboratory and research work on an approved subject under guidance of members of the lecturing staff. Part-time students may need to attend the University full-time in their final session or attend for one further part-time session, if facilities are not available for the thesis to be done at work. Generally, the thesis involves the design and construction of experimental apparatus together with laboratory tests. Each student is required to present a seminar, and a written thesis must be submitted on each project by the Tuesday of the fourteenth week of Session 1 or Session 2.

6.921 Project
The project is done in the final stages of the BSc(Eng) course. It involves the design and construction of experimental apparatus together with laboratory tests. Each student is required to present a seminar and submit a written report. The project should represent the equivalent of a minimum 100 hours of directed laboratory work. If facilities are not available for this to be done largely at work, students may need to attend the University full-time in final session, or attend for one further part-time session.

6.931 Industrial Elective

6.932 Industrial Elective

6.933 Industrial Elective
Prerequisites for 6.931, 6.932, 6.933: Students must be in at least the third stage of part-time BE degree course and be in full-time approved employment or be pursuing an approved sandwich course.

Each Industrial Elective represents one year of appropriate quality concurrent industrial experience for students in approved full-time employment. Students must submit evidence and a written report to the satisfaction of the Head of School. Some attendance at the University for verbal reporting may also be required.

A maximum of three such electives can be taken and they may be substituted for certain subjects in course 3640 requirements. The substitution is not available for work done during the first year of employment if this coincides with the first year of part-time enrolment. The period of employment claimed must precede the completion of the thesis 6.911. An Industrial Elective cannot be claimed for work submitted for credit as 6.911 Thesis. Details of the procedure for registering and the requirements to be met can be obtained from the School of Electrical Engineering and Computer Science.

8.110 Computing and Graphics S1 L2T1 S2 L1T2
Introduction to programming and development of skills for solving problems and rapid calculation. Computing elements, input-output, data and program structures. Useful and correct algorithms. The use of Pascal and control languages. Introduction to higher level languages and graphics.

Australian Drawing Standards. Descriptive geometry and orthographic projections. Perspective drawing. Introduction to computer aided drafting. Introduction to graphics — primitives, attributes, windows, layers, etc. Elementary graphics programming. Tutorials include supervised and free practice at computing, testing algorithms, data manipulation. Drawing practice includes graphs, systems diagrams; road, concrete and steel work; perspective drawing; pseudo computer aided drafting and a graphics plot.

8.120 Engineering Mechanics FL2T2
Co-requisite: 10.001

8.130 Civil Engineering Practice S1 L2T1 S2L1¼T⅔
Prerequisite: HSC Exam Score Range Required
2 unit English (General) or 53-100
2 unit English 49-100
or
3 unit English 1-50

8.2110 Systems Engineering 1  S1 L1½T½
Prerequisite: 10.001.

8.2120 Systems Engineering 2  S2 L1T1
Prerequisites: 8.1120, 8.2110, 10.381.

8.2210 Engineering Construction 2  S1 L1½T½
Prerequisite: 8.1210.

8.2220 Engineering Construction 3  S2 L1½T½
Prerequisite: 8.2210.
Vehicle mobility science, grade resistance and rimpull cycle time and productivity. Drilling processes in rock, concrete and soil. Compressed air science, gas flow in pipes, design of compressed air pipeline systems. Fragmentation science, crushing and screening, blasting and demolition.

8.2310 Materials Technology  S2 L2T2
Co-requisite: 8.2420.

8.2320 Concrete Technology 1  S1 L2T2

8.2410 Mechanics of Solids 1  S1 L2T1
Prerequisite: 8.1410.

8.2420 Mechanics of Solids 2  S2 L2T1
Prerequisite: 8.2410.

8.2430 Structural Design 1  S2 L3T1
Prerequisite: 8.2410. Co-requisite: 8.2420.

8.2610 Hydraulics 1  S1 L1T1
Prerequisites: 8.1410, 8.1610, 10.001.

8.3110 Engineering Computations  S1 L2T1
Prerequisites: 8.1120, 10.022.
8.3210 Engineering Management 1  S2 L1½T½
Prerequisite: 8.2220.

8.3220 Engineering Management 2  S2 L3T1
Prerequisite: 8.3210.

8.3230 Engineering Construction 4  S2 L1½T½
Prerequisite: 8.2220.
Specialised construction processes. Grouting, piles and pile driving, coffer dams and caissons, paving and surfacing, tunnelling and formwork design.

8.3310 Soil Mechanics  S1 L1½T½
Prerequisite: 8.2610.

8.3320 Geotechnical Engineering  S2 L2T1
Prerequisite: 8.3310.

8.3330 Concrete Technology 2  S2 L1T1
Prerequisite: 8.2320. Co-requisite: 8.3310.

8.3410 Structural Analysis 1  S1 L2T1
Prerequisite: 8.2420.

8.3420 Structural Analysis 2  S2 L2T1
Prerequisite: 8.3410.

8.3430 Structural Design 2  S1 L3T1
Prerequisites: 8.2420, 8.2430.
Behaviour analysis and design of reinforced concrete beams from first cracking up to ultimate moment capacity: ultimate strength theory, design for shear, bond and anchorage, modular ratio theory, reinforced concrete columns, continuous beams and frames, composite beams, detailing, concrete codes.

8.3440 Structural Design 3  S2 L3T1
Prerequisite: 8.3430.

8.3510 Traffic Flow Theory  S1 L2T1
Prerequisite: 10.381.

8.3610 Hydraulics 2  S1 L1½T½
Prerequisite: 8.2610.

8.3620 Hydraulics 3  S2 L1½T1½t
Prerequisite: 8.3610.
Unsteady flow in pipes: surge, water hammer. Sediment trans-
8.3630 Water Supply and Wastewater Disposal  S1 L2T1
Prerequisite: 8.2610.

8.3640 Engineering Hydrology  S2 L2T1
Prerequisite: 10.381.

8.4110 Industrial Training
Requirement for the Bachelor of Engineering Degree.
Students are required to complete a minimum of 60 working days of approved industrial training and submit a report on this training before the fourth week of Session 1.

8.4210 Construction Major  S2 L/T11
Prerequisites: 8.3230, 8.4220.
Construction camp: a one week field camp involving several construction procedures and associated performance measurements. Construction planning and design: organisation, management, and control to support the conduct of the construction camp. Either construction technology or construction management. Construction and/or management project.

8.4220 Engineering Management 3  S1 L1½T½
Prerequisite: 8.3220.
Human resources: conflict management, industrial relations, work groups in construction practice. Legal systems: contracts and their administration, professional liabilities and duties. Financial management: corporate entities and legal forms of enterprises, financial reporting, accounting systems, project finance, cash flow, taxation, depreciation of fixed assets.

8.4310 Geotechnical Major  S2 L/T11
Prerequisites: 8.3320, 8.3330, 8.4330.

8.4320 Metals Engineering  S1 L2
Prerequisite: 8.2310. Co-requisite: 8.3440.
Metals used in structures: types, applications and developments in steels, aluminum alloys etc. Corrosion: causes, prevention and control in structural, reinforcing and piling steels. Fatigue and brittle fracture: factors leading to increased risk, significance of welding; empirical and fracture mechanics approaches to design against failures in service.

8.4330 Pavement Engineering  S1 L1½T½
Prerequisite: 8.3130.
Pavement materials: subgrades, gravels, crushed rock, mechanical and chemical stabilisation, concrete, interlocking blocks, bituminous concrete, sprayed seals. Pavement design: traffic and environmental effects, loading spectra, design of flexible, rigid and block pavements. Pavement construction: construction processes and control.

8.4410 Structures Major  S2 L/T11
Prerequisites: 8.4410, 8.4420, 8.4430.
A design or research project and the following strands: bridge engineering, concrete structures, and structural behaviour which will include computer methods, stability and dynamic analysis, and classical methods.

8.4420 Structural Analysis 3  S1 L1T1
Prerequisite: 8.3420.
Approximate analysis and structural form. Brief discussions of cable structures, arches, plates and shells.

8.4430 Structural Design 4  S1 L1T1
Prerequisite: 8.3440.
Slab design: two-way edge supported slabs, idealized frame and simple design methods, punching shear, moment transfer at column connections, serviceability approach, detailing. Design of reinforced concrete footings and retaining walls. Plastic design of steel frames.

8.4440 Timber Engineering  S1 L2
Prerequisite: 8.2420.

8.4510 Transport Major  S2 L/T11
Prerequisites: 8.3510, 8.4520.
Geometric design of transport elements: road location and form design, subdividing and simple intersections, application of computer aided design methods. Design for traffic management and control: efficiency, safety, environmental factors, information sys-
tems, lighting. Environmental and social impact of transport design. Transport operations: public transport system design. Project involving transport analysis or design.

8.4520 Transport System Analysis S1 L2T1
Prerequisite: 8.2120.

Description and analysis of transport system interactions: feedback, steady state performance, sensitivity analyses. Travel demand: traffic generation, distribution and assignment. Transport supply: capacity and operational measures of different transport modes. Land use and transport planning: economic, social and environmental evaluation. Optimization methods.

8.4610 Structures S1 L1T2
Prerequisites: 8.3640. Co-requisite: 8.3620.

8.6110 Structures S1 L1T2
8.6120 Civil Engineering for Electrical Engineers SS L2T2
Includes an introduction to the various branches of civil engineering, the nature and organization of the profession. Relationship between clients and design consultants. The historical development of civil engineering. Theory of beams and trusses, resultant forces, structural action, stress and strain. Relation between load, shear force and bending moments, geometric properties of sections, deflection of beams. Properties of materials used in structures; various steels, concrete (plain, reinforced and prestressed), aluminium and timber. Brittle fracture. Introduction to buckling. Engineering failures. Introduction to design of transmission lines and towers.

8.6140 Engineering for Surveyors 1 SS L1½T1½

8.6150 Engineering for Surveyors 2 SS L3
Municipal engineering. Soil mechanics: Soil forming processes; pedological classification; engineering classification of soils; pavement design based on engineering classification; effective stress concept for saturated and unsaturated soils, shear strength, flow of water through soils, consolidation; slope stability and earth pressures. Public utilities: Relationship between urban development and each of water supply, wastewater and stormwater drainage, transport.

Servicing Subjects
These are subjects taught within courses offered by other faculties.

For further information regarding the following subjects see the Faculty of Applied Science Handbook.

8.6110 Structures S1 L1T2
8.6120 Civil Engineering for Electrical Engineers SS L2T2
8.6130 Properties of Materials F L1T1
8.6140 Engineering for Surveyors 1 SS L1½T1½
8.6150 Engineering for Surveyors 2 SS L3

Mathematics

10.001 Mathematics 1 F L4T2
Prerequisite:

HSC Exam Score Range Required
2 unit Mathematics* or 67-100
3 unit Mathematics or 1-50
4 unit Mathematics or 1-100
10.021B.

Excluded: 10.011, 10.021B, 10.021C.

*This refers to the 2 Unit Mathematics subject which is related to the 3 Unit Mathematics subject. It does not refer to the subject 2 Unit Mathematics (Mathematics in Society).

Calculus, analysis, analytic geometry, linear algebra, an introduction to abstract algebra, elementary computing.
10.011 Higher Mathematics 1  

**Prerequisite:**
HSC Exam  
Score Range Required  
120-150

**3 unit Mathematics** or  
**4 unit Mathematics**

Excluded: 10.001, 10.021B, 10.021C.

Calculus, analysis, analytic geometry, linear algebra, an introduction to abstract algebra, elementary computing.

10.021B General Mathematics 1B  

**Prerequisite:**
HSC Exam  
Score Range Required  
60-100

**2 unit Mathematics** or  
**3 unit Mathematics** or  
**4 unit Mathematics**

or 1-100

Prerequisite: 10.001.

10.021C General Mathematics 1C  

**Prerequisite:** 10.021B. Excluded: 10.001, 10.011.

Techniques for integration, improper integrals; Taylor's theorem; first order differential equations and applications; introduction to multivariable calculus; conics; finite sets; probability; vectors, matrices and linear equations.

10.022 Engineering Mathematics 2  

**Prerequisite:** 10.001.

Differential equations, use of Laplace transforms, solutions by series; partial differential equations and their solution for selected physical problems, use of Fourier series; introduction to numerical methods; matrices and their application to theory of linear equations, eigenvalues and their numerical evaluation; vector algebra and solid geometry; multiple integrals; introduction to vector field theory.

10.031 Mathematics  

**Prerequisite:** 10.001 or 10.011 or 10.021C(CR).

**Note A:** A unit, together with 10.032, which is available to Faculty of Science students as one of a sequence of two units constituting a terminating service course in mathematics. As such it is mutually exclusive to any other Level II or Level III unit in Pure and/or Applied Mathematics except that 10.292A may be taken with 10.031 and 10.032.

**Note B:** Mathematics 10.031 is included for students desiring to attempt only one Level II Mathematics unit. If other Level II units in pure Mathematics or Applied Mathematics are taken, 10.031 Mathematics will not be counted.

10.0331 Electrical Engineering  

**Mathematics 3 — Transform Methods**  

**Prerequisites:** 10.111A, 10.1113, 10.1114, 10.2122. Exclusions: 10.412D, 10.422D and 10.4331.

10.0332 Electrical Engineering  

**Mathematics 3 — Numerical Methods**  

**Prerequisites:** 10.111A, 10.1114, 10.2111, 10.2112. Exclusions 10.212A, 10.222A.

10.111A Pure Mathematics 2 — Linear Algebra  

**Prerequisite:** 10.001 or 10.011. Excluded: 10.121A.

10.1113 Pure Mathematics 2 — Multivariable Calculus  

**Prerequisite:** 10.001 or 10.011. Excluded: 10.1213.

Multiple integrals, partial differentiation. Analysis of real valued functions of one and several variables.

10.1114 Pure Mathematics 2 — Complex Analysis  

**Prerequisite:** 10.001 or 10.011. Excluded: 10.1214.

Analytic functions, Taylor and Laurent series, integrals. Cauchy's theorem, residues, evaluation of certain real integrals.

10.1115 Pure Mathematics 2 — Finite Mathematics A  

**Prerequisite:** 10.001.

Positional number systems, floating-point arithmetic, rational arithmetic, congruences. Euclid's algorithm, continued fractions, Chinese remainder theorem, Fermat's theorem, applications to computer arithmetic. Polynomial arithmetic, division algorithm, factorization, interpolation, finite field. Codes, error-correcting codes, public-key cryptography.
10.1116 Pure Mathematics 2 — Finite Mathematics B
Prerequisite: 10.1115 (or any other Year 2 Mathematics half-unit).
Introduction to combinatorial computing, recurrence relations, examples of divide and conquer strategies, backtrack and branch and bound algorithms. Finite Fourier transforms, roots of unity, convolutions, application to fast multiplication and the analysis of pseudo-random numbers. Boolean algebra, switching circuits.

10.121A Higher Pure Mathematics 2 — Algebra
Prerequisite: 10.011 or 10.001 (DN). Excluded: 10.111A, 10.1111.

10.1213 Higher Pure Mathematics 2 — Multivariable Calculus
Prerequisite: 10.011 or 10.001 (DN). Excluded: 10.1113.
As for 10.1113 Pure Mathematics 2 — Multivariable Calculus but in greater depth.

10.1214 Higher Pure Mathematics 2 — Complex Analysis
Prerequisite: 10.1213. Excluded: 10.1114.
As for 10.1114 Pure Mathematics 2 — Complex Analysis, but in greater depth.

10.2111 Applied Mathematics 2 — Vector Calculus
Prerequisite: 10.001. Excluded: 10.2211.
Properties of vectors and vector fields; divergence, gradient, curl of a vector, line, surface, and volume integrals. Gauss' and Stokes' theorems. Curvilinear co-ordinates.

10.2112 Applied Mathematics 2 — Mathematical Methods for Differential Equations
Prerequisite: 10.001. Excluded: 10.2212.

10.2113 Applied Mathematics 2 — Linear Programming
Mathematical modelling and solution techniques for linear optimization problems. Feasible regions, graphical methods, the standard problem, basic solutions, fundamental theorem, simplex and revised simplex methods, duality and the dual simplex method, sensitivity analysis, the transportation problem.

10.2115 Applied Mathematics 2 — Discrete-Time Systems
The study of dynamical systems whose states change at discrete points in time. Difference equations; existence and uniqueness of solutions, general solution of linear equations. Linear systems: dynamics, stability, and oscillations, z-transforms, state-space methods. Nonlinear systems; equilibrium points, limit cycles. Applications selected from problems of importance in engineering, biological, social, management, and economic systems.

10.2211 Higher Applied Mathematics 2 — Vector Analysis
Prerequisite: 10.011 or 10.001 (CR). Excluded: 10.2111.
As for 10.2111 but in greater depth.

Prerequisite: 10.011 or 10.001 (CR). Excluded: 10.2112.
As for 10.2112 but in greater depth.

10.2213 Higher Applied Mathematics 2 — Linear Programming
As for 10.2113 but in greater depth.

10.2215 Higher Applied Mathematics 2 — Discrete-Time Systems
As for 10.2115, but in greater depth.

10.2922 Applied Mathematics 3 — Applied Time Series Analysis
Prerequisites: 10.2112 or 10.031 or 10.022. Co-requisites: 10.331 or equivalent. 10.2921 or 10.212D or equivalent. Excluded: 10.4129.
Techniques for analyzing time-varying data. Classification of random processes, sampling for discrete analysis, Fourier analysis, spectrums, filtering. Cross-spectra, estimation and hypothesis testing, confidence limits, application to experiment planning. Emphasis on computer analysis of actual data.

10.311A Theory of Statistics 2 — Probability and Random Variables
Prerequisite: 10.001 or 10.011 or 10.021C (CR). Excluded: 10.321A, 10.301, 10.331, 45.101.
Probability, random variables, standard discrete and continuous distributions, multivariate distributions, transformations, random sampling, sampling distributions, limit theorems.
Prerequisite: 10.001 or 10.011.

As for 10.3111 but in greater depth.

10.3122 Theory of Statistics 2 —
Nonparametric Statistical Inference
S2 L1½T⅔
Prerequisite: 10.311A. Co-requisite: 10.321B.

Order statistics, exact and approximate distributions, multinomial distributions, goodness of fit, contingency tables, one-sample and two-sample estimation and inference problems.

10.3212 Higher Theory of Statistics 2 —
Nonparametric Statistical Inference
S2 L1½T⅔
Prerequisite: 10.321A. Co-requisite: 10.321B.

As for 10.3112 but in greater depth.

Probability and Random Variables
S1 L3T1
Prerequisite: 10.001 or 10.011. Excluded: 10.311A, 10.301, 10.331, 45.101.

As for 10.311A but in greater depth.

10.321B Higher Theory of Statistics 2 —
Basic Inference
S2 L3T1
Prerequisite: 10.321A. Excluded: 10.311B, 10.301, 10.331, 45.101.

As for 10.311B but in greater depth.

10.331 Statistics SS
F L1½T⅔

An introduction to the theory of probability, with finite, discrete and continuous sample spaces. The standard elementary univariate distributions; binomial, Poisson and normal, an introduction to multivariate distributions. Standard sampling distributions, including those of $\chi^2$, $t$ and $F$. Estimation by moments and maximum likelihood (including sampling variance formulae, and regression); confidence interval estimation. The standard tests of significance based on the above distributions, with a discussion of power where appropriate. An introduction to experimental design; fixed, random and mixed models, involving multiple comparisons and estimation of variance components.

10.341 Statistics SU
S1 L2½ T⅔
Prerequisite: 10.001 or 10.011.

For students in the School of Surveying.

Revision of plane trigonometry and co-ordinate systems. Join, polar, area calculations using hand calculators. Spherical trigonometry. Principles of calculation; representation of numbers, round-off errors, significant figures, orders of magnitude. Introduction to computers; computer hardware, computer software, operating systems, programs. Program design and documentation. Introduction to FORTRAN; constant types, data elements, selection control, loop control, input and output, program modules.

10.351 Statistics SM
F L1½T⅔
Prerequisite: 10.001 or 10.011.

For students in Aeronautical, Industrial and Mechanical Engineering and Naval Architecture.

Introduction to probability theory, with finite, discrete and continuous sample spaces. Random variables: the standard elementary distributions including the binomial, Poisson and normal distributions. Sampling distributions: with emphasis on those derived from the normal distribution: $t$, $\chi^2$ and $F$. Estimation of parameters: the methods of moments and maximum likelihood and confidence interval estimation. The standard test of statistical hypotheses, and, where appropriate, the powers of such tests. An introduction to regression and the bivariate normal distribution.

10.361 Statistics SE
F L1½T⅔
Prerequisite: 10.001 or 10.011.

For students in the School of Electrical Engineering.

Introduction to probability theory, random variables and distribution functions; the binomial, Poisson and normal distributions in particular. Standard sampling distributions, including those of $\chi^2$, $t$ and $F$. Estimation by moments and maximum likelihood; confidence interval estimation. The Standard tests of significance based on the above distribution with a discussion of power where appropriate.

10.381 Statistics SC
S1 or S2 L1½T⅔
For students in the School of Civil Engineering.

Accounting

14.001 Introduction to Accounting A  S1 L1½
Architecture: 2 credit points compulsory for BBuild degree course students.
Prerequisite: Nil.

14.002 Introduction to Accounting B  S2 L1½
Architecture: 2 credit points; compulsory for BBuild degree course students.
Prerequisite: 14.001.
An introduction for non-commerce students to managerial accounting. Long-range planning, budgeting and responsibility accounting: cost determination, cost control and relevant cost analyses.

14.501 Accounting and Financial Management 1A  S1 or S2 L2T½
Prerequisite: Nil.
The basic concepts of financial model building and information systems, including the double-entry recording system, the accounting cycle, income measurement and financial reporting, and an introduction to basic elements of auditing.

Industrial Engineering

Industrial Engineering is a Department within the School of Mechanical and Industrial Engineering.

18.003 Numerical Methods/Industrial Experimentation  S1 L1T½ S2 L1½T½
Prerequisites: 5.0721, 10.022, 10.351.

18.004 Manufacturing Management  S1 L2T2
Prerequisites: 14.001, 14.002, 18.503, 18.603.
Production control: modes of manufacture; information flow in multi-stage production systems; classical production and inventory models and control techniques; material requirements planning; just-in-time production; flexible manufacturing systems and their control. Quality control: sampling inspection, economic aspects, control charts, management of QC. Project control: critical path scheduling, PERT. Computers in manufacturing management: systems design.

18.091 Industrial Management  S1 LT5
Prerequisites: 10.2112, 10.361.
Engineering economy: economic objectives of the firm. Economic measures of performance: net present value, annual equivalent value and the DCF rate of return (including the incremental rate of return) and their application in the selection and replacement of processes and equipment. Introduction to operational research: The formation and optimization of mathematical models of industrial processes. The development of decision rules. Some techniques of operational research and applications, eg mathematical programming, queuing theory, inventory models, simulation, critical path networks. The use of human and physical resources: Methods engineering, ergonomics, motion and time study, financial incentives, applications to machine controlled processes, work sampling and data collection. Plant location, factory layout. Production and quality control: Control of jobbing, repetitive batch and continuous production. Manufacturing organizations, functions, inter-relationships and information flow. Sampling techniques in quality control, control charts. Introduction to inventory control: Analysis of some engineering planning decisions.

18.224 Numerical Control of Machine Tools  S1 L2T1
Prerequisite: 5.0721. Excluded: 18.260G.
Overview of numerical control systems: machine specification and selection; manual part programming; process planning and sequencing; selection of operating conditions; work holding devices and tooling; introduction to computer assisted part programming.
18.303 Methods Engineering  F L1T1
Prerequisite: 10.351.

18.403 Production Design and Technology  F L2T2
Prerequisites: 5.4220, 5.4222, 10.351.

Basic metrology and tolerancing, introduction to plasticity theory and its application to theories for machining and forming, economics of production processes; interaction of machines and tools; principles of process selection; review of major processes, interaction of design, production quantity, materials and processes; value analysis.

18.404 Design for Production  F L1T1
Prerequisite: 5.123 or 18.413.

Product design, development and manufacture important in the manufacturing industry. Includes industrial design, patents law, product liability, product reliability, safety standards and regulations, process and operation planning, advanced production aids and jig and fixture design, advanced measuring inspection and gauging methods, quality control methods and systems.

18.413 Design for Industrial Engineers  S1 L1T1 S2 L1T2
Prerequisites: 5.122, 5.4220, 5.4222.

Tooling design, Production aids, Fluid power systems, Introduction to fatigue in design, Design analysis for manufacture, component design and drawing with individual and group projects of an interdisciplinary nature. (Some material taken with 5.123 Mechanical Engineering Design 3.)

18.503 Operations Research A  F L2T1

History and overview of operations research. Decision theory. Methodology; identification and formulation of the problem; construction of a model, obtaining solutions; testing the model and implementing the solution. Case study.

18.551 Operations Research  F L2T1
Prerequisites: 5.0721, 10.022, 10.351. Excluded: 6.646.

The formulating and optimization of mathematical models. The development of decision rules. Some techniques of operations research such as mathematical programming, queuing theory, inventory models, replacement and reliability models; simulation. These techniques applied to situations drawn from industrial fields, eg production planning and inventory control. Practical problems of data collection, problem formulation and analysis.

18.603 Management/Economics  F L/T2
Prerequisite: 5.0721.

18.803 Optimization  S1 L2T1
Prerequisite: 10.022. Excluded: 5.1245.

Servicing Subjects

These are subjects taught within courses offered by other faculties.

For further information regarding the following subjects see the Faculty of Applied Science Handbook.

18.121 Production Management  F L2T1
Prerequisites: 10.031, 10.331.

Engineering economy: Economic objectives of the firm. Economic measure of performance: net present value, annual equivalent value and the DCF rate of return (including the incremental rate of return) and their application in the selection and replacement of processes and equipment. The use of human and physical resources: Methods engineering, ergonomics, motion and time study, financial incentives, applications to machine controlled processes, work sampling and data collection. Plant location, factory layout. Production and quality control: Control of jobbing, repetitive batch and continuous production. Manufacturing organizations, functions, inter-relationships and information flow. Sampling techniques in quality control, control charts. Introduction to inventory control: Analysis of some engineering planning decisions. Introduction to operational research: The formation and optimization of mathematical models of industrial processes. The development of decision rules. Some techniques of operational research and applications, eg mathematical programming, queuing theory, inventory models, simulation.

18.1211 Production Management A  S1 L3
Prerequisites: 10.031, 10.331 or 10.0218, 10.021 C, 13.200.

Use of human and physical resources: Methods engineering, ergonomics, motion and time study, financial incentives, appli-

18.1212 Production Management B S2 L3
Prerequisites: 18.1211.

Engineering economy: Economic objectives of the firm. Economic measure of performance: net present value, annual equivalent value and the DCF rate of return (including the incremental rate of return) and their application in the selection and replacement of processes and equipment. Introduction to operational research: Formation and optimization of mathematical models of industrial processes. Development of decision rules. Some techniques of operational research and applications, eg mathematical programming, queuing theory, inventory models, simulation.

18.131 Operations Research
Introduction to operational research: The formation and optimization of mathematical models of industrial processes. The development of decision rules. Some techniques of operational research and applications, eg mathematical programming, queuing theory, inventory models, simulation.

Applied Geology

25.5112 Geology for Civil Engineers S1 L2T1
An introduction to mineralogy, petrology, structural geology, stratigraphy and geomorphology. Weathering of rocks and development of soils. The role of the geologist in civil engineering.

Geography

27.010 Land Studies S1 L2T2
Concepts, significance and problems of land. Land as territory and land as resource in Australia. Constraints imposed by the physical environment on human occupancy and settlement patterns, the variety of conflicts that result and management strategies. Practical work involves study of the ways in which the attributes and characteristics of land are displayed on maps, air photos and satellite imagery, and introduces these as basic information sources and research tools in applied geography.

27.030 Environmental Processes S2 L2T2
Essential and continuing links between components of the physical environment. Movement of energy and matter in the physical environment, including consideration of Earth's energy balance, the hydrological cycle, nutrient cycles in vegetation and soil, imbalances leading to land degradation and instability, alternatives to and movement of materials.

27.133 Pedology S2 L2T3
Prerequisites: 27.010 and 27.030 or 27.111 or any two units from 2.111, 2.121, 2.131, 2.141, and 27.811, 27.828 or 27.311 or 25.012 or 25.022.

Methodology of pedogenic studies and the application of these studies to the understanding of soil-landform relationships. Soil physical and chemical properties and their interrelationships, emphasizing clay-mineral structure and behaviour, soil solution chemistry, soil water movement and the application of these properties to elements of soil mechanics. Soil properties in natural, rural and urban landscapes, including assessment of soil fertility, swelling characteristics, dispersibility, erodibility and aggregate stability. Laboratory analysis of soil physical and chemical characteristics with emphasis on properties associated with land capability assessment. Statistical analysis of soil data and its application to mapping. The use of soil micromorphological and mineralogical studies in pedology.

27.143 Biogeography S1 L2T3
Prerequisites: 27.010 and 27.030 or 27.811 or 27.828 or 17.031 and 17.041 or 27.111 or 27.172.

Distribution of taxa. Floras of the Southern Hemisphere with particular reference to Australia. Endemic, discontinuous and relict taxa. Dispersal and migration of species. Origin, evolution and geological history of Angiosperms. The development of the Australian biogeographic element. Study of the past to understand present distributions of taxa. The role of mantle and climatic change on Australian vegetation. Detection of pattern and association and their causes: Classification, ordination and mapping of vegetation. Ecology of selected Australian vegetation types. Composition, structure, productivity and environmental control of heathland, woodland, grassland and rainforest communities. Management of vegetation in different climate regimes. Field work of up to five days is a compulsory part of the subject.

27.153 Climatology S1 L2T3
Prerequisites: 1.001 or 27.811 or 27.828 or 25.110 and 25.120 or 17.031 and 17.041 or 27.111.

27.175 Introduction to Remote Sensing  S1 L2T2
Prerequisite: Successful completion of a Year 1 program in Applied Science, Science or Arts (or equivalent) as approved by the Head of School.

Principles and technical aspects of remote sensing. Forms of available imagery, their utility and facilities for interpretation. Basic air-photo interpretation techniques relevant to environmental assessment. Introduction to principles of the electromagnetic spectrum, photometry and radiometry. Sensor types, image formation and end products associated with selected satellite programs, including Landsat. Land-cover and land-use interpretation procedures in visual image analysis. Basic procedures in machine-assisted image enhancement.

27.176 Remote Sensing Applications  S2 L2T2
Prerequisite: 27.175 or 27.1711, 29.514 or 29.511 and 29.631. Excluded: 27.1712

Spectral characteristics of natural phenomena and image formation. Ground truthing, collection and calibration. Introduction to computer classification procedures. Multitemporal sampling procedures, image to image registration and map to image registration. Major applications of remote sensing in the investigation of renewable and non-renewable resources to include: soils, geology, hydrology, vegetation, agriculture, rangelands, urban analysis, regional planning, transportation and route location and hazard monitoring.

27.183 Geomorphology  S2 L2T3
Prerequisites: 25.110 and 25.120 or 27.010 and 27.030 or 27.811 or 27.828 or 27.111 or 27.172. Excluded: 27.860.

27.193 Environment Impact Assessment  S1 L2T2
Rationale and basic objectives; standardized types of environmental impact assessment (EIA), including matrix approach, adopted methods of EIA in Australia. Frequently used assessment and predictive techniques for meteorological, hydrological, biological, socio-economic impacts. Techniques of impact evaluation in terms of socio-economic criteria. Environmental decision making and planning under conditions of uncertainty. Case studies exemplifying procedures, techniques and issues. Trends, changes and possible future developments in EIA. Practical exercises representing components of typical EIAs.

27.862 Australian Environment and Natural Resources  S1 L2T2
Prerequisite: 27.010 and 27.030 or 27.811 or 27.812 or 27.826 or 27.829. Excluded: 27.872.

Continental and regional patterns of land, water and energy resources in Australia and its territorial waters, and natural factors affecting their development, including climate, soils and terrain; problems of limited surface and underground water resources and of conflicting demands, exemplified through particular basin studies; comparable reviews of energy, minerals and forest resources, human resources and development.

27.863 Ecosystems and Man  S2 L2T2
Prerequisite: 27.010 and 27.030, or 27.111 or 27.311 or 27.312 or 27.826 or 27.829. Excluded: 27.873, 27.363.

The structure and functioning of ecosystems, human interaction with ecosystems; Australian case studies of ecosystem management, including pastoral, cropping, forestry, coastal and urban ecosystems.

Surveying

Note: Electronic Calculators.
Students enrolled in the surveying courses are required to equip themselves with an electronic calculator. Advice on the purchase of this equipment is given to students at the commencement of their course.

29.1111 Introduction to Computing  S1 L2 T2
Revision of plane trigonometry and co-ordinate systems. Join, polar, area calculations using hand calculators. Spherical trigonometry. Principles of calculation; representation of numbers, round-off errors, significant figures, orders of magnitude. Introduction to computers; computer hardware, computer software, operating systems, programs. Program design and documentation. Introduction to FORTRAN; constant types, data elements, selection control, loop control, input and output, program modules.

29.1711 Introduction to Surveying  F L1½T½
Historical development of surveying. Principles of survey observations and the control of observation errors. Introduction to geodetic positioning, photogrammetry and remote sensing; cadastral surveying and land information management; engineering, mining, geophysical and hydrographic surveying; mapping. Discussion of the purpose, methods and products of these surveying disciplines. Survey data; structures, collection,
storage, processing and presentation. The key values of the surveying profession. The profile and role of a surveyor in practice; knowledge, skill management and professional ethics. Current and future challenges of the changing surveying profession.

29.2041 Survey Data Presentation S2L2T1

29.2111 Principles of Computer Processing S2L2T2

Co-requisite: 29.1111.

Operating systems; VAX/VMS, MS-DOS, command languages. Third party software; word processing, spreadsheets, compilers. Program structure; subroutines, functions, control structures. Program libraries; creation, system libraries. Data structures; organization types, structures, arrays, stacks, lists, queues, trees. Data files; types and organizations. Sorting, searching, merging. Data bases; concepts, types, information access.

29.2221 Introduction to Geodetic Science S2L2T½

29.3011 Surveying Instruments S1L2T½

Prerequisite: 29.1111.

Surveying tapes and bands; measurement, calibration, reductions. Levelling instruments; principles, construction, testing and adjustment, ancillary equipment. Optical and electronic theodolites; principles, construction, testing and adjustment.

29.3111 Survey Computations S1L2T1

Prerequisite: 29.21111.

29.3231 Geodetic Computations S1L2T1

Prerequisite: 29.2221. Co-requisite: 10.022

Principles of map projections. Surveying and mapping projections; transverse Mercator projection. Geometry of the ellipsoid; ellipsoidal computations. Corrections to field observations: arc-to-chord, scale factor and grid convergence.

29.4011 Surveying Techniques S2L4½T1½

Principles, reduction of observations and errors in survey techniques of levelling, horizontal and zenith angle measurement, trigonometric heighting, traversing, vertical staff tacheometry. Electronic distance measurement; principles, corrections, reductions, calibration, electro-optical distance meters.

29.4051 Survey Camp 1 S2T3

Co-requisite: 29.3011

29.4111 Data Analysis and Computing 1 S2L2T1

Prerequisite: 29.2111. Co-requisite: 29.3111.

29.4221 Geodetic Positioning 1 S2L2T1

Prerequisite: 29.2221. Co-requisite: 29.3231.

29.4721 Project Management 1 S2L1½T½

29.5010 Surveying 5  
Prerequisite: 29.3010.  
Precision theodolites; construction, errors and testing. Precise horizontal angle measurement. Electronic theodolites. Precise levelling; instruments, staves, errors. Field methods, marking and accuracy.

29.5110 Computations 3  
Prerequisite: 29.3110.  

29.5220 Geodetic Positioning  
Prerequisite: 29.4220. Co-requisite: 29.3110.  

29.5230 Map Projections  
Prerequisite: 29.4220. Co-requisite: 29.3110.  
Principles of map projections. Surveying projections and grids. Transverse mercator projections used in Australia. Scale-factor and arc-to-chord corrections on the transverse mercator projection.

29.5610 Cadastral Surveying and Land Law 1  
Prerequisite: 29.4220. Co-requisite: 29.3110.  
The legal system in Australia and NSW: the nature of land law including land tenure, estates in land, interests in land; title systems in land; land administration in Australia and NSW. Boundary surveying — controlling principles; cadastral mapping in NSW.

29.6010 Surveying 6  
Prerequisite: 29.3010. Co-requisite: 29.5010.  

29.6220 Field Astronomy  
Prerequisite: 29.4220.  
Introduction to the determination of latitude and longitude from meridian and prime vertical observations. Determination of azimuth from the sun and close circum-polar and circum-elongation stars. Simultaneous determination of latitude and longitude by position lines.

29.6510 Photogrammetry 1  
Prerequisite: 29.3010.  

29.6610 Cadastral Surveying and Land Law 2  
Co-requisite: 29.5610.  
Survey investigation for both artificial and natural boundaries; survey and title searching; field note preparation for cadastral surveying; survey marking; preparation of plans of survey; study of appropriate statutes and regulations; cadastral survey techniques for urban and rural properties; the role of co-ordinates in cadastral surveying.

The status of roads in NSW; identification surveys; consents for MHWM, railways, rivers, kerbs in Sydney, strata plan surveys including plan preparation; the surveyor as a professional; contract, partnership and corporations, liability; surveyors and the law, limitation periods, insurance, loss prevention; software packages for cadastral surveying.

29.6810 Land Management and Development 2  
Co-requisite: 29.5610.  
Subdivision control in NSW; broad-acre subdivisions under Local Government and Planning and Environment Legislation; procedures and legal controls; review of subdivision design; engineering aspects.

29.7010 Surveying 7  
Co-requisite: 29.6010.  

29.7050 Survey Camp  
Prerequisites: 29.5010, 29.6010, 29.5110, 29.5220, 29.5230 29.6220, 29.6610.  
Cadastral surveying including astronomic observations for azimuth, land use survey including air photo and Landsat imagery interpretations. Photo control survey by traverse and resection.
precise traverse and heighting with EDM. Preparation of reports based on filed tasks completed.

29.7120 Computer Graphics S1 L1T1
Prerequisite: 29.3110.
Computer graphics, especially in relation to computer assisted mapping and draughting. Acquisition, processing and presentation of data; graphics programming using a high level language and a graphics language; use of interactive graphics display terminals and plotters.

29.7220 Geodetic Computations S1 L2T1
Prerequisites: 29.5110, 29.5230.
Elements of geodetic methodology; classes of mathematical models. Least squares solution of overdetermined models; assessment of results. Adjustment of control surveys. Solution of direct and inverse geodetic problems.

29.7510 Photogrammetry 2 S1 L2½T1½
Prerequisite: 29.6510.

29.7810 Land Management and Development 3 S1 L1T1
Prerequisite: 36.411.
Design and studio project for a residential neighbourhood development. Constraint and site analysis; preparation of maps of land use, vegetation, surface and soils, drainage and terrain, slopes, climate and aspect; composite overlay maps. Structure plan design: residential precincts, schools commercial areas, industrial areas, active and passive recreation, pedestrian ways and road hierarchy.

29.8010 Surveying 8 S2 L3T2
Prerequisite: 29.5010.

29.8220 Global Geodesy S2 L2T1½
Co-requisite: 29.7220.

29.8510 Photogrammetry 3 S2 L2T1
Co-requisite: 29.7510.

29.8710 Seminar S2 L1T½
Prerequisite: 29.4710.
Introduction to characteristics of effective speaking. Oral presentation by individual students on topics in selected areas of surveying. Participation in colloquia by invited speakers on current topics in surveying. Student assessment of degree course.

29.8720 Management S2 L2

29.8810 Land Management and Development 4 S2 L1T1
Prerequisites: 8.6140, 8.6150. Co-requisite: 29.7810.
Continuation of design and studio project for a residential neighbourhood development. Plan of detailed lot layout: consideration of access, grades, drainage reserves, parks and pedestrian ways. Engineering design and plans: catchment details, road longitudinal and cross-sections, drainage layout, flow schedule, hydraulic grade line calculations, longitudinal sections of kerb profiles.

29.9010 Advanced Surveying Instruments S1 or S2 L2T1
Prerequisites: 29.5010, 29.6010.

29.9020 Hydrographic Surveying S1 or S2 L1T2
Prerequisite: 29.7010.
Practical training: a hydrographic survey requiring establishment of horizontal and vertical shore control, preparation of
plotting sheets, control marking, bathymetry, equipment calibration, tidal observations and reduction, inking in. Other navigational equipment. Nature of seabed, wind waves, the survey report. Discussion on practical surveying tasks or topics of current interest. Harmonic analysis of tidal data.

29.9030 Precise Engineering Surveying  S1 or S2 L2T1
Prerequisites: 29.5010, 29.6010.
Review of survey problems in industry and engineering. Surveys for large structures — location, setting out and control during construction, monitoring of deformation and settlement: high precision mechanical, optical and electronic equipment for distance measurement, levelling, horizontal and vertical alignment, local deformation. Network design, station marking, observation techniques, data presentation, deformation and settlement analysis including free network solutions. Close-range surveys: optical tooling, laser interferometry. Positioning and alignment of machine components, optical positional constraints, scale and azimuth control.

29.9090 Project  S1 or S2 T3
Prerequisite: High standard in the chosen topic area normally required; permission of project supervisor.
Theoretical or practical investigation of a selected topic under the guidance of a supervisor, with a report of a high academic standard required. Topic may be one suggested by the School or by the individual student based on his or her experiences.

29.9210 Adjustments of Control Networks  S1 or S2 L1½T1½
Prerequisite: 29.7220.

29.9220 Advanced Geodetic Positioning  S1 or S2 L2T1
Prerequisite: 29.5220.
Precise aspects of terrestrial and extraterrestrial reference frames; units, constants, coordinate systems and transformations used in satellite positioning; modelling of measurements. Orbit determination. Positioning with GPS; field procedures. Inertial surveying systems: inertial frame; sensors; mathematical and error models; filtering and smoothing processes; post-mission adjustment techniques; inertial positioning methods and applications.

29.9510 Computer Assisted Mapping  S2 L2T1
Co-requisite: 29.7510.

29.9520 Remote Sensing Principles  S1 or S2 L1½T1½
Prerequisite: 29.4520.
Definition and physics of basic electromagnetic quantities, atmospheric effects, photographic film images and sensors, thermal infra-red sensing, radar, radar sensing, electro-optical sensors. Choice of sensor and data processing. Remote sensing project.

29.9530 Land Information Systems  S1 or S2 L2T1
Land information systems and computer-assisted mapping; land information as maps and records; computerization of land information; data acquisition from ground surveys, aircraft and satellite mounted sensors; data acquisition from maps and air photographs; data storage methods; data structures; data processing, transformations, searching, sorting; data base management systems; interactive graphical editing; data output including computer plotters and software packages; cartographic presentation; an examination of existing systems in Australia and overseas.

29.9610 Modern Cadastral Concepts  S1 or S2 L2T1
Prerequisite: 29.6610.
An analysis of the operation and components of a modern cadastral survey system, especially the relationship between title, conveyancing, surveying and mapping. Components of land tenure and cadastral systems; statewide parcel based land information systems; cadastral models. Horizontal and vertical subdivision, trends in group housing in Australia and overseas, ownership alternatives including strata titles, management of strata schemes, the development process related to strata subdivision.

29.9910 Special Topic in Surveying A  S1 or S2 L2T1
A special subject to be lectured on by visiting professors or other visiting staff. Details of syllabus and lecturer to be communicated to Faculty on each occasion when the subject runs.

29.9920 Special Topic in Surveying B  S1 or S2 T3
A special subject taken by a group of students by private study in conjunction with tutorial sessions with the member(s) of staff in charge of the subject.

Servicing Subjects
These are subjects taught within courses offered by other faculties.
For further information regarding the following subjects see the Faculty of Architecture Handbook.

29.411 Surveying for Architects and Builders  S1 L1T1½ C2
A compulsory subject. Prerequisites: nil.
Introduction to Mapping SI L1TV4

Town Planning

38.411 Town Planning S1 L2

Architecture prerequisite: 11.4308 and 100 credit points.

Chemical Engineering and Industrial Chemistry

48.302 Fuels and Energy S2 L2T2

A servicing subject for students in Electrical Engineering which deals with sources and properties of fuels (with particular emphasis on coal, crude oil and natural gas), principles of combustion including combustion calculation and the technology of boilers and other fuel plant. Other energy sources including solar energy and nuclear energy are discussed. The national and global situation is reviewed.

48.403 Polymer Science F L2T1

Prerequisites: 2.102A, 2.102B, 10.031, 10.301. Co- or prerequisites: 48.001, 48.113.

Anatomy

70.011C Introductory Anatomy S1 L2T4

Physiology and Pharmacology

73.111 Physiology 1 F L2T4

Prerequisites: 17.031 & 17.041; 2.121 & 2.131, or 2.141; 10.001 or 10.011 or 10.021 B & C. Excluded: 73.121, 73.011. Co-requisite: 41.101.

Introduction to fundamental physiological principles, dealing first with basic cellular function in terms of chemical and physical principles, and, second, with the operation of the various specialized systems in the body, for example, the cardiovascular system, whose function it is to transport materials to and from the tissues of the body; the respiratory system which must maintain the exchange of oxygen and carbon dioxide between the atmosphere and the blood; the gastrointestinal system which enables food materials to be modified by digestion and absorbed into the circulation; the kidney which is involved in the regulation of body fluid and electrolyte balance and with the excretion of the waste products of metabolism; the endocrine system which releases chemical messengers, called hormones, that are carried in the blood stream to regulate a great variety of body functions, eg metabolism and reproductive activity; the nervous system which by means of very rapidly propagated electrical impulses is responsible for all our movements, sensations, memories, emotions and consciousness itself. A substantial series of practical class experiments on these different areas of physiology is included in the course. This subject is taken by students enrolled in any of the Physiology program.

Law

90.502 Industrial Safety and Health S1 S2 Hpw4 C3

90.502 Industrial Safety and Health

Prerequisites: 17.031, 17.041.

Introduction to gross anatomy, based on a study of prospected specimens. Musculoskeletal, cardiovascular, respiratory, gastrointestinal, genitourinary and nervous systems. General topographical and surface anatomy.

Undergraduate Study: Subject Descriptions
Faculty of Engineering
Enrolment Procedures

All students re-enrolling in 1989 or enrolling in graduate courses should obtain a copy of the free booklet *Re-enrolment Procedures 1989* available from School Offices and the Admissions Office. This booklet provides detailed information on enrolment procedures and fees, enrolment timetables by Faculty and course, enrolment in miscellaneous subjects, locations and hours of Cashiers and late enrolments.

Graduate School of Engineering

The Graduate School of Engineering is concerned with the coordination and development of the graduate activities of the Faculty and provides opportunities for well-qualified graduates to engage in advanced studies and research.

The Faculty consists of the Schools of Civil Engineering, Electrical Engineering and Computer Science, Mechanical and Industrial Engineering, Surveying and the Centres for Biomedical Engineering, Manufacturing and Automation, and Safety Science. The Faculty is also closely associated with the Centres for Groundwater Management and Hydrogeology, Remote Sensing, and Waste Management which are joint enterprises of the Faculties of Engineering and Applied Science. The Faculty is also closely associated with the Joint Microelectronics Research Centre.

The School of Civil Engineering consists of five departments: Geotechnical Engineering (foundation engineering, soil mechanics, rock mechanics, concrete technology, and pavement engineering); Engineering Construction and Management (civil engineering systems, engineering economy, project planning and management and civil engineering construction); Structural Engineering (structural analysis and structural design); Transport Engineering (planning, design, and operation of transport systems, statistical analysis, land use and transport modeling, economic evaluations and environmental impact studies); Water Engineering (hydraulics, hydrology, water resources and public health engineering). In addition to extensive laboratory facilities on the Kensington campus, the School operates laboratories at King Street, Randwick and King Street, Manly Vale. The latter complex houses the School's Water Research Laboratory and the associated Water Reference Library. The School also uses the Fowlers Gap Arid Zone Research Station for construction camps and data collection for arid zone hydrology.

The School of Electrical Engineering and Computer Science comprises five departments: Communications (all aspects of theory, applied electronics and engineering relating to communication systems such as telephones, broadcasting and television); Electric Power (electrical machines and generation, distribution and utilization of electric energy); Electronics (telecommunication circuits, devices, micro-electronics and application of electronics to such areas as solar power generation); Computer Science (design of computer devices and the handling of information in all forms, e.g. numeric alphabetic, pictorial, verbal); Systems and Control (development of theories for the control of complex systems and the application of these theories including computer simulation). The School also houses the Joint Microelectronics Research Centre.

The School of Mechanical and Industrial Engineering consists of three departments: Applied Mechanics (agricultural engineering, automatic control, biomechanics, engineering design, engineering mechanics and mechanics of solids); Fluid Mechanics and Thermodynamics (energy utilisation and power generation, nuclear engineering, refrigeration and air conditioning, gas and liquid handling, aeronautical engineering and naval architecture); Industrial Engineering (economic analysis, production planning and control, product and process design, methods engineering and operations research). The Centre for Manufacturing and Automation is also located within the School.
The School of Surveying encompasses the following areas: Cadstral Surveying (knowledge of the laws and practices relating to property boundaries); Geodetic Surveying (the shape, size and mathematical model of the earth including small movements of the earth's crust; Satellite Surveying (the use of data from ground survey, air photography and satellite imagery to produce accurate maps); Hydrographic Surveying (the mapping of the seabed and waterways of navigation and offshore resource management); Engineering Surveying (the precise survey of large engineering constructions); Land Management and Development (environmental assessment for resource management and change of land use); Land Information Management (the use of computerised systems for accurate information of spatially related data); Photogrammetry (measurement of 3-dimensional positions from photographs and remotely sensed images).

The Centre for Biomedical Engineering is an interdisciplinary unit which promotes and co-ordinates biomedical engineering studies and research being conducted by a number of schools within the University. Biomedical engineering involves the application of engineering techniques to biomedical problems with particular emphasis on clinical medicine.

The Centre for Manufacturing and Automation promotes and coordinates teaching and research in the areas of manufacturing science and technology, machine control and automation, as well as computer integrated manufacturing and management.

The Centre for Safety Science promotes and co-ordinates teaching and research of a multidisciplinary range of scientific disciplines concerned with occupational health and safety. The major areas of study include occupational health control, safety engineering and management for safety with an emphasis being placed on the engineering of a safe working environment.

The Centre for Groundwater Management and Hydrogeology was established early in 1987 as a research and training unit within the Faculties of Applied Science and Engineering. Its general aims are to research the groundwater problems of strategic national importance and to co-ordinate and develop postgraduate courses and continuing education programs, and to liaise with industry.

The Centre for Remote Sensing is a joint enterprise of the Faculties of Applied Science, and Engineering which promotes and co-ordinates remote sensing studies and research being conducted by various schools within the University. Remote sensing is the science of obtaining information about the earth's surface (in particular) using electro-magnetic imaging systems mounted on aircraft and space platforms.

The Centre for Waste Management is a joint enterprise of the Faculties of Engineering and Applied Science, and co-ordinates teaching and research in the multidisciplinary area of waste management. Waste management is concerned with the study of treating, controlling and disposing of industrial and domestic wastes as applied to the analysis of waste disposal technologies. Particular emphasis is placed on the safe treatment, disposal and resource recovery of solid and liquid wastes.

The Joint Microelectronics Research Centre was established in 1982 under the Commonwealth Special Research Centres Program. Its laboratories are located in the School of Electrical Engineering and Computer Science and at the Royal Melbourne Institute of Technology. The function of the Centre is to carry out research in semiconductor materials and processes, integrated circuit design, computer-aided design and computer-aided testing.

The Faculty awards seven higher degrees as follows: Research — Doctor of Philosophy, Master of Engineering and Master of Surveying; Course Work Masters — Master of Engineering Science (available in a number of areas of specialization), Master of Surveying Science, Master of Safety Science and Master of Biomedical Engineering. In addition, the degrees of Doctor of Science and Master of Science may be awarded for research conducted in, or in association with, the Faculty of Engineering.

The administration of the various awards including admission, progress and assessment of all higher degree and diploma candidates is conducted by the Higher Degree Committee of the Faculty under the general supervision of the Faculty of Engineering.

Conditions governing the award of higher degrees and graduate diplomas are set out later in this handbook in Conditions for the Award of Higher Degrees. However, conditions for the award of the degree of Doctor of Science may be found in the University Calendar.

English Language Requirements

Applicants whose first language is not English or who have not undertaken a previous degree where English was the primary language of instruction are required to provide proof of their competence by presenting for one of the following tests or by satisfying the course authority as to their level of proficiency.

<table>
<thead>
<tr>
<th>Test</th>

Research Degrees

Doctor of Philosophy

PhD

This degree is awarded for a thesis considered to be a substantially original contribution to the subject concerned. The degree is becoming a prerequisite for research appointments in government and industrial research and development laboratories.

Admission Guidelines A candidate for registration for the degree of Doctor of Philosophy should hold an honours degree from the University of New South Wales or an honours degree of equivalent standing from another approved university. See also English Language Requirements as detailed earlier under Graduate School of Engineering. Applications for admission should be made to the Academic Registrar on the prescribed form at least one calendar month before the commencement of the session in which registration is to begin.
Period of Candidature

The normal period is six academic sessions (full-time) and eight academic sessions (part-time) from the date of enrolment. In special cases the minimum period of registration may be reduced by up to two academic sessions. The maximum period of registration is ten academic sessions (full-time) and twelve academic sessions (part-time). In special cases an extension of these times may be granted.

Admission Guidelines

A candidate for registration for the degree of Master of Engineering, Master of Science or Master of Surveying should hold a Bachelor's degree from the University of New South Wales or from another approved university. See also English Language Requirements as detailed earlier under Graduate School of Engineering. Applications for admission should be made to the Academic Registrar on the prescribed form at least one calendar month before the commencement of the session in which registration is to begin.

Period of Candidature

The normal period is four academic sessions (full-time) and six academic sessions (part-time) from the date of enrolment. In special cases the minimum period of registration may be reduced by up to two academic sessions. The maximum period of registration is six academic sessions (full-time) and ten academic sessions (part-time). In special cases extensions may be granted.

Research degrees may be undertaken in the Faculty of Engineering as follows:

Admission Guidelines

These are Faculty-wide degrees allowing for flexibility of choice between formal course work and research. The schools in the Faculty have developed recommended programs of study leading to specialisation in certain areas.

Candidates are required to complete a program totalling 36 credits* for formal course work. Alternatively a degree may be awarded for the completion of formal course work and a report on a project or completion of a thesis only. The number of credits for a project report are 9 or 18, and 36 for a thesis.

Before enrolment an applicant should submit an intended program for approval by the school/division offering the majority of the credits to ensure that the prerequisite background held is adequate for all subjects including those taken in other schools or institutions.

Admission Guidelines

An acceptable qualification is a degree at Honours level, or at Pass level to a superior standard in a four-year course in an approved discipline. The latter is defined as an average of 65% over the last two years of a full-time course (or last three stages of a part-time course) taken in minimum time. If the degree concerned is not in an acceptable discipline, or was of less than four years full-time study, a bridging or qualifying program is required. This is normally arranged by enrolment in the appropriate graduate diploma with the possibility of transferring to the Masters program after completion of requirements prescribed by the Faculty. See also English Language Requirements as detailed earlier under Graduate School of Engineering.

Applicants for admissions to a course of study leading to the award of a course work Masters degree should apply to the Academic Registrar on the prescribed form at least two calendar months before the commencement of the session in which registration is to begin. It may be necessary to limit entry to some formal courses because of available resources. In such cases, an application may be provisionally accepted 'subject to a place being available'. When a firm offer is made, it is subject to acceptance within one month.

*See definition of 'credit' under Graduate Subjects later in this section.
Period of Candidature

The normal period is two academic sessions (full-time) or four academic sessions (part-time) from the date of enrolment. The maximum period of candidature is four academic sessions (full-time) and eight academic sessions (part-time). In special cases an extension of time may be granted. A candidate is not permitted to continue in a course if the credit value of the subjects failed totals more than six.

Admission Guidelines

An acceptable qualification is a degree at Honours level, or at Pass level to a superior standard in a four-year course in an approved discipline. The latter is defined as an average of 65% over the last two years of a full-time course (or last three stages of a part-time course) taken in minimum time. If the degree concerned is not in an acceptable discipline, or was of less than four years full-time study, a bridging or qualifying program is usually required. This is normally arranged by enrolment in the appropriate graduate diploma with the possibility of transferring to the Masters program after completion of requirements prescribed by the Faculty. See also English Language Requirements as detailed earlier under Graduate School of Engineering.

Period of Candidature

The normal period is three and one third academic sessions (full-time) or six academic sessions (part-time) from the date of enrolment. The maximum period of candidature is five academic sessions (full-time) and eight academic sessions (part-time). In special cases extensions may be granted.

Master of Safety Science

MSafetySc

The Master of Safety Science is an interdisciplinary course involving the study of the principles of engineering, law, management, medicine and science as applied to the field of occupational safety.

Admission Guidelines

An acceptable qualification is a degree at Honours level, or at Pass level to a superior standard in a four-year course in an approved discipline. The latter is defined as an average of 65% over the last two years of a full-time course (or last three stages of a part-time course) taken in minimum time. If the degree concerned is not in an acceptable discipline, or was of less than four years full-time study, a bridging or qualifying program is required. This is normally arranged by enrolment in the appropriate graduate diploma with the possibility of transferring to the Masters program after completion of requirements prescribed by the Faculty. See also English Language Requirements as detailed earlier under Graduate School of Engineering.

Courses of Study

Courses of study leading to the award of course work Masters degrees may be undertaken in the Faculty as follows:

<table>

The program in Remote Sensing is offered in both the Faculty of Engineering and the Faculty of Applied Science. Entry into either Faculty depends upon the background of the applicant and the orientation of the proposed program.

Subjects available in the Faculty of Engineering are listed toward the end of this section. However, not all electives are offered in any particular year. Subject descriptions appear in the following section of the handbook.
Course Work Programs

Detailed information is available from the schools offering the courses.

8500
Electrical Engineering and Computer Science

Master of Engineering Science
MEngSc

- All candidates must commence in Session 1 and possess an appropriate level of knowledge for the program subjects chosen.
- All candidates elect to study in at least one of the specific programs offered by the School of Electrical Engineering and Computer Science: each Program Co-ordinator will advise if applicants are adequately qualified to undertake the proposed subjects and must approve the chosen program.

All candidates must register in one of the following major areas and in at least one of its programs:

Major Area

Communications
Program Co-ordinator: Dr C.J.E. Phillips
Programs:
1. Communication Electronics
2. Digital Communication and Systems
3. Microwave and Optical Communications
4. Signal Processing

Electric Power
Program Co-ordinator: Dr T.R. Blackburn
Programs:
1. Power Systems Engineering
2. Electrical Power Technology
3. Power Systems Engineering (for engineers from neighbouring countries)

Electronics
Program Co-ordinator: Dr R.S. Huang
1. Solid State Devices
2. Microelectronics

Computer Science
Program Co-ordinator: A/Prof A. Dunworth
1. Computer Science
2. Computer Engineering

Systems and Control
Program Co-ordinator: Dr D.H. Mee
Programs:
1. Digital Systems and Control
2. Cybernetic Engineering and Advanced Robotics
3. Biomedical Engineering (see co-ordinator)

Specialist Programs

8501 Communications

1. Communication Electronics
   - Normally 18 credits of course work and an 18 credit project.
   - One of the five elective subjects may be chosen from outside this program.

Compulsory subject
6.340G Communication Electronics 3

Elective subjects
6.060G Microprocessor Systems 3
6.169G Microwave Circuits: Theory and Techniques 3
6.170G Microwave and Optical Devices 3
6.338G Television Systems 3
6.341G Signal Processing 1 - Fundamental Methods 3
6.343G Digital and Analogue Communications 3
6.404G Real Time Computing and Control 3
6.577G Integrated Circuit Design 3
6.665G VLSI System Architecture and Design 3

2. Digital Communication and Systems
   - Normally 18 credits of coursework and an 18 credit project.
   - At least three subjects must be taken from the following list and the remaining subjects from other graduate programs within the Department and School.

Compulsory subjects
6.336G Digital Communication Networks 1 3
6.337G Digital Communication Networks 2 3
6.343G Digital and Analogue Communications 3
6.347G Digital Modulation and Coding 3

Elective subjects
6.150G Theory c: Optical Fibres and Optical Signal Processing 3
6.167G Propagation and Transmission of Electromagnetic Waves 3
6.170G Microwave and Optical Devices 3

3. Microwave and Optical Communications
   - Normally 18 credits of course work and an 18 credit project.
   - One of the three elective subjects may be chosen from outside this program.

Compulsory subjects
6.150G Theory c: Optical Fibres and Optical Signal Processing 3
6.167G Propagation and Transmission of Electromagnetic Waves 3
6.170G Microwave and Optical Devices 3

Elective subjects
6.164G Antenna Design and Applications 3
6.169G Microwave Circuits: Theory and Techniques 3
6.348G Optical Communications Systems 3
### 4. Signal Processing
- Normally 18 credits of course work and an 18 credit project.
- One of the four elective subjects may be chosen from outside the program.

#### Compulsory subjects
- 6.341G Signal Processing 1 — Fundamental Methods
- 6.342G Signal Processing 2 — Advanced Techniques

#### Elective subjects
- 6.070G Digital Image Processing Systems
- 6.150G Theory of Optical Fibres and Optical Signal Processing
- 6.340G Communications Electronics
- 6.343G Digital and Analogue Communications
- 10.061G Advanced Mathematics for Electrical Engineers
- 10.361G Statistics

### 8502 Electric Power
#### 1. Power Systems Engineering
- Normally 18 credits of course work and either an 18 credit project or a program in another area offered by the School.
- Three elective subjects to be chosen.

#### Compulsory subjects
- 6.202 Power Engineering 1
- 6.242G Power System Analysis
- 6.205G Power System Planning and Economics

#### Elective subjects
- 6.206G Power System Operation, Control and Protection
- 6.228G Power System Equipment
- 6.221G High Voltage Technology
- 6.215 Industrial Electrical Systems
- 6.229G Fields and Materials

#### 2. Electrical Power Technology
- Normally 18 credits of course work and either an 18 credit project or a program in another area offered by the School.
- Four elective subjects to be chosen.

#### Compulsory subjects
- 6.229G Fields and Materials
- 6.221G High Voltage Technology

#### Elective subjects
- 6.228G Power System Equipment
- 6.224G Partial Discharges in Electrical Insulation
- 6.227G Insulation Performance in Electrical Plant
- 6.212 Power Engineering — Utilisation
- 6.242G Power System Analysis
- 6.215 Industrial Electrical Systems

#### 3. Power Systems Engineering
(for engineers from neighbouring countries)
- Normally 18 credits of course work and an 18 credit project.
- Two elective subjects to be chosen.

#### Compulsory subjects
- 6.202 Power Engineering 1
- 6.242G Power System Analysis

### 8503 Electronics
- Normally 18 credits coursework and 18 credit project.
- There are no compulsory subjects, but at least 3 subjects should be chosen from one of the programs shown below.
- The remaining three subjects may be chosen from the alternative program list or outside these lists.

#### 1. Solid State Devices
- 6.573G Advanced Semiconductor Devices
- 6.575G Integrated Circuit Technology

#### 2. Microelectronics
- 6.575G Integrated Circuit Technology
- 6.577G Integrated Circuit Design
- 6.573G Advanced Semiconductor Devices
- 6.665G VLSI Systems Architecture Design
- 6.340G Communication Electronics

### 8504 Computer Science/Computer Engineering
- Normally 36 credits of coursework or 18 credits of coursework and an 18 credit project.
- At least four elective subjects (coursework only programme) or at least two elective subjects (thesis programme) to be chosen as appropriate.

#### Compulsory subjects
- 6.060G Microprocessor Systems
- 6.660G Design and Analysis of Algorithms
- 6.663G Operating Systems
- 6.664G Compiling Techniques and Programming Languages

#### Elective subjects (8504)
- 6.468G Computer Display Systems and Interactive Instrumentation
- 6.654G Digital Systems
- 6.655G Computer Organization and Architecture
- 6.665G VLSI System Architecture and Design
- 6.666G Artificial Intelligence
- 6.667G Programming Languages: Fundamental Concepts
- 6.668G Computer Graphics
- 6.669G Formal Specification
- 6.670G Parallel and Distributed Computing Systems
8505 Systems and Control

1. Digital Systems and Control
   - Normally 18 credits of course work and an 18 credit project.

   Compulsory subjects
   - 6.401G Computer Control Systems 1  Credit 3
   - 6.403G Computer Control Systems 2  Credit 3
   - 6.404G Real Time Computing and Control  Credit 3
   - 6.405G Topics in Digital Control  Credit 3

   Elective subjects
   - 6.060G Microprocessor Systems  Credit 3
   - 6.342G Digital Signal Processing 2 — Advanced Techniques  Credit 3
   - 6.468G Computer Display Systems and Interactive Instrumentation  Credit 3
   - 6.470G Robotics, Automation and Productivity Technology  Credit 3

2. Cybernetic Engineering and Advanced Robotics
   - Normally 9 credits of course work and an 18 credit project.
   - Remaining 9 credits may be taken from the elective list or other programs and subjects.

   Compulsory subjects
   - 6.457G Cybernetic Engineering  Credit 3
   - 6.469G Robot Vision  Credit 3
   - 6.470G Robotics, Automation and Productivity Technology  Credit 3

   Elective subjects
   - 6.060G Microprocessor Systems  Credit 3
   - 6.070G Digital Image Processing Systems  Credit 3
   - 6.342G Signal Processing 2 — Advanced Techniques  Credit 3
   - 6.404G Real Time Computing and Control  Credit 3
   - 6.468G Computer Display Systems and Interactive Instrumentation  Credit 3

8530 Industrial Engineering

8540 Mechanical Engineering

Master of Engineering Science
MEngSc

A major field of study is required to be nominated and two-thirds of the 36 credits required for the degree must be taken in that major field. (Examples of major fields are heat engines, fluid mechanics and solar energy. Consult School Advisers for further details)

All candidates take either a 9 credit or 18 credit project on a topic in their major field.

Formal lecture subjects are not restricted to the School of Mechanical and Industrial Engineering, Faculty of Engineering or this University, but two-thirds of all credits must be taken at the University of New South Wales.

In consultation with their School Adviser, candidates at enrolment put together a program which is based on these requirements, but which may be modified from time to time in the light of changes in availability of subjects. These requirements also apply to a number of specialist courses which are offered by the School of Mechanical and Industrial Engineering and which are described below.

Specialist Programs

1. Refrigeration and Air Conditioning

   Credits
   - 19 credits of core subjects:
     - 5.151-2G Refrigeration and Air Conditioning Design  1, 2  Credit 3
     - 5.715G Two Phase Flow and Heat Transfer  Credit 3
     - 5.731G Analysis of Heat Transfer  Credit 4
     - 5.755-6G Refrigeration and Air Conditioning 1, 2 and 3  Credit 3
     - 18 credit Project Report
     - or
     - 9 credit Project plus 8 credits from:
       - 5.328-9G Control and Modelling of Mechanical Systems 1, 2  Credit 3
       - 5.601G Computational Fluid Dynamics  Credit 3
       - 5.653-4G Acoustic Noise 1, 2  Credit 2
       - 5.655G Energy Conservation and System Design  Credit 3
       - 5.722G Solar Thermal Energy Design  Credit 3
       - 5.753G Ambient Energy Air Conditioning  Credit 2
       - 5.757G Refrigeration and Air Conditioning Applications  Credit 3
       - 5.759G Refrigeration and Air Conditioning Experimentation  Credit 3
       - 47.090G Introduction to Occupational Health and Safety Law  Credit 3
     - or such other subjects as may be approved by the Head of School.

2. Industrial Automation

   Credits
   - 18 credits of core subjects taken from:
     - 5.086G Digital Logic Fundamentals for Mechanical Engineers  Credit 3
     - 5.087G Microprocessor Fundamentals for Mechanical Engineers  Credit 3
     - 5.088G Industrial Applications of Microprocessors  Credit 3
     - 5.089G Elements of Industrial Automation  Credit 3
     - 5.090G The Analysis and Use of Integrated CAD/CAM systems  Credit 3
     - 5.328-9G Control and Modelling of Mechanical Systems 1, 2  Credit 3
     - and
     - 18 credit Project Report
     - or
     - 9 credit Project and a further 9 credits of subjects selected from:
       - 5.317G Industrial Robotics  Credit 3
       - 18.772G Information Processing Systems in Organization  Credit 2
       - 18.868G Industrial Applications of Mathematical Programming  Credit 3
     - or such other subjects as may be approved by the Head of School.

86
3. Industrial Management

3 credits of core subjects:
18.074G Industrial Management 3
18.965G Industrial Management Seminar 0
at least 11 credits selected from:
14.062G Accounting for Engineers 3
18.380G Methods Engineering 4
18.571G Operations Research 1 6
18.675G Economic Decisions in Industrial Management 3
18.776G Production and Inventory Control 2
18.909G Project 9
or
18.918G Project Report 18
The remaining credits may be selected from:
15.565G Industrial Relations 3
18.061G Industrial Experimentation 1 3
18.076G Decision Support Systems 3
18.171G Inspection and Quality Control 3
18.360G Ergonomics 3
18.371G Factory Design and Layout 3
18.464G Value Analysis/Engineering 3
18.465G Computer-Aided Manufacturing 3
18.672G Decision Theory for Industrial Management 3
18.673G Energy Modelling, Optimization and Energy Accounting 3
18.675G Economic Decisions in Industrial Management 3
18.760G Discrete Event Simulation Languages 3
18.761G Simulation in Operations Research 3
18.764G Management of Distribution Systems 2
18.765G Optimization of Networks 2
18.772G Information Processing Systems in Organizations 2
18.776G Production and Inventory Control 2
18.862G Linear Programming 2
18.863G Nonlinear Programming 2
18.870G Large Scale Optimization in Industry 3
18.874G Dynamic Programming 2
18.879G Mathematical Programming Analysis 3
or such other subjects as may be approved by the Head of School

4. Operations Research

Prerequisites:
(i) 2 years of University level Mathematics
(ii) minimum 40 hours University level course in Probability and Statistics (or enrolment in 5.0721 Computing as equivalent as a co-requisite)
(iii) minimum 40 hours University level course in Engineering Economic Analysis (or enrolment in 18.675G Economic Decisions in Industrial Management as a co-requisite)
(iv) competence in computer programming (or enrolment in 5.0721 Computing as a co-requisite).

12 credits of core subjects:
14.062G Accounting for Engineers 3
18.571G Operations Research 1 6
18.574G Management Simulation 3
18.970G Operations Research Seminar 0
18.909G Project 9
or
18.918G Project Report 18
The remaining credits may be selected from:
18.074G Industrial Management 3
18.076G Decision Support Systems 3
18.360G Ergonomics 3
18.371G Factory Design and Layout 3
18.380G Methods Engineering 4
18.464G Value Analysis/Engineering 3
18.671G Decision Theory 2
18.672G Decision Theory for Industrial Management 3
18.673G Energy Modelling, Optimization and Energy Accounting 3
18.675G Economic Decisions in Industrial Management 3
18.760G Discrete Event Simulation Languages 3
18.761G Simulation in Operations Research 3
18.764G Management of Distribution Systems 2
18.765G Optimization of Networks 2
18.772G Information Processing Systems in Organizations 2
18.776G Production and Inventory Control 2
18.862G Linear Programming 2
18.863G Nonlinear Programming 2
18.870G Large Scale Optimization in Industry 3
18.874G Dynamic Programming 2
18.879G Mathematical Programming Analysis 3
or such other subjects as may be approved by the Head of School

5. Advanced Analysis for Design

Prerequisites:
(i) 5.123 Mechanical Engineering Design 3 or equivalent
(ii) 5.423 Mechanics of Solids 3 or equivalent

21 credits of core subjects:
5.414G Finite Element Applications 3
5.415G Stress Analysis for Mechanical Engineering Design 1 3
5.417G Mechanics of Fracture and Fatigue 3
5.909G Project (Design and Build) 9
18.360G Ergonomics 3
plus at least 5 credits selected from:
5.124G Design Technology 2
5.1244 Project Management 2
5.124S Computer Based Engineering Design (or 18.870G) 2
5.403G Experimental Stress Analysis 3
8.731G Project Management (or 8.732G) 3
8.732G Advanced Project Management Theory (or 8.731G) 3
18.464G Value Analysis/Engineering 3
18.675G Economic Decisions in Industrial Management 3
18.870G Large Scale Optimization in Industry (or 5.124S) 3
The remaining credits, resulting overall in at least 36 credits, must be chosen from an approved list of subjects, details of which may be obtained from the School of Mechanical and Industrial Engineering.

Students who elect to take the 9 credit Project will be required to take one of the following specialist options:

### Industrial Automation

The following two subjects from the Industrial Automation package subject to availability:
- **5.086G** Digital Fundamentals for Mechanical Engineers
- **5.089G** Industrial Applications of Microprocessors
- **5.090G** The Analysis and Use of Integrated CAD/CAM Systems

### Robotics

The following two subjects from the Industrial Automation package subject to availability:
- **5.086G** Digital Fundamentals for Mechanical Engineers
- **5.317G** Industrial Robots
- **5.320G** Artificially Intelligent Machines
- **6.404G** Real Time Computing and Control
- **6.469G** Robotic Vision
- **6.470G** Robotics, Automation and Productivity Technology

### Manufacturing Management

- **14.062G** Accounting for Engineers
- **18.675G** Economic Decisions in Industrial Management
- **18.776G** Production and Inventory Control

### Manufacturing Design

**Either**
- **18.380G** Methods Engineering
- **18.171G** Inspection and Quality Control
- **18.371G** Factory Design and Layout
- **14.062G** Accounting for Engineers
- **18.461G** Design for Production
- **18.464G** Value Analysis and Engineering

### Nuclear Engineering

15 credits of core subjects:
- **5.230G** Radioactivity 1
- **5.231G** Radioactivity 2
- **5.232G** Neutronics
- **5.233G** Nuclear Safety
- **5.234G** Nuclear Power Assessment

and
- **5.918G** Research Project
- **5.909G** Project

The remaining credits may be selected from:
- **18.673G** Energy Modelling, Optimization and Energy Accounting
- **5.320G** Artificially Intelligent Machines
- **5.414G** Finite Element Applications
- **5.415G** Stress Analysis for Mechanical Engineering Design 1
- **5.417G** Mechanics of Fracture and Fatigue
- **5.601G** Computational Fluid Dynamics
- **5.715G** Two Phase Flow and Heat Transfer
- **5.731G** Analysis of Heat Transfer

or other such subjects as may be approved by the Head of School.

### Computer Integrated Manufacturing

- 18 credits of core subjects:
  - **18.074G** Industrial Management
  - **18.260G** Computer Aided Programming for Numerical Control
  - **18.465G** Computer Aided Manufacturing
  - **97.601G** Computer Aided Design for Manufacture
  - **97.602G** Computer Integrated Manufacturing
  - **97.603G** Product Design and Technological Innovation

and
- 18 credit Project Report

or
- 9 credit Project

The remaining credits may be selected from:

### Industrial Automation (subject to availability)

- **5.086G** Digital Logic Fundamentals for Mechanical Engineers
- **5.088G** Industrial Applications of Microprocessors
- **5.090G** The Analysis and Use of Integrated CAD/CAM Systems

### Robotics (subject to availability)

**Either**
- **5.086G** Digital Logic Fundamentals or Mechanical Engineers
- **5.317G** Industrial Robotics
- **5.320G** Artificially Intelligent Machines
- **6.404G** Real Time Computing and Control
- **6.469G** Robotic Vision
- **6.470G** Robotics, Automation and Productivity Technology
Manufacturing Management

- 14.062G Accounting for Engineers 3
- 18.675G Economic Decisions in Industrial Management 3
- 18.776G Production and Inventory Control 2

Manufacturing Design

Either

- 18.380G Methods Engineering 4
- 18.171G Inspection and Quality Control 3
- 18.371G Factory Design and Layout 3

Or

- 14.062G Accounting for Engineers 3
- 18.461G Design for Production 4
- 18.464G Value Analysis and Engineering 3

Or

- 5.317G Industrial Robotics 3
- 97.604G Flexible Manufacturing Systems 3
- 97.605G Computer-Aided Design for Manufacture 2

8610

Civil Engineering

Master of Engineering Science
MEngSc

The School of Civil Engineering offers a large number of graduate subjects which allow the flexibility of many combinations to provide relevant groupings both in an academic and professional sense. The main technical groupings are:

- engineering construction and management
- geotechnical engineering
- structural engineering
- transport engineering
- water engineering

All candidates are required to undertake a project with the other credits being obtained from formal course work. Full details of preferred programs in the various specialists areas are available from the School.

8610

Waste Management

Master of Engineering Science
MEngSc

8085

Waste Management

Master of Engineering Science
MApPSc

Candidates are required to complete a course totalling at least 36 credits, made up of compulsory subjects, elective subjects and a project. The degree may be obtained internally on a full time (normally 2 sessions of 18 credits) or part time (normally 4 sessions of 9 credits) basis. An external course program is also offered (normally over 4 sessions) with resource material posted to students and evaluation made on written assignments.

Candidates would be enrolled as MEngSc or MApPSc depending on their previous qualification experience and course content.

Compulsory subjects

- 8.872G Management of Wastes 3
- 8.873G Waste and Wastewater Analysis and Environmental Requirements 3
- 8.874G Waste Management Science 3
- 25.715G Sources of Waste and Landfill Disposal 3
- 48.067G Treatment, Disposal and Resource Recovery of Solid and Liquid Wastes 3
- 48.388G Unit Operations in Wastewater Sludge and Solids Management 3

Project (MEngSc)

- 8.909G Project 9
- 8.918G Project Report 18

Project (MApPSc)

- 46.512G Project 9
- 46.513G Project Report 18

Elective subjects

Selection of the subjects for the formal course work must be approved by the Director of the Centre for Waste Management. For a graduate degree specializing in Waste Management a candidate would normally complete 18 credits of core subjects plus 9 credits selected from the list of elective subjects.

Credits

- 7.152G Mining Conservation 3
- 7.535X Mine Fill Technology 2
- 48.391G Atmospheric Pollution Control (Theory) 3
- 48.391X Atmospheric Pollution Control (Theory) 3
- 48.392G Atmospheric Pollution Control (Practical Aspects) 3
- 8.857G Sewage Treatment and Disposal 3
- 8.870G Hydraulics and Design of Water and Wastewater Treatment Plants 3
- 25.702G Hydrogeology 3
- 25.704G Environmental Geology 3
- 25.707X Geopolllution Management 3
- 25.707G Geopolllution Management 3
- 46.203G Medical Aspects 1
- 46.204G Legislative Aspects 1
- 47.481G Management of Dangerous Materials 3
- 47.120G Human Behaviour and Safety Science 3
- 48.063G Industrial Water and Wastewater Engineering 3

8640

Remote Sensing

Master of Engineering Science
MEngSc
Candidates are required to complete a course totalling at least 36 credits, made up of compulsory subjects, elective subjects and a project or research project. Compulsory subjects not offered in a particular year may be substituted by an equivalent subject, approved by the appropriate Head of School. The degree will normally comprise one year of full-time study (two sessions of 18 credits) or two years of part-time study (four sessions of 9 credits each).

Candidates who are not exempted from any of the compulsory subjects and who opt for the Research Project (18 credits), will achieve the required 36 credits without any elective subjects.

### Compulsory subjects

<table>

### 8650 Surveying

#### Master of Surveying Science

**MSurvSc in Land and Geographic Information Systems**

Candidates are required to complete a course totalling at least 36 credits made up of compulsory subjects, elective subjects and a project or project report. Compulsory subjects not offered in a particular year may be substituted by an equivalent subject approved by the appropriate Head of School. The course will normally comprise one year of full-time study (two sessions of 18 credits) or two years of part-time study (four sessions of 9 credits each).

### Project

- Project (9 credits) or Project Report (18 credits)

The Masters degree program in Land and Geographic Systems is offered in both the Faculty of Engineering and the Faculty of Applied Science. Entry into either Faculty depends on the background of the applicant and the orientation of the proposed program.
**Graduate Study: Course Outlines**

**8660 Biomedical Engineering**

**Master of Biomedical Engineering MBiomedE**

The program of study must total 60 credits and include at least 40 credits at graduate level.

Strand A subjects are directed to candidates with an engineering/physical sciences background and Strand B to those with a medical/biological sciences background. Selection of subjects is not limited to those listed below; relevant approved subjects from other areas may be undertaken. A research project is compulsory and may be undertaken concurrently with other subjects. An 18 credit Project Report is the normal requirement.

### Session 1 (March-June)

### Preliminary subjects

**Statistics and Computing**

No more than 4 credits selected from:

- 16.901G Health Services Statistics 1
- 32.012G Biomedical Statistics
- 47.030G Computing for Safety Science

**Management**

Either:

- 18.074G Industrial Management
- 30.935G Organizational Behaviour A

---

**8670 Faculty of Engineering**

**Master of Safety Science MSafetySc**

Candidates are required to complete a program totalling 54 credits made up of 12 credits of preliminary subjects (selected according to previous qualifications), 22 credits of compulsory subjects, 11 credits of Safety Engineering electives, and a 9 credit Project. The preliminary subjects enable graduates from a wide range of disciplines (such as engineering, science, medicine, economics, law) to reach an adequate standard of comprehension for studying the compulsory and elective subjects.
Courses of study leading to the award of a Graduate Diploma in Engineering provide graduates with opportunities to extend their professional knowledge. In most cases, candidates may choose from a range of subjects in the special area of their choice. There are also opportunities to select subjects from other professional areas in which candidates may be interested. In addition, the graduate diploma courses in Engineering Developments are intended for those who wish to take a more general program in several areas of interest.

Before enrolment, an applicant should submit an intended program for approval by the school or centre offering the majority of the credits. Candidates must complete a program totalling 30 credits. Forty per cent of these may consist of approved undergraduate subjects and the program may contain subjects from other schools of the Faculty, other faculties of the University and other universities or institutions subject to meeting any prerequisite requirements. If an applicant nominates a course of study from the list below, at least half of the credits should come from the subjects taken in that area.

Admission Guidelines
An applicant for admission to a graduate diploma course should be a graduate of the University of New South Wales or other approved university or have other qualifications as may be approved by the Faculty of Engineering. Applicants should apply to the Academic Registrar on the prescribed form at least two calendar months before the commencement of the session in which registration is to begin. It may be necessary to limit entry because of available resources. In such cases, an application may be provisionally accepted subject to a place being available. When a firm offer is made, it is subject to acceptance within one month.

Period of Candidature
The normal period is two academic sessions (full-time) or four academic sessions (part-time) from the date of enrolment. The maximum period of candidature is four academic sessions (full-time) and six academic sessions (part-time). In special cases extensions may be granted. A candidate is not permitted to continue in a course if the credit value of the subjects failed totals more than six.

Courses of study leading to the award of a graduate diploma may be undertaken in the Faculty of Engineering as follows:

<table>
<thead>
<tr>
<th>School/Course</th>
<th>Course Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>Graduate Diploma in Engineering:</td>
<td></td>
</tr>
<tr>

<tr>
<td>Graduate Diploma in Surveying</td>
<td>5490</td>
</tr>
</tbody>
</table>

*The Graduate Diplomas in Remote Sensing and Waste Management are offered in both the Faculty of Engineering and the Faculty of Applied Science. Entry into either Faculty depends upon the background of the applicant and the orientation of the proposed program.

**The Graduate Diplomas in Ergonomics and Safety Science are interdisciplinary structured courses for candidates from a wide range of backgrounds.

Further details of the recommended programs of study may be obtained from the course authorities concerned.

Subjects available in the Faculty of Engineering are listed at the end of this section. However, not all electives are offered in any particular year. Subjects available by tape correspondence as well as all subject descriptions, appear later in this handbook.

Graduate Diplomas

Courses of study leading to the award of a Graduate Diploma in Engineering provide graduates with opportunities to extend their professional knowledge. In most cases, candidates may choose from a range of subjects in the special area of their choice. Subjects available in the Faculty of Engineering are listed at the end of this section. However, not all electives are offered in any particular year. Subjects available by tape correspondence as well as all subject descriptions, appear later in this handbook.
Graduate Subjects

The subjects which may be available for a candidate proceeding to the award of the degree of Master of Engineering Science, Master of Safety Science, Master of Surveying Science, Master of Biomedical Engineering and Graduate Diploma are listed below. Not all electives are necessarily offered in any particular year.

Under the credit system in operation in the Faculty, one credit is normally equal to one hour's attendance per week for one session. The qualification 'normally' is required because of the varying ways in which credits are distributed for course work, design, critical review or research in the different schools.

Many graduate subjects assume that students have prior, or preliminary, knowledge of the area of study. It is the responsibility of students to acquaint themselves with this level of assumed prior knowledge and take steps, if necessary, to obtain it. This may, for example, involve a course of preparatory reading before commencing the subject.

In some cases the assumed level of knowledge for a specific subject is indicated in this Handbook by the statement of assumed knowledge. This is intended as a guide to the assumed prior knowledge and often uses the description of other subjects in the Handbook (graduate and undergraduate) to indicate the content and level which the lecturer will assume. Students who are in doubt as to the adequacy of their preparation should contact the lecturer concerned and discuss the matter. The lecturer in charge of a subject has the authority to decide whether or not the student has the appropriate level of assumed knowledge.

Note 1: Candidates taking their Projects in Industrial Management are generally required to take 18.074G and 18.965G plus at least 11 credits from 18.380G, 18.571G, 18.675G, 18.776G and 14.062G Accounting for Engineers. Before enrolling in the Projects they must have had one year's relevant industrial experience and have access to industry for their project topics.

Note 2: Candidates taking their projects in Operations Research are generally required to take the 18.571G, 18.574G, 18.970G and 14.062G Accounting for Engineers. Before enrolling in the Projects they must have had one year's relevant industrial experience and have access to industry for their project topics.

Note 3: All Master of Engineering Science candidates in the Department of Industrial Engineering must include 18.905G or 18.915G in their programs.

†A 36 credit Thesis is not normally approved in the School of Mechanical and Industrial Engineering.

### Graduate Diploma Subjects

Graduate Diploma programs in all schools of the Faculty may include subjects from the above list, subject to the approval of the Head of School responsible for the subject.

In addition the following subjects are offered specially for Graduate Diploma candidates. Not all electives are necessarily offered in any particular year.

### Project Reports and Theses

Supervision of project reports and theses will generally be available in the following areas of research interest in the Schools of the Faculty. Alternatively, design and other topics may be chosen by arrangement.

### Civil Engineering

#### Engineering Construction and Management

Construction techniques. Equipment selection. Field studies of spatial layout, material flow, and construction operations.
Engineering

Micro, macro, and system structure of construction operations. Civil engineering management. Critical path methods, and operations research methods in engineering construction. Information flow requirements and decision processes of office and field agents.

Geotechnical Engineering

Numerical Methods in Geomechanics
Finite element techniques and their applications in geotechnical engineering including static and dynamic loading. Theoretical and numerical studies of rock blasting. Numerical techniques in static and dynamic fracture mechanics. Application of artificial intelligence and fuzzi-sets in geotechnical engineering.

Pavement Engineering

Civil Engineering Materials

Groundwater

Hydrology

Hydraulics

Prestressed Concrete Structures
Partially prestressed concrete beams. Analysis and design of end blocks for post-tensioned beams.

Public Health Engineering

Reinforced Concrete Structures

Structural Analysis

Transport Engineering
Graduate Study: Course Outlines

Investigations into transport economics, policy and decision-making.
Investigations of the geometric shape of the road alignment on the driver's view of the road.
Study of road alignment design in three dimensions.

Water Resources Engineering
Multi-objective water resources planning.
Hydro-economic studies.
Optimization problems in water resource systems design.
Drought studies.
Flood plain management.
Arid lands management.

Electrical Engineering and Computer Science

Communications
Optical communications.
Optical fibres and integrated optics.
Electro-optic devices such as sensors.
Digital communications.
Digital radio and modulation methods.
Computer communications and local area networks.
New architectures for local area networks.
Switching and stored program control systems.
UHF and microwave circuits and devices.
Microwave measurements.
Antennas and phased arrays.
Radar and navigational aids.
Signal processing and analysis.
Active and adaptive filtering.
Digital filters.
Digital signal processor chip applications.
Acoustic and seismic signal processing.
Speech recognition and synthesis.
Real-time speech to text conversion.
Communications aids for the handicapped.
Digital image processing.
Electronic music.
Man-machine interaction.

Computer Science
Computer organization.
Computer graphics.
Artificial intelligence.
Expert systems.
Operating systems.
Languages.
Scheduling.
Network projects.
Data base machine projects.
Computer aided design.
Computer aided instruction projects (CAI)
Fault tolerant computer systems.

Office automation and electronic publishing.
Computer aids for dyslexic children.
Digital systems description languages.
Integrated circuit and logic testing.
VLSI systems.

Electric Power
Power systems analysis and planning.
The stability, dynamics and control of electric power systems.
Power system protection.
Static VAR compensation.
Design and optimal operation of distribution systems.
Transformer design.
Electrical measurements and data acquisition.
Application of insulating material.
High voltage and high current phenomena.
Arcing fault characteristics.
Electrical machines and drives.
Electrical equipment for hazardous atmospheres.
Gaseous discharges and insulation.
Partial discharge detection and location.
Superconductivity.
Electromagnetic transient analysis.
Harmonic analysis.
Wind power generation and integration.
Load management and control.
Production costing and pricing in power systems.
Computer aided teaching systems.
Power electronics.
Remote area supply.

Electronics
Semiconductor device physics.
Integrated circuit design.
Integrated circuit technology.
Surface elastic wave devices.
Microelectronic sensors.
Photovoltaic solar energy conversion.
Computer-aided IC design.
Dry etching.
Remote sensing.
Integrated circuits for advanced signal processing.

Systems and Control
Boiler-turbine modelling, control and simulation.
Digital systems and digital signal processing.
Computer aided design of control systems.
Microprocessor technology in control systems and information displays.
Biomedical engineering: gait analysis, compartmental modelling, physiological systems modelling.
Medical applications of microprocessors.
Biological signal analysis.
Cybernetic engineering and advanced robotics: pattern, image and scene analysis, learning machines, vision and assembly.
Large text systems design.
Query language development.
Industrial applications of control and simulation.
Adaptive control.
Digital control.
Multivariable control.
Control applications of expert systems.
Identification and systems modelling.

Numerical methods for reactor analysis and simulation.
Nuclear power planning and reactor strategy.
Risk assessment.
Radiation processing.

Industrial Engineering — comprising Operations Research and Production Engineering

Engineering economic analysis.
Efficiency of production lines.
Optimum shearing policies for rolled bars.
Application of probability theory in the allocation of engineering tolerance.
Computer generation of timetables.
Job shop scheduling.
Least-cost tolerance.
Optimum reject allowance.
Operational simulation.
Variety reduction.
Probabilistic networks.
Optimization techniques relevant to information processing systems.
Statistical decision theory.
Production scheduling for variable demand.
Inventory and production control.
Optimum control.
Mathematical programming.
Dynamic programming.
Geometric programming.
Integer programming.
Large scale optimization.
Applications of operations research to real-world problems.
Stochastic processes.
Applications of optimization techniques.
Experimental and theoretical investigations of the following process: machining, extrusion, indentation, compression, rolling.
Performance of single and multipoint cutting tools including tool life and economics of machining.
Properties of materials at high rates of strain.
Materials handling studies.
Factory design and location studies.
Plant layout by computer.
Ergonomics.
Occupational safety and health.
Production design studies.
Engineering design analysis and tolerance technology.
Metrology studies.
Group technology studies.

Surveying

Geodesy and Satellite Positioning

Positioning with GPS.
Geoid and gravimetric studies.
Satellite geodesy and precise orbit determinations.
Geodynamics: crustal motion studies using satellite laser ranging and very long baseline interferometry data and GPS. Adjustment of continental control networks. Ionospheric and tropospheric effects in GPS measurements.

Photogrammetry.

Land Information Systems (LIS)
LIS pertaining to Local Government needs. Role of Local Government in a state-wide LIS. Incorporation of remote sensing into LIS. Data acquisition and upgrading in LIS. LIS networks. LIS in developing countries. Land tenure, land registration and cadastral surveying systems.

Surveying

Biomedical Engineering

Remote Sensing

Waste Management
Subject Descriptions

Identification of Subjects by Number

A subject is defined by the Academic Board as 'a unit of instruction approved by the University as being a discrete part of the requirements for a course offered by the University'.

Each approved subject of the University is identifiable both by number and by name as this is a check against nomination of subject other than the one intended.

Subject numbers are allocated by the Academic Registrar and the system of allocation is based on the following guidelines:

1. The authority offering the subject, normally a School of the University, is indicated by the number before the decimal point.
2. Each subject number is unique and is not used for more than one subject title.
3. Subject numbers may not be re-used with a new subject title within ten years of previous use.
4. Graduate subjects are indicated by a suffix 'G' to a number with three digits after the decimal point. In other subjects three or four digits are used after the decimal point.

Subjects taught are listed in full in the handbook of the faculty or board of studies responsible for the particular course within which the subjects are taken. Subject descriptions are contained in the appropriate section in the handbooks.

The identifying numerical prefixes for each subject authority are set out on the following page.

Servicing Subjects are those taught by a school or department outside its own faculty. Their subject descriptions are published in the handbook of the faculty which originates the subject and are also published in the handbook of the Faculty in which the subject is taught.

The following pages contain descriptions for most of the subjects offered for the courses described in this book, the exception being the General Education subjects. For General Education subjects see the General Education Handbook which is available free of charge.

HSC Exam Prerequisites

Subjects which require prerequisites for enrolment in terms of the HSC Examination percentile range, refer to the 1978 and subsequent Examinations.

Candidates for enrolment who obtained the HSC in previous years or hold other high school matriculation should check with the appropriate school on what matriculation status is required for admission to a subject.

Information Key

The following is the key to the information which may be supplied about each subject:

S1 Session 1, S2 Session 2
F Session 1 plus Session 2, ie full year
S1 or S2 Session 1 or Session 2, ie choice of either session
SS single session, but which session taught is not known at time of publication
CCH class contact hours
L Lecture, followed by hours per week
T Laboratory/Tutorial, followed by hours per week
hpw hours per week
C Credit or Credit Units
DN Distinction
DN Distinction
W weeks of session

103
Toxicology, Occupational and Public Health

Important classes of toxic materials found in the environment; treatment of pesticide residues, industrial chemicals of various types, toxic gases, mould metabolites and bacterial toxins occurring in food, carcinogenic substances, toxic metals, etc. Effects of these substances on living organisms, particularly man. Practical work: pesticide residue analysis, blood and urine analysis, gas sampling and analysis, trace metal determination and experiments on the animal metabolism of toxic substances.

Discrete logic elements; assembly design; misoriented design; support devices; microprocessor units.

5.087G Microprocessor Fundamentals for Mechanical Engineers

Microprocessor chips; system design; memory; past design; programming; applications.

5.088G Industrial Applications of Microprocessors

Prerequisite: 5.087G or equivalent. Excluded: 6.432, 6.433G, 6.651G and equivalent.

5.089G Elements of Industrial Automation

An introductory overview of the elements of Industrial Automation systems and the factors governing their use in industry.

5.090G The Analysis and Use of Integrated CAD/CAM Systems

Prerequisite: 5.089G.

5.151G Refrigeration and Air Conditioning Design 1

5.152G Refrigeration and Air Conditioning Design 2

Prerequisite: 5.151G or equivalent.

5.230G Radioactivity 1

5.231G Radioactivity 2

Biological effects of radiation and radiological protection, the ICRP and the ALARA concept. Gamma shielding, from point, line, cylindrical and distributed sources. Radiation dose estimation from external and internal sources. Atmosphere dispersion, and modes of transport of radionuclides in the biosphere and geosphere. Compartment model formulations and applications in radioecology and radiation dosimetry.

5.232G Neutronics

5.233G Nuclear Safety

5.234G Nuclear Power Assessment

5.318G Advanced Mechanism Analysis and Synthesis 1

Assumed knowledge: 5.301 or 5.3021 or 5.333 or equivalent. Excluded: 5.3040, 5.315G.

Algebraic displacement, velocity and acceleration analyses of simple and complex planar mechanisms. Instantaneous kinematics: centrodes; inflection and Bresse circles; acceleration centre; Euler-Savary equation; cubic of stationary curvature; centring point curve. Coupler curves and their properties; curve cognates. Constraint and freedom; mobility; velocity closure of a loop; special configurations; singularities. Various methods of synthesis.

5.319G Advanced Mechanism Analysis and Synthesis 2

Excluded: 5.316G and equivalent.

A selection of topics from Planar mechanisms: kinematic analysis of complex mechanisms; kinetic analysis; kinematic geometry; precision position synthesis. Cams: basic and common curves; equations of motion; development of profile; determination of system geometry and mechanical properties; noise, wear, backlash and manufacture. Spatial linkages: structural analysis; closure equations; screw system algebra; special configurations.

5.320G Artificially Intelligent Machines

The principles of operation of machines into which limited powers of decision making have been delegated. The grouping of intelligent machines. Cognition; sensor technology; parsing; information representation; convolutions; software and hardware environments.

5.328G Control and Modelling of Mechanical Systems 1

As for 5.329G.

5.329G Control and Modelling of Mechanical Systems 2

Prerequisite: 5.328G or equivalent.

Development of modelling techniques using both digital and analogue computation, with special emphasis on the representation of non-linearities. Typical examples of mechanical systems.

5.336G Random Vibrations

Assumed knowledge: 5.331 or 5.333 or equivalent.

Probability, vibration theory review, linear mechanical system response to random vibrations. Statistical characteristics: auto-correlation, spectral density, convolution, narrow band processing, consistency, applications.

5.338G Mechanical Vibration Analysis

Assumed knowledge: 5.303 and 5.423 or equivalent. Excluded: 5.334 5.348, 5.335G and equivalent.

Means of controlling inertia-induced vibration in machinery. Frequency response functions of damped and undamped systems;
laboratory classes. Eigenvalues and eigenvectors for multi-degree of freedom systems, including geared shaft systems. Beam and plate vibration via finite element analysis, with laboratory experiments to verify finite element results.

5.403G Experimental Stress Analysis C3
Excluded: 5.401G.

5.414G Finite Element Applications C3
Excluded: 5.419, 5.823.

5.415G Stress Analysis for Mechanical Engineering Design 1 C3
Assumed knowledge: 5.423 or equivalent. Excluded: 5.434 and equivalent.

Plates, shells: primary, secondary and peak stresses, relations to strength. Pressure vessels. Current design philosophies:

5.416G Stress Analysis for Mechanical Engineering Design 2 C3
Assumed knowledge: 5.423 or equivalent.

5.417G Mechanics of Fracture and Fatigue C3
Excluded: 5.426G and 5.429G and equivalent, 5.424.

5.601G Computational Fluid Dynamics C3

5.602G Numerical Fluid Dynamics and Heat Transfer C3
Assumed knowledge: 5.623, Excluded: 5.717G, 5.635.

5.616G Internal Combustion Engines 1 C3
Excluded: 5.643.

5.617G Internal Combustion Engines 2 C3
Prerequisite: 5.615G or 5.616G or equivalent.

5.621G Gasdynamics 1 C2
Excluded: 5.653, 5.811.

One dimensional steady flow: isentropic channel flow, normal shock waves, supersonic wind tunnels and diffusers. Two dimensional steady flow: oblique shock waves, Prandtl-Meyer expansions, nozzles, airfoils. One dimensional unsteady flow: moving waves, reflections, explosions in ducts, shock tubes; method of characteristics, internal flows, piston and valve effects.

5.622G Gasdynamics 2 C2
Prerequisite: 5.621G or equivalent.

5.631G Lubrication Theory and Design 1 C2
Excluded: 5.6342.

History of lubrication, types of bearing and bearing operation, nature of surfaces and their contact, modes of lubrication, prop-
erties of lubricants, viscous flow in pipes and channels, measurement of viscosity, infinitely long and short bearing approximations, one dimensional analysis of short bearing, other slider bearing geometries, the effect of end leakage, hydrostatic or externally pressurised bearings, squeeze films.

5.632G Lubrication Theory and Design 2
Prerequisite: 5.631G or equivalent.

5.633G Acoustic Noise 1
Excluded: 5.3541.
Acoustic plane wave equation, standing waves, energy density, intensity, decibel scales. Human response, annoyance and damage criteria. Transmission between media, absorbing materials. Mufflers, Three dimensional wave equation. Transmission in ducts. Room acoustics.

5.634G Acoustic Noise 2
Prerequisite: 5.633G or equivalent. Excluded: 5.3542.

5.655G Energy Conservation and System Design
Examination of some existing systems, assessment of their energy losses and their improvement by tuning. Alternative energy sources and their availability, energy utilization and efficiency in various systems. Environmental aspects, assessment of emissions, means of improvement. Economically viable energy technology under present conditions. Expected trends in energy technology in the short and long term. A number of case studies.

5.700G Power Production Assessment
Assumed knowledge: 5.630 and 5.636 or equivalent.
Components of hydro, coal and nuclear fuel power station designs. Economics of power production. Operation and maintenance of costs. Efficiency and heat balance calculations of thermal power stations. Comparison of electrical energy production costs of different power stations.

5.715G Two Phase Flow and Heat Transfer
Assumed knowledge: 5.636 or equivalent. Excluded: 5.664.

5.722G Solar Thermal Energy Design
Excluded: 5.644, 5.720G and equivalent.

5.731G Analysis of Heat Transfer
Assumed knowledge: 5.636 or equivalent. Excluded: 5.716G, 5.717G.

5.732G Power Plant Engineering
Assumed knowledge: 5.620, and 5.626 or equivalent.

5.753G Ambient Energy Air Conditioning
Assumed knowledge: 5.636 or equivalent.

5.755G Refrigeration and Air Conditioning 1
Assumed knowledge: 5.555G Refrigent and Air Conditioning 1
5.756G Refrigeration and Air Conditioning 2  
Assumed knowledge: 5.755G or equivalent

5.757G Refrigeration and Air Conditioning Applications  
Industrial, commercial and domestic applications of refrigeration and air conditioning. Refrigeration technology. The science and technology of foods. Building design and construction.

5.759G Refrigeration and Air Conditioning Experimentation  
Prerequisites: 5.755G, 5.756G. Co-requisites: 5.151G, 5.152G.
Performance testing and system evaluation of multistage R22/brine system, R12 forced draft cooler system and dual duct air conditioning plant. Instrumentation, data acquisition and control of refrigeration plant. Use of calorimeter rooms for testing and rating of equipment. Transient performance characteristics of direct expansion coil and system, under different ambient conditions. Group project involving the designing, building, commissioning, instrumenting and testing of refrigeration and air conditioning equipment.

5.909G Project  

5.912G Naval Hydrodynamics 1  
Assumed knowledge: 5.630 or 10.411A or equivalent.
As for 5.913G

5.913G Naval Hydrodynamics 2  
Prerequisite: 5.912G or equivalent.
Advanced treatment of topics selected from: ship waves and ship resistance; ship manoeuvrability; ship motion and seakeeping; hydrofoil and propeller theory; aero and hydrodynamics of surface effect machines.

5.918G Project Report  

5.936G Thesis  

6.050G Occasional Elective  
This syllabus changes from one occasion to the next, allowing presentation of a modern topic at graduate level, particularly by visiting academics of eminence.

6.060G Microprocessor Systems  
Basic computer architecture: fetching and executing instructions; Motorola 6809 registers and instructions; assemblers, addressing modes; bus waveforms; interfacing to a bus; parallel interfacing; the PIA; handshaking: interrupts; critical regions; buffered I/O; stack data frames; recursion; serial interfacing; the ACIA; direct memory access (DMA); dynamic memory; Microprocessor examples.

6.070G Digital Image Processing Systems  
Excluded: 6.467G.
The fundamentals of digital image processing with topics selected from the following: Visual perception and the image model, transforms, enhancement, sharpening and smoothing, restoration, encoding, segmentation, reconstruction of images from projections and tomography, satellite imaging and imaging in remote sensing; image processing hardware and systems; picture processing; measurement and inspection.

6.150G Theory of Optical Fibres and Optical Signal Processing  

6.164G Antenna Design and Applications  
Pre-requisite: 6.167G.
Principles of phased arrays and reflector antennas with some emphasis on space-borne and ground-terminal antennas for satellite communications. Analysis and synthesis of phased array, null steering theory. Single and dual reflector antennas, offset-reflector systems, optimization techniques. Effects of satellite orbital saturation on design of ground terminal antennas. Monopulse tracking antennas. Antenna tolerance theory.

6.167G Propagation and Transmission of Electromagnetic Waves  
Fundamental concepts and analytical techniques of guided wave propagation. Waveguide theory; coaxial lines, rectangular and circular waveguides and surface wave propagation. Poynting theorem, power flow, impedances. Wave attenuation: evanescent modes, conductor and dielectric losses. Phase and group velocities, dispersion. Numerical techniques; the finite differ-

6.169G Microwave Circuits: Theory and Techniques

6.170G Microwave and Optical Devices

Principles and applications of microwave amplifying and control devices. Includes microwave transistors, Gunn and impatt diodes and recent developments in ultra high speed transistors. Principles and applications of optical sources and detectors. Includes lasers, LEDs, electro-optic and acoustic-optic modulators and switches, optical detectors.

6.205G Power System Planning and Economics

Review of conventional planning techniques and their limitations. Introduction of a novel approach based on welfare maximisation. Examples of its application to coordinated supply and demand side planning in problems - such as demand forecasting, supply reliability, maintenance scheduling, transmission planning and demand management.

6.206G Power System Operation, Control and Protection

Control of system frequency: system frequency dynamics, load frequency control of interconnected systems, automatic generation control. Unit commitment and economic despatch. Control of system voltage and reactive power. Problems of power system operation: security of supply, load forecast, power flow control, fault level containment, stability. Protection of power system and transmission lines: main protection, back up protection, system protection under emergency. Protection in distribution systems.

6.221G High Voltage Technology

Introduction to the technology involved in the design and testing of high voltage power system equipment. Study of the practical applications of relevant materials, with emphasis on properties of insulation systems (gases, liquids and solids) and the interaction of the materials in non-uniform fields. Methods of testing under steady state, AC and DC, and surge conditions are incorporated in the laboratory work. Design examples are taken from insulator, bushing, cable, power capacitor, transformer, rotating machine and switchgear technologies.

6.224G Partial Discharges in Electrical Insulation

Assumed knowledge: 6.202 or 6.222 or equivalent.

Aspects of partial discharge phenomena and their effect on electrical insulation. The physical processes involved in partial discharges plus the interpretation of results from measurements on simple and complex apparatus, such as power cables, power capacitors, rotating machines and transformers. Techniques studied include digital based systems with particular emphasis being given to practical applications, in order to relate theoretical concepts to measurements which are subject to laboratory or on-site limitations.

6.227G Insulation Performance in Electrical Plant

Assumed knowledge: 6.202 or 6.222 or equivalent.

Demonstrations and projects to support the lecture material.

6.228G Power System Equipment

Assumed knowledge: 6.202 or equivalent.

Operating characteristics and design features of the major equipment components of a power system. Includes a general treatment of equipment rating, thermal design, electrodynamic forces, equipment protection and data acquisition. Specific items of equipment include power transformers, instrument transformers, switchgear, overhead lines and underground cables, surge arrestors, gas insulated systems, power factor correction equipment and alternators. Protection of electrical equipment. Effects of electromagnetic fields on personnel.

6.229G Fields and Materials

General description of the inter-relationship between the different types of fields (electric, magnetic and thermal) and materials when used in various areas of electric power engineering. Topics include: a general coverage of dielectric, conducting, magnetic and thermal materials; solution of Poisson's Laplace's and Fourier's equations for simple geometries and calculation of electric, magnetic and thermal fields, including boundary effects; a selection of typical applications from thermal rating, electric heating, contact effects, laser action, surface electron emission, etc; a brief outline of some measurement techniques applicable to the above.

6.242G Power System Analysis

6.250G Power Elective 1

6.251G Power Elective 2 C3
As for 6.550G Solid State Electronics Elective.

6.336G Digital Communication Networks 1 C3
Excluded: 6.652.

6.337G Digital Communication Networks 2 C3
Prerequisites: 6.652 or 6.336G.

6.338G Television Systems C3

6.340G Communication Electronics C3
Assumed knowledge: 6.0316 or similar.
Electronic aspects of modern analogue and digital communication systems. Topics selected from: electronic systems design; electromagnetic compatibility and interference; electronic system noise; analogue modulators, demodulators, frequency conversion circuits, AM and FM transmitters and receivers; television electronics; phase locked loops; switched capacitor and other practical filter technologies; surface acoustic wave devices.

6.341G Signal Processing 1—Fundamental Methods C3
Excluded: 6.042.
Fundamental principles of the analysis and processing of analogue and digital signals with emphasis on digital methods. Generalized Fourier analysis; convolution, correlation, energy and power density spectra for signals and linear systems. Sampling, the discrete Fourier transform (DFT) and fast Fourier transform (FFT) algorithms. Fundamentals of filter design and realization of analogue and digital filters, including active filters and special purpose programmable digital signal processors. Digital processing of analogue signals, filter stability, sensitivity and finite word length effects in the realization of digital filters.

6.342G Signal Processing 2—Advanced Techniques C3
Prerequisite: 6.341G or similar.
Advanced techniques of digital signal processing with applications in communications and control, radar and sonar and the processing of speech, seismic signals and images. Topics selected from: digital methods for sampling rate changes, advanced FFT algorithms and the chirp z-transform algorithm. Advanced digital filtering methods. Analysis of random signals and noise in linear systems and non-linear devices. Estimation and measurement of power density spectra. Linear prediction and parameter estimation for speech analysis and spectrum estimation. Mean-square estimation and adaptive filtering for the detection and estimation of signals in noise, equalization, echo and noise cancelling and deconvolution. Nonlinear techniques; homomorphic signal processing and cepstral analysis, median filtering, etc. Short-time spectral analysis and time-frequency distributions. Two-dimensional signal processing.

6.343G Digital and Analogue Communications C3
Co-requisite: 6.042 or 6.341G or similar. Excluded: 6.323 or similar.
Prerequisite or co-requisite for 6.347G Digital Communications and 6.348G Optical Communications.
Fundamentals of modern telecommunications systems, including theoretical and practical aspects of: linear and non-linear analogue modulation (AM, SSB, FM, etc), digital signal transmission, pulse code modulation, computer communication, effects of noise in analogue and digital systems, error control, multichannel systems (FDM, TDM, etc), synchronization, relay systems, optimum transmitters and receivers.

6.347G Digital Modulation C3
Prerequisite: 6.343G or similar.
Advanced and unified treatment of digital transmission systems. Baseband ASK digital communication systems including intersymbol interference, eye patterns, power spectral density, probability of error estimates and bounds, Nyquist criterion partial response signals (eg simple and modified duobinary). Digital modulation including various types of shift keying modulation such as amplitude, amplitude and phase, phase, frequency and minimum shift keying (ASK, DPSK, DAPSK, PSK, FSK and MSK), power spectral density, probability of error, signal constellations and system comparison. Equalization including linear, non-linear, adaptive and automatic equalization and Viterbi decoders.

6.348G Optical Communications Systems C3
Prerequisites: 6.150G, 6.170G.
Calculation of bandwidth of single mode and multimode fibres. Review of transmitter and receiver circuits. Connection and launching efficiency between fibre and optical source. Fibre to

6.401G Computer Control Systems 1
An introduction to the use of CAD packages and coverage of the control theory necessary to understand the design of fundamental control systems. Selected computer packages, sampling and conversion, difference equation models, polynomial forms, z-transforms, differential equation models, operator forms, s-transforms, block diagrams, flow diagrams and state space models, connections between discrete and continuous models, classical continuous design, Root locus, Nyquist, Bode, classical discrete design, w-transforms, PID controllers, simple controller design schemes (time/polynomial), Dahlin Higham, pole placement, approximations, Smith predictor, deadbeat, stochastic observers, pre-whitening, stochastic processes, time domain, frequency domain, correlation, identification, moving average models.

6.403G Computer Control Systems 2
Prerequisites: 6.401G
Builds on the material of 6.401G, completing coverage of basic material considered necessary for modern control system synthesis and design. Revision of model forms: discrete-continuous, polynomial-state space. Observability, controllability, observers — deterministic, stochastic processes, stochastic models, innovation models, prediction, multivariable PI tuning, linear quadratic regulator design, Kalman filtering, stochastic control, LGQ, disturbances, measured disturbances, feedforward control, estimated disturbances, identification, simultaneous estimation of states and parameters, simple adaption, servomechanism problems, cascade control, multiple sampling rates, non-linear elements.

6.404G Real Time Computing and Control
Prerequisites: 6.401G or assumed knowledge equivalent to 6.432 or 6.413
Examines the implementation of modern control techniques and associated instrumentation using distributed computers. Practical hardware aspects, including measurement and actuation, data conditioning, acquisition and transmission, microprocessor devices, and other distributed computing components. Commercial realisations ranging from PLCs to full process control computing systems. Software: executive operating systems, concurrency, control algorithms, numerical problems, languages and development tools in the real-time context. Design of the man-machine interface using interactive computer display systems. The role of simulation and other CAD tools. Steps of engineering development from concept to commissioning. The viewpoint of industrial design is maintained throughout.

6.405G Topics in Digital Control
Prerequisites: 6.401G, 6.403G.
Possible modules include: identification, estimation, multivariable systems, robust control, optimization, adaptive control, biomedical applications, instrumentation and sensors, robotics, industrial/design case studies, non-linear identification, non-linear control, variable structure systems, expert systems and others to be decided.

6.406G Advanced Control Topics
Prerequisites: 6.401G, 6.403G.
From one to three models, covering advanced control theory, with an emphasis on applications. The modules are not limited to digital control. Typical modules include: identification, estimation, multi-variable systems, robust control, optimization, adaptive control, biomedical applications, instrumentation and sensors, robotics, industrial/design case studies, non-linear identification, non-linear control, variable structure systems, expert systems and others to be decided.

6.433G Design of Advanced Microprocessor Systems
Prerequisite: 6.060G.
Aims to familiarize the systems designer with the architecture and applications of the rapidly expanding family of microprocessor hardware support devices for dedicated control functions. Topics include: review and comparison of bus protocols of common systems: architecture, programming and applications of specialized system support devices and peripheral control chips; single chip microprocessors, architecture and applications to dedicated control tasks. Laboratory work includes individual design projects involving typical systems application of these devices.

6.457G Cybernetic Engineering
The genesis of cybernetics; fundamentals of cybernetic engineering; machines modelled on life and their evolution to robots. Topics include: biological information transmission, memory and efficiency with aspects of biochemical coding and control, genetic and neural; basics of brain models and the development of pattern recognition techniques, learning machines and syntactic structures; includes the Perceptron view and brain modelling; the Albus approach to robotics, anthropomorphic robots; the social consequences of the dual evolution of robots.

6.468G Computer Display Systems and Interactive Instrumentation
Prerequisite: 6.060G.
Man-machine-process communication and control, and associated microprocessor based instrumentation. Review of appropriate analog and digital technology. Microcomputer hardware and programming for interactive communication using both machine and high-level languages. Display devices, operating principles and performance limitations. Hardware and software
techniques for computer-generation and processing of pictures. Colour and movement. Interactive design and graphics creation. The geometry of transformations and projections. Light pens and other input devices.

6.469G Robot Vision C3

Prerequisite: 6.070G or equivalent.

Material oriented towards image understanding, scene analysis and world models for robots incorporating vision; including imaging techniques and geometries for vision, modelling the imaging process and image understanding, edges, range information, surface orientation, boundaries and regions, motion and optic, flow, texture, structural description, matching and inference, vision robotics.

6.470G Robotics, Automation and Productivity Technology C3

Principles of Robotics relevant to future trends in automating the manufacturing process. Such aspects as arm configurations, dynamics and control with relevant sensing methods; image understanding for inspection, assembly and control together with trends in artificial intelligence for Robotics are discussed.

6.481G Introductory Physiology for Engineers S1 L2T2 C3

Excluded: 6.402.

An introduction to biophysics and physiology for Engineers. Cells, tissues and organ systems with emphasis on their functional and regulatory characteristics and their interaction. An introduction to computer models of physiological control systems demonstrating their value in understanding the dynamics of complex neural, hormonal and circulatory responses to changes in homeostasis.

6.484G Biological Signal Analysis C3

Excluded: 6.341G.

Digital computer methods of extracting information from biological signals using filtering and averaging, expectation density functions, correlation functions, spectral analysis and other techniques. Methods of constructing models of biological systems.

6.550G Solid State Electronics Elective C3

This syllabus changes from one occasion to the next, allowing presentation of a modern topic at graduate level, particularly by visiting academics of eminence.

6.573G Advanced Semiconductor Devices C3

Excluded: 6.512.

Theory and operating characteristics of a range of semiconductor devices including bipolar diodes and transistors, MOS devices and circuit connections, charge coupled devices, solar cells, light emitting diodes and semiconductor lasers.

6.575G Integrated Circuit Technology C3

6.577G Integrated Circuit Design C3

Assumed knowledge: 6.031E or 6.322.

An advanced treatment of the design of integrated circuits with emphasis on the relationships between technology, device characteristics and circuit design. Includes properties and modelling of bipolar and MOS circuit components, circuit analysis and simulation, layout rules, analog functions such as operational and power amplifiers, multipliers, D/A and A/D converters. Analog MOS circuits. Digital circuits include gates, compound functions, RAM, ROM, speed and power analysis. Economics and yield analysis for MSI, LSI and VLSI devices.

6.578G Solar Energy Conversion C3

Harnessing of sunlight by using solar cells to convert it directly to electricity. The properties of sunlight and of the semiconductors used in solar cells are reviewed and their interaction described. Factors important in the design of solar cells and the current technology used to produce cells. Likely future developments in this technology. System applications ranging from systems which are currently viable economically to residential and central power systems which may be a possibility for the future.

6.654G Digital Systems C3

Computer architecture, implementation and realization. Use of hardware description languages for the analysis, design and specification of arithmetic units, storage and control Microprogramming techniques.

6.655G Computer Organization and Architecture C3

Assumed knowledge: 6.031E or 6.613.

Basic principles of computer architecture. A comparative study of the architectural features of a number of significant computer systems.
Graduate Study: Subject Descriptions

6.659G Data Bases and Networks

Data base management systems: data models; relational and network structures; data description languages; data manipulation languages; multi-schema structures. Data integrity and security; recovery; privacy. Network: economics; control and technological considerations; digital data transmission; error detection and recovery; network configurations; circuit switching, packet switching; communication protocols, current international standards; data compression; encryption and decryption.

6.660G Design and Analysis of Algorithms

Techniques for the design and performance analysis of algorithms for a number of classes of problems. Analysis of algorithms: order notation, recurrence equations, worst case and expected order statistics. Design of efficient algorithms: recursion, divide and conquer, balancing, backtracking algorithms, branch and bound, dynamic programming; set manipulation problems; fast search algorithms, balanced optimal and multi-way trees; graph representations and algorithms; pattern matching algorithms, NP — complete problems. Design and specification of programs: modularization, interface design, introduction to formal specification techniques.

6.661G Business Information Systems

6.663G Operating Systems

Introduction to operating systems via an intensive case study of a particular system, namely the UNIX Time-sharing system which runs on the PDP11 computer. Includes system initialization, memory management, process management, handling of interrupts, basic input/output and file systems. A comparison of UNIX with other operating systems. General principles for operating system design.

6.664G Compiling Techniques and Programming Languages

6.665G VLSI System Design
Assumed knowledge: Background in electronic design equivalent to 6.532.

The design and implementation of very large scale integrated systems, using both nMOS and CMOS technologies. The use and construction of CAD tools, including simulators, layout generators, and plot utilities. MOS failure modes, testing and design for testability. A study of some digital subsystems, digital architectures and design styles will be carried out. An integral part of the course is an MSI/LSI design project. Selected project designs will be submitted for fabrication and returned to students for testing.

6.666G Artificial Intelligence
Assumed knowledge: Background to final year Computer Science level, equivalent to subjects 6.613, 6.642, 6.632 and 6.643.

Overview of current research in Artificial Intelligence. Some of the topics are: the representation of knowledge, search techniques, problem solving, machine learning, expert systems, natural language understanding, and languages for Artificial Intelligence. Students are also required to prepare a report and give a seminar on one aspect of A.I. such as: robotics, vision, language understanding, speech recognition, A.I. languages, learning.

6.667G Programming Languages: Fundamental Concepts
Assumed knowledge: Background to final year Computer Science level, equivalent to subjects 6.631, 6.642, 6.632 and 6.643.

Fundamental aspects of programming language definition, semantics and implementation models. The current approach uses denotational semantics. Denotational semantics is a formal method for describing the abstract meaning of programming languages.

6.668G Computer Graphics
Assumed knowledge: Background to final year Computer Science levels, equivalent to subjects 6.613, 6.642, 6.632 and 6.643.

Background to use and evaluate existing graphics packages, or to write a graphics package of your own. Topics include: vector, circle, and character generation, graphics hardware — raster, random scan, and storage tube displays, graphics display controller chips, basic 2D transformations, windowing, clipping, viewports, display segmentation, polygon clipping and filling, basic 3D transformations, perspective transformation, 3D clipping, hidden line and surface removal, graphical input devices. Existing graphics packages and standards are examined — Grotran, Core, GKS, and Tektronics.
6.669G Formal Specification

Assumed knowledge: Background to final year Computer Science level, equivalent to subjects 6.613, 6.642, 6.632 and 6.643.

Introduction to formal specification techniques; use of predicate logic and modern set theory to describe computing systems; Schema notation for structuring large specifications; Schema calculus to prove properties of specifications; Refinement techniques for transformation of specifications into executable programs; refinement of abstract data types.

6.670G Parallel and Distributed Computing Systems

Assumed knowledge: Background to final year Computer Science level, equivalent to subjects 6.613, 6.642, 6.632 and 6.643.

Parallelism (concurrency) in functionally coupled and distributed (communicationally coupled), hardware and software, computing systems. Topics will be selected from: Synchronisation, communication and arbitration; Computational paradigms — s; concurrent synchronous processing, lists, trees; Computational paradigms — p: vectors, arrays, APL tables, associative look-up structures; Synchronous bit-serial architectures: n-operands arithmetic, n-operands comparison; Pure pipeline and Systolic architectures and problems; Pipeline ALUs — multiple bus data path architectures; Memory-Processor architecture: super-imposed code-word processors, image identifiers, inner product processors; Object based systems; Languages with communication and processes; CSP, ADA C ++; Locally and geographically distributed systems: Failure tolerant computer systems.

8.401G Human Factors in Transport

Human capabilities, ergonomic principles, attitudes to new concepts, planning, the law; application to transport planning, design and implementation. The human as a processor of information, influence on design of transport facilities particularly information displays, signals signs and lighting.

8.402G Transport, Environment, Community

8.403G Theory of Land Use/Transport Interaction

Theoretical aspects of land use/transport planning. Basic concepts, data collection methods, systems models and equation of state (function behavioural, optimizing). Introduction to land use-transport modelling (land use, generation, distribution, modal assignment, network assignment, evaluation). Planning methodologies (short-, medium-, long-term; action planning, strategic planning; local, urban, regional national).

8.404G Local Area Transport Planning

Application of theoretical methods to local area planning. Local government planning and engineering; pedestrian planning, frontage land use problems, analysis of residential areas, industrial estates, shopping centres and recreational facilities, accessibility studies, environmental studies, parking studies.

8.405G Urban Transport Planning Practice

8.406G Regional Transport Planning S2 C3

The role of transport in economic and social development in regions including Third World countries; historical and contemporary analysis. Analytical techniques for regional planning. Planning practice, feasibility studies, evaluation methods. Case studies.

8.407G Transport Systems Design (Non-Urban) S1 C3

Process of location of road, railway and airport facilities. Data collection alternative routes, public discussion, methods, techniques, aids, plans and diagrams produced. Geometric form; differences between road, railway and airport carriageway layout. Optical guidance, design models, landscape, provision for surface-water signposting, fencing and posts.

8.408G Transport System Design (Urban) S2 C3

Types of urban transport facilities. Distributors, streets, bicycle routes, walk-oriented areas, bus lanes and rapid transit lanes, stops and change terminals, noise control. Minimum geometric form; speed range controls, provision for surface water on urban roads, landscape. Design of intersection and parking areas.

8.409G Interchange Design SS C3

Central projection theory and application to alignment design; perspective drawing methods, introduction to aerial and terrestrial photogrammetry, photomaps and photomontage as applied to transport facilities. Speed change lanes, exit and entrance terminals, ramp types, ramp speeds and design. Interchange location and layout, provision for surface water, signposting. Computer use. Safety measures during maintenance.

8.410G Highway Engineering Practice Part 1 S1 C3

8.411G Highway Engineering Practice Part 2 S2 C3

8.412G Economics for Transportation Studies S1 C3

8.413G Transport Economics S2 C3

Cost and price analysis for each of the transport modes (road, rail, air and sea). Welfare analysis and taxation theory with respect to transport. Economics of location, economics of land use models; regional trade model.

8.414G Transport Systems Part 1 S1 C3

8.415G Transport Systems Part 2 S2 C3

Historical introduction to transport systems and development of various transport modes, road (vehicles, pedestrians, cycles), conveyor, rail, sea and air. Analysis of the operational characteristics of vehicles in the transport modes of road, rail and air. Analysis of the requirements of the rights of way for each transport mode. Development of optimum criteria for the distribution of cargo and passenger traffic. Terminals and mode transfer facilities. Development of system operational models. Energy consideration, new systems.

8.416G Traffic Engineering F C6

8.417G Transport and Traffic Flow Theory F C6

Analysis of deterministic and stochastic models of the traffic stream. Topics covered include the following: Definition and measurement of traffic stream parameters. Space and time distribution of speed. Overtaking models and the moving-observer method. Fundamental diagram of traffic. Car-following theory. Headway and counting distributions. Introduction to queueing theory. Simulation techniques. Signalized and unsignalized intersections.

8.418G Statistics for Transport Studies Part 1 S1 C3

8.419G Statistics for Transport Studies Part 2  
Assumed knowledge: 8.418G 

8.702G Network Methods in Civil Engineering  SS C3 
Graphs, flow-in networks, optimal paths, critical path schedule, resources levelling, simulation networks, stochastic networks, project management, further applications.

8.703G Optimization Techniques in Civil Engineering  SS C3 
Search, linear programming, non-linear programming, geometric programming, calculus of variations, maximum principle, applications.

8.704G Stochastic Methods in Civil Engineering  SS C3 
Queueing, Markov processes, theory of storage, reliability, renewal, application, transportation and allocation.

8.705G System Modelling  SS C3 
The development of system models for specific problem areas and decision positions. Problem environment, goals, objectives, and definition established by field contact and team discussion, information flow requirements and the design of user-oriented decision processes. Class size is limited to selected students.

8.706G Experimental Methods In Engineering Research  SS C3 
Purposes of experimentation in engineering research. Design of experiments; factorial and other designs; replication. Analysis of experimental data: analysis of variance and covariance; special analysis; other statistical methods. Decision theory.

8.707G Numerical Methods in Civil Engineering  SS C3 

8.710G Advanced Topics in Optimization in Civil Engineering  SS C3 
Special studies in optimization in Civil Engineering design and construction to be offered from time to time by appropriate specialists.

8.714G Advanced Topics in System Modelling  SS C3 
Special studies in system modelling to be offered from time to time by appropriate specialists.

8.723G Construction Design  SS C3 
Design of field services and structures; compressed air services, cofferdams, ground anchors, floating plant, formwork and falsework, bridge centring, well-points and dewatering systems.

8.724G Construction Technology  SS C3 
A selection of topics from: drilling, blasting techniques, tunnelling, rock-bolting and other ground support, earth/rock transport, harbours, railways, dams, bridges, structural steelwork techniques, pipeline construction, foundation grouting, compressed air work.

8.725G Construction Accounting and Control  SS C3 

8.726G Construction Law and Professional Practice  SS C3 

8.727G Construction Planning and Estimating  F C6 
Project initiation and development, feasibility studies, planning and estimating procedures, contract administration; estimating cost of labour plant and materials, indirect cost and overheads, profit; construction administration. Preparation of cost estimate for a major civil engineering project.

8.728G Design of Construction Operations  F C6 
Heavy equipment, labour intensive, and composite operations; spatial layout and material flow concepts; the modelling of oper-
ations at the micro, macro, and systems level; engineered estimates and productivity prediction models; analysis of construction operations by time-lapse methods; field methods at foreman, superintendent, engineer, and project manager levels; field studies of specific construction operations.

8.731G Project Management SS C3

A problem-oriented approach to Project and Mission Management; the nature of engineering and construction projects; the project team; behavioural aspects of project management; the organization and management of project resources; short term field planning and management strategies.

8.732G Advanced Project Management Theory SS C3

A theoretical and formative approach to Project and Mission Management; management strategies and project success evaluation techniques; organizational and behavioural aspects of the project team structure; behaviour norms and their impact on project team motivation; project management decision processes; case studies in project management.

8.753G Soil Engineering SS C3

8.776G Rock Mechanics SS C3

Description of rock mass and its effect on soil properties. Principles of preloading of soils and its effect on foundation behaviour. Design and construction aspects of soil improvement techniques including lime and cement stabilization, chemical grouting, vertical drains, dynamic consolidation, vibroflotation sand and gravel piles, lime piles, freezing, electro-osmotic dewatering. Design and construction of diaphragm walls, ground and rock anchors.

8.777G Numerical Methods in Geomechanics SS C3

Fundamentals of finite element and boundary element methods; application to practical geotechnical design and case studies; deformation and flow problems; linear and non-linear analysis; application to underground opening, stability of slopes, foundations, mining excavation; seepage and consolidation soil-structure interaction problems; earth pressures, retaining walls and buried pipes, thermal stress analysis.

8.781G Advanced Concrete Technology 1 SS C3

8.782G Advanced Concrete Technology 2 SS C3

8.783G Pavement Materials SS C3

8.784G Pavement Design SS C3

8.785G Pavement Evaluation and Maintenance SS C3

8.786G Industrial and Heavy Duty Pavements SS C3

Functions of industrial and heavy-duty pavements. Port pavements, container facilities, bulk cargo areas, mine haulage roads,

8.788G Site Investigations

Engineering geology mapping and terrain classification. Drilling, trenching and sampling of rock and soil. In-situ testing of soil and rock. Laboratory testing of soil and rock. Assessment of design parameters. Instrumentation to measure pore pressure, stress, displacement.

8.790G Stability of Slopes

Stability of natural and constructed slopes in civil and mining engineering. Stability analysis; stabilization methods and design; monitoring. Design of slopes in soft ground, soil and rock, and in partially saturated slopes; design of open cut mines. Probabilistic methods.

8.791G Foundation Engineering 1

Stress distribution beneath foundations, settlement analysis, design of shallow footings, design of pile foundations, cast in-situ piles, foundation on shrink-swell soils, lateral earth pressures, foundations on rock, site investigations.

8.792G Foundation Engineering 2

Advanced consolidation theory, non-linear behaviour, soil structure interaction, design of rafts and piled rafts, analysis and construction of piled foundations, steel piles, braced cuts, temporary support of excavations, design of foundations for dynamic loading, machine foundations.

8.793G Geomechanics

The fundamentals of the effective stress concept, clay mineralogy, seepage analysis and Laplace equation method of fragments, fundamentals of liquefaction and cyclic mobility, basic and advanced consolidation theory including Terzaghi's 1D theory, nonlinearity and Biot's theorem critical state soil mechanics theory, hyperbolic model, fundamentals of continuum stress analysis, theory of elasticity, constitutive relationships and failure criteria for real soils and rocks and soil plasticity.

8.802G Elastic Stability 1

Euler strut; uniform and non-uniform cross sections. Eccentric loading; stressing beyond the elastic limit. Struts continuous over several supports. Stability of frames.

8.803G Elastic Stability 2

Energy methods of formation of stability problems. Approximate methods. Thin-walled open section struts; lateral buckling of beams; bending and buckling of thin plates.

8.804G Vibration of Structures 1

Review of basic aspects. Analysis of lumped mass systems with various degrees of freedom. Vibration in beams and other continuous structures.

8.805G Vibration of Structures 2

8.806G Prestressed Concrete 1

Historical development. Methods of prestressing. Elastic analysis and design. Flexural capacity and shear capacity of prestressed elements.

8.807G Prestressed Concrete 2

8.808G Prestressed Concrete 3

Partially prestressed concrete; cracked section analysis; crack control and deflection calculations; determination of appropriate level of prestress; strength calculations. Rational design procedures for prestressed members. Continuous beams; secondary moments; practical design procedures. Prestressed slabs; two-way slabs; flat slabs; load balancing approach to design, effect of tendon distribution; design procedures, flexural and shear strength; deflections.

8.809G Reinforced Concrete 1

Historical development. Methods of analysis and design, including limit state concepts. Analysis and design for bending, compression and combined bending and compression. Slenderness effects in columns. Shear and torsion. Serviceability requirements.

8.810G Reinforced Concrete 2

8.811G Reinforced Concrete 3

8.812G Plastic Analysis and Design of Steel Structures 1
The perfectly plastic material, the plastic hinge; plastic collapse of beams and frames; upper and lower bound theorems; introduction to design principles and methods.

8.813G Plastic Analysis and Design of Steel Structures 2
Estimation of deflections; factors affecting plastic moment; shakedown; three-dimensional plastic behaviour; minimum weight design.

8.814G Analysis of Plates and Shells

8.817G Experimental Structural Analysis 1
Dimensional analysis and principles of similitude, model analysis and design of models. Instrumentation and special methods of measurement. Evaluation of data.

8.818G Bridge Design 1

8.819G Bridge Design 2

8.820G Structural Analysis and Finite Elements 1

8.821G Structural Analysis and Finite Elements 2

8.822G Structural Analysis and Finite Elements 3
Application of the finite method to analysis of structures. Verification of the results of standard computer programs. Structural stability and vibration of structures.

8.830G Hydromechanics
General equation of fluid motion, potential flow, conformal mapping, laminar flow, Navier-Stokes equations; turbulence, shear flows, jets and wakes, boundary layers, turbulent mixing, diffusion, air entrainment, cavitation, stratification.

8.831G Closed Conduit Flow
Theories for energy loss in conduit flows, roughness at pipe walls and tunnels, design applications. Cavitation in conduits, transport of waterborne mixtures in pipes, accuracy of flow measurement in pipe lines.

8.832G Pipe Network and Transients

8.833G Free Surface Flow
Theory of wave motion in open channels. Application of theory to design of hydraulic structures, spillways, control gates, energy dissipators, channel transitions. Use of hydraulic models.

8.835G Coastal Engineering 1
Theory of periodic waves as applied to tides and wind generated waves in water of varying depths. Wave and tide prediction.

8.836G Coastal Engineering 2
Wave forces on structures, shore processes and beach erosion. Estuarine hydraulics, wave and tide models.

8.842G Groundwater Hydrology
Confined and unconfined aquifers, analogue and digital models of aquifer systems, water movement in the unsaturated zone, recharge, groundwater quality, sea water intrusion.

8.843G Groundwater Hydraulics
Mechanics of flow in saturated porous materials, steady and unsteady flow to wells, leaky aquifers, partial penetration, multiple aquifer boundaries, delayed yield from storage, regional studies.

8.847G Water Resources Policy
Resource economics, water supply, water demand, multiple objective planning, multiple purpose projects, water law, water administration, case studies.

8.848G Water Resource System Design
Principles of the optimal design and operation of multiple purpose, multiple component, water resource system; evaluation of cost and benefits in complex and simple systems.
8.849G Irrigation
Soils, soil-water relationships, plants, climate, crop requirements; water budgets, sources, quality, measurement; irrigation efficiency. Design of irrigation systems, appurtenant works, distribution.

8.850G Drainage of Agricultural Land
Characteristics of drainage systems, steady and unsteady state drainage formulae, conformal transformation solutions, soil characteristics field measurement of hydraulic conductivity and soil water pressure, significance of unsaturated zone, practical aspects.

8.851G Unit Operations in Public Health Engineering
Theory of physical, chemical, biological, and hydraulic processes used in both water and wastewater treatment. Applications where these are common to both water and wastewater treatment.

8.852G Water Distribution and Sewage Collection
Water collection, transmission and distribution systems — layout design and analysis, reservoirs, pumping. Sewage collection design and analysis — capacities, corrosion, pumping.

8.855G Water and Wastewater Analysis and Quality Requirements
The effects of impurities in water and wastewater on its suitability for various beneficial uses, and methods used for detecting impurities. Analytical methods used in water and wastewater treatment for monitoring and process control.

8.856G Water Treatment
Application of processes and process variations used to upgrade the quality of water for specified uses, with particular reference to the treatment of water for municipal use.

8.857G Sewage Treatment and Disposal
Application of processes and process variations used to improve the quality of sewage effluent, and the disposal of the effluent. Re-use of effluents where applicable. Sludge treatment and disposal.

8.858G Water Quality Management
Fundamental concepts; systems approach to quality aspects of water resource systems; quality interchange systems; quality changes in estuarine, surface, and ground water. Quality management by engineered systems. Economic criteria relating to water use and re-use systems.

8.860G Investigation of Groundwater Resources 1
Occurrence and extraction of groundwater, investigation and drilling methods, systems approach, optimization techniques, conjunctive use studies, quality of groundwater.

8.861G Investigation of Groundwater Resources 2
Geophysical methods, remote sensing, photo-interpretation, arid-environment studies, analog models, case studies.

8.862G Fluvial Hydraulics
Unsteady and varied flow in non-uniform channels, secondary currents, sediment transport, channel morphology, scour and shoaling, river control works, modelling of fluvial processes.

8.863G Estuarine Hydraulics

8.864G Arid Zone Hydrology
Arid zone rainfall characteristics, data collection and instrumentation, runoff processes, infiltration, transmission loss, recharge processes, flood characteristics and design; water yield, storage of water; evaporation and evaporation suppression; sediment transport and measurements.

8.865G Arid Zone Water Resources Management
Water as a resource: demand for and supply of water; works and management to match demand with supply. Special features of the arid zone climate, water uses, quantification of demand quantities and qualities; measurement of flow rate, volume, quality. Engineering works: design, construction, operation and maintenance of work, including excavation tanks, dams, pipelines, pumps, windmills, engines and motors, troughs; costs; reliability; energy sources for pumping. Special practices: water spreading, irrigation including trickle irrigation; evaporation reduction, desalination.

8.866G Public Health Science
Impact of water and wastewater treatment on disease transmission. Monitoring methods used for pathogens and indicator organisms, structure and degradation of large molecules, biochemical pathways of anabolism and catabolism and the characterization of micro-organisms.
8.869G Instrumentation and Control in Water Supply and Wastewater Engineering  
S2 C3
Principles of primary elements, instrument response and reliability, control methods and the response of plants to control conditions in water and wastewater treatment and supply systems.

8.870G Hydraulics and Design of Water and Wastewater Treatment Plants  
S2 C3
Co-requisites: 8.856G, 8.857G or equivalent.
Application of hydraulic principles to flows within treatment plants. Selection and integration of unit processes required for water and wastewater treatment, plant layout, plant design including hydraulic profiles, the influence of flow and load variability, instrumentation and control strategies.

8.871G Water Supply and Sanitation in Developing Countries  
S2 C3
Prerequisites: 8.851G, 8.855G, 8.868G or equivalent.
Selection of appropriate technology for water supply and wastewater treatment and disposal to account for hot climates and low per capita incomes. Design basis for systems and the operating requirements.

8.872G Management of Wastes  
S2 L2T1 C3
8.872X Management of Wastes (external)  
S1 C3
Management and control strategies in waste management, legal requirements, local and overseas legislation, case studies of waste management.

8.873G Waste and Wastewater Analysis and Environmental Requirements  
S1 L1½T1½ C3
8.873X Waste and Wastewater Analysis and Environmental Requirements (external)  
S1 C3
Principles of analytical methods used in chemical analysis of wastes and wastewaters, sampling schemes, statistical evaluation of data, environmental requirements to prevent pollution.

8.874G Waste Management Science  
S1 L2T1C3
8.874X Waste Management Science (external)  
S1 C3
Aspects of chemistry, biology and geology relevant to waste management, equilibrium and kinetic approaches, cell structure and metabolism, formation and classification of rocks and soils.

8.875G Hydrological Processes  
SS C3
Hydrological cycle, water and energy balances and circulation, precipitation process, interception, infiltration, storm runoff process, evaporation and transpiration, surface groundwater interactions, land use effects.

8.876G Applied Hydrological Modelling  
SS C3
Introduction to hydrological models, deterministic catchment models, model calibration and verification, stochastic models, storage yield analysis for reservoir design, extension of records, stochastic reservoir analysis or identification of groundwater systems, conjunctive use systems.

8.877G Flood Design 1  
SS C3
Introduction to flood estimation, frequency analysis of hydrological data, design rainfall data, hydrograph analysis, storm rainfall-runoff relations, design flood estimation for small to medium sized catchments including the rational method, introduction to urban drainage design.

8.878G Flood Design 2  
SS C3
Introductory flood routing, loss rates, linear and nonlinear response, unit hydrographs, runoff routing, choice of method of flood estimation, urban drainage design.

8.879G Flood Design 3  
SS C3
Flood frequency analysis, river flood routing, catchment characteristics, estimation of extreme floods, synthetic unit hydrographs, design hydrograph methods, application of runoff routing models.

8.880G Groundwater Modelling  

8.901G Civil Engineering Elective 1  
SS C3
A Session 1 occasional elective on a civil engineering topic, selected according to current demand and availability of local and visiting specialists.

8.902G Civil Engineering Elective 2  
SS C3
A Session 2 occasional elective on a civil engineering topic, selected according to current demand and availability of local and visiting specialists.

8.909G Project  
C9
8.909X Project (external)  
A minor research investigation involving analysis and interpretation of data, or a critical review and interpretation of literature on a selected topic, or a design project.

8.918G Project Report  
C18
8.918X Project Report (external)
As for 8.909G but involving more substantial investigation.

8.936G Thesis

Mathematics

10.061G Advanced Mathematics for Electrical Engineers
Boundary value problems in partial differential equations. Selected topics from complex variable analysis, integral transforms, and orthogonal functions and polynomials.

10.361G Statistics
Probability theory, a survey of random processes with engineering applications — processes in discrete and continuous time. Markov processes, ergodicity, stationarity, auto-correlation, power spectra, estimation of auto-correlation and power spectra.

32.012G Biomedical Statistics
Statistical assessment of normal and diseased states. Statistical relationships between multiple variables used to assess disease; analysis of variance, regression, factor analysis, discriminant analysis. Progression of diseases over time. Diagnosis and assessment of treatments. Experimental design and sampling. Computation methods.

32.101G Mathematical Modelling for Biomedical Engineers
Model formulation and validation of ordinary and partial differential equations by analytical and numerical techniques.

Accounting

14.062G Accounting for Engineers
Problems related to industrial situations, and their relevance in decision-making. Manufacturing and cost accounts, budgeting and budgetary control, cost analysis and control and profit planning.

Industrial Relations and Organizational Behaviour

30.565G Industrial Relations A
Prerequisite: Nil.
Concepts and issues in Australian industrial relations at the macro or systems level, with overseas comparisons where appropriate. Labour movements and the evolution of employee-employer relations in the context of industrialization and change; origins and operations of industrial tribunals at the national and state levels: structure, operations and objectives of Australian trade unions and employer bodies; role of governments and their instrumentalities, nature of industrial conflict resolution such as arbitration and bargaining; and national wage policy.

30.935G Organization Behaviour
Prerequisite: Nil.
Relationships between individuals and organizations. Individual behaviour — personality, perception, motivation, learning, performance. Organizations as settings for individual behaviour — types of organization, work organizations. Interaction, groups and work groups. Organizational influences on work behaviour; structural factors and the design of work; reward systems; organizational cultures and social influences. The development of individual-organization relationships: participation, socialization, careers; conflict, stress and adaptation; organizational effectiveness.

Health Administration

16.901G Health Service Statistics 1
Statistical methods and theory; frequency distributions and their descriptions; an introduction to probability; principles of sampling; estimation and hypothesis testing; statistical decision theory; normal, Poisson and binomial distributions; linear regression; index numbers; time series analysis. Data drawn from the health planning field used to illustrate these methods.

Industrial Engineering

Industrial Engineering is a Department within the School of Mechanical and Industrial Engineering.

18.061G Industrial Experimentation 1
Design of experiments with reference to industrial problems; planning experiments; significance testing; simple comparative experiments, accelerated experiments; fatigue testing, tool life
testing; economic aspects of experimental design; analysis of variance or randomized block, latin square and factorial experiment designs.

18.062G Industrial Experimentation 2 C3
Regression analysis; use of orthogonal polynomials in regression analysis and analysis of variance; confounding in factorial design; response surfaces and determination of optimum conditions.

18.074G Industrial Management C3
Definitions of management; evolution of management thought, classical, quantitative and behavioural schools; interactions between organizations and their environment. The planning process; strategic and tactical planning, developing planning premises, nature of managerial decision making, quantitative aids, management by objectives. Organizational structures; coordination and spans of control, the informal organization, authority delegation and decentralization, groups and committees, managing organizational change and conflict. Motivation, performance and satisfaction; leadership, interpersonal and organizational communication, staffing and the personnel function. The control process; budgetary and non-budgetary methods of control, use of management information systems.

18.076G Decision Support Systems C3
Perspectives on organizational and individual decision making; basic philosophy of Decision Support Systems; knowledge representation techniques; DSS models and operators; Data Base Management systems in DSS; iterative design techniques; the DSS/user interface; practical design and implementation of a Decision Support System.

18.171G Inspection and Quality Control C3
Economics of measurement; advanced measuring and inspection methods; non-destructive testing; quality control systems; sampling by attributes and variables; standardization; case studies; process capability and variability; machine tools acceptance testing; alignment procedures.

Assumed knowledge: 5.0721 or equivalent. Excluded: 18.224.

18.261G Computer Automation C3
Computer architecture including central processor, random-access memory, read only memory, input/output ports, peripherals, and the relationships between each. A systematic study of the requirements for interfacing computers to the real world. Machine code, assembly language, and high level languages such as BASIC or FORTRAN with a comparison of each for particular applications. Development of smallcomputer system for machine tool control, automated inspection, supervision, stock control, etc.

18.360G Ergonomics C3
Applied anatomy and kinesiology, anthropometry; application to work place arrangement, seating and bench design, tool and equipment design, lifting techniques, consumer product and architectural design. Physiological and psychological aspects of work and fatigue; measurement of energy consumption, limits to energy expenditure at work, static muscular fatigue, boredom. Environment effects; natural and artificial lighting arrangements, problems of perception, colour, noise and vibration, preventive measures; heat and ventilation, thermal regulation in humans, criteria for comfort, effects of pollutants. Man-machine interface. Displays, machine control, reaction times, vigilance. Applications of ergonomics to occupational safety and health. Ergonomic research methodology.
Note: A project forms a substantial proportion of the assessment for this subject.

18.371G Factory Design and Layout C3
Assumed knowledge: 18.303 or 18.380G or equivalent.
Production requirements: processes, machines and storage; optimum factory size, multiple factories. Plant location: single and multiple factories and warehouses; location models and economic analysis. Factory design: function; appearance; economic factors; environmental factors. Materials handling systems: influence on layout; economic choice between alternatives; long-distance transport. Layout design: by product: types of production line, means of line balancing, queueing theory applications. By process: travel charts and computer programs for optimization. Group technology. Practical aspects; provision of services and amenities; layout visualization methods.
Note: A project forms a substantial proportion of the assessment for this subject.

18.380G Methods Engineering C4

18.461G Design Production C4
Influence of manufacturing processes on design; design simplification and standardization; value engineering; economics of process selection; case studies.
18.464G Value Analysis and Engineering C3
Cost reduction through value analysis/engineering illustrated by case studies. Selection of projects to be studied, collection of information, creative problem solving, development of alternatives, functional analysis system technique, functional evaluation, cost-function relationship, decision making, communication and implementation of the proposal. Applications to engineering design and services.

18.465G Computer-Aided Manufacturing C3

18.471G Design Communication C2
Communication systems in design; aids to design communication; engineering drawing practice; standardization; interpretation of design information.

18.571G Operations Research 1 C6
Excluded: 6.646, 18.503, 18.551, 18.580G.
The formation and optimization of mathematical models. The development of decision rules. Some techniques of operations research such as mathematical programming, queueing theory, inventory models, replacement and reliability models and simulation. These techniques are applied to situations drawn from industrial fields, for example, production planning and control. Practical problems of data collection, problem formulation and analysis.

18.574G Management Simulation C3

18.579G Case Studies in Operations Research C3
Problems confronting management are seldom in the form of clear cut textbook type exercises; rather they are often ill-structured and ambiguous. A variety of such problems in operations research/management science is considered with emphasis on the common pitfalls that arise in solving real world problems and the comparison of different strategies for solution. Students are expected to prepare written reports on certain cases considered suitable for submission to management.

18.580G Operations Research C6
Excluded: 6.646, 18.503, 18.551, 18.571G.
The formulating and optimization of mathematical models. The development of decision rules. Some techniques of operations research such as mathematical programming, queueing theory, inventory models, replacement and reliability models; simulation. These techniques applied to situations drawn from industrial fields, eg production planning and inventory control. Practical problems of data collection, problem formulation and analysis.

18.671G Decision Theory C2
Excluded: 18.672G.
Theories of choice, value, risk and uncertainty for the individual and for multi-person situations. Statistical decision theory. Bayes and minimax rules. Optimum sampling.

18.672G Decision Theory for Industrial Management C3
Excluded: 18.671G.

18.673G Energy Modelling, Optimization and Energy Accounting C3
The analysis of energy systems using computer models. Applications of such models range from policy analysis at government level investment analysis within individual industries. Covers both the formulation of energy models and the techniques used to obtain optimized solutions, with examples from actual studies. Effects of uncertainty and the use of energy accounting as an analytical tool.

18.675G Economic Decisions in Industrial Management C3
Excluded: 18.603.
General aspects: the economic objective, the single-period investor’s model, economic criteria, the mathematics of finance. Deterministic models: project evaluation using discounted cash flow analysis; capital structure; debt and equity financing; cost of capital and the minimum acceptable rate of return; taxation; inflation and its effects. Probabilistic models: multiple objectives and multi-attribute value systems based on means and variances of cash flows. Particular applications of economic decision-making: venture and risk analysis, risk management, static and dynamic replacement models, rent-or-buy decisions, breakeven analysis, expansion and economic package concepts, analysis of projects with public financing.

18.681G Engineering Economics Analysis C3
Price-output decisions under various competitive conditions. The time-value of money, net present worth and DCF rate of return, and their application in the selection and replacement of processes and equipment. Construction and optimization of particular models, eg replacement, capital rationing. Measures of profitability.

18.760G Discrete-Event Simulation Languages C3
Assumed knowledge: 18.503 or 6.646 or 18.761G or equivalent.
Basic elements of simulation languages: random number generation, process generation, list and set processing, data struc-
tures, time advance and event scanning, gathering and resetting statistics, graphics. Simulation language world views. Comparative review of commercially available simulation languages such as Simscript, GPSS, ECSL, and Simula, and a study of one of them in depth. Simulation using personal computers. Simulation language preprocessors.

18.761G Simulation in Operations Research C3
Excluded: 18.503, 6.646.

18.763G Variational Methods in Operations Research C2
The variational problem and its history. The modern formulations. Mathematical Theory. Application to a wide range of problem areas such as production and inventory control, advertising, machine maintenance and natural resource utilization.

18.764G Management of Distribution Systems C2
Assumed knowledge: 18.503.
The distribution system: single depot location, multi-depot location, vehicle scheduling, vehicle loading, fleet size, case studies.

18.765G Optimization of Networks C2
Prerequisite: 18.551.

18.770G Stochastic Control C2

18.772G Information Processing Systems in Organizations C2
The place of operations research in information processing systems. Computer hardware and software. Data structures and data manipulation techniques. Typical structures of suites of programs. The life cycle of information processing systems. System design. Applications packages with emphasis on systems for production and inventory control. Major problems in information processing systems.

18.773G Optimal Control in Operations Research C2
Brief survey of dynamic optimization techniques. Introduction to the calculus of variations and the maximum principle for both continuous and discrete systems. Applications to operations research problems drawn from the areas of production and inventory control, machine maintenance, investment and natural resource utilization.

18.774G Applied Stochastic Processes C2
Examples of stochastic processes, basic concepts and Markov chains. Renewal theory. Applications to queues, inventory replacement, risk, business and marketing. Markov decision processes.

18.775G Networks and Graphs C2
Basic concepts. Application of Hamiltonian paths, Euler cycles, trees, planar graphs, dominating and independent sets to operations research problems. Shortest route algorithms. Concept of maximum flow in a network applied to transportation assignment and scheduling problems.

18.776G Production and Inventory Control C2
Excluded: 18.004
Overview of the basic issues in Production and Inventory control. Material Requirements Planning: the Master Production Schedule; structuring Bills of Materials for MRP; Capacity planning and control; shop floor scheduling and lead time reduction; cycle counting; lot sizing techniques; implementation of MRP systems in practice. Just-in-Time (JIT) production; the Kan Ban system; production planning and control in Flexible Manufacturing Systems (FMS); the relation between MRP, JIT and FMS.

18.777G Time Series Forecasting C2

18.778G Scheduling and Sequencing C2

18.779G Game Theory C2

18.780G Production Control C2
Modes of manufacture; information flow in multi-stage production systems; classical production and inventory models and control techniques; Material Requirements Planning; Just-in-Time Production; Flexible Manufacturing Systems and their control.
18.862G Linear Programming

18.863G Nonlinear Programming

18.864G Applied Geometric Programming
Optimization concepts developed for function of polynomial form. Solution techniques for such problems, sensitivity of solution. Applications of geometric programming to problems from engineering and operations research.

18.868G Industrial Applications of Mathematical Programming

18.867G Large Scale Optimization in Industry
Large-scale linear programming: sparse constraint matrices, updating basis factorizations. Large-scale nonlinear programming: the limitations of classical quasi-Newton and conjugate gradient methods, sparse Hessian approximations, superbasic variables, augmented Lagrangian methods for sparse nonlinear constraints. Applications, examples and case studies from industry: optimal power flow, steam and power plant design, pipeline network optimization and other.

18.871G Mathematics of Operations Research

18.874G Dynamic Programming

18.875G Geometric Programming
The geometric programming theory is developed for convex and non-convex mathematical programs. The theory is applied to polynomial and posynomial programming. As projects actual polynomial and posynomial programs will be solved.

18.876G Advanced Mathematics for Operations Research
A survey of mathematical ideas which are of value in operations research. Topics will be selected from the following areas: set theory, real analysis, matrix theory, topology, function spaces, linear operator theory, inequalities, stability, complex analysis, convex analysis, distribution theory, group theory and measure-theoretic probability theory.

18.879G Mathematical Programming Analysis
Co-requisites: 18.871G; Linear Programming section of 18.571G. Methods for the analysis of mathematical programs. Analysis of the properties of linearity, separability, convexity, quasi-convexity and duality, providing the basis of the conversion of mathematical programs to potentially simpler formulations. Includes the areas of geometric programming, convex programming and quasi-convex programming.

18.909G Project
18.918G Project Report
18.936G Thesis
18.966G Seminar (Industrial Management)
18.967G Advanced Topic in Production Engineering
18.968G Advanced Topic in Production Engineering
18.969G Advanced Topic in Industrial Engineering
18.970G Seminar (Operations Research)
18.977G Advanced Topic in Operations Research C2
Allows the presentation of special topics, particularly by visiting academics.

18.978G Advanced Topic in Operations Research C2

18.979G Advanced Topic in Operations Research C2

25.707G Geopollution Management S1 L1½T1½ C3

25.707X Sources of Waste and Industry S1, external C3

25.715G Sources of Waste and Industry S1, external C3
Sources of solid and liquid wastes, design and operation of landfills, processes within landfills, re-use and planning of sites, transport of waste.

25.715X Landfill Disposal S1, external C3

25.816G Geological Remote Sensing S1 L1½T1½ C3
The physics of various remote sensing techniques; interpretation of conventional aerial photography in exploration; Infra-red remote sensing techniques; side linking airborne radar; theory and applications of Landsat Imagery; enhancement techniques for satellite imagery; interpretation of Landsat photographic products and application to several case history areas. Integration of remote sensing information with the overall data base as applied to exploration.

27.043G Remote Sensing Applications S1 L1½T1½ C3
The application of remotely-sensed data and information in the description, classification and assessment of earth resources and environmental conditions. Different types of remote sensing data and imagery, their attributes, acquisition and uses. Relevance of remote-sensing data and imagery to a range of applications, including assessment of conditions of terrain, soils and surface materials; multitemporal monitoring and inventory of range- lands, croplands and forests; rural and urban land use assessment; surveillance of surface water resources and sedimentation; appraisal of changes in the coastal zone. Use of remote sensing in environmental management and in environmental impact assessment.
27.174G Remote Sensing Instrumentation and Satellite Programs  S1 L2T1 C3
Aircraft and satellite platforms; sensor types; image formation and end products including panchromatic, colour, colour IR and thermal IR photographic products, microwave imagery and computer tape products. The organization, acquisition, processing and analysis of imagery obtained from the following satellite programs; Landsat, Skylab, Heat Capacity Mapper Mission, Geodynamics Experimental Ocean Satellite, NOAA-9, Nimbus Coastal Zone Colour Scanner, Seasat, Space Shuttle, Spot and Soyuz-Salyut.

27.644G Computer Mapping and Data Display  C3
Introduction to automated cartography and thematic mapping; theoretical and practical problems in displaying and mapping data by computer; review and application of selected computer mapping packages. INFO is used for database management, and ARC-INFO for cartographic manipulation and output.

27.672G Geographic Information Systems  C3
Study of selected geographic information systems; problems of data capture and display, data storage and manipulation, system design and development; cartographic displays and computer mapping. INFO is used for database management, and ARC-INFO for spatial data manipulation and display.

27.715G

27.911G Soil Erosion and Conservation  S1 or S2 L2T4 C6

27.914G Terrain Evaluation
Principles and techniques for natural resource surveys and land evaluation including: land systems, terrain patterns, land capability and economic aspects of evaluation; examination of mapping, taxonomic and descriptive units; the problem of map scale and accuracy; styles of presentation for practitioners and other uses. Application of principles in selected other contexts.

29.101G Aspects of Electromagnetic Distance Measurement  SS L2T1 C3

29.102G Characteristics of Optical Surveying Instrumentation  SS L2T1 C3
Sources of error in modern optical surveying instruments. Methods of testing and calibration. Observational techniques for reducing effects of errors. Developments in circle reading and level sensing systems. Design of instrument testing facilities.

29.103G Precise Engineering Surveys  SS L2T1 C3
Techniques and instrumentation for precise surveys. Applications in industry and engineering; deformation and settlement surveys, surveys for large constructions, optical tooling, special measurement problems.

29.106G Special Topic in Surveying A  C3
A special subject to be lectured on by visiting professors or other visiting staff.

29.107G Special Topic in Surveying B  C3
A special subject taken by an individual student or a small group of students by private study in conjunction with tutorial sessions with the member(s) of staff in charge of the subject.

29.151G Adjustment of Control Surveys  SS L2T1 C3

29.210G Satellite Surveying  SS L2T1 C3
Concepts of satellite surveying: nomenclature, TRANSIT system, GPS for point and relative positioning, vertical control. Sur-
29.211G Introduction to Geodesy

29.213G Physical Meteorology

29.217G Gravimetric Geoid Evaluations

29.530G Analytical Photogrammetry

Fundamental relationship, image and object space. Interior orientation, deviations from collinearity. General orientation of one and two images by collinearity. Simultaneous block adjustment by bundles. Additional parameters. Calibration of metric and non-metric cameras. Control requirements in analytical photogrammetry.

29.532G Computer-Assisted Mapping

29.600G Principles of Remote Sensing

29.602G Remote Sensing Procedures

Review of atmospheric correction procedures and application to multi-temporal Landsat MSS data. Review of image registration, enhancement and classification procedures with particular reference to multi-source remote sensing data sets. Analysis of techniques over a varied land use area. Land use change project and analysis using multi-source and multi-temporal remotely sensed imagery, including Landsat MSS, TM, SPOT and SAR.

29.603G Statutory Controls of Land Development

Detailed examination of the subdivision and development process in N.S.W., with particular emphasis on the statutory procedures and controls at the local government level. The Local Government Appeals Tribunal and its major relevant decisions. Local Government and land development law. Case studies in land development.

29.604G Land Information Systems

29.605G Ground Investigations for Remote Sensing

The spectral, temporal and spatial characteristics of various surfaces, and the available sensors to effect maximum differentiation. Ground and image comparisons. Instruments available for field measurements. Field investigation procedures including positioning and sampling considerations.

29.606G Cadastral Systems

29.909G Project

C9

29.918G Project Report

C18

29.936G Thesis

C36
Biomedical Engineering

32.009G Project

Introduction to clinical situations in hospitals. Presentation of guest lectures by eminent people working in this field. Lecture topics include cardiology, neurology, orthopaedics, rehabilitation, etc. Visits to various biomedical engineering units.

32.010G Biomedical Engineering Practice

Statistical assessment of normal and diseased states. Statistical relationships between multiple variables used to assess disease; analysis of variance, regression, factor analysis, discriminant analysis. Progression of diseases over time. Diagnosis and assessment of treatments. Experimental design and sampling. Computation methods.

32.012G Biomedical Statistics

Sources, effects and uses of radiation on human tissues. Ultrasonic, X-ray and nuclear radiations are included together with ultraviolet, infrared, laser, microwave and longer wavelength electromagnetic effects.

32.018G Project Report

Basic theory of passive components, simple network analysis, small signal amplifiers, feedback and oscillators, operational amplifiers and their uses, analogue integrated circuits. Transistors as logic devices, gates. Safety requirements for medical instruments, circuit diagram analysis and component identification. Laboratory work involves both design and construction of analogue circuits.

32.030G Project Report

Examination of the fundamental digital and analogue signal conditioning circuits commonly found in medical applications. Emphasis is given to project-oriented practical experience involving aspects of biological signal acquisition by microcomputers. Fundamentals of microprocessor hardware and software.

32.060G Biomedical Systems Analysis

Compartmental analysis serves to unify modelling and analysis in many diverse fields. It has wide application in pharmacokinetics, metabolic, ecosystem and chemical kinetic modelling, and in the future will be applied increasingly to engineering systems. Topics include: classes of compartmental structure; fundamental properties; rate processes; inferred parameters; input-dependent kinetics; optimal input design; algorithms for identification and control.

32.101G Mathematical Modelling for Biomedical Engineers

Material and energy balances, modelling of intrabody mass transfer, elementary treatment of diffusion, convection, hydraulic permeability and osmosis in biological and synthetic membranes. Applications to hemodialysis, blood oxygenators, artificial pancreas and slow release drug delivery systems.

32.311G Mass Transfer in Medicine

Fundamentals of biological fluid flow by way of the governing equations. Kinematics and dynamics, viscous and inertial flow, boundary layers, separation, physiological flows (cardiac, vascular, pulmonary, urinary, etc.) and flow in artificial organs.

32.321G Physiological Fluid Mechanics

Interaction of biological fluids and cells with foreign surfaces, in vitro tests to assess biocompatibility and thrombogenicity, current status of biocompatible materials as applied to extracorporeal systems, surgical implants and prosthetic devices.

32.332G Biocompatibility

Algorithm design and documentation, printer plotting, editing, using the VAX/VMS systems. Programming in FORTRAN and PASCAL languages. Overview of computing in biomedical engineering and hospitals. Automated patient monitoring and laboratory testing. Data storage and information retrieval.

32.51G Introductory Biomechanics

The principles of the mechanics of solid bodies: force systems; kinematics and kinetics of rigid bodies; stress-strain relationships; stress analysis of simple elements application to musculoskeletal system.
32.541G Mechanics of the Human Body SS L2T1 C3
Prerequisite: 32.510G or equivalent.
Statics and dynamics of the musculoskeletal system: mathematical modelling and computer simulation, analysis of pathological situations.

32.551G Biomechanics of Physical Rehabilitation SS L2T1 C3
Prerequisite: 32.510G or equivalent.
The application of biomechanics principles to the areas of: performance testing and assessment, physical therapy, design of rehabilitation equipment, design of internal and external prostheses and orthoses.

32.561G Mechanical Properties of Biomaterials SS L2T1 C3
Prerequisite: 32.510G or equivalent.
The physical properties of materials having significance to biomedical engineering; human tissues; skin; soft tissues; bone; metals; polymers and ceramics: the effects of degradation and corrosion.

32.601G Biomedical Applications of Microprocessors 1 S1 L3 C3
Prerequisite: 32.050G or equivalent.

32.602G Biomedical Applications of Microprocessors 2 S2 L3 C3
The aim of this subject is to obtain the microcomputer-developed system from the previous subject (32.601G) and to produce a stand-alone printed circuit board. Use of logic analyzer and debugging techniques for machine language programs and hardware design. Exposure to different types of microprocessors by use of simulators and emulators. Definition and selection of microprocessor. Transfer of microcomputer-developed system to specified microprocessor. Implementation of hardware on printed circuit board. Testing of stand-alone device.

32.603G Static and Flow Cytometry S2 L3 C3
Technology, techniques and uses of flow and static cytometry. Flow cytometers (analysis and cell sorting), image analysis and cell counting from slides. Preparation and staining of cells. Data acquisition and analysis. Applications in medical research and diagnosis.

32.611G Medical Instrumentation S2 L2T1 C3
Prerequisite: 32.040G or equivalent.
A critical survey of the theory and practical applications of medical transducers and electromedical equipment in common use in hospitals and research laboratories.

32.621G Biological Signal Analysis S1 L3C3
Use of digital computers to extract information from biological signals. Signal processing using filtering, averaging, curve-fitting and related techniques, and analysis using model simulations, correlation, spectral analysis etc.

32.701G Dynamics of the Cardiovascular System S1 L2T1 C3
Structure of the heart; organization of the mammalian vasculature; mechanical, electrical and metabolic aspects of cardiac pumping; the solid and fluid mechanics of blood vessels; rheology of blood.

Graduate School of the Built Environment

39.908G Community Noise Control S1 L1T1 C2
Introduction; sound and sound propagation, sound power, sound pressure, decibels; sound perception, psychoacoustics loudness, annoyance, phons and dB(A); hearing conservation; acoustic measuring and analysing instruments — sound level meters, filters, analysers, recorders; sound sources, community noise assessment; the NSW Noise Control Act; practical exercises in sound recording, analysis and assessment; noise control — source noise reduction, use of barriers, enclosures, distance, sound absorbing materials; sound transmission through building elements; noise components of environmental impact statements.

Biotechnology

42.211G Principles of Biology SS L3
A study of the characteristics of living systems, including a functional treatment of cytology, metabolism, bioenergetics; structure, function and characteristics of single and multicellular systems; growth; cell division; reproduction; heredity and evolution.
42.212G Principles of Biochemistry

A condensed treatment of biochemistry comprising the following aspects: the elemental and molecular composition of living organisms; the chemistry and roles of the biological elements and molecules; the thermodynamics and enzymatic catalysis of metabolism; catabolic, anabolic, amphibolic and anaplerotic processes, with emphasis on hydrolysis and synthesis of polymers, glycolysis and gluconeogenesis of glucose. Oxidation and synthesis of fatty acids, deamination and decarboxylation of amino acids, the tricarboxylic acid cycle, electron transport and oxidative phosphorylation; metabolic regulation and integration.

42.407G Biological Principles

Faculty of Applied Science

46.203G Medical Aspects

Aspects of medicine bearing upon physiological consequences of pollutants. Synergism and antagonisms, photosynthesis and phytotoxicity, metabolic mechanisms; morbidity and mortality surveys; exposure indices. Particular pollutants aldehydes, nitrodefins, carbon monoxide, sulphur dioxide, oxides of nitrogen, hydrocarbons, ozone and oxidants, particulates, carcinogens.

46.204G Legislative Aspects

Safety Science

47.030G Computing for Safety Science

Nature and description of information in digital form, processing of information with special reference to the computer, microprocessor and microcomputer. Identification and statement of information flow problems, construction of models for computer solution, flow charts and control node diagrams, basis of a computer high-level language. Programming in BASIC, fundamental statements, loops and arrays, character strings and word processing, graphs, histograms and tables. Peripheral hardware, storage and filing, examples of operating systems. Spread sheets and data base systems with application to health and safety monitoring.

47.051G Principles of Engineering Mechanics

Solid mechanics: force systems, equilibrium, friction, frames and beams; stress-strain relationships, bending stress, buckling, safe loads; applications in safety and biomechanics. Fluid flow: static pressure, continuity of flow, Bernoulli's equation, laminar and turbulent flow, sound wave propagation in air; applications in ventilation and acoustics.

47.052G Introduction to Safety Engineering

Basic safety practice; management of dangerous materials; fire and explosion; ventilation; noise control; radiation protection; electrical safety; biological safety; machine dangers and machine guarding; construction safety; transport safety; environmental safety; plant safety assessment.

47.054G Machines and Structures Safety

Prerequisite: 47.051G or equivalent.

47.060G Electrical Safety

Electric current; effects of current flow and electric fields; elementary circuit representation, typical supply situations; likely dangerous conditions; static electricity; hazardous location; some special problem areas: codes of safe working; treatment of electric shock.

47.061G Principles of Ergonomics

Applied anatomy and kinesiology, anthropometry; application to work place arrangement, seating and bench design, tool and equipment design, lifting techniques, consumer product and architectural design. Physiological and psychological aspects of work and fatigue; measurement of energy consumption, limits to energy expenditure at work, static muscular fatigue, boredom. Environment effects; natural and artificial lighting arrangements, problems of perception, colour, noise and vibration, preventive
measures; heat and ventilation, thermal regulation in humans, criteria for comfort, effects of pollutants, Man-machine interface. Displays, machine controls, reaction times, vigilance. Applications of ergonomics to occupational safety and health. Ergonomic research methodology.

**Note:** A project forms a substantial proportion of the assessment for this subject.

### 47.062G Applied Ergonomics

**Prerequisite:** 47.061G at credit level or equivalent.

Cognitive ergonomics. Decision making, vigilance, effects of workload and stress, applications to screen-based equipment. Work systems: the systems approach, practical evaluation and re-design of work systems. Experimental methodology; experimental design in ergonomics, critical evaluation of the literature.

### 47.070G Ventilation

**Prerequisite:** 47.051G or equivalent.

### 47.090G Introduction to Occupational Health and Safety Law

The concept of law; the creation and interpretation of statutes; the judicial and court systems; locus standi; common law and equity; basic principles of legal liability (civil and criminal); basic principles of administrative law and the liability of the Crown; the common law of employment; statutory regulation of employment; compulsory arbitration of industrial disputes. Outline of occupational health, safety and compensation legislation of the Australian States. Actions under the common law.

### 47.120G Human Behaviour and Safety Science

Industrial relations and implementation of a safety program. Learning and safety programs. Attitudes and attitude change. Safety compliance — individual and group factors affecting compliance. Work motivation and safety practice. Accident proneness and personnel selection. Individual differences in attitudes to work.

### 47.180G Management for Safety

**Prerequisite:** 47.120G.

Accounting for accident costs; risk management; safety management and loss control; organization and management for safety; cost effectiveness of safety programs. Selection and training of personnel. Communication; modes of communication; preparation of safety and accident reports; presentation of evidence. Management of occupational health problems through prevention, early reporting and rehabilitation.

### 47.230G Radiation Protection

**Prerequisite:** 47.061G at credit level or equivalent.

Radiation physics; radiodinometry; radiation biology; shielding and control of radiation; administration; waste management; emergency procedures; environmental impact, non-ionizing radiation. Special topics; practical work and site visit.

### 47.330G The Accident Phenomenon

**Prerequisite:** 10.331 or equivalent.

Causes of accidents and defensive strategies; energy storage and transfer; risk benefit concepts; epidemiology of accidents; reduction of loss from accidental injury; human factors, the environment and accidents; system reliability and fault-tree analysis in the study and control of accidents; study of some major accidents; accident investigation and analysis; case studies in transport, industry, recreation and the home.

### 47.480G Fire and Explosion

### 47.481G Management of Dangerous Materials

### 47.903G Special Report in Safety Science

Only for students enrolled in the Graduate Diploma course in Safety Science.

### 47.909G Project

### 47.918G Project Report
Chemical Engineering and Industrial Chemistry

48.063G Industrial Water and Wastewater Engineering  S1 or S2 L3

Environmental consequences of water pollution. Water quality criteria and regulations related to industrial use and disposal. Water sources and requirements of industry. Theoretical and practical aspects of treatment methods, including screening, sedimentation, oil separation, coagulation and flocculation, filtration, biological treatment, adsorption, ion exchange, membrane processes. Strategies for industry including waste surveys, prevention at source, correction before discharge, water reuse. Economic aspects. Seminars. Factory visits/laboratory.

55.823G Files and Database Systems  S1

File structures, database management systems and file interrogation systems in a text processing or bibliographical environment. Topics: relations, their mapping and normalization; access methods; data organization; independence, integrity and security; CODASYL databases, relational databases and query languages.

Anatomy

70.201G Introductory Functional Anatomy

An overview of basic human anatomy and physiology with an emphasis on structures and systems such as the eye, ear and skin, which are most vulnerable to chemical and physical trauma under industrial conditions. Other systems studied include the musculo skeletal system, central and peripheral nervous systems, circulatory, respiratory, gastrointestinal, endocrine and urogenital systems.

Pathology

72.402G Principles of Disease Processes  S1 L3 C3

Prerequisites: 73.111 or equivalent, 70.011C or equivalent.

Not offered in 1988.

The reaction of cells to injury, the inflammatory reaction; necrosis-vascular changes and infarction; reparative processes; frac-
ture healing; neoplasia; reaction to implants; specific processes requiring prosthetic assistance.

Physiology and Pharmacology

73.111 Physiology 1 F L2T4
Prerequisites: 17.031 & 17.041; 2.121 & 2.131, or 2.141; 10.001 or 10.011 or 10.021 B & C. Excluded: 73.121, 73.011. Co-requisite: 41.101.
Introduction to fundamental physiological principles, dealing first with basic cellular function in terms of chemical and physical principles, and, second, with the operation of the various specialized systems in the body, for example, the cardiovascular system, whose function it is to transport materials to and from the tissues of the body; the respiratory system which must maintain the exchange of oxygen and carbon dioxide between the atmosphere and the blood; the gastrointestinal system which enables food materials to be modified by digestion and absorbed into the circulation; the kidney which is involved in the regulation of body fluid and electrolyte balance and with the excretion of the waste products of metabolism; the endocrine system which releases chemical messengers, called hormones, that are carried in the blood stream to regulate a great variety of body functions, e.g., metabolism and reproductive activity; the nervous system which by means of very rapidly propagated electrical impulses is responsible for all our movements, sensations, memories, emotions and consciousness itself. A substantial series of practical class experiments on these different areas of physiology is included in the course. This subject is taken by students enrolled in any of the Physiology program.

79.616G Occupational Epidemiology S1 L3 C3
Prerequisite: 16.901G or equivalent. Prerequisite or co-requisite: 80.701G or equivalent.

80.701G Occupational Disease S2L3 C3
Prerequisite: 70.201G or equivalent.
Physical environment and disease: Musculoskeletal system, physical trauma; heat and cold, burns, electric shock; radiation; pressure, vibration, noise, hearing. Chemical environment and disease: Metallic poisons, toxic compounds, gaseous poisons, carcinogens, allergens. Microbial environment and disease. Systems approach: Gastrointestinal tract; renal system; central and peripheral nervous systems; visual system, respiratory system, airborne particulates; skin.

80.702G Occupational Health Control S1L3 C3
Prerequisite: 80.701G or equivalent.
Introduction; dose response; risk, codes of safe practice; protection of the worker; design of safe workplace; protective equipment; occupational health surveillance; epidemiology; occupational safety program; emergency arrangements; environmental health; non-occupational safety; safety services.

Faculty of Engineering

97.580G Image Analysis in Remote Sensing C3
Prerequisite: 10.361 or similar.
Techniques for extracting information from remotely sensed data with particular emphasis on satellite imagery. Topics taken from: nature and characteristics of earth resources and related satellites; satellite sensors and data formats; image enhancement techniques; image classification methods, including clustering, classification and feature selection; image classification methodologies; new horizons in remote sensing image analysis.

97.581G Microwave Remote Sensing C3
Use of passive and active (radar) microwave techniques in remote sensing of earth resources. Topics include: real and
synthetic aperture radar systems; passive microwave radiometry; energy-surface interactions; interpretation of microwave image data; applications in agriculture, geology, oceanography and hydrology; issues in signal and image processing; characteristics of airborne and spaceborne microwave sensors.

97.601G Computer Aided Design for Manufacture C3

Principles underlying the interactive computer graphics packages such as AUTOCAD, CADAM, CATIA. Applications to design and engineering processes. Projects on building packages for design or upgrading the existing packages.

97.602G Computer Integrated Manufacturing C3

Prerequisite: 18.465G.

Systems analysis and design of computer integrated manufacturing, including flexible manufacturing systems and automated factories.

97.603G Product Design and Technological Innovation C3

97.604G Flexible Manufacturing Systems C3

Prerequisite: 18.465G.

Technical aspects of FMS components, including automated material-handling devices, job selection/design and their aggregation. Hierarchical structure of FMS; mathematical models of FMS.

97.605G CAD for Manufacture 2 C3

Prerequisite: 97.601G.

Topics related to methods of geometric modelling for curves, surfaces and solid models, and their applications to computer-aided design problems in manufacturing industry. Finite element methods in CAD. Intelligent CAD systems; principles and applications.
Graduate Study

Conditions for the Award of Higher Degrees

First Degrees

Rules, regulations and conditions for the award of first degrees are set out in the appropriate Faculty Handbooks.

For the list of undergraduate courses and degrees offered see Table of Courses (By Faculty): Undergraduate Study, in the Calendar.

Higher Degrees

The following is the list of higher degrees and graduate diplomas of the University, together with the publication in which the conditions for the award appear.

For the list of graduate degrees by research and course work, arranged in faculty order, see Table of Courses (by faculty): Graduate Study in the Calendar.

For the statements Preparation and Submission of Project Reports and Theses for Higher Degrees and Policy with respect to the Use of Higher Degree Theses see later in this section.

*Faculty of Science.
§Faculty of Biological and Behavioural Sciences.

Higher Degrees

Doctor of Philosophy (PhD)

1. The degree of Doctor of Philosophy may be awarded by the Council on the recommendation of the Higher Degree Committee of the appropriate faculty or board (hereinafter referred to as the Committee) to a candidate who has made an original and significant contribution to knowledge.

2. (1) A candidate for the degree shall have been awarded an appropriate degree of Bachelor with Honours from the University of New South Wales or a qualification considered equivalent from another university or tertiary institution at a level acceptable to the Committee.

(2) In exceptional cases an applicant who submits evidence of such other academic and professional qualifications as may be approved by the Committee may be permitted to enrol for the degree.

(3) If the Committee is not satisfied with the qualifications submitted by an applicant the Committee may require the applicant to undergo such assessment or carry out such work as the Committee may prescribe, before permitting enrolment as a candidate for the degree.

Enrolment and Progression

3. (1) An application to enrol as a candidate for the degree shall be made on the prescribed form which shall be lodged with the Academic Registrar at least one calendar month before the commencement of the session in which enrolment is to begin.

(2) In every case, before permitting a candidate to enrol, the head of the school* in which the candidate intends to enrol shall be satisfied that adequate supervision and facilities are available.

(3) An approved candidate shall be enrolled in one of the following categories:

(a) full-time attendance at the University;
(b) part-time attendance at the University.

*Or department where a department is not within a school or schools or departments where the research is being undertaken in more than one school or department.
Engineering

(4) A full-time candidate shall be fully engaged in advanced study and research except that the candidate may undertake not more than five hours per week or a total of 240 hours per year on work which is not related to the advanced study and research.

(5) Before permitting a part-time candidate to enrol, the Committee shall be satisfied that the candidate can devote at least 20 hours each week to advanced study and research for the degree which (subject to (8)) shall include regular attendance at the school* on an average of at least one day per week for 48 weeks each year.

(6) A candidate shall be required to undertake an original investigation on an approved topic. The candidate may also be required to undergo such assessment and perform such other work as may be prescribed by the Committee.

(7) The work shall be carried out under the direction of a supervisor appointed from the full-time academic members of the University staff.

(8) The work, other than field work, shall be carried out in a school* of the University except that the Committee:

(a) may permit a candidate to spend not more than one calendar year of the program in advanced study and research at another institution provided the work can be supervised in a manner satisfactory to the Committee;

(b) may permit a candidate to conduct the work at other places where special facilities not possessed by the University may be available provided the direction of the work remains wholly under the control of the supervisor;

(c) may permit a full-time candidate, who has been enrolled as a full-time candidate for at least six academic sessions, who has completed the research work and who is writing the thesis, to transfer to part-time candidature provided the candidate devotes at least 20 hours each week to work for the degree and maintains adequate contact with the supervisor.

(9) The progress of a candidate shall be reviewed annually by the Committee following a report by the candidate, the supervisor and the head of the school* in which the candidate is enrolled and as a result of such review the Committee may cancel enrolment or take such other action as it considers appropriate.

(10) No candidate shall be awarded the degree until the lapse of six academic sessions from the date of enrolment in the case of a full-time candidate or eight academic sessions in the case of a part-time candidate. In the case of a candidate who has had previous research experience the Committee may approve remission of up to two sessions for a full-time candidate and four sessions for a part-time candidate.

(11) A full-time candidate for the degree shall present for examination not later than ten academic sessions from the date of enrolment. A part-time candidate for the degree shall present for examination not later than twelve academic sessions from the date of enrolment. In special cases an extension of these times may be granted by the Committee.

4. (1) On completing the program of study a candidate shall submit a thesis embodying the results of the investigation.

(2) The candidate shall give in writing to the Academic Registrar two months notice of intention to submit the thesis.

(3) The thesis shall comply with the following requirements:

(a) it must be an original and significant contribution to knowledge of the subject;

(b) the greater proportion of the work described must have been completed subsequent to enrolment for the degree;

(c) it must be written in English except that a candidate in the Faculty of Arts may be required by the Committee to write a thesis in an appropriate foreign language;

(d) it must reach a satisfactory standard of expression and presentation;

(e) it must consist of an account of the candidate's own research but in special cases work done conjointly with other persons may be accepted provided the Committee is satisfied about the extent of the candidate's part in the joint research.

(4) The candidate may not submit as the main content of the thesis any work or material which has previously been submitted for a university degree or other similar award but may submit any work previously published whether or not such work is related to the thesis.

(5) Four copies of the thesis shall be presented in a form which complies with the requirements of the University for the preparation and submission of theses for higher degrees.
Graduate Study: Conditions for the Award of Higher Degrees

(6) It shall be understood that the University retains the four copies of the thesis submitted for examination and is free to allow the thesis to be consulted or borrowed. Subject to the provisions of the Copyright Act, 1968, the University may issue the thesis in whole or in part, in photostat or microfilm or other copying medium.

Examination

5. (1) There shall be not fewer than three examiners of the thesis, appointed by the Academic Board on the recommendation of the Committee, at least two of whom shall be external to the University.

(2) At the conclusion of the examination each examiner shall submit to the Committee a concise report on the thesis and shall recommend to the Committee that:

(a) the candidate be awarded the degree without further examination; or

(b) the candidate be awarded the degree without further examination subject to minor corrections as listed being made to the satisfaction of the head of the school*; or

(c) the candidate be awarded the degree subject to a further examination on questions posed in the report, performance in this further examination being to the satisfaction of the Committee; or

(d) the candidate be not awarded the degree but be permitted to resubmit the thesis in a revised form after a further period of study and/or research; or

(e) the candidate be not awarded the degree and be not permitted to resubmit the thesis.

(3) If the performance at the further examination recommended under (2)(c) above is not to the satisfaction of the Committee, the Committee may permit the candidate to re-present the same thesis and submit to further examination as determined by the Committee within a period specified by it but not exceeding eighteen months.

(4) The Committee shall, after consideration of the examiners' reports and the results of any further examination, recommend whether or not the candidate may be awarded the degree. If it is decided that the candidate be not awarded the degree the Committee shall determine whether or not the candidate be permitted to resubmit the thesis after a further period of study and/or research.

Fees

6. A candidate shall pay such fees as may be determined from time to time by the Council.

Master of Biomedical Engineering (MBiomedE)

1. The degree of Master of Biomedical Engineering may be awarded by the Council to a candidate who has satisfactorily completed a program of advanced study.

Qualifications

2. (1) A candidate for the degree shall have been awarded an appropriate degree of Bachelor from the University of New South Wales or a qualification considered equivalent from another university or tertiary institution at a level acceptable to the Higher Degree Committee of the Faculty of Engineering (hereinafter referred to as the Committee).

(2) In exceptional cases an applicant who submits evidence of such other academic and professional qualifications as may be approved by the Committee may be permitted to enrol for the degree.

(3) If the Committee is not satisfied with the qualifications submitted by an applicant the Committee may require the applicant to undergo such assessment or carry out such work as the Committee may prescribe, before permitting enrolment.

Enrolment and Progression

3. (1) An application to enrol as a candidate for the degree shall be made on the prescribed form which shall be lodged with the Academic Registrar at least two calendar months before the commencement of the session in which the enrolment is to begin.

(2) A candidate for the degree shall be required to undertake such formal subjects and pass such assessment as prescribed, and shall submit a project report. The program of advanced study, including the preparation of the project report, shall total a minimum of 60 credits. The number of credits allocated for each subject shall be determined by the Committee on the recommendation of the Director of the Centre for Biomedical Engineering (hereinafter referred to as the head of the school).

*Or department where a department is not within a school or schools or departments where the research is being undertaken in more than one school or department.
Engineering

(3) The progress of the candidate shall be reviewed at least once annually by the Committee and as a result of its review the Committee may cancel enrolment or take such other action as it considers appropriate.

(4) No candidate shall be awarded the degree until the lapse of two academic sessions from the date of enrolment in the case of a full-time candidate or five sessions in the case of a part-time candidate. The maximum period of candidature shall be five academic sessions from the date of enrolment for a full-time candidate and eight sessions for a part-time candidate. In special cases an extension of these times may be granted by the Committee.

4. (1) A candidate shall be required to undertake a project on an approved topic.

(2) The work shall be carried out under the direction of a supervisor appointed from the full-time academic members of the University staff.

(3) The candidate shall give in writing to the Academic Registrar two months notice of intention to submit a report on the project.

(4) Three copies of the project report shall be presented in a form which complies with the requirements of the University for the preparation and submission of project reports for higher degrees.

(5) It shall be understood that the University retains three copies of the project report submitted for examination and is free to allow the project report to be consulted or borrowed. Subject to the provisions of the Copyright Act, 1968, the University may issue the project report in whole or in part, in microfilm or other copying medium.

5. (1) There shall be not fewer than two examiners of the project report, appointed by the Academic Board on the recommendation of the Committee, at least one of whom shall be external to the University unless the Committee is satisfied that this is not practicable.

(2) At the conclusion of the examination each examiner shall submit to the Committee a concise report on the project report and shall recommend to the Committee that:

(a) the project report be noted as satisfactory; or

(b) the project report be noted as satisfactory subject to minor corrections being made to the satisfaction of the head of the school; or

(c) the project report be noted as unsatisfactory but that the candidate be permitted to resubmit it in a revised form after a further period of study and/or research; or

(d) the project report be noted as unsatisfactory and that the candidate be not permitted to resubmit it.

(3) The Committee shall, after considering the examiners' reports and the candidate's results of assessment in the prescribed formal subjects, recommend whether or not the candidate may be awarded the degree. If it is decided that the project report is unsatisfactory the Committee shall determine whether or not the candidate may resubmit it after a further period of study and/or research.

6. A candidate shall pay such fees as may be determined from time to time by the Council.

1. The degree of Master of Engineering or Master of Science by research may be awarded by the Council on recommendation of the Higher Degree Committee of the appropriate faculty (hereinafter referred to as the Committee) to a candidate who has demonstrated ability to undertake research by the submission of the thesis embodying the results of an original investigation.

2. (1) A candidate for the degree shall have been awarded an appropriate degree of Bachelor from the University of New South Wales or a qualification considered equivalent from another university or tertiary institution at a level acceptable to the Committee.

(2) An applicant who submits evidence of such other academic or professional attainments as may be approved by the Committee may be permitted to enrol for the degree.

(3) When the Committee is not satisfied with the qualifications submitted by an applicant the Committee may require the applicant, before being permitted to enrol, to undergo such examination or carry out such work the Committee may prescribe.
Enrolment and Progression

3. (1) An application to enrol as a candidate for the degree shall be made on the prescribed form which shall be lodged with the Academic Registrar at least one calendar month before the commencement of the session in which enrolment is to begin.

(2) In every case, before permitting a candidate to enrol, the head of the school* in which the candidate intends to enrol shall be satisfied that adequate supervision and facilities are available.

(3) An approved candidate shall be enrolled in one of the following categories:

(a) full-time attendance at the University;
(b) part-time attendance at the University;
(c) external — not in regular attendance at the University and using research facilities external to the University.

(4) A candidate shall be required to undertake an original investigation on an approved topic. The candidate may also be required to undergo such examination and perform such other work as may be prescribed by the Committee.

(5) The work shall be carried out under the direction of a supervisor appointed from the full-time members of the University staff.

(6) The progress of a candidate shall be reviewed annually by the Committee following a report by the candidate, the supervisor and the head of the school* in which the candidate is enrolled and as a result of such review the Committee may cancel enrolment or take such other action as it considers appropriate.

(7) No candidate shall be granted the degree until the lapse of three academic sessions in the case of a full-time candidate or four academic sessions in the case of a part-time or external candidate from the date of enrolment. In the case of a candidate who has been awarded the degree of Bachelor with Honours or who has had previous research experience the Committee may approve remission of up to one session for a full-time candidate and two sessions for a part-time or external candidate.

(8) A full-time candidate for the degree shall present for examination not later than six academic sessions from the date of enrolment. A part-time or external candidate for the degree shall present for examination not later than ten academic sessions from the date of enrolment. In special cases an extension of these times may be granted by the Committee.

Thesis

4. (1) On completing the program of study a candidate shall submit a thesis embodying the results of the original investigation.

(2) The candidate shall give in writing two months notice of intention to submit the thesis.

(3) The thesis shall present an account of the candidate's own research. In special cases work done conjointly with other persons may be accepted, provided the Committee is satisfied about the extent of the candidate's part in the joint research.

(4) The candidate may also submit any work previously published whether or not such work is related to the thesis.

(5) Three copies of the thesis shall be presented in a form which complies with the requirements of the University for the preparation and submission of higher degree theses.

(6) It shall be understood that the University retains the three copies of the thesis submitted for examination and is free to allow the thesis to be consulted or borrowed. Subject to the provisions of the Copyright Act, 1968, the University may issue the thesis in whole or in part, in photostat or microfilm or other copying medium.

Examination

5. (1) There shall be not fewer than two examiners of the thesis, appointed by the Academic Board on the recommendation of the Committee, at least one of whom shall be external to the University unless the Committee is satisfied that this is not practicable.

(2) At the conclusion of the examination each examiner shall submit to the Committee a concise report on the merits of the thesis and shall recommend to the Committee that:

(a) the candidate be awarded the degree without further examination; or
(b) the candidate be awarded the degree without further examination subject to minor corrections as listed being made to the satisfaction of the head of the school*; or
(c) the candidate be awarded the degree subject to further examination on questions posed in the report, performance in this further examination being to the satisfaction of the Committee; or

*Or department where a department is not within a school or schools or departments where the research is being undertaken in more than one school or department.
of Engineering

(d) the candidate be not awarded the degree but be permitted to resubmit the thesis in a revised form after a further period of study and/or research; or

(e) the candidate be not awarded the degree and be not permitted to resubmit the thesis.

(3) If the performance at the further examination recommended under (2)(c) above is not to the satisfaction of the Committee, the Committee may permit the candidate to re-present the same thesis and submit to a further oral, practical or written examination within a period specified by it but not exceeding eighteen months.

(4) The Committee shall, after consideration of the examiners' reports and the reports of any oral or written or practical examination, recommend whether or not the candidate may be awarded the degree. If it is decided that the candidate be not awarded the degree the Committee shall determine whether or not the candidate may resubmit the thesis after a further period of study and/or research.

6. A candidate shall pay such fees as may be determined from time to time by the Council.

Fees

Master of Engineering (ME), Master of Science (MSc) and Master of Surveying (MSurv) without supervision

Qualifications

Enrolment

Thesis

Examination

1. The degree of Master of Engineering or Master of Science or Master of Surveying without supervision may be awarded by the Council on the recommendation of the Higher Degree Committee of the appropriate faculty (hereinafter referred to as the Committee) to a candidate who has demonstrated ability to undertake research by the submission of a thesis embodying the results of an original investigation.

2. A candidate for the degree shall have been awarded an appropriate degree of Bachelor from the University of New South Wales with at least three years relevant standing in the case of Honours graduates and four years relevant standing in the case of Pass graduates, and at a level acceptable to the Committee.

3. An application to enrol as candidate for the degree without supervision shall be made on the prescribed form which shall be lodged with the Academic Registrar not less than six months before the intended date of submission of the thesis. A graduate who intends to apply in this way should, in his or her own interest, seek at an early stage the advice of the appropriate head of school* with regard to the adequacy of the subject matter and its presentation for the degree. A synopsis of the work should be available.

4. (1) A candidate shall submit a thesis embodying the results of the investigation.

(2) The candidate shall give in writing to the Academic Registrar two months notice of intention to submit the thesis.

(3) The thesis shall present an account of the candidate's own research. In special cases work done conjointly with other persons may be accepted, provided the Committee is satisfied about the extent of the candidate's part in the joint research.

(4) The candidate may also submit any work previously published whether or not related to the thesis.

(5) Three copies of the thesis shall be presented in a form which complies with the requirements of the University for the preparation and submission of theses for higher degrees.

(6) It shall be understood that the University retains the three copies of the thesis submitted for examination and is free to allow the thesis to be consulted or borrowed. Subject to the provisions of the Copyright Act, 1968, the University may issue the thesis in whole or in part, in photostat or microfilm or other copying medium.

5. (1) There shall be not fewer than two examiners of the thesis, appointed by the Academic Board on the recommendation of the Committee, at least one of whom shall be external to the University unless the Committee is satisfied that this is not practicable.

(2) Before the thesis is submitted to the examiners the head of the school* in which the candidate is enrolled shall certify that it is prima facie worthy of examination.

(3) At the conclusion of the examination each examiner shall submit to the Committee that:

*Or department where a department is not within a school or schools or departments where the research is being undertaken in more than one school or department.
Graduate Study: Conditions for the Award of Higher Degrees

(a) the candidate be awarded the degree without further examination; or
(b) the candidate be awarded the degree without further examination subject to minor corrections as listed being made to the satisfaction of the head of the school*; or
(c) the candidate be awarded the degree subject to a further examination on questions posed in the report, performance in this further examination being to the satisfaction of the Committee; or
(d) the candidate be not awarded the degree but be permitted to resubmit the thesis in a revised form after a further period of study and/or research; or
(e) the candidate be not awarded the degree and be not permitted to resubmit the thesis.

(4) If the performance at the further examination recommended under (3)(c) above Is not to the satisfaction of the Committee, the Committee may permit the candidate to re-present the same thesis and submit to further examination as determined by the Committee within a period specified by it but not exceeding eighteen months.

(5) The Committee shall, after consideration of the examiners’ reports and the results of any further examination, recommend whether or not the candidate may be awarded the degree. If it is decided that the candidate be not awarded the degree the Committee shall determine whether or not the candidate may resubmit the thesis after a further period of study and/or research.

Fees

6. A candidate shall pay such fees as may be determined from time to time by the Council.

Master of Engineering Science (MEngSc) and Master of Surveying Science (MSurvSc)

1. The degree of Master of Engineering Science or Master of Surveying Science may be awarded by the Council to a candidate who has satisfactorily completed a program of advanced study.

2. (1) A candidate for the degree shall have been awarded an appropriate degree of Bachelor from the University of New South Wales or a qualification considered equivalent from another university or tertiary institution at a level acceptable to the Higher Degree Committee of the Faculty of Engineering (hereinafter referred to as the Committee).

(2) In exceptional cases an applicant who submits evidence of such other academic and professional qualifications as may be approved by the Committee may be permitted to enrol for the degree.

(3) If the Committee is not satisfied with the qualifications submitted by an applicant the Committee may require the applicant to undergo such assessment or carry out such work as the Committee may prescribe, before permitting enrolment.

3. (1) An application to enrol as a candidate for the degree shall be made on the prescribed form which shall be lodged with the Academic Registrar two calendar months before the commencement of the session in which the enrolment is to begin.

(2) A candidate for the degree shall:

(a) undertake such formal subjects and pass such assessment as prescribed, or
(b) demonstrate ability to undertake research by the submission of a thesis embodying the results of an original investigation of an approved topic, or
(c) undertake an approved combination of the above in which case the thesis component shall be referred to as a project report.

(3) The program of advanced study shall total a minimum of 36 credits. The number of credits allocated for each subject shall be determined by the Committee on the recommendation of the appropriate head of school*. A 9 credit project report shall be submitted for examination in accordance with the requirements of the appropriate head of the school* and shall be assessed as a formal subject.

(4) A candidate’s proposed program shall be approved by the appropriate head of school* prior to enrolment. For the purposes of this requirement the appropriate head of school* shall normally be the head of the school* providing supervision of the project report or thesis or, if there is no project report or thesis, the major field of study.

*Or department where a department is not within a school or schools or departments where the research is being undertaken in more than one school or department.
Engineering

(5) The progress of a candidate shall be reviewed at least once annually by the Committee and as a result of its review the Committee may cancel enrolment or take such other action as it considers appropriate.

(6) No candidate shall be awarded the degree until the lapse of two academic sessions from the date of enrolment in the case of a full-time candidate or four sessions in the case of a part-time candidate. The maximum period of candidature shall be four academic sessions from the date of enrolment for a full-time candidate and eight sessions for a part-time candidate. In special cases an extension of these times may be granted by the Committee.

4. (1) A candidate who undertakes an 18 credit project or a 36 credit thesis shall carry out the work on an approved topic under the direction of a supervisor appointed from the full-time academic members of the University staff.

(2) The candidate shall give in writing to the Academic Registrar two months notice of intention to submit a project report or thesis.

(3) The project report or thesis shall present an account of the candidate’s own research. In special cases work done conjointly with other persons may be accepted, provided the Committee is satisfied about the extent of the candidate’s part in the joint research.

(4) The candidate may also submit any work previously published whether or not such work is related to the thesis.

(5) Three copies of the project report or thesis shall be presented in a form which complies with the requirements of the University for the preparation and submission of project reports and theses for higher degrees.

(6) It shall be understood that the University retains the three copies of the project report or thesis submitted for examination and is free to allow the project report or thesis to be consulted or borrowed. Subject to the provisions of the Copyright Act, 1968, the University may issue the project report or thesis in whole or in part, in microfilm or other copying medium.

5. (1) There shall be not fewer than two examiners of the project report, appointed by the Academic Board on the recommendation of the Committee, at least one of whom shall be external to the University unless the Committee is satisfied that this is not practicable.

(2) At the conclusion of the examination each examiner shall submit to the Committee a concise report on the project report and shall recommend to the Committee that:

(a) the project report be noted as satisfactory; or
(b) the project report be noted as satisfactory subject to minor corrections being made to the satisfaction of the head of the school*; or
(c) the project report be noted as unsatisfactory but that the candidate be permitted to resubmit it in a revised form after a further period of study and/or research; or
(d) the project report be noted as unsatisfactory and that the candidate be not permitted to resubmit it.

(3) The Committee shall, after considering the examiners’ reports and the candidate’s results of assessment in the prescribed formal subjects, recommend whether or not the candidate may be awarded the degree. If it is decided that the project report is unsatisfactory the Committee shall determine whether or not the candidate may resubmit it after a further period of study and/or research.

6. (1) There shall be not fewer than two examiners of the thesis, appointed by the Academic Board on the recommendation of the Committee, at least one of whom shall be external to the University unless the Committee is satisfied that this is not practicable.

(2) At the conclusion of the examination each examiner shall submit to the Committee a concise report on the thesis and shall recommend to the Committee that:

(a) the candidate be awarded the degree without further examination; or
(b) the candidate be awarded the degree without further examination subject to minor corrections as listed being made to the satisfaction of the head of the school*; or
(c) the candidate be awarded the degree subject to a further examination on questions posed in the report, performance in this further examination being to the satisfaction of the Committee; or
(d) the candidate be not awarded the degree but be permitted to resubmit the thesis in a revised form after a further period of study and/or research; or

*Or department where a department is not within a school or schools or departments where the research is being undertaken in more than one school or department.
(e) the candidate be not awarded the degree and be not permitted to resubmit the thesis.

(3) If the performance at the further examination recommended under (2)(c) above is not to the satisfaction of the Committee, the Committee may permit the candidate to re-present the same thesis and submit to further examination as determined by the Committee within a period specified by it but not exceeding eighteen months.

(4) The Committee shall, after consideration of the examiners' reports and the results of any further examination, recommend whether or not the candidate may be awarded the degree. If it is decided that the candidate be not awarded the degree the Committee shall determine whether or not the candidate may resubmit the thesis after a further period of study and/or research.

Fees 7. A candidate shall pay such fees as may be determined from time to time by the Council.

Master of Safety Science
(MSafetySc) Qualifications

1. The degree of Master of Safety Science may be awarded by the Council to a candidate who has satisfactorily completed a program of advanced study.

2. (1) A candidate for the degree shall have been awarded an appropriate degree of Bachelor from the University of New South Wales or a qualification considered equivalent from another university or tertiary institution at a level acceptable to the Higher Degree Committee of the Faculty of Engineering (hereinafter referred to as the Committee).

(2) In exceptional cases an applicant who submits evidence of such other academic and professional qualifications as may be approved by the Committee may be permitted to enrol for the degree.

(3) If the Committee is not satisfied with the qualifications submitted by an applicant the Committee may require the applicant to undergo such assessment or carry out such work as the Committee may prescribe, before permitting enrolment.

Enrolment and Progression

3. (1) An application to enrol as a candidate for the degree shall be made on the prescribed form which shall be lodged with the Academic Registrar at least two calendar months before the commencement of the session in which enrolment is to begin.

(2) A candidate for the degree shall be required to undertake such formal subjects and pass such assessment as prescribed. The program of advanced study shall total a minimum of 54 credits. The number of credits allocated for each subject shall be determined by the Committee on the recommendation of the Course Director (hereinafter referred to as the head of the school).

(3) The progress of a candidate shall be reviewed at least once annually by the Committee and as a result of its review the Committee may cancel enrolment or take such other action as it considers appropriate.

(4) No candidate shall be awarded the degree until the lapse of two academic sessions from the date of enrolment in the case of a full-time candidate or four sessions in the case of a part-time candidate. The maximum period of candidature shall be four academic sessions from the date of enrolment for a full-time candidate and eight sessions for a part-time candidate. In special cases an extension of these times may be granted by the Committee.

18 Credit Project Report

4. (1) The program of advanced study may include an 18 credit project on an approved topic.

(2) The work shall be carried out under the direction of a supervisor appointed from the full-time academic members of the University staff.

(3) The candidate shall give in writing to the Academic Registrar two months notice of intention to submit a report on the project.

(4) Three copies of the project report shall be presented in a form which complies with the requirements of the University for the preparation and submission of project reports for higher degrees.

(5) It shall be understood that the University retains the three copies of the project report submitted for examination and is free to allow the project report to be consulted or borrowed. Subject to the provisions of the Copyright Act, 1968, the University may issue the project report in whole or in part, in microfilm or other copying medium.

Examination of 18 Credit Project Report

5. (1) There shall be not fewer than two examiners of the project report, appointed by the Academic Board on the recommendation of the Committee.
At the conclusion of the examination each examiner shall submit to the Committee a concise report on the project and shall recommend to the Committee that:

(a) the project report be noted as satisfactory; or
(b) the project report be noted as satisfactory subject to minor corrections being made to the satisfaction of the head of the school; or
(c) the project report be noted as unsatisfactory but that the candidate be permitted to resubmit it in a revised form after a further period of study and/or research; or
(d) the project report be noted as unsatisfactory and that the candidate be not permitted to resubmit it.

The Committee shall, after considering the examiners’ reports and the candidate’s results of assessment in the prescribed formal subjects, recommend whether or not the candidate may be awarded the degree. It is decided that the project report is unsatisfactory the Committee shall determine whether or not the candidate may resubmit it after a further period of study and/or research.

A candidate shall pay such fees as may be determined from time to time by the Council.

The degree of Master of Surveying by research may be awarded by the Council on the recommendation of the Higher Degree Committee of the Faculty of Engineering (hereinafter referred to as the Committee) to a candidate who has demonstrated ability to undertake research by the submission of a thesis embodying the results of an original investigation.

A candidate for the degree shall have been awarded an appropriate degree of Bachelor from the University of New South Wales or a qualification considered equivalent from another university or tertiary institution at a level acceptable to the Committee.

In exceptional cases an applicant who submits evidence of such other academic and professional qualifications as may be approved by the Committee may be permitted to enrol for the degree.

When the Committee is not satisfied with the qualifications submitted by an applicant the Committee may require the applicant, before being permitted to enrol, to undergo such examination or carry out such work as the Committee may prescribe.

An application to enrol as a candidate for the degree shall be made on the prescribed form which shall be lodged with the Academic Registrar at least one calendar month before the commencement of the session in which enrolment is to begin.

In every case, before permitting a candidate to enrol, the Head of the School of Surveying (hereinafter referred to as the head of the school) shall be satisfied that adequate supervision and facilities are available.

An approved candidate shall be enrolled in one of the following categories:

(a) full-time attendance at the University;
(b) part-time attendance at the University;
(c) external — not in regular attendance at the University and using research facilities external to the University.

A candidate shall be required to undertake an original investigation on an approved topic. The candidate may also be required to undergo such examination and perform such other work as may be prescribed by the Committee.

The work shall be carried out under the direction of a supervisor appointed from the full-time members of the University staff.

The progress of a candidate shall be reviewed annually by the Committee following a report by the candidate, the supervisor and the head of the school and as a result of such review the Committee may cancel enrolment or take such other action as it considers appropriate.

No candidate shall be granted the degree until the lapse of three academic sessions in the case of a full-time candidate or four academic sessions in the case of a part-time or external candidate from the date of enrolment. In the case of a candidate who has been awarded the degree of Bachelor with Honours or who has had previous research experience the Committee may approve remission of up to one session for a full-time candidate and two sessions for a part-time or external candidate.
(8) A full-time candidate for the degree shall present for examination not later than six academic sessions from the date of enrolment. A part-time or external candidate for the degree shall present for examination not later than ten academic sessions from the date of enrolment. In special cases an extension of these times may be granted by the Committee.

**Thesis**

4. (1) On completing the program of study a candidate shall submit a thesis embodying the results of the original investigation.

(2) The candidate shall give in writing two months notice of intention to submit the thesis.

(3) The thesis shall present an account of the candidate’s own research. In special cases work done conjointly with other persons may be accepted, provided the Committee is satisfied about the extent of the candidate’s part in the joint research.

(4) The candidate may also submit any work previously published whether or not such work is related to the thesis.

(5) Three copies of the thesis shall be presented in a form which complies with the requirements of the University for the preparation and submission of higher degree theses.

(6) It shall be understood that the University retains the three copies of the thesis submitted for examination and is free to allow the thesis to be consulted or borrowed. Subject to the provisions of the Copyright Act, 1968, the University may issue the thesis in whole or in part, in photostat or microfilm or other copying medium.

**Examination**

5. (1) There shall be not fewer than two examiners of the thesis, appointed by the Academic Board on the recommendation of the Committee, at least one of whom shall be external to the University unless the Committee is satisfied that this is not practicable.

(2) At the conclusion of the examination each examiner shall submit to the Committee a concise report on the merits of the thesis and shall recommend to the Committee that:

(a) the candidate be awarded the degree without further examination; or

(b) the candidate be awarded the degree without further examination subject to minor corrections as listed being made to the satisfaction of the head of the school; or

(c) the candidate be awarded the degree subject to a further examination on questions posed in the report, performance in this further examination being to the satisfaction of the Committee; or

(d) the candidate be not awarded the degree but be permitted to resubmit the thesis in a revised form after a further period of study and/or research; or

(e) the candidate be not awarded the degree and be not permitted to resubmit the thesis.

(3) If the performance at the further examination recommended under (2)(c) above is not to the satisfaction of the Committee, the Committee may permit the candidate to re-present the same thesis and submit to a further oral, practical or written examination within a period specified by it but not exceeding eighteen months.

(4) The Committee shall, after consideration of the examiners’ reports and the reports of any oral or written or practical examination, recommend whether or not the candidate may be awarded the degree. If it is decided that the candidate be not awarded the degree the Committee shall determine whether or not the candidate may resubmit the thesis after a further period of study and/or research.

**Fees**

6. A candidate shall pay such fees as may be determined from time to time by the Council.

**Master of Surveying without supervision (MSurv)***

See Master of Engineering.

**Master of Surveying Science (MSurvSc)***

See Master of Engineering Science.
1. A Graduate Diploma may be awarded by the Council to a candidate who has satisfactorily completed a program of advanced study.

2. (1) A candidate for the diploma shall have been awarded an appropriate degree of Bachelor from the University of New South Wales or a qualification considered equivalent from another university or tertiary institution at a level acceptable to the Higher Degree Committee of the appropriate faculty (hereinafter referred to as the Committee).

(2) An applicant who submits evidence of such other academic or professional attainments as may be approved by the Committee may be permitted to enrol for the diploma.

(3) If the Committee is not satisfied with the qualifications submitted by an applicant the Committee may require the applicant to undergo such assessment or carry out such work as the Committee may prescribe, before permitting enrolment.

3. (1) An application to enrol as a candidate for the diploma shall be made on the prescribed form which shall be lodged with the Academic Registrar at least two calendar months before the commencement of the session in which enrolment is to begin.

(2) A candidate for the diploma shall be required to undertake such formal subjects and pass such assessment as prescribed.

(3) The progress of a candidate shall be reviewed at least once annually by the Committee and as a result of its review the Committee may cancel enrolment or take such other action as it considers appropriate.

(4) No candidate shall be awarded the diploma until the lapse of two academic sessions from the date of enrolment in the case of a full-time candidate or four sessions in the case of a part-time candidate. The maximum period of candidature shall be four academic sessions from the date of enrolment for a full-time candidate and six sessions for a part-time candidate. In special cases an extension of these times may be granted by the Committee.

4. A candidate shall pay such fees as may be determined from time to time by the Council.
Scholarships and Prizes

The scholarships and prizes listed below are available to students whose courses are listed in this handbook. Each faculty handbook contains in its Scholarships and Prizes section the scholarships and prizes available with that faculty. The General Information section of the Calendar contains a comprehensive list of scholarships and prizes offered throughout the University.

Scholarships

Undergraduate Scholarships

Listed below is an outline only of a number of scholarships available to students. Full information may be obtained from Room G20, located on the Ground Floor of the Chancellery.

Unless otherwise indicated in footnotes, applications for the following scholarships should be made to the Registrar by 14 January each year. Please note that not all of these awards are available every year.

**Applications close 30 September each year.**
The UNSW Co-op Program
The University of New South Wales has industry-linked education scholarship programs to the value of $8000 per annum in the following areas: Business Information Technology, Chemical Engineering, Civil Engineering, Electrical and Computer Engineering, Industrial Chemistry, Mechanical and Industrial Engineering, Mining/mineral Engineering and Applied Geology.

Further information can be obtained by writing to The Co-ordinator, UNSW Co-op Programs Industry-Linked Education Office, C/-Vice-Chancellors Unit.

Graduate Scholarships

Application forms and further information are available from the Student Enquiry Counter, located on the Ground Floor of the Chancellery unless an alternative contact address is provided. Information is also available on additional scholarships which may become available from time to time, mainly from funds provided by organizations sponsoring research projects.

The following publications may also be of assistance: 1. Awards for Postgraduate Study in Australia and Awards for Postgraduate Study Overseas, published by the Graduate Careers Council of Australia. PO Box 28, Parkville, Victoria 3052*; 2. Study Abroad, published by UNESCO*; 3. Scholarships Guide for Commonwealth Postgraduate Students, published by the Association of Commonwealth Universities*.

Details of overseas awards and exchanges administered by the Department of Employment, Education and Training can be obtained from: Awards and Exchanges Section, Department of Employment, Education and Training, PO Box 826, Woden, ACT 2606.

Where possible, the scholarships are listed in order of faculty.

*Available for reference in the University Library.

<td>Candidates must be Australian citizens and 1. Either members of the Commonwealth or a State Public Service or semi-government Authority. 2. Either staff or graduate students at an Australian university. 3. Individuals recommended for nomination by the Local Correspondents. The candidate will usually have an honours degree or equivalent, or an outstanding record of achievement, and be not more than 36 years of age. Applications close 29 August with the Academic Registrar. Forms available from Mr J Larkin, Bureau of Agriculture and Resource Economics, GPO Box 1563, Canberra ACT 2601.</td>
</tr>
<tr>
<td>The Packer, Shell and Barclays Scholarships to Cambridge</td>
<td>Living and travel allowances, tuition expenses.</td>
<td>1-3 years</td>
<td>Applicants must be Australian citizens who are honours graduates or equivalent, and under 26 years of age. Applications close 15 October with The Secretary, Cambridge Commonwealth Trust, PO Box 252, Cambridge CB2 ITZ England.</td>
</tr>

<td></td>
</tr>
<tr>
<td>The Rhodes Scholarship to Oxford University</td>
<td>Approximately £4200 stg pa</td>
<td>2 years, may be extended for a third year</td>
<td>Unmarried Australian citizens aged between 19 and 25 who have an honours degree or equivalent. Applications close in August each year with The Secretary, University of Sydney, NSW, 2006. Applications close in mid-September each year.</td>
</tr>
<tr>
<td><strong>Engineering</strong></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Australian Institute of Nuclear Science and Engineering Studentships</td>
<td>Basic stipend $11,103 pa plus allowances and some University expenses.</td>
<td>1-3 years</td>
<td>Applicants must be honours graduates in Science or Engineering. At least one quarter of the period of tenure must be spent at the Institute at Lucas Heights, NSW. Applications close late October with the Academic Registrar.</td>
</tr>
<tr>
<td>Harold G. Conde Memorial Fellowship</td>
<td>$5000 pa</td>
<td>Maximum of 3 years</td>
<td>Applicants should be honours graduates permanently domiciled in Australia. The Fellowship is a supplementary award to be held in conjunction with another scholarship and is for graduate study or research in a field related to the electricity industry. Applications close with the Academic Registrar by 10 April.</td>
</tr>
<tr>
<td>IBM Research Scholarship in Microelectronics</td>
<td>$12000 pa where only scholarship held. $5000 pa where it supplements another scholarship.</td>
<td>Up to 3 years</td>
<td>To enable a suitable graduate to undertake a research degree in the Joint Microelectronics Research Centre. Applications close 31 October with the Academic Registrar.</td>
</tr>
<tr>
<td>The Joseph Barling Fellowship</td>
<td>Not less than $8500</td>
<td>Maximum of 3 years</td>
<td>Candidates should be electrical engineering graduates of the University of New South Wales (in special circumstances mechanical and industrial engineering graduates may apply.) The Fellowship is for full-time study for the award of the degree of Master of Business Administration or Doctor of Philosophy at the University. Applications close 31 December with the Academic Registrar.</td>
</tr>
<tr>
<td>Medical Engineering Research Association</td>
<td>Variable</td>
<td>1-3 years</td>
<td>Awarded for postgraduate study or research in the field of Biomedical Engineering. Applications to The Secretary, MERA, PO Box 218, Lindfield, NSW 2070.</td>
</tr>
<tr>
<td>Water Industry Research Award</td>
<td>$17,764 pa</td>
<td>2-4 years</td>
<td>Applications close with the Academic Registrar 10 January.</td>

Prizes

Undergraduate University Prizes

The following table summarizes the undergraduate prizes awarded by the University. Prizes which are not specific to any School are listed under General. All other prizes are listed under the Faculty or Schools in which they are awarded.

Information regarding the establishment of new prizes may be obtained from the Examinations Section located on the Ground Floor of the Chancellery.

This Handbook has been specifically designed as a source of reference for you and will prove useful for consultation throughout the year.

For fuller details about the University - its organization, staff membership, description of disciplines, scholarships, prizes, and so on, you should consult the Calendar.

The Calendar and Handbooks also contain a summary list of higher degrees as well as the conditions for their award applicable to each volume.

For detailed information about courses, subjects and requirements of a particular faculty you should consult the relevant Faculty Handbook.

Separate Handbooks are published for the Faculties of Applied Science, Architecture, Arts, Commerce and Economics, Engineering, Law, Medicine, Professional Studies, Science (including Biological and Behavioural Sciences and the Board of Studies in Science and Mathematics), and the Australian Graduate School of Management (AGSM).

The Calendar and Handbooks, which vary in cost, are available from the Cashier's Office.
