INTRODUCTION

In 1970 the Faculty of Science will, for the first time, adopt a unit system in all three years of the pass degree. In this new system, the traditional subjects such as Mathematics, which previously occupied a whole year, are now broken up into smaller units: first year subjects into two units, second year subjects into three units and third year subjects into four units.

First year subjects, which count as two units, differ from those of later years in that they must be taken as a whole. In other words one unit cannot be taken without the other. All students in the Science Course must enrol in Mathematics I, which is offered in three versions each of which counts as two units: Mathematics I, Higher Mathematics I and Mathematics IT. One only is required, but care must be taken in making the choice. Care must also be taken in choosing between Physics I, Higher Physics I and Physics IC. In general, Mathematics IT and Physics IC considerably limit the choice of units in following years.

Students proceeding to a degree in Science will be associated principally with schools within the Faculties of Biological Sciences and Science. However, in accordance with the regulations, students may elect to take subjects from schools in other faculties. Students seeking advice should contact the representative of the
relevant School. A list appears below:

Faculty of Applied Science

School of Applied Geology .... Mr. G. J. Baldwin

Faculty of Arts

School of Geography* .... ..... Professor J. A. Mabbutt
School of Philosophy** .... Professor C. L. Hamblyn

Faculty of Biological Sciences

General and Human Biology* (pre-requisite for all other units in this Faculty excepting Psychology)

School of Applied Psychology Mr. A. K. Olley
School of Biochemistry† ..... Dr. P. J. Schofield
School of Biological Technology‡ ..... Professor B. J. Ralph
School of Botany† ..... Dr. M. M. Hindmarsh
School of Microbiology† ..... Mr. R. G. H. Barbour or Dr. A. J. Wicken
School of Zoology† ..... Dr. E. Russell

Faculty of Engineering

School of Mechanical and Industrial Engineering ....

Engineering I* ..... ..... Mr. H. A. Borchardt

School of Electrical Engineering

Computer Science‡ ..... ..... Mr. G. B. McMahon

Faculty of Medicine

School of Anatomy† ..... ..... Assoc. Prof. B. R. A. O’Brien
School of Physiology† ..... ..... Dr. T. J. Heath
Faculty of Science

School of Applied Physics and Optometry .... .... Professor C. J. Milner
School of Chemistry .... .... Mr. W. J. Dunstan
School of Mathematics .... .... Mr. D. E. Mackenzie
School of Physics .... .... Dr. R. E. Lishmund

In addition to the Science subjects, all undergraduates in Science are required to pass in three subjects in General Studies. A wide choice is available and students should consult the Department of General Studies handbook which is provided free of charge.

Students who wish to be admitted with advanced standing should obtain the necessary forms from the Admissions Office. Copies of recommended courses may be obtained from the Enrolment Office.

CALENDAR OF DATES FOR 1970

Term 1 March 2 to May 16
Term 2 June 1 to August 8
Term 3 August 31 to October 31

JANUARY—
Monday 19 ............ Last day for acceptance of applications to enrol by new students and students repeating first year.
Tuesday 27 to Saturday Feb. 7 .... Deferred examinations.

FEBRUARY—
Monday 16 ........... Enrolment Week commences for new students and students repeating first year.
Monday 23 ........... Enrolment Week commences for students re-enrolling (second and later years).

MARCH—
Monday 2 ............ First Term lectures commence.
Friday 13 .......... Last day for enrolment of new students (late fee payable).
Friday 27 to Monday 30 ........ Easter.
Tuesday 31 .......... Last day for later year enrolments (late fee payable).

APRIL—
Wednesday 29 .......... Captain Cook Bi-Centenary Day—Public Holiday.

MAY—
Saturday 16 .......... First Term ends.

JUNE—
Monday 1 .......... Second Term commences.
Monday 15 .......... Queen's Birthday—Public Holiday.
Friday 26 .......... Last day for acceptance of applications for re-admission after exclusion under rules governing re-enrolment.
FACULTIES OF BIOLOGICAL SCIENCES AND SCIENCE

JULY—
Tuesday 7 .............. Foundation Day.
Friday 17 .............. Last day for acceptance of corrected enrolment details forms.

AUGUST—
Friday 7 .............. Last day for acceptance of corrected enrolment details forms (late fee payable).
Saturday 8 ............ Second Term ends.
Monday 31 ............ Third Term commences.

OCTOBER—
Monday 5 ............. Eight-Hour Day—Public Holiday.
Saturday 31 ........... Third Term lectures cease.

NOVEMBER—
Saturday 7 to Saturday 28 ........ Annual Examinations (30-week courses).

1971

Term 1 ..................... March 1 to May 15
Term 2 ..................... May 31 to August 7
Term 3 ..................... August 30 to October 30

JANUARY—
Tuesday 26 to Saturday Feb. 6 .... Deferred examinations.

FEBRUARY—
Monday 15 ........... Enrolment Week commences for new students and students repeating first year.
Monday 22 ........... Enrolment Week commences for students re-enrolling (second and later years).

MARCH—
Monday 1 .............. First Term lectures commence.
FACULTY OF BIOLOGICAL SCIENCES

Dean—Professor B. J. F. Ralph

SCHOOL OF APPLIED PSYCHOLOGY
Professor of Applied Psychology and Head of School

Professor of Applied Psychology
A. G. Hammer, MA Syd.

Associate Professor (Clinical Psychology)
R. T. Martin, BA DipPubAdmin Syd., MBPsychoanalSoc

Executive Assistant to Head of School
A. K. Olley, BA Syd.

SCHOOL OF BIOCHEMISTRY
Professor of Biochemistry and Head of School
E. O. Thompson, MSc DipEd Syd., PhD Cantab., ARACI

SCHOOL OF BIOLOGICAL TECHNOLOGY
Professor of Biological Technology and Head of School
B. J. F. Ralph, BSc Tas., PhD Lav., FRACI

Associate Professor
F. J. Moss, MB BS Melb.

SCHOOL OF BOTANY
Professor of Botany and Head of School
H. N. Barber, MA ScD Cantab., PhD Lond., FRS, FAA

SCHOOL OF MICROBIOLOGY
Professor of Microbiology and Head of School
J. M. Vincent, DScAgr Syd., DipBact Lond., FAIAS

Professor of Medical Microbiology
G. N. Cooper, MSc PhD Melb.

Associate Professor of Bacteriology
A. D. Brown, MSc Syd., PhD Manc.

SCHOOL OF ZOOLOGY
Associate Professor and Acting Head of School
A. K. O'Gower, MSc PhD Syd.
FACULTY OF SCIENCE

SCHOOL AND ADMINISTRATIVE OFFICERS

Dean—Professor S. J. Angyal

Dean’s Representative—Associate Professor G. J. Sutton, MSc PhD N.S.W., ASTC, FRIC, FRACI

Graduate Assistant to the Dean—Miss Emma S. Ayre, BA Syd.

SCHOOL OF APPLIED PHYSICS AND OPTOMETRY

Professor of Applied Physics and Head of School
C. J. Milner, MA PhD Cantab, FInstP, FAIP

Associate Professor
J. Lederer, BSc Syd., MSc N.S.W., ASTC, FIO

SCHOOL OF CHEMISTRY

Professor of Organic Chemistry and Head of School
S. J. Angyal, PhD Bud., DSc N.S.W., FAA, FRACI

Professor of Organic Chemistry
G. W. K. Cavill, MSc Syd., PhD DSc Liv., FRIC, FRACI

Professor of Theoretical and Physical Chemistry
R. M. Golding, MSc Auck., PhD Cantab., FNZIC, AInstP

Professor of Inorganic Chemistry
S. E. Livingstone, PhD DSc N.S.W., FSTC, FRACI

Professor of Analytical Chemistry
L. E. Smythe, MSc Syd., PhD Tas., FRACI

Professor of Chemistry
J. S. Shannon, DIC, PhD Lond., DSc Adel., FRACI

Associate Professors
E. R. Cole, MSc Syd., PhD N.S.W., FRACI
R. A. Eade, MSc Syd., PhD Liv., FRACI
J. L. Garnett, MSc N.S.W., PhD Chic., ASTC, ARACI
D. P. Graddon, MSc PhD Man., FRIC
C. M. Harris, BSc PhD N.S.W., ASTC, FRACI
R. J. L. Martin, MSc Melb., PhD Lond.
J. J. Simes, MSc DipEd Syd., PhD Liv., FRACI
N. C. Stephenson, MSc Syd., PhD N.S.W., ARACI
G. J. Sutton, MSc PhD N.S.W., ASTC, FRIC, FRACI
Director of First Year Studies
June C. Griffith, MSc N.S.W., PhD Syd.

Executive Assistant to Head of School
W. J. Dunstan, MSc Syd., ARACI

Graduate Assistant
Mrs. N. Merry, BA Syd.

SCHOOL OF MATHEMATICS

Professor of Applied Mathematics and Head of School
V. T. Buchwald, BSc Manc., MSc PhD Lond.

Professor of Applied Mathematics
J. M. Blatt, BA Cinc., PhD Corn. and Prin., FAA, FAPS

Professor of Pure Mathematics
G. Szekeres, DiplChemEng Bud., FAA

Professor of Pure Mathematics
G. M. Kelly, BSc Syd., BA PhD Cantab.

Professor of Statistics
A. M. Hasofer, BEE Faruk, BEc PhD Tas., MIEAust

Associate Professor of Mathematical Statistics
J. B. Douglas, MA BSc DipEd Melb.

Director of First Year Studies
Associate Professor A. H. Low, MSc DipEd Syd., PhD N.S.W.

SCHOOL OF PHYSICS

Professor of Physics and Head of School
E. P. George, BSc PhD Lond., DSc N.S.W., FInstP

Professor of Experimental Physics
H. J. Goldsmid, BSc PhD DSc Lond., FInstP

Associate Professors
D. Haneman, MSc Syd., PhD R'dg., FAIP, MSocSigmaXi(U.S.A.), Grad InstP
J. C. Kelly, BSc Syd., PhD R'dg., GradInstP, AAIP
J. F. McConnell, MSc Syd., PhD N.S.W., AInstP, AAIP
L. G. Parry, BSc DipEd Syd., MSc PhD N.S.W., AInstP, AAIP

Executive Assistant to Head of School
R. E. Lishmund, BSc PhD St. And., AInstP, AAIP
GENERAL INFORMATION

ADMISSIONS OFFICE

The Admissions Office which is located in the Chancellory on the upper campus provides intending students (both local and overseas) with information regarding courses, admission requirements, scholarships and enrolment. Office hours are from 9.00 a.m. to 1.00 p.m. and 2.00 p.m. to 5.00 p.m. Monday to Friday and an evening service is provided during the enrolment period.

Applications for special admission, admission with advanced standing and from persons relying for admission on overseas qualifications should be lodged with the Admissions Office. The Office also receives applications from students who wish to transfer from one course to another, resume their studies after an absence of twelve months or more, or seek any concession in relation to a course in which they are enrolled. It is essential that the closing dates for lodgment of applications are adhered to, and, for further details the sections on "Rules Relating to Students" and "Enrolment Procedure for Undergraduate Courses" should be consulted.

Applications for admission to undergraduate courses from students who do not satisfy the requirements for admission (see section on "Requirements for Admission"), from students seeking admission with advanced standing, and from students who have had a record of failure at another university, are referred by the Admissions Office to the Admissions Committee of the Professorial Board.

Students seeking to register as higher degree candidates should discuss their proposals initially with the Head of the School in which they wish to register. An application is then lodged on a standard form and the Admissions Office, after obtaining a recommendation from the Head of the School, refers the application to the appropriate Faculty or Board of Studies Higher Degree Committee.

Details of the procedure to be followed by students seeking entry to first year courses at the University may be obtained from the Admissions Office or the Metropolitan Universities Admissions Centre.
Persons seeking entry to first year courses in one or more of the three Universities in the Sydney Metropolitan Area (Macquarie University, The University of New South Wales and the University of Sydney) are required to lodge a single application form with the Metropolitan Universities Admissions Centre, Third Floor, 13-15 Wentworth Avenue (near Museum Station), Sydney (P.O. Box 7049, G.P.O., Sydney, 2001). On the application form, provision is made for applicants to indicate preferences for courses available in any of the three Universities. Students are notified individually of the result of their applications and provided with information regarding the procedures to be followed in order to accept the offer of a place at this University and complete their enrolment at the Enrolment Bureau, Unisearch House, 221 Anzac Parade, Kensington.

REQUIREMENTS FOR ADMISSION

A person who seeks to become a candidate for any degree of Bachelor of the University must first have qualified for matriculation and have satisfied the requirements for admission to the particular Faculty, Course or Subject chosen.

It should be noted that compliance with these conditions does not in itself entitle a candidate to enter upon a course. While it is the policy of the University to endeavour to admit all properly qualified applicants who have lodged applications by the appropriate closing date, it may be necessary at times to restrict the entry to one or more faculties because of lack of facilities.

A candidate who has satisfied the conditions for matriculation and for admission to a course of study shall be classed as a "matriculated student" of the University, after enrolment.

A person who has satisfactorily met the conditions for admission may be provided with a statement to that effect on the payment of the prescribed fee.

SECTION A

GENERAL MATRICULATION AND ADMISSION REQUIREMENTS

(for entry to the University in 1969 and until further notice)

1. A candidate may qualify for matriculation by attaining in recognised matriculation subjects at one New South Wales Higher School Certificate Examination or at one University of Sydney Matriculation Examination a level of performance determined by the Professorial Board from time to time.
2. The level of performance required to qualify for matriculation shall be
   (a) passes in at least five recognised matriculation subjects, one of which shall be English and three of which shall be at Level 2 or higher;
   and
   (b) the attainment of an aggregate of marks, as specified by the Professorial Board, in not more than five recognized matriculation subjects, such marks being coordinated in a manner approved by the Board.

3. The following subjects, and such other subjects as may be approved by the Professorial Board from time to time, shall be recognized matriculation subjects:
   - English
   - Greek
   - Chinese
   - Mathematics
   - Latin
   - Japanese
   - Science
   - French
   - Hebrew
   - Agriculture
   - German
   - Dutch
   - Modern History
   - Italian
   - Art
   - Ancient History
   - Bahasa Indonesia
   - Music
   - Geography
   - Spanish
   - Industrial Arts
   - Economics
   - Russian

4. A candidate who has qualified to matriculate in accordance with the provisions of Clauses 1, 2 and 3 may be admitted to a particular Faculty, Course or Subject provided that:
   (a) his qualification includes a pass at the level indicated in the subject or subjects specified in Schedule A as Faculty, Course or Subject Pre-requisites;
   or
   (b) the requirements regarding these particular Faculty, Course or Subject Pre-requisites, as specified in Schedule A, have been met at a separate Higher School Certificate or University of Sydney Matriculation Examination.

5. Notwithstanding any of the provisions of Clauses 1 to 4, the Professorial Board may grant matriculation status to any candidate at the Higher School Certificate or University of Sydney Matriculation Examination who has reached an acceptable standard and may admit him to any Faculty, Course or Subject.

NOTE

1. For the purposes of clause 2 (a), Mathematics and Science BOTH PASSED at First Level or Second Level Full Course shall together count as three subjects.
2. For the purposes of clause 2 (b), Mathematics and Science TAKEN either singly or together at First Level or Second Level Full Course shall each count as one and one half subjects.

SECTION B
SUPPLEMENTARY PROVISIONS FOR MATRICULATION

1. Notwithstanding the provisions of Section A above, candidates may be accepted as “matriculated students” of the University under the following conditions subject to the approval of the Professorial Board:—

(a) Any person who holds a diploma from the New South Wales Department of Technical Education, or any other Technical College which may from time to time be recognised by the University, may be admitted to the University as a “matriculated student” with such status as the Board may determine, provided that, in the opinion of the Board, the applicant’s qualifications are sufficient for matriculation to the Faculty nominated.

(b) The Board may admit as a “matriculated student” in any Faculty with such status as the Board may determine in the circumstances:
   (i) A graduate of any approved University.
   (ii) An applicant who presents a certificate from a University showing that he has a satisfactory record and is qualified for entrance to that University, provided that in the opinion of the Board there is an acceptable correspondence between the qualifying conditions relied upon by the applicant and conditions laid down for matriculation to the nominated Faculty of the University of New South Wales.

(c) (i) Any person who has completed the first year of the course at the Royal Military College of Australia and submits a certificate from the Commandant to that effect may be admitted as a “matriculated student” of the University.
   (ii) Any person who has completed a full course of at least three years’ prescribed study at the Royal Military College of Australia and produces a certificate from the Commandant to that effect may be admitted as a “matriculated student” of the University with such status as the Board may determine.

(d) Any person who has completed satisfactorily the passing out examination of the Royal Australian Naval College and submits a certificate from the Commanding Officer may be admitted as a “matriculated student” of the University.
(e) (i) Any person who has completed the first year of the course at the Royal Australian Air Force College and submits a certificate from the Commandant to that effect, may be admitted as a "matriculated student" of the University.

(ii) Any person who has completed two years of the course at the Royal Australian Air Force College and submits a certificate from the Commandant to that effect, may be admitted as a "matriculated student" of the University with such status as the Board may determine.

(f) An applicant who presents a certificate from another University showing that he is qualified for entrance to that University and setting out the grounds of such qualification, provided that in the opinion of the Professorial Board, there is an acceptable correspondence between the qualifying conditions relied upon by the applicant and the conditions laid down for matriculation to the nominated Faculty of the University of New South Wales.

2. (a) The Professorial Board may in special cases, including cases concerning persons of other than Australian education, declare any person qualified to enter a Faculty as a "provisionally matriculated student" although he has not complied with the requirements set out above, and in so doing may prescribe the completion of certain requirements before confirming the person's standing as a "matriculated student". Students who satisfactorily complete these requirements will be permitted to count the courses so passed as qualifying for degree purposes.*

(b) Persons over the age of twenty-five years may be admitted to provisional matriculation status provided that:

(i) they have satisfactorily completed an approved course of systematic study extending over at least three years after passing the School Certificate Examination, or

(ii) they satisfy the Professorial Board that they have reached a standard of education sufficient to enable them profitably to pursue the first year of the proposed course.

(c) Any applicant for provisional status may be required to take such examination as the Professorial Board may prescribe before such status is granted.

*The Professorial Board has determined that normally confirmation of standing as a "matriculated student" will require the successful completion of not less than half the normal programme in the first year of enrolment.
3. The Professorial Board may, at its discretion, permit a person, who does not satisfy the requirements for admission, to attend lectures in a subject or subjects at the University, on payment of the prescribed fees provided that such person shall not necessarily have the privileges of "matriculated students" and shall not be eligible to proceed to a degree.

ENROLMENT PROCEDURE FOR UNDERGRADUATE COURSES

It is the policy of the University to endeavour to admit all properly qualified applicants who have lodged applications by the appropriate closing date. In 1970, however, facilities available to the University will make it necessary to impose quotas in the faculties of Architecture, Arts, Commerce and Medicine and School of Social Work.

The enrolment procedure for the different classes of undergraduate students is as follows:

First Enrolments

Students with Overseas Entry Qualifications

Overseas students and Australian Residents relying for admission on overseas qualifications must lodge an application for enrolment prior to 31st October of the year preceding that in which admission is sought.

Local and Interstate Residents

(a) Australian Residents including students transferring from one course to another or from another University who have undertaken qualifying examinations in 1969 must lodge an application for enrolment by 19th January, 1970.

(b) Australian Residents already qualified for admission and students wishing to resume University studies must apply for enrolment by 31st October, 1969.

First Year Repeat Students

First year students who fail all subjects at the annual examinations and who are not granted any deferred examinations must apply for re-enrolment to the Admissions Office by 19th January, 1970.
Application forms for enrolment and details of the application procedures may be obtained on application to the Registrar, P.O. Box 1, Kensington, 2033.

Students in the above categories whose applications for enrolment are accepted will be required to complete their enrolment at a specified appointment time before the start of first term. Fees must be paid on the day of the appointment. However, in special circumstances and provided class places are still available, students may be allowed to complete their enrolment after the prescribed week subject to the payment of a late fee.

Later Year Enrolments—All students enrolling other than for the first time and not included above should do so through the appropriate school. Full-time students, other than those in the Science course, must attend at the time and place during Enrolment Week as set out in the booklet published each year, “Enrolment Procedure for Students Re-enrolling”. Enrolment forms for these students will be prepared and available at the enrolment centre.

All full-time and part-time students in the Pure and Applied Chemistry course are required to complete an enrolment form in the last fortnight of third term. The forms may be obtained from the office of the School of Chemistry (Mr. A. Funnell). An appointment will then be made to complete enrolment in accordance with the special arrangements made by the school. These arrangements are published in the booklet, “Enrolment Procedure for Later Year Students”.

A late fee of $7 will be incurred by students failing to enrol during Enrolment Week.

Miscellaneous Subject Enrolments—Students may be permitted to enrol for miscellaneous subjects (i.e., as students not proceeding to a degree or diploma) provided the Head of the School offering the subject considers it will be of benefit to the student and there is accommodation available. Under no circumstances will subjects taken in this way count towards a degree or diploma.

Students who have completed the final examinations but have a thesis still outstanding are required to enrol for the period necessary to complete the thesis and to pay the requisite fees.

Course details must be completed during the prescribed Enrolment Week. For details of fee requirements, including late fee provisions, see under Fees.
Final Dates for Completion of Enrolment—No enrolments will be accepted from new students after the end of the second week of term (13th March, 1970) except with the express approval of the Registrar and the Head of the School concerned; no later year enrolments will be accepted after 31st March without the express approval of the Registrar which will be given in exceptional circumstances only.

UNIVERSITY UNION CARD

All students other than miscellaneous students are issued with a University Union membership card. This card must be carried during attendance at the University and shown on request.

The number appearing on the front of the card in the space at the top right-hand corner is the student registration number used in the University's records. This number should be quoted in all correspondence.

The card must be presented when borrowing from the University libraries, when applying for travel concessions and when notifying a change of address. It must also be presented when paying fees on re-enrolment each year when it will be made valid for the year and returned. Failure to present the card could result in some inconvenience in completing re-enrolment.

A student who loses a Union card must notify the University Union as soon as possible.

New students will be issued with University Union cards by mail to their term address as soon as possible after fee payment. In the meantime, the fees receipt form should be carried during attendance at the University and shown on request. If the Union card is not received within three weeks of fee payment the University Union should be notified.
Fees for Undergraduate Courses

Where course fees are assessed on the basis of term hours of attendance the hours for each subject for purposes of fee assessment shall be those prescribed in the Calendar, irrespective of any variation from the prescribed hours which may be necessary in conducting the subject.

For the purpose of fee determination for courses in the Faculty of Science assessment is on a term basis. A full-time course fee will be charged for any term where more than 15 hours’ per week instruction, etc., is involved.

(i) Full-time Course Fee (more than 15 hours’ attendance per week)—$132 per term.
(ii) Part-time Course Fee (over 6 hours’ and up to 15 hours’ attendance per week)—$66 per term.
(iii) Part-time Course Fee (6 hours’ or less attendance per week)—$33 per term.
(iv) Course Continuation Fee—A fee of $28 per annum (no term payment) is payable by:

Category (a) Students who have once been enrolled for a thesis and have only that requirement outstanding; OR

Category (b) Students given special permission to take annual examinations without attendance at the University. (Students in this category are not required to pay the subscriptions to the University Union, the Students’ Union, the Sports Association and the Library Fee.)

Miscellaneous Subjects

Undergraduate subjects taken as "miscellaneous subjects" (i.e., not for a degree or diploma) or to qualify for registration as a candidate for a higher degree are assessed on an hourly basis in accordance with the schedule above.

*Fees quoted are current at time of publication and may be altered by Council without notice.
Students given approval to enrol in a miscellaneous subject or subjects in addition to being enrolled in a course are assessed according to the total hours of attendance as if the additional subject(s) formed part of the course.

**Other Fees**

In addition to the course fees set out above all registered undergraduates will be required to pay—

- Matriculation Fee—$8—payable at the beginning of first year.
- Library Fee—annual fee—$14.
- University Union*—entrance fee—$20.

**Student Activities Fees**

- University Union*—$20—annual subscription.
- Sports Association*—$2—annual subscription.
- Students' Union*—$5—annual subscription.
- Miscellaneous—$10—annual fee.
- Total—$37.

Graduation or Diploma Fee—$8—payable at the completion of the course.

Depending on the course being taken, students may also be required to pay—

- Applied Psychology Kit Hiring Charge—$2 per kit. Additional payment for breakages and losses in excess of $1.
- Biochemistry Kit Hiring Charge—$4 per kit. Additional charge for breakages and losses in excess of $1 may be required.
- Chemistry Kit Hiring Charge—$4 per kit. Additional charge for breakages and losses in excess of $1 may be required.
- Excursion Fee—$2 per subject (botany, zoology, entomology).†

**Special Examination Fees**

- Deferred examination—$6 for each subject.
- Examinations conducted under special circumstances—$8 for each subject.
- Review of examination result—$8 for each subject.

* Life members of these bodies are exempt from the appropriate fee or fees.
† Students in the original Applied Biology degree course pay an excursion fee of $1 per subject for botany, zoology and entomology.
Late Fees

First Enrolments
Fees paid on the late enrolment session and before the commencement of term $7
Fees paid during the first and second weeks of term $14
Fees paid after the commencement of the third week of term with the express approval of the Registrar and Head of the School concerned $28

Re-Enrolments

First Term
Failure to attend enrolment centre during enrolment week $7
Fees paid after the commencement of the third week of term to 31st March $14
Fees paid after 31st March where accepted with the express approval of the Registrar $28

Second and Third Terms
Fees paid in third and fourth weeks of term $14
Fees paid thereafter $28
Late lodgement of corrected enrolment details forms (late applications will be accepted for three weeks only after the prescribed dates) $6

Withdrawal from Course
Students withdrawing from a course are required to notify the Registrar in writing. Fees for the course accrue until a written notification is received.

Where notice of withdrawal from a course is received by the Registrar before the first day of First Term a refund of all fees paid other than the matriculation fee will be made.

Where a student terminates for acceptable reasons a course of study before half a term has elapsed, one half of the term’s fee may be refunded. Where a student terminates a course of study after half a term has elapsed, no refund may be made in respect of that term’s fees.
The Library fee is an annual fee and is not refundable where notice of withdrawal is given after the commencement of First Term.

On notice of withdrawal a partial refund of the University Union Entrance Fee is made on the following basis: any person who has paid the entrance fee in any year and who withdraws from membership of the University Union after the commencement of first term in the same year, or who does not renew his membership in the immediately succeeding year may on written application to the Warden receive a refund of half the entrance fee paid.

On notice of withdrawal a partial refund of the Student Activities Fees is made on the following basis:

- University Union—$3.33 in respect of each half term.
- University of New South Wales Students' Union—where notice is given prior to the end of the fifth week of first term $2, thereafter no refund.
- University of New South Wales Sports Association—where notice is given prior to 30th April a full refund is made, thereafter no refund.
- Miscellaneous—where notice is given prior to 30th April $5, thereafter no refund.

PAYMENT OF FEES

Completion of Enrolment

All students are required to attend the appropriate enrolment centre during the prescribed enrolment period* for authorisation of course programme. Failure to do so will incur a late fee of $7.

First year students (including students repeating first year) must complete enrolment (including fee payment) before they are issued with class timetables or permitted to attend classes. A first year student who has been offered a place in a course to which entry is restricted and fails to complete enrolment (including fee payment) at the appointed time may lose the place allocated.

* The enrolment periods for Sydney students are prescribed annually in the leaflets “Enrolment Procedure for New Students” and “Enrolment Procedure for Students Re-enrolling”.

Fees should be paid during the prescribed enrolment period but will be accepted during the first two weeks of First Term. (For late fees see below.) No student is regarded as having completed an enrolment until fees have been paid. Fees will not be accepted (i.e., enrolment cannot be completed) from new students after the end of the second week of term (i.e., 13th March, 1970), and after 31st March from students who are re-enrolling, except with the express approval of the Registrar, which will be given in exceptional circumstances only.

**Payment of Fees by Term**

Students who are unable to pay their fees by the year may pay by the term, in which case they are required to pay First Term course fees and other fees for the year, within the first two weeks of First Term. Students paying under this arrangement will receive accounts from the University for Second and Third Term fees. These fees must be paid within the first two weeks of each term.

**Assisted Students**

Scholarship holders or Sponsored Students who have not received an enrolment voucher or appropriate letter of authority from their sponsor at the time when they are enrolling should complete their enrolment paying their own fees. A refund of fees will be made when the enrolment voucher or letter of authority is subsequently lodged with the Cashier.

**Extension of Time**

Any student who is unable to pay fees by the due date may apply in writing to the Registrar for an extension of time. Such application must give year or stage, whether full-time or part-time, and the course in which the applicant wishes to enrol, state clearly and fully the reasons why payment cannot be made and the extension sought, and must be lodged before the date on which a late fee becomes payable. Normally the maximum extension of time for the payment of fees is until 31st March for fees due in First Term and for one month from the date on which a late fee becomes payable in Second and Third Terms.

Where an extension of time is granted to a First Year student in First Term, such student may only attend classes on the written authority of the Registrar, but such authority will not normally be given in relation to any course where enrolments are restricted.
Failure to Pay Fees

Any student who is indebted to the University and who fails to make a satisfactory settlement of his indebtedness upon receipt of due notice ceases to be entitled to membership and privileges of the University. Such a student is not permitted to register for a further term, to attend classes or examinations, or to be granted any official credentials.

No student is eligible to attend the annual examinations in any subject where any portion of his course fees for the year is outstanding after the end of the fourth week of Third Term (25th September, 1970).

In very special cases the Registrar may grant exemption from the disqualification referred to in the two preceding paragraphs upon receipt of a written statement setting out all relevant circumstances.
RULES RELATING TO STUDENTS

ATTENDANCE AT CLASSES

Where a student has attended less than eighty per cent of the possible classes, he may be refused permission to sit for the examination in that subject.

COURSE TRANSFERS AND CLAIMS FOR ADVANCED STANDING

Students wishing to transfer from one course to another (including transfer from full-time to part-time study or vice versa) must make application to the Admissions Office. Applications to transfer to courses where quotas apply will not be accepted after 19th January. The Admissions Office will give each applicant an acknowledgement of his application to transfer.

Having made application to the Admissions Office students transferring are required to attend the School Enrolment Centre at the time set down for the year/stage of the new course in which they expect to enrol. They must present the letter granting approval of the transfer to the enrolling officer.

Students who have not received a letter granting approval to the transfer before the date on which they are required to enrol must present their acknowledgement to the enrolling officer who will decide whether to permit them to attend classes provisionally in the new course. Students who are permitted to attend classes provisionally should not pay fees until they have received their letter granting formal approval to transfer.

Students claiming advanced standing (exemptions from subjects) by reason of courses completed in other places should do so by applying to the Registrar on the appropriate form. Copies of the form may be obtained from the Admissions Office.

CHANGES IN COURSE PROGRAMMES AND WITHDRAWAL FROM SUBJECTS

Students seeking approval to substitute one subject for another or add one or more subjects to their programme must make
application to the Head of the School responsible for the course on a form available from School offices. In the case of students wishing to withdraw from subjects or terminate their enrolment the application must be lodged at the Examinations and Student Records Section. The Registrar will inform students of the decision. Approval of withdrawal from subjects is not automatic, each application being determined after considering the circumstances advanced as justifying withdrawal. It is emphasized that withdrawal from subjects after Term I or failure to sit for the examinations in any subjects for which the student has enrolled is regarded as failure to pass the subjects unless written approval to withdraw has been obtained from the Registrar.

RESUMPTION OF COURSES

Students wishing to resume their studies after an absence of twelve months or more are required to apply to the Admissions Office for permission to re-enrol by 19th January, 1970. Students re-enrolling in this way will normally be required to satisfy conditions pertaining to the course at the time of re-enrolment. This condition applies also to students who have been re-admitted to a course after exclusion under the rules restricting students re-enrolling.

ANNUAL EXAMINATIONS

The annual examinations take place in November-December for students in 30-week courses, and in September for students in 21- and 24-week courses. Timetables showing time and place at which individual examinations will be held are posted on the central notice boards in the Bio-Medical Building, Central Lecture Theatre Block, The Chancellery, Dalton Building, Main Building and Western Grounds Area. Misreading of the timetable is not an acceptable excuse for failure to attend an examination. Examination results are posted to the term addresses of students. No results will be given by telephone.

All students will receive an enrolment details form by 30th June. It is not necessary to return this form, unless any information recorded there is incorrect. Amended forms must be returned to the Examinations Branch by 17th July. Amendments notified after the closing date will not be accepted unless exceptional circumstances exist and approval is obtained from the
Registrar. Where a late amendment is accepted, a late fee of $6 will be payable. Amended forms returned to the Registrar will be acknowledged in writing within fourteen days.

RESTRICTION UPON STUDENTS RE-ENROLLING

The University Council has adopted the following rules governing re-enrolment with the object of requiring students with a record of failure to show cause why they should be allowed to re-enrol and retain valuable class places. These rules will be applied retrospectively from January, 1971.

1. (i) A student shall show cause why he should be allowed to repeat a subject in which he has failed more than once. (Failure in a deferred examination as well as in the annual examination counts, for the purpose of this regulation, as one failure). Where such subject is prescribed as a part of the student’s course he shall be required to show cause why he should be allowed to continue the course.

Notwithstanding the provisions of Clause 1(i)

(ii) A student enrolled in the first year or first stage of any course who has failed in more than half the programme in which he is enrolled for that year or stage shall be required to show cause why he should be allowed to continue in the course.

(iii) A student enrolled in the first year of the Medical course who has failed in more than one subject of that year shall be required to show cause why he should be allowed to continue in the Medical course.

2. Notwithstanding the provisions of Clause 1, a student shall be required to show cause why he should be allowed to continue a course which he will not be able to complete in the time set down in the following schedule:

<table>
<thead>
<tr>
<th>Number of years in course</th>
<th>Total time allowed from first enrolment to completion (years)</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>5</td>
</tr>
<tr>
<td>4</td>
<td>6</td>
</tr>
<tr>
<td>5</td>
<td>8</td>
</tr>
<tr>
<td>6</td>
<td>9</td>
</tr>
<tr>
<td>7</td>
<td>11</td>
</tr>
<tr>
<td>8</td>
<td>12</td>
</tr>
</tbody>
</table>
3. No full-time student shall, without showing cause, be permitted to continue a course unless all subjects of the first year of his course are completed by the end of his second year of attendance. No student in the Faculty of Arts shall, without showing cause, be permitted to continue a course unless he completes four subjects by the end of his second year of attendance.

No part-time student shall, without showing cause, be permitted to continue a course unless all subjects of the first two stages of his course are completed by the end of his fourth year of attendance and all subjects of the third and fourth stages of his course by the end of his seventh year of attendance.

No student in the Faculty of Medicine shall, without showing cause, be permitted to continue with the medical course unless he completes the second year of the course by the end of his third year of attendance, and the third year of the course by the end of his fourth year of attendance.

4. A student who has a record of failure in a course at another University shall be required to show cause why he should be admitted to this University. A student admitted to a course at this University following a record of failure at another University shall be required to show cause, notwithstanding any other provisions in these rules, why he should be permitted to continue in that course if he is unsuccessful in the annual examinations in his first year of attendance at this University.

5. Any student excluded under any of the Clauses 1-3 may apply for re-admission after two academic years and such application shall be considered in the light of any evidence submitted by him.

6. A student wishing "to show cause" under these provisions shall do so in writing to the Registrar. Any such application shall be considered by the Professorial
Board, which shall determine whether the cause shown is adequate to justify his being permitted to continue his course or re-enrol as the case may be.

7. The Vice-Chancellor may on the recommendation of the Professorial Board exclude from attendance in a course or courses any student who has been excluded from attendance in any other course under the rules governing re-enrolment and whose record at the University demonstrates, in the opinion of the Board and the Vice-Chancellor, the student’s lack of fitness to pursue the course nominated.

8. A student who has failed, under the provisions of Clause 6 of these rules, to show cause acceptable to the Professorial Board why he should be permitted to continue in his course, and who has subsequently been permitted to re-enrol in that course or to transfer to another course, shall also be required to show cause, notwithstanding any other provisions in these rules, why he should be permitted to continue in that course if he is unsuccessful in the annual examinations immediately following the first year of resumption or transfer of enrolment as the case may be.

9. A student may appeal to an Appeals Committee constituted by Council for this purpose, against his exclusion by the Professorial Board from any subject or course.

**RE-ADMISSION AFTER EXCLUSION**

Applications for re-admission must be made on the standard form and lodged with the Registrar not later than 30th June of the year prior to that for which re-admission is sought. An application should include evidence of appropriate study in the subjects (or equivalents) on account of which the applicant was excluded. In addition, evidence that the circumstances which were deemed to operate against satisfactory performance at the time of exclusion are no longer operative or are reduced in intensity, should be furnished. An applicant may be required to take the annual examinations in the relevant subjects as qualifying examinations in which case re-admission does not imply exemption from the subject. Late applications cannot be considered where, in the
opinion of the University, insufficient time will be available for the student to prepare himself for any qualifying examinations which may be required.

It should be noted that a person under exclusion may not be enrolled in miscellaneous subjects unless he has received the approval of the Professorial Board.

Persons who intend applying for re-admission to the University at a future date may seek advice as to ways in which they may enhance their prospects of qualifying for re-admission. Enquiries should be made on a form obtainable from the Examinations Branch, and lodged with the Registrar.
STUDENT SERVICES

THE LIBRARY

The University Library is located on the Upper Campus adjacent to the Chancellery, the Commerce Building and the Arts Building. The Bio-Medical Library is in the Biological Sciences Building with a branch at Prince Henry Hospital (Phone: 661 0111).

The Library’s Undergraduate Collection covers the teaching and research interests of the Faculty, and students are expected to read widely and critically from it.

It is recommended that students attend the “Introduction to the Library” which is held at advertised times during Orientation Week and the first week of term. The “Introduction” uses audiovisual aids to describe the physical layout of the undergraduate library and the services available to readers.

Copies of the booklet, Guide to the Library, are available on request.

Students who are interested in a subject approach to information may attend a course which outlines methods of searching for information in libraries. This course runs for eight hours over a period of one week.

Individual assistance for readers with specific library problems is provided by the Reader Assistance Unit which is located in the foyer.

THE UNIVERSITY UNION

The University Union is a common meeting ground for all students. Eating and general recreational facilities are available, as well as a shop for stationery and other student requisites, branches of several banks, a pharmacy, a branch of David Jones, and hairdressing facilities. Membership is compulsory for all registered students.
STUDENT ACCOMMODATION

Residential Colleges

Accommodation for students is provided within the complex of the Residential Colleges of the University which comprise Basser College, Phillip Goldstein Hall and Philip Baxter College. The College complex houses 500 men and women students, as well as staff members. Tutors in residence provide tutorial assistance in a wide range of subjects.

Board and residence fees, which are payable on a term basis, amount to $20 per week. Intending students should apply in writing to the Master, Box 24, Post Office, Kensington, N.S.W., 2033, from whom further information is available.

Accommodation is also available at International House, New College (Church of England) and Warrane College (Roman Catholic). Students should write to the college of their choice for information regarding accommodation.

Other Accommodation

Students requiring other than Residential College accommodation may make application to the Student Amenities Service where current lists are kept of accommodation available at recognised boarding houses, private homes, and in serviced and unserviced apartments.

STUDENT COUNSELLING AND RESEARCH UNIT

Prospective students seeking advice or guidance regarding the selection and planning of courses (particularly in relation to a career), or advice regarding their suitability for a particular course, are invited to consult the University's Student Counselling and Research Unit. Appointments may be made by telephone (663-0351, extensions 2600 to 2605).

In addition to its counselling service, the Unit provides a variety of study skills programmes throughout the year, on a group or individual basis. Programmes offered in the past have included Reading Improvement, Study Methods, Written Expression, Note Taking, Studying Mathematics, Improving Listening, Preparing for Statistics.
STUDENT AMENITIES UNIT
This Unit is closely associated with the Sports Association and also handles applications for student concession fares and provides a service for students requiring other than College accommodation.

STUDENT EMPLOYMENT UNIT
Assistance is offered in finding full-time employment for evening students, and permanent employment after graduation. The Unit also administers the University's industrial training programme and is located in the Chancellery (Administration Building) located off High Street.

STUDENT HEALTH UNIT
A student health and first aid centre, staffed by a qualified medical practitioner and a nursing sister, is provided by the University. Students are encouraged to attend the centre for advice on all matters pertaining to their health.
University Scholarships

The University annually awards up to fifteen scholarships tenable in degree courses to students who have matriculated at the Higher School Certificate Examination; ten scholarships to students who have completed certificate courses (Department of Technical Education); ten scholarships to students who have completed Trade Courses (Department of Technical Education); and ten scholarships to part-time students who have taken the Diploma Entrance course of the Department of Technical Education. The scholarships are tenable in any faculty and exempt the holder from payment of course fees during the currency of the scholarship. Scholarships will be awarded in order of merit on the Higher School Certificate Examination results. They may be held only by persons who do not hold another award. Applications for these scholarships, on forms available from the Registrar, must be lodged with the Registrar within seven days of the publication of the results of the New South Wales Higher School Certificate Examination.

Commonwealth University Scholarships

There are three types of scholarships, which are available for both Pass and Honours courses: (a) Open Entrance Scholarships; (b) Later Year Scholarships; (c) Mature Age Scholarships. Benefits include payment of tuition fees, examination fees, matriculation fees, degree fees, and other compulsory fees. Full-time students may also apply for a living allowance, which is subject to a means test.

The closing date for applications for Commonwealth University Scholarships is 30th September of the year immediately preceding the year for which the scholarship is desired. Applications for renewal of scholarship must be made before 31st October each year. Further information, application forms and the Commonwealth Scholarship Handbook may be obtained from the Department of Education and Science, La Salle Building, 70 Castlereagh Street, Sydney, 2000, or Box 3987, G.P.O. Sydney, 2001. Phone 2 0323.
Bursaries Awarded by the Bursary Endowment Board

A number of Bursaries tenable at the University are awarded to candidates of merit at the Higher School Certificate Examination whose family income falls within certain limits prescribed by the Bursary Endowment Board.

Applications should be made to the Secretary, Bursary Endowment Board, c/- Department of Education, Bridge St., Sydney.

Scholarships in Optometry

The Australian Optometrical Association (New South Wales Division) and Gibb & Beeman (Spectacle Makers) Pty. Ltd., offer annually one scholarship each to the value of $500 per annum. The Australian Optometrical Association also offers a scholarship which has a total value of $1600: $250 for the first year and $450 for the second, third and fourth years. These scholarships are available to students who desire to enrol in the full-time degree course in Optometry leading to the degree of Bachelor of Optometry at the University of New South Wales.

Applicants must be residents of New South Wales. While scholarship holders are not under any bond or obligation, it is expected that they will practise optometry in Australia. Candidates must be under 21 years of age at the time of application.

Each scholarship will normally be tenable for the duration of the course but its tenure shall be at all times subject to the holder maintaining a standard of conduct and progress acceptable to the Professorial Board. The annual allowance of the scholarship is payable to the holder in three equal amounts at the commencement of each term of the University year.

These scholarships will be awarded on the understanding that applicants will normally hold a Commonwealth Scholarship which covers the cost of University fees. However, applicants who are not holders of a Commonwealth Scholarship may also be considered.

Application for these scholarships, on forms obtainable from the Registrar, must be lodged with the Registrar after publication of examination results and the announcement of the award of Commonwealth Scholarships, but not later than 31st January each year.
Traineeships and Cadetships

Traineeships and cadetships are offered by the N.S.W. Public Service Board and by the Commonwealth Service.

These traineeships make it possible for selected employees of the Commonwealth or State Public Services to undertake full-time University study.

Students receive a salary during their years at the University and are required to undertake their industrial training with the department in which they are employed. Full details of cadetships and traineeships available at any one time may be had, in the case of the State authorities, from the N.S.W. Public Service Board, 19 O'Connell Street; and in the case of the Commonwealth authorities, from the Employment Officer, Commonwealth Public Service Inspector's Office, Commonwealth Centre, Chifley Square (cnr. Phillip and Hunter Streets) (telephone 28-5701).

Department of Railways Cadetships

The Department of Railways each year offers cadetships in Chemistry. Cadet chemists are enrolled in the appropriate part-time course leading to the degree of B.Sc. and are required to enter into a bond of $2000 to remain in the employ of the Department for five years after completion of the cadetship. Cadets have their course fees paid and receive a salary in accordance with the award rates.

Vacancies for cadets are advertised between November and January and full details are given in a brochure available during this period from the Employment Personnel Officer, Department of Railways, 509 Pitt Street, Sydney.

Sponsored Students

Many private industrial and commercial organisations sponsor students in Science courses. The conditions under which students are sponsored vary from company to company, but in general the company meets all compulsory fees. Industrial training is generally undertaken with the sponsoring company.

Students are advised to consult the Admissions Office or the Student Counselling Unit at Kensington for further details concerning scholarships and cadetships and for information concerning companies sponsoring students.
UNDERGRADUATE COURSES

There are two types of courses available within the Faculties of Science and Biological Sciences. The first is the Science Course, which allows a student to select sequences from a variety of the sciences. The second type of course is of a more specialised nature. Such courses are offered in Pure and Applied Chemistry, Applied Physics, Optometry and Applied Psychology. Details of each of these courses are given below.

I. SCIENCE COURSE

The Science Course is administered by the Dean of the Faculty of Science through his nominated representative on behalf of the Schools within the Faculty of Biological Sciences and the Faculty of Science, as well as the Schools of Applied Geology, Physiology and Anatomy, and the Department of Electronic Computation (School of Electrical Engineering).

The pass degree (Bachelor of Science) is based on a unit structure. A unit in experimental subjects comprises 90 hours of lectures, tutorials and laboratory work, and in theoretical subjects comprises an equivalent loading of lectures and tutorials. A unit may be of 15 or 30 weeks’ duration.

The unit structure has been chosen to allow flexibility in the choice of a course of study and the regulations have been framed so that a student may choose a pattern suitable for:

(1) a general scientific education.
(2) the training of science teachers.
(3) professional training in a specific discipline.
(4) professional training in interdisciplinary areas.

Units are grouped according to levels. Level I subjects are all double units. Level II units normally follow after Level I pre-requisites. Level III units in most cases follow after Level II pre-requisites.

The requirements of a pass degree may be met by completing units in accordance with the regulations set out below and which
constitute a major in one of the disciplines of the Schools of the Faculties of Science and Biological Sciences, or the Schools of Applied Geology (Faculty of Applied Science), Physiology or Anatomy (Faculty of Medicine). Some units may also be included from Schools in the Faculties of Arts and Engineering. A major normally includes four Level III units chosen from those offered by a particular School.

All students are required to complete three General Studies subjects. Patterns and outlines of these subjects are listed in the Department of General Studies Handbook, which is available free of cost.

The minimum time required to complete a pass degree is three years’ full-time study or an equivalent period part-time. Some subject groupings cannot, however, be completed in the minimum time due to timetable difficulties.

A student may be admitted, subject to meeting conditions defined in the regulations, to an honours course which involves an extra year of full-time study or two years of part-time study. Those intending to seek admission to an honours year should consult the Head of the appropriate school on completion of the first year subjects.

Any arrangement of units to be studied must be approved by the Dean of the Faculty of Science. Advice on recommended course patterns may be obtained from the Education Officer of the School in which a student intends to major.
REGULATIONS GOVERNING THE SCIENCE COURSE

1. Definitions

The Science course is administered by the Dean of the Faculty of Science through his nominated representative.

The pass degree is based on a unit structure. A unit may be of 15 or 30 weeks' duration, and units are grouped according to levels. Level I subjects are all double units, level II units normally follow after level I pre-requisites and level III units, in most cases, follow after level II pre-requisites. A major sequence normally includes four level III units chosen from those offered by a particular school, although a number of schools offer more than four such units.

A pre-requisite unit is one which must be completed prior to enrolment in the unit for which it is prescribed. A co-requisite unit is one which must either be completed successfully before or be studied concurrently with the unit for which it is prescribed. An excluded unit is one which cannot be counted together with the unit which excludes it towards the degree qualification. In exceptional circumstances, on the recommendation of the head of the appropriate school, the Dean of the Faculty of Science may waive or vary a particular pre-requisite or co-requisite.

CARE SHOULD BE TAKEN IN THE CHOICE OF UNITS TO ENSURE THAT THE PATTERN COMPLIES WITH THE REGULATIONS SET OUT IN SECTION 3(a). CERTAIN COMBINATIONS OF UNITS CANNOT BE COMPLETED IN THE MINIMUM TIME DUE TO THE RESTRICTIONS OF TIMETABLES. COPIES OF TYPICAL COURSE PATTERNS ARE AVAILABLE FROM THE FACULTY OFFICE.

2. Regulations governing the Science course

(a) Requirements for a pass degree

In order to qualify for admission to the degree of Bachelor of Science under these regulations a candidate shall attend classes and satisfy the examiners in Science units and General Studies subjects chosen as follows—
(i) At least 23 Science units shall be included from the list set out in section 3(a) and three General Studies subjects from the list in section 3(b).

(ii) The 23 Science units shall comply with the pre-requisites, co-requisites and exclusion conditions set out in section 3(a) and also shall conform to the following restrictions:

- not less than 8 units, nor more than 10 units may be from level I;
- not less than 6 units may be from level II;
- not less than 4 units may be from level III, and these four shall be chosen from related disciplines.

(iii) One of 10.001 Mathematics I, OR 10.011 Higher Mathematics I, OR 10.021 Mathematics IT shall be included.

(iv) In addition to the specific pre-requisites listed in Clause 3(a), additional general pre-requisites are required by some schools as a preliminary to certain advanced level units. These units, which are scheduled below, should be taken in the first year of enrolment together with compulsory mathematics. Eight units are normally taken in first year.

School of Chemistry: 1.001, 1.011 or 1.041 Physics.

School of Applied Geology: 1.001, 1.011 or 1.041 Physics and 2.001 or 2.011 Chemistry.

School of Biochemistry: 1.001, 1.011 or 1.041 Physics and 2.001 or 2.011 Chemistry and 17.001 General and Human Biology except that with the consent of the Head of the particular School concerned and in special circumstances Physics may be deferred to second year and 25.001 Geology taken in lieu in first year. In this case, credit will not be given for any level III units offered by these Schools until level I Physics is completed.
School of Anatomy: 2.001 or 2.011 Chemistry and 17.001 General and Human Biology.

School of Physiology: 2.001 or 2.011 Chemistry and 17.001 General and Human Biology.

Dept. of Applied Physics: 2.001 or 2.011 Chemistry and 5.001 Engineering.

(v) Only one from each of the following subjects/units may be included:
   (a) 12.001 Psychology or 26.121 Psychology.
   (b) 52.111 Philosophy or 26.521 Philosophy.
   (c) Any unit listed in Section 3(a) or the equivalent unit offered at Wollongong University College which contains similar syllabus material.

(vi) A full-time student is required to complete the appropriate level I Mathematics and six other approved level I units in the first two years of attendance or else show cause to the satisfaction of the Professorial Board why he should be allowed to re-enrol. The remaining units of the course may be completed in any order consistent with the requirements concerning pre-requisite and co-requisite units as set out in Clause 3(a).

(vii) The proposed course must be approved by the Dean of the Faculty of Science or his representative at enrolment. In special circumstances, the Dean may grant a student permission to defer enrolment in certain level I units until the second year of the course. Where any alteration in the course approved at enrolment is desired, the student must obtain the approval of the Dean or his representative for the new course.

2. (b) Requirements for an honours degree

   (i) In order to qualify for admission to the honours degree of Bachelor of Science a candidate shall:
       1. Satisfy the requirements for a pass degree but without proceeding to graduation;
2. Undertake an extra year of full-time or two extra years of part-time study.

(ii) Admission to an honours course is granted by the Head of School. Students wishing to proceed to an honours degree must apply to the Head of the appropriate school on completion of pass degree requirements.

(iii) A suitably qualified candidate may be admitted to an honours course in one of the following:

- Anatomy
- Applied Mathematics
- Biochemistry
- Biological Technology
- Botany
- Chemistry
- Computer Science
- Entomology

- Geology
- Microbiology
- Physics
- Physiology
- Psychology
- Pure Mathematics
- Theory of Statistics
- Zoology

(iv) To qualify for admission to an honours course, a student must have completed successfully 8 level III units in the pass degree course except that in special cases the Head of the appropriate school may approve entry without such a qualification.

(v) Further to requirements listed in paragraph 2(b) (iv), to qualify for entry into an honours year a student must have completed any special units at required grades as determined by the Head of the School, prior to admission to the Honours year. In order to ascertain any such special conditions, a student contemplating honours is advised to consult the Head of School at the end of the first year of study.

(vi) Upon admission to the honours course a student must attend lectures, read and engage in laboratory work as required by the Head of School.
3. Schedule of Units

(a) Science units

These are listed under the Schools which provide the instruction and are divided into levels. Students must observe the pre-requisites and co-requisites. Some Schools offer higher units to which special pre-requisites apply and which are designed to lead to honours. Students contemplating honours studies must ensure that they have selected appropriate units. Some units are terminating so that students taking these may not qualify to continue studies in that School. When selecting terminating units students must ensure that a choice of a major sequence is still available. Note that many units are of half year duration so that it is necessary to choose units which give a balanced programme of study over the year.

* Available for students who intend to study Physics for only one year.
  Progression to Physics II is normally by way of 1.001 or 1.011.

† This unit may be a co-requisite in special cases.

‡ Students should note the additional mathematics pre-requisites to units of Higher Physics Level III. Where a unit is specified at Level II as a pre-requisite or co-requisite the Level III unit may be substituted.

Students must apply to the Head of School for admission to Physics honours and they must have completed at least Physics units 1.123A, 1.123B, 1.123C and 1.123D.

* If a unit in this column is counted the corresponding unit in the first column may not be counted.

† 1. Admission to Higher Pure Mathematics II normally requires completion of 10.011 Higher Mathematics I; students who gain a superior pass in 10.001 Mathematics I may, subject to the approval of the Head of the School of Mathematics, be permitted to proceed to Higher Pure Mathematics II units.

2. Students majoring in Physics who wish to take Higher Pure Mathematics II should attempt 10.121A, 10.121B and either 10.221A or 10.211A.

3. Students aiming at Honours in Pure Mathematics must take 10.121A, B and D and either 10.221A or 10.211A.

‡ Mathematics 10.031 is included for students desiring to attempt only one level II Mathematics unit. If other level II units in Pure Mathematics, Applied Mathematics are taken, 10.031 Mathematics will not be counted.

§ Mathematics 10.032 is included for students desiring to attempt only one level III Mathematics unit. If other level III units in Pure Mathematics, Applied Mathematics are taken, 10.032 Mathematics will not be counted.

* Normally, both Quantum Mechanics and Continuum Mechanics would not be taken by the student in the same year.
† A student who gains a superior pass in 10.001 Mathematics I and/or 1.001 Physics I may apply to proceed to Higher Applied Mathematics units.
‡ 10.111A, B and 10.211A with a sufficiently good pass may be substituted as a pre-requisite in place of 10.121A, B and 10.221A.
§ Students who passed 10.111 Pure Mathematics II prior to 1969 may attempt the Applied Mathematics unit 10.211A as well as 10.211B and 10.211C. This trio of units will count as a single subject.

* Not available in 1970.

** Counts as an Elective plus an Advanced Elective. May only be taken by students who can also fit a subject from the "non-language" group into their General Studies programme.

**ADDITIONAL FOR AN HONOURS DEGREE: ADVANCED GENERAL STUDIES ELECTIVE, TWO TERMS TWO HOURS/WEEK.**

4. **Pattern of Studies**

In general, a student should select a course which is adequately distributed over the six half years of study. Typical course patterns are available from the Faculty Office.

A suggested pattern of study is:—

*First year*: The appropriate 2 units of level I Mathematics and 6 other level I units including those essential to the intended major sequence of units.

*Second year*: One general studies elective and 8 units from level II *or* 6 units from level II and 2 from level I.
Third year: Two general studies electives and at least 4 level III units. The other units could be level II or III.

Fourth year: For an honours degree, an advanced general studies elective and such requirements as specified by the Head of the appropriate School.

5. Part-time Study
A student must select the units and general studies electives in accordance with these regulations save that Clause 2a(vi) is modified so that he must complete level I Mathematics and 6 other level I units in the first four years of enrolment or else show cause to the satisfaction of the Professorial Board why he should be allowed to re-enrol.

RULES GOVERNING ADMISSION TO THE SCIENCE DEGREE COURSE WITH ADVANCED STANDING FOR THE PURPOSE OF OBTAINING A DOUBLE DEGREE

1. Undergraduates of the University of New South Wales who have satisfied the examiners in at least the first two years of a degree course extending over four or more years and approved by the Faculty of Science for the purpose of double degrees, may be admitted to the Science degree course with advanced standing. Such undergraduates' performance shall have been of a high standard and their admission shall be subject to the approval of the Dean of the Faculty of Science.

2. Students so admitted who have satisfied the examiners in General Studies subjects and/or Science course units shall be given advanced standing in such General Studies subjects and no more than 14 such Science course Units.

3. Students so admitted may be granted exemption from two other level II Science Units on the basis of other subjects completed by them.

4. In order to qualify for the award of the degree of B.Sc., students so admitted with advanced standing shall be required to complete the appropriate General Studies subjects and no less than either 6 level II and 4 level III Science Units or 8 level III Science Units in accordance with the Science course regulations.
RULES GOVERNING ADMISSION TO THE SCIENCE DEGREE COURSE WITH ADVANCED STANDING

1. Graduates of the University of New South Wales may be admitted to the Science degree course with exemption in all General Studies subjects completed by them and in no more than twelve Science course units completed by them.

2. Undergraduates of the University of New South Wales who transfer from another course to the Science degree course, may be admitted to the Science degree course with exemption in all General Studies subjects completed by them and in no more than fifteen Science course units completed by them.

3. Graduates or undergraduates of other universities or of other approved tertiary institutions may be admitted to the Science degree course with advanced standing.

4. Students admitted under Rule 3 who have satisfied the examiners in units of the same title or subject matter as Science course subjects in this University may, subject to the approval of the appropriate Heads of School, be granted exemption in no more than eleven Science course units but not including level III Science course units.

5. Notwithstanding the provisions of Rules 1, 2, 3 and 4, Faculty may determine a special programme to be completed by a student who wishes to be granted advanced standing for an honours degree of Bachelor of Science in this University.
2. PURE AND APPLIED CHEMISTRY COURSE

This course also leads to the Bachelor of Science degree, but provides a study in depth of one field only. It may be taken either as a full-time or part-time course.

**Full-time Course**

This course may be taken at pass or honours standard. The pass course requires full-time attendance at the University for three years. An additional year is required for the honours course.

First Year is similar to Year I of Chemistry in the Science course. In the second year a core of chemistry subjects, similar in content to chemistry units in the science course, but treated in greater depth and with extended practical work, is supplemented by science units offered by the Faculties of Science, Applied Science and Biological Sciences. It will be possible to choose between a wide range of such units, which may include a further first year subject if desired. The most widely chosen electives are some combination of mathematics units or a group of biological science units, such as the level II Biochemistry units in the Science course. It is possible that some elective units at this level may be offered by the School of Chemistry in later years.

The first half of the third year will consist of a further development of the core course in four chemistry subjects. At this stage the student will have studied chemistry to an extent comparable to the student who graduates from the Science course with a major in chemistry, but the Pure and Applied Chemistry student will have studied at rather greater depth. In the second half of the third year, students in the Pure and Applied Chemistry course will study a group of advanced elective subjects. While most of the electives available are provided by the School of Chemistry, the needs of students who see their future in the less technical areas of industry will be met by the provision of electives with an industrial or commercial bias.

Third year electives will normally be of 120 hours, equivalent to eight hours per week for the half year. They will be grouped into the following four categories:

1. Physical chemistry, chemical physics, mathematics, statistics.
2. Organic chemistry-based, biochemistry.
3. Inorganic-analytical chemistry-based.
4. Other approved electives to be decided.
No more than two electives may be chosen from any one group and at least one elective must be chosen from those offered by the School of Chemistry.

FOURTH YEAR — HONOURS
Consult School for details.

Part-time
The part-time course in Pure and Applied Chemistry is equivalent to the full-time course and extends over six part-time years, leading to the degree of Bachelor of Science. Honours may be awarded on the completion of an additional year of full-time study or, in special circumstances, an additional two years of part-time study.

The part-time course has been designed for students employed in the chemical industry but employment in this industry is not obligatory for entrance to the course.

This course allows a student to choose electives from other faculties such as Commerce or Applied Science. Areas such as industrial chemistry, management and technical services can thus be covered by those students who feel that their vocational interests lie in one particular region.
PURE AND APPLIED CHEMISTRY—PART-TIME COURSE

FIRST AND SECOND STAGES
(30 weeks' part-time course)

Honours

The requirements for admission to the honours course are the same as for the full-time honours course. A student wishing to do honours on a part-time basis may complete the honours year over two part-time years. Students are, however, advised to make every effort to do the honours year full time.

3. APPLIED PHYSICS COURSE

Details of this course are given on page 88 under the School of Applied Physics and Optometry.
4. OPTOMETRY COURSE

The Department of Optometry provides a four year full-time course in Optometry leading to the degree of Bachelor of Optometry, which may be awarded at the pass or honours level. The first year of the course involves a study in the fundamental sciences of physics, chemistry, mathematics and general and human biology. Students who have completed the first year of a science course including physics, chemistry, mathematics and general and human biology or zoology at any Australian university are qualified for admission to the second year of the course. Second, third and fourth years are devoted to professional training in optometry including clinical optometry in the final year.

### CONDITIONS FOR THE AWARD OF THE DOUBLE DEGREE OF B.Sc., B.OPTOM IN THE FACULTY OF SCIENCE

Undergraduates of this university who have reached a high standard in at least the first two years of the course may be admitted to the science degree with advanced standing. Admission to courses leading to the double degree of B.Sc., B.Optom. is subject to approval of the Dean of the Faculty of Science. Apart from fulfilling the requirements of the degree of B.Optom., students so admitted shall be required to complete the appropriate general studies subjects and either six level II and four level III units or eight level III units of the science degree, in accordance with the regulations.
5. BACHELOR OF SCIENCE IN APPLIED PSYCHOLOGY COURSE

The School of Applied Psychology offers a course leading to the degree of Bachelor of Science in Applied Psychology, which may be awarded at the pass or honours level. This is designed as a professional undergraduate course for the training of psychologists. It provides extensive study of psychological theory and practice, supported by an appropriate selection of other subjects. Two main fields of specialization are currently offered (Industrial and Clinical) and students in their final year will choose between these two areas.

The elective in industrial psychology is intended to meet the demand for students who will engage in personnel work in industry. It involves a study of the individual worker and the organizations in which he works, and embraces such aspects of this study as job success, job satisfaction, industrial motivation, employer-employee relations, acquisition of job skill, conditions affecting job efficiency and the like.

The elective in clinical psychology includes basic theoretical and practical training in some of the more common areas of clinical psychology. The various aspects of the specialization will be concerned with professional training in the diagnosis and assessment of personality and behaviour disorders and their treatment in various fields of counselling. Training is given in case studies and in preventive and therapeutic teamwork, and research in clinical psychology is also covered.

Details of qualifications for admission to the B.Sc. in Applied Psychology Course, the course requirements for Pass and Honours at graduation and rules governing admission with Advanced Standing are given below. Hours of attendance for the main subjects available in the course are shown in the Schedule of Course Subjects, followed by some recommended course patterns.

RULES GOVERNING THE APPLIED PSYCHOLOGY (B.Sc.) COURSE

I. Applicants for admission to the Course must be matriculated to this University; and also have either satisfied the entrance requirements for the Faculty of Science or, alternatively, have passed Mathematics I or General and Human Biology.
II. (A) In order to qualify for admission to the degree of B.Sc. in Applied Psychology under these regulations a candidate must attend classes and satisfy the examiners in the following subjects:—

1. *Each of:*—
   12.001 Psychology I
   12.012 Psychology II
   12.042 Psychology IIA
   12.013 Psychology III
   12.044 Psychology III (Supplementary)

   (In special cases, the Head of the School of Applied Psychology or his representative may approve of the substitution of any other appropriate course or equivalent units for 12.044 Psychology III (Supplementary).)

   *and either*

   12.045 Psychology IV (Industrial)

   or

   12.055 Psychology IV (Clinical)

2. *Five other subjects* (or their equivalent in units) selected to meet the following requirements:
   (a) that they shall include *at least* one of:
      (i) 10.011 Higher Mathematics I, *or*
          10.001 Mathematics I, *or*
          10.021 Mathematics IT
      *or*
      (ii) 17.001 General and Human Biology.
      [They may include both (i) and (ii).]
   (b) that they shall include *at least* one of:
      53.111 Sociology I
      15.101 Economics I
      54.111 Political Science I
      52.111 Philosophy I
      *or* with the approval of the Head of the School of Applied Psychology, one other Arts I subject or two General Studies electives.
   (c) that they shall include at least one subject which together with the subject meeting the requirements of (a) or (b) immediately above constitutes a recognized sequence of two courses.
Recognized sequences are:

(i) 10.001 Mathematics I, followed by three Mathematics Level II units, or by 10.311 Theory of Statistics I.

(ii) 17.001 General and Human Biology, followed by 12.402 Physiological Psychology, or by the equivalent of one subject chosen from the following units according to the regulations of the Faculty of Biological Sciences:

- 41.101A Chemistry of Biologically Important Molecules
- 41.101B Metabolism
  (41.101A and 41.101B must be taken together, and count as two units)
- 41.101C Biochemical Control
- 45.101A Genetics and Biometry
- 45.101C Vertebrate Zoology
- 73.011A Principles of Physiology (equivalent to 2 units)

(iii) 53.111 Sociology I, followed by 53.112 Sociology II
- 15.101 Economics I, followed by 15.102 Economics II
- 54.111 Political Science I, followed by 54.112 Political Science II
- 52.111 Philosophy I, followed by 52.112 Philosophy II.

(B) The proposed course must be approved by the Head of the School of Applied Psychology or his representative prior to or during enrolment. The courses must be chosen in such a way as will fit in with the timetable.

(C) Progression in the Course shall be by subjects, and the subjects in the Course may be completed in any order consistent with the requirements concerning pre-requisites and co-requisites for the subjects chosen.
III. **Pre-requisite and Co-requisites**

Before enrolling in any course (or equivalent units of a subject) the student shall have attended the classes and shall have satisfied the examiners in all relevant pre-requisite subjects.

The student should refer to the appropriate Faculty Handbook or to the Calendar for a statement of subject pre-requisites and/or co-requisites.

IV. The award of B.Sc. in Applied Psychology at graduation shall be at either Pass level or with Honours after a minimum of 4 years of full-time study or 6 years of part-time study.

**RULES GOVERNING ADMISSION TO THE B.Sc. IN APPLIED PSYCHOLOGY COURSE WITH ADVANCED STANDING**

1. Graduates of the University of New South Wales may be admitted to the Applied Psychology B.Sc. degree course with exemptions from no more than five (5) subjects or their unit equivalents completed by them. No more than two (2) Psychology subjects may be included in the subjects exempted.

2. Undergraduates of the University of New South Wales who transfer from another course to the Applied Psychology B.Sc. course may be admitted to the Applied Psychology B.Sc. course with exemption in no more than seven (7) Applied Psychology B.Sc. course subjects or their unit equivalents.

3. Graduates or undergraduates of other universities may be admitted to the Applied Psychology B.Sc. course with advanced standing.

4. Students admitted under Rule 3 who have satisfied the examiners in subjects of the same title or subject matter as those permissible in the Applied Psychology B.Sc. course may, subject to the approval of the appropriate Heads of School, be granted exemption in no more than five (5) subjects, of which no more than two (2) may be Psychology subjects.
The course requirements have been so designed that they allow for:

(a) a solid core of psychology to equip the psychologist-in-training with psychological theory, skill in experimentation and psychological techniques by way of 6 compulsory psychology subjects [although the student may choose from a number of electives within the subjects comprising Psychology III, III (Supplementary) and IV];

(b) some supporting studies in mathematics and/or biology, of which a minimum of one course is compulsory;

(c) some supporting studies in the social sciences, of which a minimum of one course is compulsory; and

(d) the special needs, interests and academic or vocational background of the individual student to be considered when the balance of the five supporting subjects (or their equivalents in units) is selected in consultation with the Head of School or his representative.

For this reason, no course patterns are prescribed. The patterns to be completed by students who are admitted with advanced standing will take into account the subjects credited.

Students commencing university studies for the first time will arrange their patterns of supporting subjects in consultation with the Head of the School or his representative before completing enrolment. For such full-time students, some examples of patterns, based on supporting subject variants, are suggested below:

* Day-time attendance for tutorials and practical work, including visits to institutions, etc., is required.
† Students are required to undertake such additional field work and clinical studies, averaging 2 h.p.w., as may be prescribed by the Head of the School of Applied Psychology.
‡ In cases where students are unable to satisfy the day-time attendance requirements, the Head of the School may arrange alternative programmes for practical work and tutorials.
§ For details of Level II and Level III units, including pre- and co-requisites, refer to Science course details under Faculty of Science. If units are taken, three Level II units are equivalent to one Level II subject; four Level III units are equivalent to one Level III subject.
POSTGRADUATE COURSES

On completion of a first degree course (B.Sc.) the student may wish to proceed to a higher degree. This usually entails two or three years' research under direction. A limited number of Scholarships are available at this and other Universities, and these are competitive.

The regulations governing higher degrees are to be found in the University Calendar. A candidate thinking of undertaking such a course should first discuss the matter with the Head of the School in which he wishes to study.

A course in Food and Drug Analysis is offered by the School of Chemistry on a part-time basis over two years and leads to a diploma (Dip.F.D.A.). The course is designed to provide systematic training at an advanced level for chemists who wish to extend their acquaintance with analytical techniques, and is thus suitable for those who wish to practise as public analysts.

The School of Applied Psychology offers a postgraduate course in applied psychology for the award of the Diploma in Psychology (Dip. Psychol.). It is specifically designed to provide professional training at an advanced level for graduates with at least three years of undergraduate training in psychology at an approved university; and in particular to train students in the application of psychological theory and techniques to vocational and educational guidance or to clinical practice.

The School of Biological Technology, conjointly with the School of Chemical Engineering, offers a course in biochemical engineering which leads to the award of a postgraduate diploma (Dip.Biochem.Eng.). The course may be completed in one year of full-time study or part-time over two years and is intended for graduates in chemical engineering, chemistry, biological sciences and agriculture.
SUBJECT INFORMATION AND TEXTBOOK LISTS

The following pages list details of textbooks, subject descriptions, etc. Reference books are not included here but the reference lists will be made available by the various schools. Information concerning general studies subjects is contained in the Handbook of the Board of General Studies which is available free of charge.

SCHOOL OF ANATOMY

The School of Anatomy will offer three level II units for Science students in 1970, followed by six level III units in 1971. Level II units comprise Mammalian Histology, Mammalian Embryology and Systematic Anatomy I (cardio-pulmonary). The level III units will be Systematic Anatomy II (locomotion), Systematic Anatomy III (alimentary and urogenital), Systematic Anatomy IV (neuro-endocrine), Comparative Histology, Comparative Embryology, and Microscopy and Histological Techniques. The last unit will contain contributions from Schools in the Faculty of Biological Sciences. Students who major in Anatomy and who attain an adequate standard may proceed to a B.Sc. degree with honours. Each Anatomy unit will be offered once during the year as a day course only.

70.011A Mammalian Histology

Pre-requisite for Comparative Histology

TEXTBOOK

PRE-REQUISITES
17.001 General and Human Biology.
This unit consists of 6 hours per week throughout the first half of the year.

70.011B Mammalian Embryology

Pre-requisite for Comparative Embryology

TEXTBOOK

PRE-REQUISITES
17.001 General and Human Biology.

This unit consists of 6 hours per week throughout the second half of the year.

70.011C Systematic Anatomy I

Pre- or co-requisite for Systematic Anatomy II, III, IV

TEXTBOOK

PRE-REQUISITES
17.001 General and Human Biology.

This unit consists of 6 hours per week throughout the second half of the year.
70.012A Systematic Anatomy II

Systematic Anatomy I is a pre- or co-requisite

TEXTBOOK
The rapid expansion of the Australian economy in recent years has caused the development and diversification of activity, particularly in the secondary industries. Many firms which previously engaged only in commerce or only in manufacture and selling, now have a need to expand the technical side of their business and to engage in Research and Development, that is, industrial research-and-development. The 1967 Industrial Research and Development Grants Act gave Commonwealth recognition and financial support to this trend. There is wide-spread recognition in industry of the need for trained graduate staff to undertake Research and Development in Australia, and of the need in particular for physicists educated and apt to such work to take part in it.

The Department of Applied Physics was established, as part of the new School of Applied Physics and Optometry, in mid-1968, and is being developed, with the aim of promoting the application of physics, particularly in Australian industrial and similar enterprises. It is intended, primarily, to provide a four-year full-time course leading to the degree of B.Sc. in Applied Physics (Pass or Honours). Details of the course are not yet determined; however, it is clear that the whole of the first two years of study can be effectively spent on existing subjects provided by other Schools. Students who have completed the normal first-year subjects* of any course in the Faculty of Science, or in the Faculties of Applied Science, Biological Sciences (with the exception of Applied Psychology), Engineering or Medicine, and who contemplate enrolling in the new course in Applied Physics, can undertake a normal programme of Science Course subjects in 1970 which will, on completion, fit them to enter the third year

*Including either 2.001 Chemistry I or 5.001 Engineering I; also including 1.001 or 1.011 Physics I, and 10.001 or 10.011 Mathematics I. If any other Physics I subject (1.031, 1.041, 1.051, or 1.061) has been taken, a Credit grade pass or better is required by the School of Physics for admission to 1.112 Physics II
of the Applied Physics course. This third year will, it is hoped, be offered for the first time in 1971, and the normal fourth year in 1972. The recommended programme of second-year studies for 1970 is as follows:

(a) 1.112A Electromagnetism
1.112B Atomic Physics
1.112C Thermodynamics and Mechanics

10.111A Linear Algebra
10.111B Mathematical Analysis
10.211A Mathematical Methods

(b) One Group I subject (2 Level 1 units), chosen so that the five Group I subjects taken in first and second years shall comprise Physics I, Mathematics I, 2.001 Chemistry I, 5.001 Engineering I and any one other.

(c) Appropriate General Studies subjects.

The course work in the third and fourth years will include 1.113 Physics III (or 1.213 Physics III, which has the same syllabus, but reduced laboratory work in the School of Physics), together with further supporting work in certain other servicing Schools, e.g., Statistics, and with studies in the Department of Applied Physics. These latter studies will be designed to give

(a) specialised training in some main areas of applied physics, e.g., physics of materials, electronics and control systems, vacuum and gas-discharge physics, applied optics;

(b) practice in the application of the student's knowledge of physics to practical and technical problems;

(c) an extensive acquaintance with industrial activities which involve applied physics or concern industrial physicists, e.g., specifications, quality and life testing, inventing and patents.

Students enrolling for first-year studies in 1970 who wish to pursue the course in Applied Physics as above described should enrol in the Science Course, with a view to later transfer, with a programme of first-year (Group I) subjects that includes

1.001 Physics I
or 1.011 Higher Physics I

and

10.001 Mathematics I
or 10.011 Higher Mathematics I

The two other subjects to be studied should include at least one of 2.001 Chemistry I and 5.001 Engineering I, preferably both.

Students who expect to complete in 1970 an appropriate third-year programme including Physics III are invited to consult with
the Head of the Department of Applied Physics: it may be possible to organise a special programme of studies enabling them to complete requirements for the B.Sc. in Applied Physics in the one year, 1971.

Honours graduates in Applied Physics, and other well-qualified graduates, will be able to enrol as research students working in the Department for a Master's degree or for the degree of Doctor of Philosophy.

For further information, interested persons should consult the Head of the School.

DEPARTMENT OF OPTOMETRY

The following courses are offered by the Department:

(a) A four-year full-time course leading to the degree of Bachelor of Optometry at either pass or honours level. This degree (B.Optom.) fulfils the requirements defined in the N.S.W. Optometrists (Amendment Act, 1963), and is the only course of professional training for Optometrists given in this state. Full details of the course appear earlier in this handbook.

(b) An extended undergraduate course leading to the double degree B.Sc./B.Optom.

(c) A formal graduate course for the degree of Master of Optometry (M.Optom.). This course involves the study of three elective postgraduate subjects and advanced clinical optometry, together with the preparation of a thesis on an assigned project. It may be completed in one year of full-time study, or in the case of practising optometrists, in two or three years of part-time study.

(d) Facilities for individual research are available and students who are considered as eligible may enrol with the university as candidates for the degrees of Master of Science or Doctor of Philosophy.

Further information on the foregoing may be obtained from the brochures issued by the Department of Optometry.

TEXTBOOKS
The study of psychology as a formal discipline in undergraduate courses is traditional in Australian Universities. Psychology as a subject is concerned with the systematic study of human behaviour, and includes historical, experimental and descriptive features. The School of Applied Psychology offers psychology as a major subject in the full-time Arts Course and in the full-time and part-time Science and Commerce Courses. It also offers a full-time and a part-time undergraduate professional degree course in Applied Psychology.

In the Science course, Psychology I, II and III and Psychology III (Supplementary) may be studied subject to the Science course regulations, and a student who wishes to proceed to honours in the subject must have completed three full courses of psychology in his pass degree and must have obtained at least credit in Psychology II and III in order to be admitted to the honours year.

The course leading to the degree of Bachelor of Science in Applied Psychology has been introduced in order to meet the increasing demands of professional psychologists in the various fields of applied psychology. This course provides extensive study of psychological theory and practice, supported by an appropriate selection of studies in other subjects. The later years of the course lead to increasing specialization in either industrial psychology, clinical psychology, human engineering or guidance and counselling. Full details of this course are given on page 74.

Prizes in Psychology

The *Australian Psychological Society* Prize in Psychology is awarded annually to a fourth-year student. The Society also awards annually two-years Student Subscriberships to the *Australian Journal of Psychology* to two outstanding students at the end of second year.

The Staff Prize in Psychology is awarded annually to an outstanding second-year student.

TEXTBOOKS
Biochemistry involves a study of the chemistry of living organisms, and it is a subject where those interested in biology and those interested in chemistry work together to increase our understanding of life.

Some of the most spectacular achievements of recent times have been in the unravelling of the chemistry and function of very large molecules, macromolecules, of proteins, nucleic acids and polysaccharides which occur in living organisms. This has resulted in a better understanding of the transmission of hereditary information and the adaptation of organisms to the environment by mutations and natural selection.

Major areas of interest in biochemistry at the present time involve a study of the chemistry of these large molecules involved in body processes such as growth, movement and reproduction. The formation and breakdown of these large molecules is known as metabolism and necessarily includes the chemical processes, involving both large and small molecules present in foodstuffs, which provide the necessary energy and the simple molecules or monomers that are then used in biosynthesis of these larger molecules which constitute the organism.

Basic to any understanding of the reactions of living organisms is the process of promoting chemical reactions under physiological conditions, that is, at low temperatures. A considerable emphasis is placed on understanding the hundreds of different types of enzymes, large protein molecules, each specifically designed for promoting one particular chemical reaction, the speed with which they function and the factors which control their operation.

The integration and control of biochemical reactions involves the study of hormones, or chemical messengers, that are synthesised in certain glands and exert their effects on cells, often situated in distant parts of the body, after being transported in the circulating blood or other vascular fluid.

A knowledge of biochemistry is essential in maintaining the health of living organisms and is vital to the study of Medicine. There is an overlap with other biological sciences so that Bio-
chemistry is a co-requisite or pre-requisite for study in the disciplines of Biological Technology, Botany, Microbiology, Physiology and Zoology. Biochemistry on the other hand draws particularly on a background of Biology and Chemistry and some knowledge of Mathematics and Physics.

There are excellent prospects for advanced training at honours level, involving an additional year's training, mainly in research, and for graduate research work for the Master of Science degree or for the Doctorate in Philosophy.

Biochemistry plays a role in so many facets of human activity that for students majoring in Biochemistry there are good employment opportunities in educational institutions, in many research areas, e.g., in Universities, C.S.I.R.O., Public Health and hospital organizations, and in industries concerned with food, pharmaceuticals and agriculture.

41.101A Chemistry of Biologically Important Molecules

An introduction to the study of the physico-chemical properties of biological systems. The chemical properties of amino acids, peptides and proteins, carbohydrates, nucleic acids, fatty acids, sterols and porphyrins, and the biological roles of these compounds. Practical work to illustrate the lecture course.

TEXTBOOKS

PRE-REQUISITES
17.001 General and Human Biology.
2.001 Chemistry I or 2.011 Higher Chemistry I.

CO-REQUISITES
41.101B Metabolism.

This unit is offered in the first half of the year, and consists of 30 hours' lecture and 60 hours' laboratory time.

41.101B/ Metabolism

The intermediary metabolism of carbohydrates, lipids and nitrogenous compounds. The molecular mechanism of gene expression and protein synthesis. Practical work to illustrate the lecture course.
TEXTBOOKS
As for 41.101A.

PRE-REQUISITES
17.001 General and Human Biology.
2.001 Chemistry I or 2.011 Higher Chemistry I.

CO-REQUISITES
41.101A Chemistry of Biologically Important Molecules.

This unit is offered in the first half of the year, and consists of 30 hours' lecture and 60 hours' laboratory time.

41.101C Control Mechanisms

The relation between structure and function of enzymes, hormones, vitamins and membranes. Photosynthesis. Metabolic networks and control mechanisms. Practical work to illustrate the lecture course.

TEXTBOOKS
As for 41.101A.

PRE-REQUISITES
17.001 General and Human Biology.
2.001 Chemistry I or 2.011 Higher Chemistry I.

CO-REQUISITES
This unit is offered in the second half of the year, and consists of 30 hours' lecture and 60 hours' laboratory time.

41.102A Biochemistry of Macromolecules and Cell Biochemistry

TEXTBOOKS
*The Molecular Basis of Life. An Introduction to Molecular Biology.*
Readings from Scientific American. Freeman, 1968.

PRE-REQUISITES
2.002B Organic Chemistry and one other level II Chemistry unit (preferably 2.002A).
41.101A Chemistry of Biologically Important Molecules.
41.101B Metabolism (41.101C is advisable).

This is a two-unit course which is offered in the first half of the year, and consists of 4 hours' lecture and 8 hours' laboratory time per week.
41.102B Metabolic Pathways and Control Mechanisms
Photophosphorylation and oxidative phosphorylation. The nature and function of co-enzymes. Interrelationships in mammalian intermediary metabolism. Biochemical control mechanisms including hormones and allosteric interactions. Enzyme kinetics. Practical work to illustrate the lecture course.

TEXTBOOKS
As for 41.101A above.

This is a two-unit course which is offered in the second half of the year, and consists of 4 hours’ lecture and 8 hours’ laboratory time per week.
The School is primarily concerned with the development of multi-disciplinary approaches to basic and applied problems in biochemistry and microbiology, and in particular those problems which arise from or have relevance to the various biological technologies in industry, agriculture and medicine. The well-established methodologies of biochemistry and microbiology can be strengthened and diversified by the newer mathematical techniques, and can be used most effectively in conjunction with the rigorous quantitative methods common in the physical sciences and in engineering.

Currently, the School has a major interest in fermentation processes and in their extension and development in new areas, such as the extraction of metals from their ores, the utilisation of natural gas and petroleum, and the conversion to useful products of non-edible agricultural materials. Basic studies on continuous biological processes and upon the growth kinetics and regulatory mechanisms of micro-organisms have been in progress for some years. Most of the activities in the School are collaborative with other schools and departments, in particular the Department of Biological Process Engineering of the School of Chemical Engineering.

The subject Fermentation Technology is offered as one of the units available to students undertaking a major sequence in Microbiology in the Science Course.

Honours year programmes in the fourth year of the Science course can be undertaken by students who have reached a satisfactory standard in biochemistry or microbiology in the third year of the course. A graduate diploma course in Biochemical Engineering is offered in collaboration with the School of Chemical Engineering and is open to graduates in relevant disciplines. The course is of one year’s duration full-time or two years’ duration part-time, and both programmes are currently available. Registration for the degrees of Master of Science or of Doctor of Philosophy is open to honours graduates in relevant disciplines.
or to those graduates who have completed the preliminary or qualifying programmes available in the School.

The principal educational objectives of the School are the training of graduates who, by participation in formal courses and research programmes of a collaborative kind, are experienced in the multi-disciplinary approach and appreciative of its potentials.

42.102 Fermentation Technology

An introduction to the basic factors involved in the operation of microbial processes on an industrial scale, including: The selection, maintenance and improvement of micro-organisms; the influence of physical and chemical factors on the microbial environment; the control of environmental factors; the effects of operational patterns in batch and continuous flow cultivation; the harvesting, purification and standardisation of products; process optimisation; disposal of waste materials; an examination of selected microbial processes for chemical, pharmaceutical and food production, against the basic characteristics of large-scale fermentation processes; practical exercises, including the operation of various types of fermenters, to illustrate the principal aspects of the lecture course.

TEXTBOOK

PRE-REQUISITES
44.102A Basic General Microbiology
and/or
44.102B Microbial Physiology.

This unit is offered in the second half of the year and consists of 30 hours of lectures and tutorials and 60 hours of laboratory and project work.
SCHOOL OF BOTANY

Botany is concerned with all aspects of the structure and function of plants. Knowledge gained by investigations in these fields is important in agriculture, forestry and conservation, as well as in understanding the fundamental properties of biological material.

The major aspects of the subject which are taught in undergraduate courses in the School are Plant Genetics, Plant Physiology and Biochemistry, Plant Morphology, Environmental Botany, Mycology and Plant Pathology. Any of these courses are usually combined with appropriate subjects in Biochemistry, Microbiology and Zoology. By this means, students may complete their studies with a broad spread over a number of biological disciplines, or may concentrate more in botanical aspects, with other subsidiary supporting subjects.

Fourth year honours courses are provided for students wishing to specialise in a particular branch of botany.

Research facilities are available within the School of postgraduate study leading to a degree of Master of Science or Doctor of Philosophy.

Careers for graduates in Botany include teaching, at secondary or tertiary level, scientific and technological work in food and drug industries, and investigational or research work in the laboratories of State or Commonwealth organizations.

43.101A/45.101A Genetics and Biometry

Analysis of the mitotic cycle; replication of DNA and its organization in the chromosomes; linkage, non-meiotic recombination; mutation, structural changes, polyploidy, aneuploidy; population genetics; cytoplasmic inheritance; episomes; gene structure and function. An introduction to statistical methods and their application to biological data, including an introduction to analysis of variance and experimental design.

TEXTBOOKS

PRE-REQUISITES
17.001 General and Human Biology.
This unit is offered jointly by the Schools of Botany and Zoology during the first half of the year. It consists of 3 hours’ lecture and 3 hours’ tutorial and laboratory time per week.

43.101B Plant Evolution and Ecology

A study of the evolution of vegetative form and structure of vascular plants; an examination of their organisation into terrestrial communities; identification, evolution and distribution of elements of the Australian flora. Field excursions, including a vacation camp are an integral part of the course.

TEXTBOOKS
or

PRE-REQUISITES
17.001 General and Human Biology.

This unit is offered in the second half of the year, and consists of 2 hours’ lecture and 4 hours’ laboratory time per week. In addition, students will be required to attend excursions as arranged during the course.

43.101C Plant Physiology

Photosynthesis and selected aspects of plant metabolism. Nitrogen fixation; translocation and uptake of inorganic ions; the physiology of growth and development in plants; plant growth hormones and herbicides.

TEXTBOOK

PRE-REQUISITES
17.001 General and Human Biology.

This unit is offered in the second half of the year, and consists of 2 hours’ lecture and 4 hours’ laboratory time per week.

43.102A Advanced Genetics

Human genetics including chromosome analysis, genetics of haemoglobin variation and drug response. Twin studies. Serum and enzyme polymorphisms. DNA studies including polarity and transcription concepts. Hypothesis of genetic recombination. Evolutionary genetics. Allelic complementation and fine structure.

**PRE-REQUISITES**

43.101A/45.101A  Genetics and Biometry.

This unit is offered in the second half of the year, and consists of 3 hours' laboratory and 3 hours' lecture and tutorial time per week. Students may be required to attend to long term experiments outside formal class time on occasion.

### 43.102B Plant Taxonomy

Considers the assessment analysis and presentation of data for classifying plants both at the specific and spura-specific level. Some field excursions are necessary.

**TEXTBOOKS**

**PRE-REQUISITES**

43.101B  Plant Evolution and Ecology (Plant Morphology).

**CO-REQUISITE**

43.101A/45.101A  Genetics and Biometry.

This unit is offered in the first half of the year, and consists of 2 hours' lecture and 4 hours' laboratory time per week. In addition, students will be required to attend some weekend day field trips.

### 43.102C Plant Physiology and Biochemistry

Aims to introduce students to the application of scientific methods to problems in the biochemistry and cell physiology of plants. Students will design and carry out appropriate experiments and interpret the results in the light of information received from lectures, tutorials and reading scientific literature. It is expected that the following topics will be presented: (a) the cell wall; (b) metabolic changes in germinating seeds; (c) lipid metabolism; and (d) energy conversion in photosynthesis.

**PRE-REQUISITES**

41.101A  Chemistry of Biologically Important Molecules.

41.101B  Metabolism.
43.102D Mycology

TEXTBOOKS

PRE-REQUISITES
17.001 General and Human Biology.
This unit is offered in the second half of the year, and consists of 2 hours’ lecture and 4 hours’ laboratory time per week.

43.102E Environmental Botany

An introduction to the soil and atmospheric environment in which terrestrial plants exist and a study of the behaviour and response of the flowering plant to its environment, both in nature and agriculture.

PRE-REQUISITES
17.001 General and Human Biology.
This unit is offered in the first half of the year, and consists of 2 hours’ lecture and 4 hours’ laboratory time per week.

43.102F Plant Pathology

History of plant pathology; pathogenic organisms; symptoms of disease. Specific diseases caused by fungi, nematodes, bacteria and viruses. Host-pathogen relationships including stages of infection, evolution of host-pathogen relationships, adaptation for successful parasitism, resistance mechanisms and genetics of resistance. Control of disease by the use of fungicides, nematocides, crop rotation and breeding for resistance.

TEXTBOOKS

PRE-REQUISITES
17.001 General and Human Biology.
This unit is offered in the first half of the year, and consists of 2 hours’ lecture and 4 hours’ laboratory time per week.
Chemistry is the science of materials, their properties and their transformations. As such, it is both an experimental and a theoretical science. Chemistry provides a common language for the experimental sciences, comparable with the language of quantitative scientific thought provided by mathematics, and is central among them, lying between physics on the one hand, and biology on the other. The interdependence of chemistry and other sciences is exemplified in the fields of biochemistry, chemical physics, geochemistry and chemical engineering. Additional to its intrinsic value, chemistry provides the basis of modern technology, through its contributions to medicine, industry and agriculture.

A recent survey of chemistry has been published as the Westheimer report, *Chemistry—A New Look* (Benjamin paperback, 1966), and is an ideal reference book for any student entering upon a career in chemistry.

Chemistry forms a part of many undergraduate courses offered, for example, Chemistry in the Science course, and Pure and Applied Chemistry. Additionally, there are courses within the Faculty of Applied Science, such as Industrial Chemistry, Polymer Science, Ceramic Engineering, Food Technology, Chemical Engineering, Textile Technology, Fuel Engineering and Metallurgy, which are predominantly concerned with technological aspects of chemistry.

The School of Chemistry provides two main undergraduate courses, namely (1) **Pure and Applied Chemistry**, and (2) **Chemistry (as a co-major) in the Science Course**. Both courses lead to the B.Sc. degree.

A study of **Chemistry (as a co-major) in the Science course** involves a study of two branches of science to an advanced level. For example, a combination of level III Chemistry with level III Mathematics will provide a useful basis for later specialization in X-ray crystallography or theoretical chemistry; a combination of level III Chemistry with level III Geology will be of assistance to those who later wish to specialize in geochemistry. Another
Possibility is to combine level III Chemistry with level III Biochemistry units. These courses are suitable for those who wish to acquire advanced knowledge of two fields of study, or of interdisciplinary subjects. The Science course is also suitable for those planning to teach Chemistry at the secondary level. On a full-time basis, the Science course may be taken in three years (pass) or four years (with honours). On a part-time basis, however, the Science course may, according to the choice of subjects, require seven years (pass).

The Pure and Applied Chemistry course provides a study in depth largely of one field only. The course consists of the fundamental principles of chemistry and in addition elective topics are offered in contemporary fields of chemistry. It may be taken either full-time (three years for pass, four years for honours) or part-time (six years for pass, eight years for honours). The subject matter of each full-time year is identical with that of the two corresponding part-time years, and transfer from full-time to part-time, or vice versa, is possible. No industrial training is required for either the full-time or part-time course, though it is customary for students taking the part-time course to find employment in some branch of chemical industry.

Career opportunities exist for graduates of the School of Chemistry in universities, the Commonwealth Scientific and Industrial Research Organization (C.S.I.R.O.), the Australian Atomic Energy Commission (A.A.E.C.), defence research, medical research, public health, Customs and other State and Commonwealth Government organizations. Opportunities also exist in secondary teaching, and in chemical industry, particularly in the research and development, control and management sections.

The role of basic scientific research in the creation of modern industrial society is widely accepted. The usual introduction to research in chemistry is provided by the honours degree (in either the Science course, or the Pure and Applied Chemistry course), which may be followed by a higher research degree in Chemistry (e.g., M.Sc., Ph.D.). These degrees are aimed at those whose interests are in research and/or teaching. Combination of chemistry with biochemistry, with mathematics, or with geology form a satisfactory foundation for an honours degree in chemistry.
REQUIREMENTS FOR HONOURS IN CHEMISTRY

Students desiring admission to the honours course must apply in writing to the Head of the School not later than 30th November of the year in which the third year of the full-time (or equivalent stage of the part-time) course is completed.

The requirement for admission to the honours course is a sufficiently meritorious record in the work of the pass degree.

The major part of the work for honours will consist of a research project which may be undertaken in any one of the six departments. A written thesis is submitted on the research project, and there is also some formal course work. Attendance will be required at such lectures and seminars as the Head of the School directs. Honours will not be awarded in any particular branch of the subject, but in chemistry as a whole.

For admission to the honours chemistry course in Science, the applicant must complete at least eight level III units, of which at least four must be in Chemistry. Students who, at the beginning of their third year are already interested in taking honours in chemistry, are advised to seek guidance from the School about the most appropriate subject to accompany the level III Chemistry units.

Prospective Honours students in the Pure and Applied Chemistry course should seek guidance before choosing their elective subjects in final year.

17.001 GENERAL AND HUMAN BIOLOGY

This is an introductory course for students intending to proceed in medicine or in the biological sciences. The structure of the course is determined by a committee drawn from the Faculty of Medicine and the Faculty of Biological Sciences, with Professor H. N. Barber as chairman. The director is Dr. A. E. Wood.

TEXTBOOKS

REQUIREMENTS FOR PRACTICAL WORK
A list of equipment required for practical work will be posted on the notice board in the ground floor of the Biological Sciences Building. Students must purchase this material before the first practical class.
The geographer studies variations from place to place on the earth arising from the spatial relationships of the phenomena making up man's physical and social environment. Apart from its cultural value, an understanding of these relationships is necessary for the conservation and planned development of physical and economic resources. Geography IS should be of particular interest to those studying concurrently in the physical and biological sciences.

Lecture, laboratory and tutorial arrangements for Geography IS are as follows:

### 27.031 Geography IS

**27.031 Geography IS**

**TEXTBOOKS**

*Part 1: Physical Geography*

- CSIRO. *The Australian Environment*. Melbourne U.P.
- Strahler, A. N. *Physical Geography*. Wiley International.

*Part 2: Economic Geography*

Practical classes throughout the year will introduce the use of maps and diagrams, air photographs and geographical statistics. The approximate cost to students will be about $4.00 for field tutorials and about $8.00 for the required drawing equipment and a topographic map.
GEOLOGY

FOR STUDENTS IN THE SCIENCE COURSE

Students may major in Geology in the Science course (see the regulations governing this course). This course is available on both a full-time and a part-time basis and leads to the degree of Bachelor of Science, Pass or Honours. Students majoring in Geology will complete the following subjects:

First year—25.001 Geology I (as for the Applied Geology degree course).

Second year—25.002 Geology II (as for the Applied Geology degree course).

Third year—25.003 Geology III (as for the Applied Geology degree course).

In addition, students in this course may take a second Geology subject in their third year, 25.013 Geology III (Supplementary). This course covers fields not dealt with in other Geology courses and advanced or specialized treatment of topics studied earlier. Section (a) of the course is compulsory and contains Geology of Fuels, Photogeology, Oceanography, Geochemistry and Geophysics. Candidates may select two of the following in Section (b) Minergraphy, Structural Analysis, Stratigraphy and micropalaeontology, to complete the course.

Honours in Geology

Full-time students in the Faculty of Science who have completed the two third year Geology subjects and part-time students who have completed course requirements up to the end of the sixth year and whose programme includes the two third year Geology subjects may apply to the Head of the School of Applied Geology to read for an Honours degree in Geology. Students who have majored in either Physics and Geology or Chemistry and Geology, may also be admitted to the course which would include some studies in Geophysics or Geochemistry respectively.
The Honours course will consist of:

A short field assignment with appropriate work in the laboratory on material collected, the results of both the field and laboratory investigations to be presented in a graduation thesis. Advanced lectures, practical work and seminars. Short laboratory assignments on specific problems may be given.

Further details of the Honours course may be had from the Head of School.

Full-time students will cover the Honours work in the fourth year of the course. Part-time students will be required to commence their field thesis work at the end of the sixth year of their course and advanced laboratory assignments will be done in the eighth year along with the further work necessary to complete the field thesis work.

Students seeking to do Honours in Geology will have to satisfy the Head of the School that they have attained a sufficient standard in their pass course work to indicate their ability to undertake geological studies at a more advanced level.

Mineralography
Traditionally, mathematics is classified into Pure Mathematics, Applied Mathematics and Statistics. The classification is not a very sharp one and there is considerable overlap and interaction between the three branches.

The Pure Mathematician is concerned with the study of mathematics for its own sake, irrespective of (though often with an eye on) possible applications in the natural, social or technical sciences and in industry. The main avenues of employment for a Pure Mathematician are the Universities, the teaching services, and some research establishments such as the C.S.I.R.O. The growth of population in Australia has resulted in a large increase in the enrolments of Australian Universities and consequently a student who graduates with a good honours degree should find little difficulty in becoming a university lecturer after three years as a teaching fellow or postgraduate student while working for a Ph.D.

In the past the employment of mathematicians in Australian industry and commerce was rather uncommon; however, over the last few years there has been a remarkable change, corresponding to the general recognition of the desirability of making quantitative what was previously mere qualitative. Amongst many reasons responsible for the change in the employment picture, one of the most important is the advent of high speed computers, which have made possible the detailed mathematical analysis of complex practical situations which could not have been carried out without them.

For example, it is now generally recognised that every reasonably large establishment should employ a statistician or team of statisticians. There must be efficient and well designed supervision of the quality and testing of products. The analysis of sales and business methods must be in the hands of experts. Statisticians are also found in many research establishments, in government departments, in industry, in the C.S.I.R.O., and in the Universities, where they are concerned with the design of experiments and analyses of the results obtained. Further, mathematically oriented
statisticians may spend their time on the invention of important mathematical descriptions of physical and social phenomena. Mathematical relations governing the behaviour of electricity, energy and satellites, for example, are well known; it is not so well known, however, that other mathematical theories are being developed in nearly every field of endeavour by persons trained in statistical theory and probability: for example, in public works for statistical models to assisting the design of dams; in sociology for theories explaining migration; and in biology for theories of inheritance. Students interested in working in these fields should study the courses in Theory of Statistics.

Applied Mathematics consists of the application of mathematical methods to the study of nature. In different Australian universities, different fields of study are emphasised, but in each case the study of nature and her laws is the main purpose, the mathematical technique being the means to this end. In this Department the main field of study is modern theoretical physics, with an emphasis on quantum mechanics, nuclear theory, and statistical mechanics and oceanography. However, other branches of Applied Mathematics are included in the course, such as electro-magnetic theory, classical dynamics, aerodynamics, theory of elasticity and solid state theory. In this general field, the normal qualification for independent research and for university employment, is a Ph.D. degree, following upon an Honours B.Sc. degree. The Department of Applied Mathematics includes provision for this full course. Furthermore, it is highly desirable for young graduates in this field who have recently qualified for a Ph.D. degree to go overseas for some time in order to widen their experience. Overseas contacts exist, and every effort is made to place graduates suitably.

One of the spectacular aids to industry and research is the high-speed computer. It requires skilled training to maintain and programme for a high-speed machine costing many hundreds of thousands of dollars. The number of persons in Australia qualified to take charge of a large machine is quite small. A graduate with satisfactory attainments in this field is assured of a well-paid and interesting position. The courses in Applied Mathematics and Statistics include training in programming for the digital computers and in numerical analysis. Students will have considerable practice on the university’s computers.

It must not be thought that an honours degree is necessary for success in all these fields. Pass degrees are satisfactory for a variety
of positions in government departments, commercial or industrial organizations and experimental laboratories, but, of course, an honours degree would in almost all cases give priority.

THE COURSES AND SUBJECTS PROVIDED BY THE SCHOOL

The School of Mathematics provides courses at the Pass and Honours levels in Pure Mathematics, Applied Mathematics and Theory of Statistics. Full details of the subjects and their relations with other subjects in the Science Course appear in the University Calendar. Any student who feels that he does not understand the situation should consult one of the enrolment officers of the School.

FIRST YEAR MATHEMATICS

All students in the Faculties of Applied Science, Biological Sciences, Engineering and Science are required to take mathematics in their first year. In addition, a first year course is optional in the Faculties of Arts, Commerce and Medicine. The School offers three courses at first year level.

10.001 Mathematics I

This is the ordinary course and is generally selected by the majority of students in the Faculties of Biological Sciences, Science, Engineering and Applied Science who intend to pursue further studies in mathematics, physics or chemistry. For example, in the case of Science students it is the basic course for a pass degree with a major in mathematics.

For entry into 10.001 Mathematics I, students are required to have passed H.S.C. mathematics at Level 2F or higher; or mathematics at Level 2S provided that the student's performance in mathematics and his general level of attainment are at standards acceptable to the Professorial Board. Students at the latter level are advised to undertake a bridging course before the beginning of lectures.

10.011 Higher Mathematics I

Covers all the material in 10.001 Mathematics I, plus other topics, at greater depth and sophistication. Though this course starts where Level I of the Higher School Certificate ends, some Level 2F students with ability might find it within their capabilities.
While it is expected that students aiming at the honours level in mathematics will take this course, it would be equally valuable for any mathematically able student whose course requires a considerable amount of mathematics.

10.021 Mathematics IT

This course has been designed for the student who intends to complete only the first year in mathematics or chemistry, but whose specialized studies require knowledge of certain mathematical tools such as calculus, matrices, probability, etc. Students in Wool and Pastoral Sciences, Optometry and Applied Psychology will find this course valuable.

Students who select this course should seriously weigh the implications of their choice because Theory of Statistics I is the only second year mathematics course available to students who have passed Mathematics IT.

Mathematics Majors at Pass Level

In the Faculty of Science students may take any combination of mathematics units which are allowed by the system of prerequisites and co-requisites. However, for students who wish to devote a major part of their undergraduate study to mathematics, the following guidelines are set out for majors in Pure Mathematics, Applied Mathematics and Statistics.

In view of the increasing demand for graduates with a mathematical background, students should consider the merits of combining courses in Pure Mathematics, Applied Mathematics, Statistics and Computer Science in accordance with their future interests. Senior members of staff in the School of Mathematics are available for consultation by students who wish to discuss their courses.

Mathematics Majors in the Faculty of Science

Any student who completes at least four Level III units in Mathematics is regarded as having majored in Mathematics as part of his B.Sc. degree.

If students wish to specialize and major in Pure Mathematics, Applied Mathematics or Statistics, the following minimum courses are suggested.
(i) **Pure Mathematics Majors**

In order to major in Pure Mathematics at the ordinary level, a student should pass in seven at least of the following units:

- 10.211 Applied Mathematics II, Unit A;
- 10.111 Pure Mathematics II, Units A, B, C;
- 10.112 Pure Mathematics III, Units A, B, C, D, E.

In all cases the student must pass complementary units or subjects in accordance with Faculty rules.

(ii) **Applied Mathematics Majors**

In second year the student should take Units A, B and C of 10.211 Applied Mathematics II, together with Units A and B of 10.111 Pure Mathematics II. In third year the student should take Units A, B, C and D of 10.212 Applied Mathematics III. Complementary units should be chosen in accordance with Faculty rules.

(iii) **Statistics Majors**

In second year the student should take 10.311 Theory of Statistics II; in addition, since he will be expected to take some units in 10.112 Pure Mathematics III in third year, he should take the Units 10.111A and 10.111B of Pure Mathematics II and 10.211A of Applied Mathematics II, passes in which will qualify him to enter level III Units in Pure Mathematics; he should also take complementary units in accordance with Faculty rules. In third year he should take the four units A, B, C and D of 10.312 of Theory and Statistics III, together with at least three level III Mathematics units (Pure or Applied); he should also take complementary units in accordance with Faculty rules.

**Honours Courses in Mathematics**

There are three separate fourth year honours courses: Pure Mathematics, Applied Mathematics and the Theory of Statistics. The four-year course for an honours degree is intended primarily for professional pure mathematicians, statisticians and mathematical physicists or applied mathematicians, but will prove of interest also to intending specialists in fields such as theoretical physics, engineering and all other theoretical sciences. The minimum requirements for each honours course are given below but students seeking an honours degree in mathematics are advised to choose units or courses in mathematics according to
their individual interests in consultation with senior members of staff of the School.

(i) *Honours Course in Pure Mathematics*

In the *Faculty of Science* in second year the student should attempt 10.121 Higher Pure Mathematics II, Units A, B and D and 10.221 Higher Applied Mathematics II, Unit A. In third year he should attempt 10.122 Higher Pure Mathematics III, Units A, C and F together with at least one unit selected from Higher Pure Mathematics III, Unit D and Pure Mathematics III, Units B and E.

In all cases complementary units or subjects must be chosen in accordance with Faculty rules.

Permission to enter fourth year in Pure Mathematics is granted only on the recommendation of one of the Professors of Pure Mathematics. Such recommendation is not usually granted unless the student’s record contains a satisfactory number of graded passes.

(ii) *Honours Course in Applied Mathematics*

In the *Faculty of Science* in second year the student should attempt 10.221 Higher Applied Mathematics II, Units A, B and C, 10.121 Higher Pure Mathematics II, Units A and B, and 1.122 Higher Physics II, Unit C. Students intending to take mathematical physics options in later years of Applied Mathematics should also take at least one other unit of Higher Physics II.

In third year the student should attempt four units of 10.222 Higher Applied Mathematics III, including Units A and C, one of Units B and F and one of Units D and E; and at least one unit of 10.122 Higher Pure Mathematics III. Students wishing to enter the third year of the honours course are advised to consult members of staff of the Department of Applied Mathematics before enrolment. Permission to enter fourth year is granted on the permission of a Professor of Applied Mathematics.

(iii) *Honours Course in Statistics*

In the *Faculty of Science* in second year the student should take 10.321 Higher Theory of Statistics II, Units A and B of either 10.111 Pure Mathematics II or 10.121 Higher Pure Mathematics and Unit A of either 10.211 Applied Mathematics II or 10.221 Higher Applied Mathematics II.
In third year he should take 10.322 Higher Theory of Statistics III, Units A, B, C and D, together with at least three level III mathematics units (Pure or Applied).

In all cases complementary units or subjects must be chosen in accordance with Faculty rules.

Students wishing to attempt Third Year honours courses are advised to discuss their courses with a Professor of the Department of Statistics. Permission to enter the Fourth Year course in the Theory of Statistics is granted on the recommendation of a Professor of Statistics. Such permission will not usually be granted unless the applicant has passed in 10.321 Higher Theory of Statistics II, and the student's record contains a satisfactory number of graded passes.

MATHEMATICS AS A SUBSIDIARY SUBJECT

The School also provides the sequence of two Units 10.031 and 10.032, at the second and third levels respectively, for students in the Faculty of Science who are mainly interested in the chemical and biological sciences. These courses offer an introduction to mathematical techniques for scientists and engineers. It should be noted, however, that these two units cannot be counted together with any second level or third level units in Pure and Applied Mathematics.

There is also a single unit in Statistics, 10.311T, which is recommended for those scientists who wish to have some knowledge of Statistics but who do not wish to proceed to any further courses in this subject.

For both the above courses the entry qualification is a pass in 10.001 Mathematics I, but in appropriate cases students who have passed in 10.021 Terminating Mathematics I at a satisfactory level may be given permission to enrol.

SCHOOL TEACHERS

There is no doubt that in order to be well qualified as a high school teacher of mathematics it is desirable that the student should have completed a sequence of Mathematics units similar to that outlined under Pure Mathematics majors at Pass level and that other units should be selected from the Theory of Statistics or Applied Mathematics sequences. This extra work will broaden the prospective teacher's outlook and will certainly improve his teaching.
Those who feel that they may be interested in proceeding to a higher degree after graduation are advised to attempt some of the courses at the higher level.

Pure Mathematics Level II, Unit C and Pure Mathematics Level III, Unit D, should be of interest to school teachers.

STUDENTS WITH LOW MATHEMATICAL QUALIFICATIONS

Students who have only a pass in Mathematics Level II (Short) at the Higher School Certificate or who have been inadequately prepared even though they have passed Mathematics Level II (Full), should see that they do not fall behind the class. Attention is directed to the Bridging Courses in Mathematics given over the University of N.S.W. Radio Station VL2UV. Tutorial time is provided by the School in Mathematics I. Students should use these tutorial periods to obtain advice on supplementary reading to make up any deficiencies in their pre-university training. If, after receiving this advice, the student cannot keep up with the class, he should consult a senior member of the staff of the School of Mathematics.

STUDENTS TRANSFERRING FROM OTHER COURSES

In some cases the mathematical subjects of the Science Course differ quite considerably from the mathematics taught to students following other courses (e.g., Engineering). Students transferring to the Science Course and wishing to obtain credit for work done in previous courses should make application through the Admissions Office as early as possible. The staff of the School will advise students in such cases but this does not relieve the student of the responsibility of making an early application through the correct channels.

SUBJECTS SUBSIDIARY TO MATHEMATICS

As mentioned above, a student wishing to major in Mathematics must pass other Science subjects in accordance with Science Course regulations. In this connection it is worth noting that the Applied Mathematics Course has a considerable content of mathematical physics and there is no doubt that Physics I and/or Physics II would assist the student.
Mathematics Prizes

There are prizes available for certain courses in the School of Mathematics. They are open to all Kensington students proceeding to an undergraduate degree or diploma but will not be awarded if there is no candidate of sufficient merit. An award of $25 and a suitably inscribed certificate are available in the following subjects: Higher Mathematics I, Higher Pure Mathematics II, Higher Applied Mathematics II, Higher Pure Mathematics III, Higher Applied Mathematics III.

Similarly there are prizes of $40 available in Theory of Statistics subjects.

The science of microbiology is concerned with the nature of the smallest living forms and their effects on human welfare. They are beneficial in providing for the decomposition of organic wastes, by maintaining and increasing the fertility of the soil and by the direct production of foodstuffs, beverages, pharmaceuticals (including antibiotics) and other industrially important compounds. On the other hand, microorganisms are important agents of disease and destruction; they can be responsible for serious spoilage of foods and textiles and for the decomposition of structural materials. As well as applying our knowledge directly and utilizing their potential to bring benefits and to minimize or prevent harmful effects, microorganisms are also being used to advance our knowledge of the nature of living substances and processes, particularly in the areas of molecular biology, genetics and metabolism.

Students may undertake microbiology as a major or minor Science course, as part of the medical degree, in food technology, biological technology or in public health engineering and drug analysis.

The subject can also be taken to the honours level and for the Master of Science and Doctor of Philosophy degrees. The last two degrees are also available for science students in the area of medical microbiology and immunology. Medical students can interrupt their course to undertake the Bachelor of Medical Science in microbiology and higher medical degrees may also be taken in the subject. Such advanced work in microbiology will include research work as well as an additional programme of reading and more formal instruction. Those who have not majored in microbiology but have otherwise suitable basic training may enrol for a higher degree in microbiology at this stage.

A student wishing to undertake microbiology at any level should ensure that he meets all pre-requisites. He is advised to consult the School's education officer for advice on the best course structure for his particular interests.
Students taking microbiology as a major subject for graduation will be expected ordinarily to undertake at least four level III microbiological units which will include Basic General Microbiology (44.102A) and Microbial Physiology (44.102B) and others chosen from Higher Microorganisms (44.102C)—alternatively Mycology (43.102D) given in the School of Botany—General Applied Microbiology (44.102D), Medical Microbiology (44.102E) and Fermentation Technology (42.102, in the School of Biological Technology). Three stage III units in microbiology will be acceptable with certain combinations that include four stage III biochemistry units.

Students not majoring in microbiology may choose one or more units from Basic General Microbiology (44.102A), Microbial Physiology (44.102B) and Higher Microorganisms (44.102C, alternatively Mycology 43.102D). Ordinarily 44.102D, 44.102E or 42.102 should not be taken without having done 44.102A and 44.102B.

A student wishing to undertake honours will be expected to have achieved a high standard in courses taken for the pass degree and to have majored in microbiology. Additionally he must receive the permission of the Head of the School. Those in the Faculty of Medicine wishing to proceed to the Bachelor of Science (Medicine) or higher degrees in Medical Microbiology should consult the Head of that Department and conform with faculty requirements.

44.101A Introductory Microbiology

The general nature, occurrence and importance of microorganisms. A systematic review of the major groups of microorganisms: the eucaryotic protista (micro-algae, protozoa and fungi); procaryotic protista (blue-green algae, “higher” bacteria, typical unicellular bacteria and small bacteria-like forms); plant, animal and bacterial viruses. The composition and fine structure of microorganisms. Microbial physiology and genetics. The relationship between microorganisms and their environment; ecological considerations. Interactions between microorganisms and higher organisms; symbiosis, parasitism and pathogenesis, immunology.
TEXTBOOKS

PRE-REQUISITES
17.001 General and Human Biology.
2.001 Chemistry I or 2.011 Higher Chemistry I.

This unit consists of 3 hours per week throughout the year.

**44.102A Basic General Microbiology**
Systems for the identification and taxonomic description of bacteria; more detailed treatment of the fine structure, cytochemistry, genetics, and antigenicity of microorganisms (including viruses).

TEXTBOOK
Davis, B. D., Dulbeco, R., Eisen, H. N., Ginsberg, H. S. & Wood, W. B. *Principles of Microbiology and Immunology* (or the larger version entitled *Microbiology*, if the Medical Microbiology unit 44.102E is also chosen). Hoeber Medical Division, Harper & Rowe, 1968.

PRE-REQUISITES (may be varied in exceptional circumstances).
41.101A Chemistry of Biologically Important Molecules.
41.101B Metabolism.
43.101A/45.101A Genetics and Biometry.
44.101A Introductory Microbiology.

This unit consists of 6 hours per week throughout the first half of the year.

**44.102B Microbial Physiology**
The metabolic requirements of microorganisms; relationship between the microorganism and its environment: growth, inhibition, death; energy-yielding and biosynthesising systems; genotypic and phenotypic control systems.

TEXTBOOK
As for 44.101A.

This unit consists of 6 hours per week throughout the first half of the year.

**44.102C Higher Micro-organisms**
Aims to round out the brief treatment these, mostly eucaryotic protista, received in the introductory course. The filamentous fungi, yeasts, micro-algae and protozoa will each be dealt with in a short taxonomic fashion but giving attention also to particular
features associated with their morphology, cytology, cytochemistry, physiology, genetics and their relationship to other organisms and human welfare generally.

Note: Mycology (43.102D) as alternative to this unit. (See entry under Botany).

TEXTBOOKS
To be advised by the School.

PRE-REQUISITES
As for 44.102A above.

This unit consists of 6 hours per week throughout the second half of the year.

44.102D General Applied Microbiology

Endeavours to relate basic facts about microorganisms to practical conditions affecting the occurrence, importance, activity and control of microorganisms in soil, air, water, in their relationship to higher organisms (other than Man); their relationship to the manufacture, preservation and spoilage of food, including dairy products; and their industrial application.

TEXTBOOK
No single book gives adequate coverage, but students may wish to purchase one or more of the reference books listed below, according to their particular interests.

PRE-REQUISITES
44.102A Basic General Microbiology.
44.102B Microbial Physiology.

This unit consists of 6 hours per week throughout the second half of the year.

44.102E Medical Microbiology (for Science Students)

The nature of bacterial and viral diseases of man: cultural and serological diagnostic procedures; epidemiology of infectious disease; fundamentals of chemotherapy, immunoprophylaxis, immunotherapy; mycology and parasitology in relation to human disease.

TEXTBOOKS

PRE-REQUISITES
44.102A Basic General Microbiology.
44.102B Microbial Physiology.

This unit consists of 6 hours per week throughout the second half of the year.
SCHOOL OF PHILOSOPHY

The study of Philosophy is partly the study of perennial problems of common interest to everyone; for example, the foundation of morality, the grounds of religious belief, the problem of the source and reliability of knowledge, and the relation between body and mind. But secondly, Philosophy also leans out to and illuminates other fields of study. Consequently, courses in Philosophy are designed to make it possible for students to pursue an interest in a course related to their other interests.

The First Year course in Philosophy is a wide-ranging course which is intended to give a broad introduction to the subject and assumes no previous acquaintance with it. There is no specialization, and no distinction between Pass and Honours. In Second Year a part of the course is also common to all students, but there is also a range of choice of possible sequences of subjects to suit special interests.

Special attention has been given to the needs of those who take Philosophy for only one or two years, so that courses will be self-contained and give a balanced picture of the subject up to the stage reached.

52.111 Philosophy I

The course divides into three parts as follows:

(1) A study of some Dialogues of Plato, with reference to definition, the immortality of the soul and the theory of universals; and an introduction to Ethics. (2) A study of the Enquiry of Hume, with reference to miracles, personal identity, the body-mind problem and freedom of the will. (3) An investigation of the structure of arguments, formal and informal, and of the foundations of scientific knowledge.

RECOMMENDED FOR PRELIMINARY READING

TEXTBOOKS
Hamblin, C. L. Elementary Formal Logic—A Programmed Course. Hicks Smith and University Paperbacks.
52.112 Philosophy II (Pass)

Three hours of lectures weekly, with tutorials and practice classes as arranged.

All students take the course-unit (1) Modern Philosophy A, and two other course-units chosen from: (2) Logic, (3) Scientific Method, (4) British Empiricism, (5) Philosophy of Politics and History, (6) Philosophy of Value, and (7) Philosophy of Psychology. Students should normally choose one, but not both of units (2) and (3), and those interested in a general philosophical background should choose unit (4).

Description of course-units

(1) Modern Philosophy A: The logical atomism of Russell and Wittgenstein; the logical positivist movement; criticism of these movements by Moore, Ayer, Quine and others.

TEXTBOOKS

(2) Logic: A systematic course in formal logic, with particular attention to the examination and formalization of arguments in ordinary language.

TEXTBOOK

(3) Scientific Method: A course designed particularly for the needs of students of the social sciences, dealing with the nature of empirical knowledge, the concepts of explanation, induction and scientific law, counterfactual statements and the paradoxes of confirmation.

Reference books will be given in lectures.

(4) British Empiricism: A survey of the empiricist tradition with special concentration on Berkeley and Hume.

TEXTBOOKS

(5) Philosophy of Politics and History: A study of philosophical problems arising out of the study of history and out of reflection on politics.
TEXTBOOKS
Dray, W. H. *Philosophy of History*. Prentice-Hall.
Walsh, W. H. *An Introduction to Philosophy of History*. Hutchinson.

(6) Philosophy of Value: An examination of the central concepts and types of judgments occurring in the fields of moral discourse and aesthetic and literary criticism.

(7) Philosophy of Psychology: A critical examination of some aspects of Fundamental Theory of Psychology, with special emphasis on classical and contemporary Behaviourism and Behaviourist orientated psychology, and on the general conceptions of 'Behaviour' and 'Purpose'.

While Psychology I is not a pre-requisite for this course, a preparatory survey of the introductory chapters of J. O. Whittaker's *Psychology* will be of value to students.

52.122 Philosophy II (Honours)
The course consists of the material set out for 52.112 Philosophy II (Pass), together with an extra course-unit chosen from those listed: Distinction students will be obliged to choose one, but not both of units (2) and (3). In addition a series of seminars will be arranged in which certain topics will be treated at a more advanced level.
The School of Physics provides both pass and honours courses. The pass course with a major in physics at two levels, ordinary and higher, normally takes three years to complete. In this course a broad and balanced treatment of all branches of physics is presented without specific emphasis on any branch or topic which may be temporarily prominent. Taken at a higher level, it precedes an honour's year during which work, to some extent, will be specialized. These studies are provided within the framework of the Science course (see earlier) as sequences appropriate for students seeking qualification as professional physicists, whether they intend to engage in research, industrial practice or the teaching of science.

A student intending to take a pass degree with a major in Physics must at least complete 1.001 Physics I; Physics II units 1.112 A, B, and C; and Physics III units 1.113 A, B, C, and D. Note that 10.001 Mathematics is a pre-requisite of all Physics level II units and that 10.211A Applied Mathematics is a co-requisite of all Physics level II units. Students are also advised to take units 10.111A and 10.111B of Pure Mathematics in second year. Additional Mathematics units are pre-requisite to Higher Physics level III units (see regulations). Students are also advised to complete supporting units in accordance with the Science Course regulations and will normally include 2.001 Chemistry I. It should be understood that units of corresponding higher subjects can often be substituted for those mentioned above.

Honours

A student intending to take Honours in Physics will normally complete the sequence of Higher Physics units 1.011; 1.122 A, B and C; 1.123 A, B, C, and D. However, students with a very good record in Physics 1.001 or in 1.112 A, B and C may be considered for admission to Higher Physics units on application to the Head of School. Applied Mathematics 10.211A (or the Higher Applied Mathematics equivalent) is a co-requisite of Higher Physics II level II units and Pure Mathematics 10.111 A and B (or the Higher Pure Mathematics equivalents) are pre-
requisites to Higher Physics level III units. Students are also strongly advised to take Applied Mathematics units 10.212 A and D (or Higher equivalent) in the third year of study.

The following show typical programmes which, together with the prescribed General Studies subjects, complete requirements for a degree.

A. Pass General Science Course Majoring in Physics
(which may be suitable for Science Teachers)

**FIRST YEAR**

* Admission to 1.112 Physics II units or to Higher Physics II units normally requires completion of 1.001 Physics I or 1.011 Higher Physics I. Students who gain a superior pass in 1.041 Physics IC and who have also passed 10.001 Mathematics I or 10.011 Higher Mathematics I may, subject to the approval of the Head of School, be permitted to proceed to 1.112 Physics II units.

† If Physics III or Higher Physics III is taken Applied Mathematics units 10.212C or 10.222F may not also count.

‡ Entry to the Honours year may, subject to the approval of the Head of School, be permissible from a course containing as a minimum the four Higher Physics III units, A, B, C, and D, plus four other level III units. Students are strongly advised to include Applied Mathematics III units, Numerical Analysis, 10.212A, and Mathematical Methods, 10.212D, among the four elective units.

Physics Prizes

The following prizes are offered annually.

The School Prize, for the best performance in Physics II, value $40.

The Physics Staff Prize, for the best performance in Physics III, value $60.

The Head of School's Prize, for the best performance in laboratory work in Physics III, value $20.

The Physics IV Prize for the best performance in Physics IV, value $40.

The G. P. Falls Memorial Prize, for the best performance in Mathematical Physics, value $20.
PHYSICS TEXTBOOKS

1.001 Physics I
1.011 Higher Physics I

For students taking 2 full years of Physics

TEXTBOOKS

1.041 Physics IC (for students taking only one full year of Physics)

TEXTBOOKS

1.212 Physics IIT
Half Unit A (Geometrical Optics)

TEXTBOOK
Fincham, W. Optics. Hatton.

Half Unit B (Electronics)

TEXTBOOK

Half Unit C (Introduction to Physics of Solids)

TEXTBOOK

Half Unit D (Biophysics)

Courses in physiology for students in the Science Course were commenced in 1963. During the second and third years of their B.Sc. course, students may take Principles of Physiology and Physiology II. Students reaching an adequate standard in these subjects may proceed to a B.Sc. degree with honours by taking Physiology III during the fourth year of the course. For the present, physiology will be available only as a day course.

73.011A Principles of Physiology

An introductory course in mammalian physiology. It considers the basic problems of homeostasis encountered in mammals and draws to a very limited extent on other examples from comparative physiology. An overall survey of the control systems and general principles of neural and chemical control is considered by the student within the framework of special lectures in systematic physiology.

TEXTBOOKS

PRE-REQUISITES
17.001 General and Human Biology.
10.001 Mathematics I or 10.011 Higher Mathematics I or 10.021 Mathematics IT.
2.001 Chemistry I or 2.011 Higher Chemistry I.

This is a two-unit course that will continue for 6 hours each week throughout the year.

73.012 Physiology II

Includes a more advanced study of mammalian physiology. Special emphasis is placed on control mechanisms, in particular on a detailed study of the central nervous system and on control in the autonomic nervous system, particularly from the point of
view of regulating the circulation and respiration. Problems of humoral and chemical control processes are considered using the kidney as a model.

TEXTBOOKS
To be advised.

PRE-REQUISITES
41.101A Chemistry of Biologically Important Molecules.
41.101B Metabolism.
41.101C Control Mechanisms.

CO-REQUISITE
43.101A/45.101A Genetics and Biometry.

A student who has not passed the pre-requisite units of Biochemistry may still proceed to Physiology II by arrangement with the Head of School.

This is a four-unit course that will continue for 12 hours per week throughout the year, and will consist of lectures, tutorials, seminars and laboratory work. On some occasions students may be required to attend at other times for the maintenance and treatment of experimental animals.
The School provides undergraduate courses in Zoology and Entomology taught as part of the Unit pattern which was introduced for second year classes in 1969 and third year classes in 1970. The School offers six units of Zoology and four units of Entomology and contributes to a unit of Biometry and Genetics offered jointly with the School of Botany. All courses leading to a Science degree in Zoology are dependent on an adequate background in Biochemistry and in Genetics and Biometry. The units offered place an emphasis on experimental Animal Physiology, experimental and applied Entomology and an ecological approach to Marine Science.

Graduates at the bachelor level may find employment in scientific and technical departments of various State and Commonwealth organizations, in certain industries and in teaching. Students intending to pursue research careers in any of the various branches of zoology are urged to complete the requirements for Honours, Master's or Doctor's degrees.

Courses in zoology are taught mainly in the lecture theatres and laboratories, but field work, including field camps and excursions, is an essential part of all courses. To this end, the School maintains an undergraduate teaching Field Station at Smith's Lake where compulsory courses are taught during vacations. The animal physiology teaching is strongly oriented towards Australian invertebrate and vertebrate animals, and the School has interests in field stations at which marsupials are studied.

Honours in Zoology or Entomology

Students must receive permission of the Head of School before proceeding to honours. Generally speaking they should have completed all subjects or units required for a Bachelor's degree and have achieved a consistently high standard in relevant units offered by the School of Zoology.

43.101A/45.101A Genetics and Biometry

For details of this course, which is offered jointly by the Schools of Zoology and Botany, see under School of Botany.
45.101B Invertebrate Zoology

A comparative study of the major invertebrate phyla with emphasis on morphology, systematics and phylogeny. Practical work to illustrate the lecture course.

Obligatory field camp.

TEXTBOOK

PRE-REQUISITES
1.001 Physics I or 1.011 Higher Physics I or 1.041 Physics IC.
2.001 Chemistry I or 2.011 Higher Chemistry I.
10.001 Mathematics I or 10.011 Higher Mathematics I or 10.021 Mathematics IT.
17.001 General and Human Biology.

This unit is offered in the second half of the year, and consists of 2 hours' lecture and 4 hours' laboratory time per week.

45.101C Vertebrate Zoology

A comparative study of the Chordata. Morphology, systematics, evolution, natural history, with reference to selected aspects of physiology and reproduction. Practical work to supplement the lecture course. Field excursions as arranged.

TEXTBOOK

PRE-REQUISITES
As for 45.101B above.

This unit is offered in the second half of the year, and consists of 2 hours' lecture and 4 hours' laboratory time per week.

45.102A Marine Ecology

A study of the metabolic, regulatory and reproductive activities of marine organisms with particular reference to the physical, chemical and biological environment in which they occur. Both field and laboratory practical work are included.

TEXTBOOK

PRE-REQUISITES
As for 45.101B above.

This unit is offered in the first half of the year, and consists of 2 hours' lecture and 4 hours' laboratory time per week.
**45.102B Animal Behaviour and Ecology**

An introduction to ecology: a study of the activities of animals in relationship to their environment. Both field and laboratory work are included.

**TEXTBOOKS**

**PRE-REQUISITES**

1.001 Physics I or 1.011 Higher Physics I or 1.041 Physics IC.  
2.001 Chemistry I or 2.011 Higher Chemistry I.  
10.001 Mathematics I or 10.011 Higher Mathematics I or 10.021 Mathematics IT.  
17.001 General and Human Biology.  
43.101A/45.101A Genetics and Biometry.

This unit is offered in the second half of the year, and consists of 2 hours' lecture and 4 hours' laboratory time per week.

**45.102C Comparative Animal Physiology**

A study of the physiology of the various animal groups with particular emphasis on the adaptation of the animal to its environment. Subjects in this examination include the following: Osmotic and ionic regulation. Respiration and the cardio-vascular system. Temperature regulation and hibernation. Nerve and muscle physiology.

**TEXTBOOK**

**PRE-REQUISITES**

41.101A Chemistry of Biologically Important Molecules.  
41.101B Metabolism.  
45.101C Vertebrates.

This unit is offered in the first half of the year, and consists of 2 hours' lecture and 4 hours laboratory time per week.

**45.102D Reproductive Physiology and Endocrinology**

A survey of reproductive mechanisms, reproductive histology and embryology, with particular reference to the comparative aspects in vertebrate species. Practical work to illustrate the lecture course. A general and comparative study of the endocrine systems, particular emphasis being made of the mechanism of
hormone action and the role of hormones in adaptation to environment.

TEXTBOOKS

PRE-REQUISITES
As for 45.102C above.

This unit is offered in the second half of the year, and consists of 2 hours’ lecture and 4 hours’ laboratory time per week.

45.202A Insect Structure and Classification
A comparative study of the internal anatomy and external morphology of insects. Classification and bionomics of major groups and families. A collection of insects is to be made. Practical work to include dissections, a study of mouthparts, wing venations, segmentation, etc. Field excursions as arranged.

TEXTBOOK

PRE-REQUISITES
45.101B Invertebrates.
43.101A/45.101A Genetics and Biometry.

This unit is offered in the first half of the year, and consists of 2 hours’ lecture and 4 hours’ laboratory time per week.

45.202B Insect Physiology
A study of the functions of the various organ systems and of the whole insect. Various aspects of reproduction, growth and metabolism. Experimental work to illustrate the lecture course.

TEXTBOOK

PRE-REQUISITES
45.202A Insect Structure and Classification.

This unit is offered in the first half of the year, and consists of 2 hours’ lecture and 4 hours’ laboratory time per week.
45.202C Applied Entomology

Fundamentals of insect control. Pest species and types of damage caused. Control by insecticides, physical and biological means. Insect toxicology. Insecticide resistance. Practical work to illustrate the above and also various aspects of bioassay in Entomology. Field excursions as arranged.

TEXTBOOK

PRE-REQUISITES
45.202B Insect Physiology.

This unit is offered in the second half of the year, and consists of 2 hours’ lecture and 4 hours’ laboratory time per week.

45.202D Project Entomology

Detailed studies of selected aspects of insect physiology; ecology and toxicology. Treatment of topics will be in depth rather than breadth. Practical work will illustrate the lectures and will place emphasis on design and planning of experiments.

PRE-REQUISITES
45.202B Insect Physiology.

This unit is offered in the second half of the year, and consists of 6 hours’ project work per week.
